

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

LITERATURE.

Camoens, the Lyricks. Sonnets, Canzons, Odes, and Sextines. Englished by Richard Burton. (Quaritch.)

CAPT. BURTON quotes Byron for the opinion that previous English versions of Camoens's lyrical poems have very little or nothing in common with the Portuguese original. There can be no doubt whatever about the fact; and the translations of Lord Strangford, of Adamson, of Southey, and of some others, are hopelessly bad as translations, and sometimes even absurdly remote from the text. A much better version, which Capt. Burton justly commends for its literalness, is Mr. Aubertin's; but this gentleman, like his feebleness, has but picked and chosen a few out of the 360 sonnets which were written by or ascribed to Camoens, and has left untouched the twenty-one canzons, the fourteen odes, and the five sextines, of all which, and of the sonnets as well, Capt. Burton now gives us rhymed translations.

In these poems not only are the metres extremely subtle and intricate, but the trains of thought are expressed, as in all good lyrics they should be, in tone, unison, and accompaniment with the music of rhyme and rhythm, and are themselves, beyond all precedent in our own literature, intricate, involved, and subtle; moreover, the intrinsic obscurity of the poems is of course increased by the obscurity which three centuries have superadded.

Such are the difficulties which the translator of Camoens's lyrical pieces has to face, and I have no hesitation in saying that Capt. Burton has overcome them; but he has not cut the Gordian knot with what some critics may require from him—good, swashing blows of his broadsword. He has used a keen, double-edged weapon of his own contrivance, and with it and his own cunning trick of fence the feat has been accomplished. To take the English language as it exists at this day in poetry, and to use it to turn the Camonian lyric with, is all but impossible; to take the poetical English of Camoens's period, or that of any previous period, with its still narrower vocabulary, would be still more an impossibility.

Capt. Burton has done neither of these things. He has rendered the lyrics into a language which he picks and culls from the English of about Camoens's time, from that of times previous to it, and not seldom from modern English speech. When with all this he fails in rhyme or measure, the too conventional reader will be shocked to hear that he has not scrupled to coin a word of his own. So translating, it is clear he has an instrument in his hands of great power and versa-

tility, but one which is no less easy to abuse than to use. Capt. Burton, however, has been as merciful as possible in the employment of archaisms and neologisms. He has a true literary artist's inclination for lucidity, and a true lyrical turn for rhythmic flow and the music of his lines. In short, he has succeeded in giving to English literature what it never possessed before: a correct, a full, and a readable version of the lyrics of the greatest poet of the Iberian Peninsula.

Now that these poems are for the first time presented to English readers fully and well, we may take the opportunity of enquiring how far they will stand comparison with the better known epos of the poet.

Portuguese poets are, and always have been, "sentimentalists," in the sense given to that word by the French critic; that is, their tendency is one of reaction against the stubborn facts of life in the direction of the suprasensuous. Only one distinguished Portuguese poet do I know who is not a sentimentalist in this sense: Sá de Miranda, the great predecessor of Camoens, and, to my thinking, next to Camoens the most interesting figure in the long line of Portuguese poets. Even the austere Miranda, however, is compelled to follow the aesthetic fashion of his day, of "art for art's sake," and though he was an honest country gentleman, who loved his hunting spear and his pruning knife as well as or better than his lute, even he had to take down that lute from the wall and, leaving his own manly strain, to strum to it love songs breathing a tenderness and despair quite foreign to his real nature, and full of all those fantastic "symbols, hieroglyphics, and mystifications" in which the age delighted. What Miranda did *invita Minerva*, Camoens as a lyrical poet did with all the energy and all the delight of his larger nature.

By far the greater number of the lyrics of Camoens treat of love or of subjects akin to love. As a sonneteer he closely follows Petrarch and, making some abatement for the difference and, perhaps, on the whole, the inferiority of Portuguese to Italian as an instrument of musical sound, Camoens seems to me to touch the lyre with as sure and skilful a hand as Petrarch himself. As poetical literature these lyrics, the sonnets and canzons especially—for the odes are not regular odes—seem to me to be as beautiful productions, as full of art and of exquisite music, as such works can be. The question is, do they possess the highest poetical quality? I am of opinion that they do not. It is not because they chiefly treat and treat monotonously of one emotion alone that I form this opinion: it is because they treat it fantastically, without earnestness, conventionally and with a false exaggeration. It is not Camoens I venture to judge, but the spirit of his time. The true voice of Camoens, *os magna sonituum*, speaks to us in his great patriotic epic, just as the true Shakspeare speaks to us in "Hamlet," "Lear," or "Macbeth," not in his "Lucrece" or his "Venus and Adonis."

It is heresy in Portugal to say that Camoens was less great as a lyrical poet than Petrarch himself; but critics in the country of his birth seem to overlook the fact that two whole centuries separate him from Petrarch, two centuries of advancement in

thought such as the world had never known before; and yet not only is the literary form of the Camonian lyrics a copy of Petrarch's, but the thoughts embodied in them are in no appreciable degree enlarged. Their spirit is the spirit of the early Renaissance with a faithful echo across the busy centuries of old Provençal song. There is nothing of the larger utterance, the strong "organ voice" of the author of the *Lusiads*. It is Camoens, but Camoens in fetters.

I feel the full venturesomeness of differing from the poet's countrymen as to the poetical quality of these poems, but it is perhaps possible, without putting forth any merely personal opinion, to try them by accepted tests and canons. Camoens is admittedly a master of language. If in his lyrical pieces he is giving us poetry of the highest quality, we shall know it by this—that his note will be one of high earnestness and directness: it will be a note direct from the soul of one who has thought deeply and feels strongly. Is there any such note sounded in the odes and sonnets of Camoens? He writes, as I have said, chiefly of love, and with consummate ingenuity, but with how much of earnestness?

"Becomes the Lover to the Love transmewèd,
By thoughts and reveries the Fancy fire;
Then have I nothing left me to desire,
For the Desirèd is in me enduèd.
If my transmewèd soul in her be viewèd,
What can my formal body look for higher?
Only in self for Rest it can retire,
Since that same Spirit hath my form imbruèd.
But this half-goddess with fair purity fraught,
As Subject dwells in Accident inlaid,
So to this Soul of mine shows self conform;
E'en as Idea fares ahe in my Thought;
While the pure lively Love whereof I'm made,
Like unto simple Matter seeks its Form."

Is this metaphysical word-play the language of true passion? Camoens's love-songs are made up of such subtleties; they are compact with cold Platonic praises of an impossibly perfect mistress. His lyrical verse and that of his contemporaries are the over-faithful copy of an old original, and their work is no longer justified by originality and the dark background of the fourteenth century. These works seem to me to be no more true poetry than the first servile reactionary works of our pre-Raphaelite painters were true art. There is a strange jumble in it all of Procris and Philomela and the Phoenix, of salamanders, crocodiles, and basilisks, an assemblage of all the commonplace of Pagan mythology, mediæval theology, of scholastic philosophy, and the absurdities of the Provençal courts of love. The poet's mistress is a paragon: her virtue, her beauty, her cruelty, and her disdain are such as the world never knew, and his constancy and devotion to all this excellence and loveliness will outlive time itself. In the next sonnet he has found another mistress, another paragon, every bit as pure, as fair, as cruel, and as coy, to whom he swears by all the Pagan gods a second æon of unending constancy. Camoens seldom rises above this level; but all through his rhymes the verse flows on with so sweet, so smooth, and so perfect a melody, as almost makes us forget how far removed it all is from the earnestness and sincerity of passionate human love. We need but to compare it with a poet's true

love-song to perceive the discordance at once. We have but to set beside it Victor Hugo's

"Le vent qui vient à travers la montagne
Me rendra fou,"

or the "Bid me to live" of Herrick, or the verses to "Althaea in Prison" of Lovelace, or Burns's "Of a' the airts the wind can blaw," or Musset's "Avez-vous vu dans Barcelone," to see at once how false and artificial it is—in short, to see that it is wanting in that simplicity and straightforwardness which, according to the greatest of all critics, are the essence of great poetry.

So much am I compelled to say in an unwilling and invidious spirit of detraction; but I would not have it be supposed that the lyrics of Camoens do not include higher strains than these amatory ones. Among them are not a few religious, descriptive, introspective, and eulogistic poems of great beauty and importance, though they, too, are often disfigured with Provençal *far-fetchedness* and Provençal extravagance. Furthermore, it would be critical insincerity not to admit that the Camonian lyrics are nearly wholly wanting in the fine lucidity which marks the Camonian epic. Their style shows the Troubadour's childish liking for artful obscurity, and of so singing that a man should have infinite pains to catch his meaning

"Qu' apenas nuls hom las enten."

Some of Camoens's poems, indeed, have baffled the intelligence of every commentator, Portuguese and German, and quite puzzle Capt. Burton himself, and it is clear to the reader of them that the maxim to the effect that language was given to us to conceal our thoughts was discovered long before the time of Talleyrand.

As to Capt. Burton's labours upon this mass of verse, the task he has now completed forms a worthy sequel to his great work in translating, and most learnedly annotating the *Lusiadas*. I had the pleasure of acknowledging the excellence of that work, and its importance to the student, in the *ACADEMY* of June 25, 1881. Space prevents my giving more than one more specimen of the author's version. It is not above the average of his work. I choose it rather because it is the translation of one of the most beautiful as well perhaps as one of the most difficult to render of Camoens's sonnets:—

"My gentle Spirit! thou who didst depart
This life of Miscontent so sudden tane;
Rest there eternal in the heavenly Reign,
Live I pent here to play sad mortal part.
If in that happy Home, where throned thou art,
Consent to memories of the Past they deign,
Forget not thou my love, whose ardent strain
Thou saw'st in purest glance that spake my heart.
And if such love gain aught of grace fro' thee,
If aught avail this woe wherewith I pine,
This pining woe that knows no remedy;
Pray Him who shorted those few years of thine
So soon He bear me hence thy sight to see
As soon He bore thee fro' my sorrowing eyne."

The exquisite spirit as well as the letter of the Portuguese seem to me to live again in the English of Capt. Burton.

OSWALD CRAWFORD.

Dictionary of National Biography. Edited by Leslie Stephen. Vol. I. Abbadie-Anne. (Smith, Elder, & Co.)

WHEN the proper time comes for estimating the literature of this latter end of the nineteenth century, it seems probable that the critic of the future will award to the present generation of English men of letters greater credit for knowledge than for power. To dwell upon the negative aspect would be ungracious, especially at a time when our three chief poets have each given us within the few past weeks a volume of their best. But the publication of the first instalment of Mr. Leslie Stephen's great enterprise naturally suggests the reflection that such a work could have been undertaken at no earlier time with equal prospect of success. If the endowment of research still remains a dream, the aggregate amount of original investigation carried on among us by a multitude of individuals is by no means contemptible. Public recognition, and organisation by competent authority, are the two things needed to place English students on the same position of advantage as their brethren in Germany or France. The generation which is producing the *Rolls'* series of historical documents, the printed catalogue of the British Museum, the new edition of the *Encyclopædia Britannica*, and the *New English Dictionary*, and which supports some twenty publishing societies, may fairly hold its own with previous generations which boasted, perhaps, more eminent names: *Non omnes omnia possunt*.

It may be as well at once to disabuse the popular mind of a false impression that has already got about. This *Dictionary of National Biography* is most improperly described as a "bead roll of England's worthies," which is no more true than to define history as the record of a nation's glory. In biography as in history, we must take the bad with the good, the base with the noble, even the insignificant with the great. No doubt, there are many readers who will turn first (and possibly turn only) to the conspicuous titles—such as Addison, Ælfred, and Anne. But when the design of the work is rightly considered, these longer articles fit into their place as parts of a system which allots just thrice as much room to forty-three persons of the name of Anderson as to the great king of the West Saxons. Though it may not be easy to frame the principle upon which admission is granted, yet all who have had occasion to consult a book of reference in vain (and who has not?) will thank the editor for having thrown his net so widely. Every single Englishman whose name is preserved in memory for what he did or for what he wrote—even if what he did was a crime and what he wrote a scandal—ought to find some record here—the third Richard as well as the first, Titus Oates as well as Algernon Sidney, Aphra Behn as well as Addison, Bennet Allen, the blackguard, as well as Ralph Allen, the prototype of Squire Allworthy. If the worthies outnumber the reprobates, that is our advantage. The duty of the editor is to see that none of either class, or of the much larger class of indifferent personages, are overlooked. For a dictionary of national biography, as Mr. Leslie Stephen understands it, is nothing less than a history of

the country, shown not in the course of events, but in the lives of men and women.

The present writer does not feel himself competent to determine off-hand how far this ambitious programme has been realised. Not a line of preface is vouchsafed to the unfortunate reviewer; and one volume out of fifty is a small sample by which to test the bulk. But a glance at a few pages is enough to show even to the ignorant what are the main features of the work. First among these we are disposed to reckon the policy of comprehension, which has left little to be provided in the inevitable supplement. This, however, is a matter that can be adequately tested only by time and use. The second quality for praise is the care that has been taken in the selection of contributors—by which we mean not the fashionable tendency to run after distinguished names, but the manifest desire to find out writers who have an acquaintance with their subjects at first hand. Original work, based upon personal consultation of authorities, is not always the most readable, but it must form the only safe foundation for a standard work of reference. Those who have had the misfortune to hunt a secondhand statement through book after book will feel most grateful for the measure of security here afforded by the signatures of genuine students. A third characteristic, which we must call general rather than universal, is the subordination of fine writing to the plain record of facts. The enforcement of this rule, there can be little doubt, was the hardest duty of the editor; and the enduring gratitude of the public will be his compensation for the occasional opposition that he must have encountered. We would not be supposed to argue for the suppression of individuality in contributors. Learned men must be trusted, within wide limits, to disburden themselves of their stores of knowledge in their own several ways. Absolute uniformity of style is consistent only with a dull level of mediocrity. But in a dictionary of these dimensions, it is of the first importance to study condensation, and to avoid the diffuseness of the biographical essay, and even the descriptive comment that is so tempting to the full mind. Another noteworthy feature that cannot be passed over is the attention paid to bibliography. This appears in two forms: in the statement of sources of information appended to each article; and in the catalogue of works where the subject was himself an author. We are the more disposed to insist upon this feature, partly as marking the accuracy of modern research, but still more as it suggests the means for a further adoption of the principle of compression. A single line here may represent more labour than half a column of picturesque narrative.

As some comments in detail are expected from a reviewer, we will say that the reader who begins with the article on Addison, written by Mr. Leslie Stephen, will not only find himself interested, but will learn indirectly, in the pleasantest way, the general character which the editor wishes to stamp upon the work. If instruction be his object, let him turn to Prof. E. A. Freeman's article on Ælfred. "Queen Anne," by Prof. A. W. Ward, and "Archbishop Abbot," by Mr. S. L. Lee, both transgress the restriction we

have ventured to lay down against diffuseness. But as we have mentioned Mr. Lee's name, it would be unjust not to add an acknowledgment of the extraordinary industry he has here displayed in multifarious fields of research. Sir Theodore Martin has undertaken "Prince Albert;" concerning which we will only say that we could have spared the eulogies of Stockmar. Among names of a collective class, the careers of naval officers by Prof. J. K. Laughton and the bibliographies of seventeenth century divines by Dr. Grosart are particularly noteworthy. The military lives would be improved by more diffidence in matters of opinion and more regard for brevity. It is, perhaps, not beneath the dignity of criticism to observe that the early inhabitants of England (whom we know not how to particularise more definitely) are well represented under *E*; and that our Scotch neighbours contrive to come to the front even in such an indifferent matter as alphabetical arrangement. A few petty points may be noted in the order that we have marked them in our copy. On p. 61, col. 2, line 6, there is a curious misprint of "minority" for "ministry." On p. 108 we find the scandalous assertion that the mother of a certain learned lawyer was "a descendant of William of Wykeham." On p. 131 Mr. Leslie Stephen states that Addison "bequeathed" his works to Craggs in a touching letter. Macaulay—we are not ourselves equal to consulting original authorities—says that he "dedicated" them to Craggs. The article on Henry Aldrich seems singularly meagre. Surely the versatile Dean of Christ Church was worth at least as much space as his namesake, the Bishop of Carlisle under Henry VIII. Some of the comments upon the histories of Sir Archibald Alison are too sarcastic for ready apprehension. Concerning one Peter Allan, we find the odd statement (p. 296) that "he planted rabbits for shooting." In the article on Dr. Richard Allestree it is most inadequate to say (p. 325): "It has by some been supposed that Allestree joined with Bishop Fell in writing the books put forth under the name of the author of the *Whole Duty of Man*." A reference might at least have been given to the three papers on the subject contributed by Mr. C. E. Doble to the *Academy* during November, 1882.

But we must not conclude with fault finding, of which the *Dictionary of National Biography* can bear a good deal. Still less would we conclude with the common forms of eulogy. Our expectations of the work were high, and they have been no whit disappointed. Even Charles Lamb would have excluded it from his class of books which "no gentleman's library should be without." Yet when it is completed, what gentleman's library will be able to contain the volumes?

J. S. CORTON.

The Maritime Alps and their Seaboard. By the Author of "*Vera*," &c. (Longmans.)

It is not generally known that the principal summits of the Maritime Alps—the frosty pinnacles so conspicuous from the sea-coast—are not in the Department which bears their name. When Victor Emmanuel gave up the county of Nice, he retained for purposes of sport the watershed of the Alps down to the

lower level of chamois on the south-western side. The references made here to these mountains are almost uniformly inaccurate. But it would hardly be reasonable to complain seriously that a lady has copied without verification the erroneous statements in the books before her, when to do more might have involved her in an exploration of the arid recesses of the Alps, or the still more arid recesses of the *Alpine Journal*. The peaks she has given wrong names and heights to are outside her proper limits, for the term "Maritime Alps" in her title represents the Department of the "Alpes Maritimes." The work, however, hardly covers the field suggested by the arrangement of words on the title-page, even when these are read in a political sense. Except in the trivial record of an official tour, the interior of the Department is left untouched. "The Seaboard of the Maritime Alps" would have more exactly indicated the contents of the volume. In thus limiting her subject the author has been well advised. The inland country is a maze of narrow glens and gorges, of sun-baked slopes and grey crags on which hang walled villages, the squalid eyries of a hard-living pastoral population. Romantic beauty and historical interest both cling to the coast.

The main purpose of the author, we are told, has been to supply a "*Handbook* to the French Riviera, its picturesque aspects and past history." This pretension suggests a preliminary comparison in externals with a volume we have handled alternately with *Maritime Alps*—M. Lenthéric's *Provence Maritime*. The two volumes contain nearly the same amount of printed matter. The English book weighs three pounds, the French less than half; the one costs twenty-one shillings, the other five francs. True, the English reader gets twenty-nine illustrations of various merit as against the nine well-executed maps given by M. Lenthéric. But have not our neighbours conspicuously the best of it?

Proceeding from form to substance, we find that the scenery described is mostly comprised in the undercliff of Provence, the region of foothills which extends north of Cannes and west of Nice, between the sea and the tawny cliffs and bare downs of the rock of St. Jeannet and the Cheiron. Beyond the Var several excursions in the mountains behind Nice and Mentone are indicated. For vivid descriptions of the characteristic aspects and associations of Provençal landscape, we must look elsewhere. The "author of *Vera*" is content to give rapid roadside sketches, which reproduce accurately enough general features without any close discrimination of local colours, of the changes between winter and spring, flowertime and harvest. But her descriptions are bright and lively, and will, no doubt, tempt some of the visitors to the winter cities to extend their drives among the more distant hill towns. Those who wander beyond carriage-roads will find their guide fail them, and even in Provence such a failure is sometimes important. For instance, an account of the Estérels, which omits the fact that they are traversed in every direction by excellently kept forest paths, is no account at all. We get no description of the exquisite little pass behind the Cap Roux from Le Trayas to Agay, with its miniature porphyry defile, and its cave associated with St.

Honorat, and visited by De Saussure. Nor is there any note of the delightful stroll over the Tanneiron above Auribeau, or of the savage gorge of the Loup.

If in her country wanderings the author confines herself to comparative highways, in her historical excursions she shows an opposite disposition. From the tables of dates—in themselves open to some criticism in detail—which serve her for a starting-point, she soon branches off into obscure episodes of Provençal history. Her pages contain evidence of conscientious study of local authorities. She has, for instance, examined profitably, for her sketch of the house of St. Honorat, the recently published cartulary of the monastery.

But of that larger knowledge of history which is necessary to give to historical studies due definiteness and perspective we find few traces. Such an episode as the spread of the Moors from their lair on the Gulf of St. Tropez into the fastnesses of the Alps, their gradual repulse, and final reduction to the position of slaves in the mines, might have been made deeply interesting. It is dealt with here in a disjointed and superficial fashion. The statements that Antipolis was the first Greek colony on the coast, and that Turbia derives its name from "Turrus Via," show obvious misapprehension. But minute criticism would be out of place. Having made the needful reservations, we may acknowledge our indebtedness to the author for some agreeable reminiscences of past times in connexion with modern landscapes. The Castle of Villeneuve-Loubet summons up for her readers memories of the popes and and sovereigns who have paced its halls; Grasse recalls the story of Jeanne, Queen of Naples; Monaco the warlike feats of the Grimaldi; St. Paul du Var furnishes a picture of a mediæval walled town and fortress. "The man in the iron mask" is always an attractive subject, though lovers of romance may be disappointed at the negative results of modern inquiry. "Cannes as it was" gives a brief summary of the story of the town which has grown out of the little fief of the Abbot on the Lérins. On "Cannes as it is" and the outrages committed by the French boulevard-maker—if possible even a worse fiend than our metropolitan builder—in the once romantic dale of Cannet, a discreet silence is preserved.

The best chapters are those that deal with the life on the farms, cultivated mostly on the *métayer* system, which produce not only wine and oil, but jonquils and violets, roses and orange blossoms, peaches and pomegranates, to supply the scent and confectionery factories of Grasse and Nice. The production of such delicacies does not soften manners. The Provençal character, the author points out, is hard and narrow. Even when well to do, he spends little, living on in defiance of all sanitary considerations, in a home the bareness and nastiness of which make a northerner shudder. Self-satisfied and self-assertive, the liberty he prizes most is that of interfering with his neighbour, with whom by natural consequence he is generally engaged in an interminable lawsuit, which forms the chief excitement of his life—or did until a few years ago, when he embarked his savings in speculations which are beginning to give him more serious subject for his sordid anxieties. The native kindness

of heart, the enlarged interests, the romantic feelings so often found on the other side of the Italian frontier, must not be looked for in Provence. It is a disagreeable picture, but doubtless in the main a true one.

Some accident has happened to the index. Many of the references are two pages wrong, and some altogether wrong.

DOUGLAS W. FRESHFIELD.

Atheism and the Value of Life. By W. H. Mallock. (Bentley.)

READERS of Mr. Mallock's previous book, *Is Life Worth Living?* will not be surprised to find that this volume, like its predecessor, fails as a whole to justify its title, and would, indeed, fail to justify any title save one of the vaguest and most general character. It is not a systematic treatise, but simply a collection of five articles reprinted from the *Edinburgh Review* and the *Nineteenth Century*; and though, in his brief preface, the writer tells us we shall find "a consecutive train of thought" and "a connected and logical order" of sequence, we must say we have been unable to discover these things, and we think Mr. Mallock would have treated his readers more fairly if he had not led them to expect an intellectual continuity of treatment which he certainly does not provide. Undoubtedly every one of the essays contains references more or less definite to contemporary atheistic or agnostic speculations; but only in the fourth essay, which is a review of the work entitled *Natural Religion*, and in the fifth, which deals with what Mr. Mallock calls "Atheistic Methodism," have we any explicit references to the bearing of these speculations upon a just estimate of the value of life.

Still, though Mr. Mallock's volume is not sufficiently "beholden to its title," it contains much that is interesting in itself, and not a little that is made interesting by the writer's lucidity of exposition and buoyant freshness of style. We have very few writers who could impart the literary fascination of which Mr. Mallock is master to such subjects as those discussed in the article on "Professor Clifford's Letters and Essays" without some avoidance of their more abstruse or technical sides; but he seems rather to delight in difficulties, and though, of course, his critique is incomplete, and therefore unsatisfactory, its incompleteness is due rather to inevitable limitations of space than to any failure in the candour which admits the strength of an enemy's fortresses or in the courage which attacks them. Mr. Mallock is occasionally irritating; now and then he is *very* irritating; and in our irritation we are apt to do less than justice to qualities both of matter and manner which are really both rare and admirable. These qualities are best observed in his contributions to literary criticism pure and simple, because there we can for the moment forget Mr. Mallock the polemical ally or opponent, and remember only Mr. Mallock the writer; while on the other hand they are never less observable than in those portions of his work where he attempts a mixture of criticism and controversy. He has never, for example, written anything more flat and ineffective than the larger part of that tiresomely elaborated essay on "George Eliot on the Human Character,"

which consists partly of a decidedly commonplace review of *Theophrastus Such*, and partly of a much too obviously laborious attempt to find in that not very characteristic volume the materials for an impeachment of the philosophical views of the writer. For obvious reasons such an article could hardly escape being a failure; but we should hardly have expected from so accomplished a literary craftsman as Mr. Mallock a failure so complete and unrelieved.

On the other hand, Mr. Mallock has never, we think, achieved a greater literary success than in the article which, though headed simply "Tennyson's Ballads and Poems," is really a survey of the whole of the Laureate's work from a standpoint which has not been occupied by any previous critic. He has, of course, his inevitable generalisation, which forms a sort of ground-plan for his criticism, and which he expounds and endeavours to substantiate with his wonted transparency and ingenuity; but it is not necessary to accept the generalisation in order to appreciate the vigour, subtlety, and freshness of the general handling. These qualities, especially the quality of freshness, are all the more noticeable because Mr. Mallock deliberately chooses to linger on the best-beaten highways of thought. Who could hope either to treat or to hear treated in any but the most trite and sleep-compelling fashion such themes as the difference between lyrical and dramatic poetry, or the precise manner in which a great poet reflects the tendencies of his age; and yet these are the very matters upon which Mr. Mallock discourses in the most attractive and arresting manner. It would be difficult to find anywhere a more helpfully luminous statement than that (pp. 91-7) devoted to the former of these subjects; indeed, we can remember nothing of the kind quite so good, except a remarkably interesting analysis made by the late E. S. Dallas in the pages of *The Gay Science*, and even Mr. Dallas prepared the way for Mr. Mallock rather than anticipated him.

It is not necessary to dwell at length upon a collection of reprinted articles, which were probably perused by many of our readers at the time of their first publication. We have said little of the polemical papers, for the simple reason that it is impossible to say much without the risk of being drawn into an interminable controversy. Mr. Mallock shows in these essays, not for the first time, that he can hold his own; and the concluding article in particular seems to us valuable, not as a mere specimen of clever rapier play—though it is this—but as a weighty contribution to what is undoubtedly the most important ethical issue of our time.

JAMES ASHCROFT NOBLE.

Recueil des Instructions données aux Ambassadeurs et Ministres de France, depuis les traités de Westphalie jusqu'à la révolution française. Publié sous les auspices de la commission des archives diplomatiques au ministère des affaires étrangères. "Autriche," avec une introduction et des notes par Albert Sorel. (Paris: Félix Alcan.)

Nothing proves more certainly the high estimation in which the study of history is now

held than the assistance given by the governments of all nations to historical students by the publication at the expense of the state of valuable documents and of ancient chronicles. The issue of the important series of Documents inédits in France, and of the Rolls series and the Calendars of State Papers in England, has done much to clear up disputed questions in the early history of both nations. But the appearance of the present volume marks a new departure in France, which it is to be hoped will soon be followed in England. Hitherto the important series referred to have chiefly treated of the mediæval history of France and England, and have consisted either of revised editions of monastic chronicles or of collections of early charters; and where modern history has been touched upon, as in Mignet's and Pelet's works on the reign of Louis XIV., and the Commonwealth series of Calendars, they have never treated of the eighteenth century. Students of the history of that century have a right to complain that their wants have hitherto been neglected, and will rejoice at the new departure made by the French government.

The period in which diplomacy flourished extended from the peace of Westphalia in 1648 to the French Revolution in 1789; for, previous to 1648, resident ambassadors were almost unknown, except in special cases, and in more modern times, the electric telegraph has made ambassadors mere mouth-pieces of the different foreign secretaries, and persons of merely ceremonial importance, and they are no longer left to act upon their own account, and to have the responsibility of using their own judgment at important crises. The eighteenth century was the palmy age of diplomacy; it was the century in which the inclinations of peoples were held of no account, and alliances were made in accordance with the caprice or state-craft of Continental monarchs. The history of the diplomacy of the eighteenth century is, therefore, of the greatest importance, and it is the point on which least light has been thrown. The incidents of great wars, and the policy at home of great ministers, are fairly well known; but diplomatists are, from their very character, of a silent nature, and the archives of the various foreign offices, in which their dispatches are buried, contain the story of their labours. It is this veil of secrecy which the French Foreign Office has consented to raise on the recommendation of the "Commission des archives diplomatiques," of which the great historian, Henri Martin, was president. From their very bulk it is, of course, impossible to publish the thousands of volumes of despatches from the French ambassadors and ministers plenipotentiary, though it may be hoped that some day they will be "calendared" after the English fashion; the Commission therefore recommended only that the more or less elaborate instructions drawn up for every ambassador before departing on a foreign mission should be published and edited by competent authorities. The present volume, the first of the series, contains the instructions to the ambassadors at Vienna, and is edited by M. Albert Sorel, the well-known Professor of Diplomacy at the Ecole des Chartes; while, to quote only the names of the best-known editors, M. Rambaud is to prepare the Russian series, M. Geffroy the

Scandinavian, M. Hanotaux the Roman, and M. Armand Baschet the English.

The relations between France and Austria between 1648 and 1789 are sufficiently well known, and have been so lengthily described by many historians, that it cannot be said that M. Sorel's volume contains any new facts of primary importance; but it does show clearly the attitude of French statesmen towards Austria, and their perpetual fear, after the death of Louis XIV., of being outwitted by the Imperial ministers. The early instructions, those of the reign of Louis XIV. are those of the least importance, for Mignet's great work on the negotiations leading up to the war of the Spanish succession left little new to be said, and the policy of Louis XIV. is, with all deference to M. Sorel, sufficiently well known and sufficiently simple as regards Austria to prevent any great interest being taken in his instructions to his various envoys extraordinary at Vienna. For Louis XIV. steadily continued Richelieu's and Mazarin's policy of consistent hostility against the house of Austria in both Spain and Germany. But from the very beginning of the reign of Louis XV. a change appears in the hereditary policy; in 1717 France joined England, Holland, and Austria in the quadruple alliance to crush Alberoni, and in 1725 the Duc de Bourbon, who was then Prime Minister of France, sent the Duc de Richelieu to Vienna to secure the friendship of Austria in case of a rupture with Spain, which he expected on the refusal of Louis XV. to marry the Infanta, and his actual marriage to Marie Leczinaka. Cardinal Fleury returned to the old policy, and managed to win Lorraine after the death of the Emperor Charles VI., and Louis XV. continued it in the war of 1742-48; but a change was bound to come when the power of Prussia began to terrify French statesmen, and when the stings of Frederick the Great's sarcasms came home to M^{de} de Pompadour. This great change took place in 1757, when the old enemies, Austria and France, made an alliance in opposition to Prussia and England. This radical change of front is the one great point in the history of the relations of France with Austria in the eighteenth century, and, as might be expected, the most interesting instructions of all are those to the Comte d'Estrées and the Comte de Stainville, afterwards the great Duc de Choiseul, and author of the *Pacte de famille*, in 1756, and to the Comte de Choiseul, afterwards Duc de Choiseul-Praslin, in 1757. This alliance of Austria with France, as well of Spain with France, was the darling project of Choiseul, and he ensured its continuance by making the marriage between the Dauphin and the Archduchess Marie Antoinette. From this time the instructions all lay weight on the maintenance of the Austrian alliance, and those addressed to the Baron de Breteuil in 1774 and 1777, which are the longest of all in the volume (pp. 454-500, and 501-22) contain a masterly summary of the position of France, obviously from the hand of Vergennes, showing that the Austrian alliance is the key-stone or pivot of the French foreign policy. The suspicion of the early days after the death of Louis XIV. has disappeared, and Vergennes hopes to see as firm an alliance between France and Austria against England as there had

formerly been between England and Austria against France. This despatch of Vergennes would of itself make the volume valuable, were it to be examined only for important state papers; but its real value, nevertheless, consists in summing up shortly the actual position of France with respect to Austria at various important epochs, and the eyes with which French statesmen regarded her before and after the important treaty of Versailles in 1756.

For others than students of diplomatic history the chief interest of the volume will be found in its portraits of the Austrian statesmen and the foreign ambassadors at Vienna, which are sketched for the instruction of the departing envoys. The genius of the French for this style of portraiture is admirably exemplified in these short incisive sketches, which excite a lively hope that M. Baschet's volume will soon be published, containing such interesting points as Choiseul's opinion of the elder, and Vergennes' of the younger, Pitt. As an example of this skill in portraiture, it might be well to quote here the description of Sir Thomas Robinson, the English ambassador at Vienna in 1737, who was afterwards Chancellor of the Exchequer, and, according to Horace Walpole, "a very dull man," not because of any special excellence, for there are many as good, but because he is well known from other authorities.

"On peut croire jusqu'à présent que le sieur Robinson retournera à Vienne reprendre les fonctions de ministre du roi d'Angleterre auprès de l'Empereur. C'est un homme qui a beaucoup de connoissance des affaires générales, mais qui, dans la part qu'il peut y avoir, règle sa conduite moins sur cette connoissance que sur les idées noires qu'il se forme, et qu'il voudroit inspirer à tout le monde; mystérieux à l'extrême, plutôt par hauteur que par prudence, même avec les parties intéressées dans les affaires où il a une part principale; ne pouvant souffrir qu'il s'en traite sans qu'on lui en donne communication; épuisant toutes les manœuvres de l'espionnage auprès soit des ministres de la cour, où il réside, soit de ceux des autres puissances qui s'y trouvent; enfin nourrissant en lui une aversion d'esprit et de cœur pour la France quoiqu'il n'ait pas eu lieu de s'en plaindre, lorsqu'il y étoit chargé des affaires de sa cour" (p. 268).

Such are the interesting portraits scattered up and down the volume, and such the value of the book; but a word must also be said for the able introduction and generally correct editing of M. Albert Sorel, who, however, makes a strange slip on p. 151 when he says that Queen Anne succeeded her "husband" William III., instead of her brother-in-law, in 1703. Would that there were in England a "commission des archives diplomatiques," and that the English government might spend a little money in elucidating the diplomatic history of the last century, as well as on Calendars of State papers and early Chronicles. The example has been given by France, and if the authorities would appoint some competent person to fill the post of *commissaire*, occupied in France by Camille Rousset, he ought to be able to gather round him as many trustworthy editors as M. Rousset has done, and publish volumes which, like this of M. Sorel's, would be of value to historical students throughout the length and breadth of Europe. H. MORSE STEPHENS.

Life of Edward Miall. By his son, A. Miall. (Macmillan.)

It is a moot point whether a biography should be regarded as the just reward or the unmerited misfortune of a well-spent life. Often, no doubt, the fear of it adds a new sting to death; yet many men have obviously conducted their correspondence throughout life with forward glances towards a posthumous "Life and Letters." However this may be, the biographer, be he never so pious and filial, finds himself labouring sometimes upon barren ground, and discovers that in discharging the duty cast upon him by the expectation of "friends," he is undertaking a task which he knows he cannot creditably perform. Such must surely have been Mr. A. Miall's feeling on completing this life of his father. Although it cannot be said that his work has any literary charm, he has not failed either in diligence, zeal, or temper, and yet the result of it all is but an unprofitable book.

Mr. Edward Miall was a man of high character, pure motives, blameless conversation, and the most indefatigable industry. But his life was not eventful. It does not appear that the part he played brought him acquainted with many of those whom the world is anxious to know, and above all he was a man of but one idea. Of itself for the biographer's purpose this is a fatal defect, for a life so absorbed has little richness or breadth or common human interest. But when the fixed idea is one so abstract or so polemical as Voluntaryism, or, as Mr. Miall quaintly would have it, "willinghood," it is difficult to see the interest of such a life except in its one relation to a political and religious movement.

Mr. Miall was in his early years, and by his own bent, trained for the ministry; but he looked back on his earlier errors too austere.

"Every religious check was thrown away, conscience sank into a state of torpor . . . and the kindness of Providence only preserved me from the grossest excesses of immorality. My Sabbaths were no longer employed in pious pursuits. Fond of reading, I selected my books without the slightest reference to the character of the day. But, hardened as I was, there were some works which I could not peruse without compunction."

The works in question were Foote's plays. Before he was twenty-three, Mr. Miall "supplied a pulpit" at Ware, and promptly married; but, finding himself on a stipend of £150, irregularly paid, in what his son calls a "straightened position," he removed to another congregation at Leicester. There he remained until 1840, and there it was that in the course of the agitation against Church rates he became stirred with fiery zeal against the Church of England as by law established. He avers—

"I believe that in the eye of Christ this connexion between the Church and State is adulterous and most offensive; that, impious in principle, it is, as might be anticipated, most deadly in its effects; that it is the prolific parent of bigotry, cruelty, rapacity, and hypocrisy, a terrible scourge to the nation, a tremendous obstacle to the progress of Divine truth."

Thenceforward this was his fixed idea. In order more effectually to advocate the cause he had at heart, he conceived the idea

of starting a newspaper in London, which would be a rival to the established Dissenting organ, the *Patriot*, and would advocate the voluntary principle. After a vigorous canvass of the provincial Dissenters, the *Nonconformist*, with Mr. Miall as editor, was started in April 1841, and for a period of nearly forty years Mr. Miall continued to be the responsible editor and to contribute leading articles. There is something about this feat so stupendous, an endurance so colossal, to have written almost every week for forty years something on Disestablishment, that the wonder is that any other faculty should have survived at all. Yet Mr. Miall not only fought his party's battle in print, he was enthusiastic in organising its operations. In 1844 he took a large part in forming a society with the characteristic title of "The British Anti-State-Church Association," now the Liberation Society, and he was a constant speaker at its meetings. His business through life was to repeat on paper and on platforms the arguments for free churches, and his relaxation was politics. Judge if his time was occupied. Before he came to London he wrote to his wife, "All advise me to keep myself clear from London society; all regard that as the greatest peril I shall have to encounter." His career, however, was never in much jeopardy from this cause: he and London society seem to have troubled one another very little. Except in connexion with his work he appears to have seen few but the members of his own family, and if he did but go away for a holiday, "the *Noncon.*" followed him *pode claudo*, and he spent his mornings in reading it.

In fighting contested elections he was at times courageous and indefatigable. He stood first for Southwark in 1845 on what were then advanced Radical lines, but without success. Sir William Molesworth headed the poll. In 1847 he offered himself at Halifax. He writes to his wife—

"There is much about this contest that gratifies me. All parties are mutually courteous. Not a whisper of personality is breathed. My committee is composed almost wholly of religious men, who make every day's work a matter of prayer. I have had much talk with the different electors almost wholly upon spiritual subjects."

However, on the polling day the numbers were—Edwards, 509; Wood, 506; Miall, 349. His next adventure was more fortunate. He was returned for Rochdale in 1852, and kept his seat for five years. During this time his observations upon leading men were graphic, but curious. Of Mr. Disraeli he says, during his Budget speech 1852:—

"He has schooled himself into seeming impassibility. That face of his of brazen hue is neither flushed nor pallid. His eye does not blink. His voice does not falter. His hand does not shake. . . . He carries *nonchalance* to absurd extremities. Occasionally he will adjust his necktie; once he positively cleaned his nails."

And a little later he remarks:—

"In argument he is strong on episodes, the main point he evades . . . and when, after a three hours' speech, he sits down, he leaves upon your mind a sense of profound regret that so powerful an intellect should be without the guidance of a conscience."

At the general election of 1857, after Mr.

Cobden had carried his vote of censure on the Government's Chinese policy, Miall, along with Bright, Cobden, Fox, Milner Gibson, and others, lost his seat. For some years he remained out of Parliament, though not out of politics. At last, after two unsuccessful attempts at Bradford in 1867 and 1868, he was returned by that borough in 1869.

Of his Parliamentary career there is not much to be said. He had the good sense not to thrust himself forward in general debate, but on his own subject he for the most part created a favourable impression. From 1858 to 1861 he had been a member of the Royal Commission on Education, and consequently in 1870 he urged with the greater weight the Nonconformist objections to Mr. Forster's Education Act. So vigorous was he, indeed that on the third reading there was quite a passage of arms between him and Mr. Gladstone. Next year, however, after his speech on his Disestablishment motion, for which he had been literally in training, foregoing even his pipe, during eight months, he won compliments both from Mr. Gladstone and Mr. Disraeli. Failing health, however, after 1873 led him to resign his seat, and he retired into private life almost entirely.

How greatly the aspects of the question, to which he so long devoted himself, had changed in the course of five-and-thirty years he must have fully realised. Much as the efforts of Mr. Miall and his friends undoubtedly accomplished in church reform and the removal of religious grievances, it is doubtful if the main object for which he struggled was much nearer attainment when he ended than when he began. It is not to be supposed that Mr. Miall's fame will long endure except among those Nonconformists who were especially of his way of thinking; yet he was for a long time a considerable figure in politics, and until his name is forgotten he will be remembered as a very unselfish, honourable and devoted man.

J. A. HAMILTON.

Miss Brown: a Novel. By Vernon Lee. In 3 vols. (Blackwood.)

WHEN it was announced that "Vernon Lee" was about to publish a novel, those acquainted with the other writings of the author felt assured of a literary success. That it would be vivid and brilliant in its description and dialogue, and that its characters would be well defined seemed also a matter of course. In these expectations none will be disappointed. Moreover, that it would be something more than a mere story of individuals was evident. The author of *Euphorion* looks at life and art with too comprehensive a vision to write a novel of mere incident, or even of mere character, and therefore we are not surprised to find that *Miss Brown* is not only a vivid picture of human life, but also both a severe satire and a tragedy. The subject of the satire is the falseness of the aesthetic ideal, and the tendency of its worshippers to gravitate towards the grossest immorality, while that of the tragedy is the sacrifice, to put it shortly, of a noble character on the altar of gratitude. These difficult themes are treated with great brilliance and originality, and with a literary and imaginative force which demand recognition. It is only to be regretted that both tragedy and satire are

extremely and needlessly painful and unpleasant.

First, as to the satire, for we prefer to view it as such, rather than an accurate picture of any section of modern cultivated society, the author would seem to have adopted the view of the late Lord Beaconsfield, that "the worship of Beauty generally ends in orgy." There is sufficient truth in this concentrated sarcasm to make a legitimate basis for a novel; and there can, we think, be no doubt that the book has been partly inspired by a sincere desire to hew down, root and branch, what appears to the author to be a very upas-tree in modern society. That a very reprehensible amount of loose talk, loose manners, and looser writing has not only been tolerated, but fostered, in certain circles by those who cant about "art" and "passion," is not to be denied. The ideas started by a few notable poets and artists have run riot among weaker followers; and this is, no doubt, a proper subject for satire. But, in the first place, so unsavoury a theme becomes sickening unless treated with the tact and taste of a Thackeray; and in the second, Vernon Lee presents us with only one side of a very large subject, which should be dealt with completely or not at all. If, on the one hand, we have a few followers of a certain school who have deemed it glory to indulge in nasty dreams, and to be credited with thoughts and actions of which they should be ashamed, there are, on the other, hundreds to whom the art and poetry of the same school has been food instead of poison. It has done its work for good as well as evil, and it is not fair to show us only its bad effects—and those so very strongly—any more than it would be fair to judge the quality of a heady wine by a description of the drunkards who have made ill use of it.

But we must give all credit to the purity of the author's intention. Pitch has been handled not altogether without its usual effect, but the object has been a worthy one. All the nauseous group of artists and poets and their more or less foolish and vicious train are used as a background to a character of great purity and dignity. *Miss Brown* herself is a creation of which the author may be proud. A girl endowed with singular beauty of the Rossetti type, half Italian, and less than half-educated, is discovered by Mr. Hamlin, an artist and poet of high reputation. At the time of her discovery she is employed in the humble capacity of nursemaid in the family of Mr. Perry, another artist of the same school, who has taken up his residence in Italy. That such a splendid creature should be lost to art and society seems to Mr. Hamlin to be one of those sacrifices which cannot be allowed. He determines to save her from the mean and commonplace career before her, and for this purpose settles upon her one-fourth of his income, leaving her completely free to marry him or not as she likes after she has been educated. To this curious compact *Miss Brown*, being then in love with him, consents, against the wishes and warnings of her sensible but rather brutal cousin Robert. She goes to a queer kind of school in Germany, where her empty mind is filled up with all the usual learning and accomplishments required of ladies in cultivated society, except religion,

about which she is not to be worried; and Mr. Hamlin himself takes care that she shall be fed with the least objectionable productions of his school of poetry, and writes her long letters in order to duly imbue her with his theories of art and life, and turn her out a first-class "aesthete." But Miss Brown, though not at all rebellious, indeed, working as hard as possible to do her duty in that station of life to which she is called—by Mr. Hamlin—cannot, for the life of her, develop into anything but a simple and high-minded woman, with far more interest in the struggles and sufferings of the class from which she sprang than in the most exquisite work of Burne Jones and Morris. Pure, truthful, unimaginative, practical and just, she finds her position in London, as the beauty of the hour and the cynosure of Maudsleys and Postlethwaites, just tolerable at first for the sake of Hamlin, but false and uncongenial to her nature. Afterwards, when her idol is broken, and she discovers in disgust that Hamlin is a mass of selfishness, weakness, affectation, and sensuality, the thought of marrying him becomes hateful to her. Then she turns, not for affection, but for interest in life, to her cousin Robert, who has made money as an engineer, and become a prominent Radical, earnest in the education of the lower classes. She now looks forward to her freedom. She will release Hamlin from his promise, return him his property, keeping only sufficient to enable her to start as a teacher. Now she studies political economy harder than she ever studied art and poetry, and with far greater delight. She watches with pleasure Hamlin's evidently growing attachment to his cousin, and her emancipation seems sure, when she is struck down with brain fever. She becomes convalescent only to learn that the passion of Hamlin for his cousin has culminated, but not in marriage; and when these two return to England, she finds that his debasement is being completed by drinking. Miss Brown makes up her mind at once; she burns all her notes on political economy, claims from Hamlin his promise to marry her, allows him to think that she loves him, and so the book ends with its one star throwing herself voluntarily into the mud. This is a short description of the career of a character conceived with great force, and carried out with greater consistency almost to the end. But the end, besides being unutterably sad and extremely repulsive, seems to me false. Although Miss Brown throughout has a natural tendency to self-sacrifice, she has too much rectitude to enter deliberately into a life which would be a ceaseless lie, and too much common sense not to see that the sacrifice would be vain.

Nor can I entirely approve of the method, clever though it be, which Vernon Lee has adopted to satirise a small but well-known section of society. Vernon Lee has dealt with it much in the same fashion as the Oriental robber, who, after plundering a caravan, stripped all his victims naked, threw all their clothes into a heap, and then amused himself with watching them struggle for shoes and turbans, shawls and burnouses. By first separating and then mixing haphazard the christian and surnames, the places of residence, the elements of character, and domestic conditions, appertaining to a number of more

or less known persons, the author has, indeed, effectually confused their identities, but has nevertheless ridiculed them individually as well as collectively.

Moreover, Vernon Lee has forgotten that to trick up an imaginary character in the clothes of a well-known person, though it will not prejudice that person in the eyes of those who know him, may well do so in the eyes of those who only know his clothes. If Mr. Jeremiah Brown, a perfectly harmless and worthy person, but well known to the public as a writer of verses, has a villa at Fulham, and a novelist introduces a poet of the name of Jeremiah Smith, with a villa at Fulham, where he keeps a harem, persons who do not personally know Mr. Jeremiah Brown will jump to the conclusion that he keeps a harem. This is a serious and by no means imaginary objection to the satiric method of Vernon Lee.

Altogether it is extremely difficult to form an impartial opinion of this remarkable novel, distinguished as it is by both faults and virtues of no common kind. If it makes one regret that it was written it also makes one look forward to another from the same hand. Let us hope that next time Vernon Lee will let us see more of the "stars" and less of the "mire," and, at least, will not again create a pearl of great price only in order to cast it to the swine. COSMO MONKHOUSE.

CURRENT THEOLOGY.

Brief Thoughts and Meditations. By the Archbishop of Dublin. (Macmillan.) Just now, when Dr. Trench is putting aside his high office as a weight not to be longer borne, this little book will have to many a particular interest. But in itself it is noteworthy. Few things are more valuable, as Solomon and Aristotle long ago pointed out, than the decisions of the wise who have had experience of life, even when they give no reasons. There is a time for dialectic and a time for pronouncing judgment. What Dr. Trench gives us in this volume is a series of quite short meditations upon things familiar enough in themselves, but made new by his penetrating insight and felicity of illustration, and made forcible by the simple dignity of his English style. In a day of much florid and vapid religious writing, such utterances will be welcomed.

Balaam: an Exposition and a Study. By Samuel Cox. (Kegan Paul, Trench & Co.) Dr. Cox, almost the first among homiletic expositors, offers us a character-study of Balaam, whom he regards as almost as great a moral paradox as David, and to whom he applies the too familiar line of Pope—

"The wisest, brightest, meanest of mankind."

His style is rhetorical, but is not over-laid with flimsy ornament, and his work, however disappointing to the historical student, will be most useful to those who regard the Bible from a purely didactic point of view. He tells us that "most of our better scholars" consider the "chronicle of Balaam" to have come from the prophet himself (Dr. Cox justifies the word "prophet" against Keil by an appeal to "a still higher authority—the New Testament," p. 37). As St. Paul became his own biographer when put upon his defence, so Balaam, when expecting his judicial sentence (see Num. xxi. 8), presented the story of recent events in the aspect most favourable to himself. There is much ingenuity in this, and much fair-mindedness in Dr. Cox's examination of his hero's character. He makes no pretence of

criticism, and assumes that all the features of character ascribed to Balaam anywhere in the Bible really belonged to this antique soothsayer. Browning would have done it better, and would have made his intuition seem true even to the most inveterate critic. For our part, however, till Browning comes, we take our stand with Kalisch, the critic, against Dr. Cox, from whose admirable, though too long, commentary on Job we had expected a nearer approach to a historical point of view. The translation of the seer's oracles, however, does deserve from us a meed of recognition.

Laws of Christ for Common Life. By R. W. Dale. (Hodder & Stoughton.) These sermons are of the practical order. The subjects treated are such as "Temperance," "The Sacredness of Property," "Political and Municipal Duty," "Family Life," "Sympathy," and all are treated with great good sense and considerable knowledge. Dr. Dale has nothing of that power—seen at its height in Dr. Newman—by which common things, suspended in a spiritual atmosphere, are seen to touch the spheres. His method is the casuist's, from principle he deduces practice, and his judgments seem very sound and robust.

An Historical Account of the Scottish Communion Office, by John Dowden (Edinburgh: R. Grant & Son), is a very interesting volume for liturgical students, competently edited by a sound and careful scholar. The importance of the formulary in question is due to its being, on the one hand, more closely allied to the Oriental liturgies in its canon than any other western form; and, on the other, to exercising a much wider influence than it could do as merely a document of the small episcopalian body in Scotland, seeing that it has been adopted with but slight verbal changes by the Protestant Episcopal Church in America, already a very powerful society, and growing at a much greater rate than any other denomination in the United States. These points are touched on in the introduction, after which comes the history of the existing office, beginning with the liturgy for Scotland, 1637 (commonly called "Laud's Book"); continuing with a description of the circumstances of liturgical worship in Scotland from 1661 to 1712; then giving some account of the Nonjurors, English, and Scottish; and so coming to the existing Scottish office, and its daughter form in America. This terminates the first section of the volume, and the second is occupied with the text of the office. After some preliminary remarks, the text of the earlier part of the office is printed in full, and is followed by a reduced facsimile of the edition of 1764, published by Bishop W. Falconar, then Primus, and Bishop R. Forbes. A reprint of the American Communion Office is added, and then several notes, textual and liturgical, are supplied in illustration. Twelve appendices conclude the work, being as follows: Reprint of the Office from the Book of 1637; Formula of the Invocation in certain Liturgies and Liturgical Services; Bibliography of the Scottish Communion Office; Canons of the Scottish Church bearing on the Use of the Office; Form of Consecration recommended by Archbishop Sancroft; Collation of the Scottish Office of 1764 with Bishop Seabury's of 1786; Reprint of the Nonjurors' Office of 1718; Bishop Abernethy-Drummond's Edition; Conspectus of the Structural Arrangement of the Parts in Certain Liturgies; Some Traditional Practices connected with the Scottish Office; Eucharistic Doctrine of the Nonjuring School; On the Use of the Word "Become" in the Invocation in the Scottish Communion Office. All these show the marks of ripe scholarship and careful accuracy of statement; while there is a wholesome absence of diffuseness throughout, so that the volume

is a really useful and welcome clue to the somewhat intricate subject with which it deals.

The Kingdom of God Biblically and Historically considered. The Tenth Series of the Cunningham Lecture. By James S. Candlish. (Edinburgh: Clark.) In these interesting lectures Prof. Candlish, after describing the efforts and longings of the pre-Christian Gentile world for "a perfect society" and discussing the relations of the Jewish theocracy to the Christian system, exhibits the doctrinal idea of "the Kingdom of God" as it is to be found in the teaching of Christ and in the teaching of the Apostles; and subsequently sketches some of the chief historical attempts to effect a practical realisation of the Kingdom of God upon earth, as, for example, in the Holy Roman Empire, and (on a smaller scale and with a more short-lived destiny) by the Anabaptists of Münster in the sixteenth and the English Puritans in the seventeenth century. The concluding lecture on the relation of the Kingdom of God to modern social ideals shows more familiarity with the speculations of theologians than with the pressing problems presented by socialistic and political reformers.

The Spirits in Prison, and other Studies on the Life after Death. By E. H. Plumptre. (Isbister.) To the very wide public that is interested in the problems of Christian eschatology (and the extraordinary success of Canon Farrar's *Eternal Hope* shows how wide that public is) Dean Plumptre's work will be welcomed. The Dean's proclivities are already well known from his letter to Canon Farrar; but it need hardly be said that there is here a moderation of expression and such competent learning in dogmatic theology as were notably absent from the two books of his friend. This work and Pusey's *What is of Faith?* are probably the only contributions to the recent controversy that will survive. Like everything of Dean Plumptre's, this book is written with much vivacity of style, and is entertaining from beginning to end.

Sermons. By the late John Service. With a Prefatory Notice. (Macmillan.) The enthusiastic *éloges* to be found in the Prefatory Notice, from the pens of his friends Prof. Nichol and Prof. Edward Caird, will tempt many to examine this volume of Dr. Service's sermons. The reader not already acquainted with Dr. Service's writings will be surprised to find here something very different from what he is wont to associate with the pulpit discourses of the Church of Scotland. There is much earnestness and thoughtfulness in Dr. Service's sermons; but the style, it must be confessed, reminds one too much of the newspaper article, and is suggestive of the permanent influence of such work in the author's early life as the editing of the *Dumbarton Herald*. That Dr. Service was a man to inspire feelings of warm attachment is plain, yet we believe his influence was largely due to that part of the personality of the preacher which is incapable of being transferred to paper.

We have received *Simon Peter: his Life, Time, and Friends*, by Edwin Hodder (Cassell); *A Year's Ministry*, by Rev. Alex. MacLaren (Hodder & Stoughton); *A Short History of the Episcopal Church in America*, by Rev. W. Benham (Griffith, Farran & Co.); *The Prayer-Book in Order as used, arranged for 1885* (Henry Frowde); *A Reasonable Faith: Short Essays for the Times*, by Three "Friends" (Macmillan); *The Profitableness of the Old Testament Scriptures: a Treatise founded on 2 Timothy iii., 16, 17*, by W. A. Bartlett (Rivingtons); *St. Paul the Author of the Acts of the Apostles and of the Third Gospel*, by Howard Heber Evans (Wyman); *From "The Beginning" to "The Glory"*; or, Scripture Lessons

for Bible Classes, by Lady Beaujolais Dent (Nisbet); *Present Day Tracts*, on Subjects of Christian Evidence, Doctrine, and Morals, Vol. V. (Religious Tract Society); *Evangel and Evangelist: Six Addresses on St. Matthew and the Gospel*, by Arthur Carr (S. P. C. K.); *Short Practical Sermons*, by F. Case (Williams & Norgate); *The Christian's Jewels: a Selection of Meditations upon the Christian Graces*, translated chiefly from the Fathers, by T. H. L. Leary (Nisbet); *An Outline of the Future Religion of the World*, with a Consideration of the Facts and Doctrines upon which it will probably be based, by T. Lloyd Stanley (Putnams); *The Shoes of Peace*, by Anna B. Warner (Nisbet); *The Great Passion-Prophecy Vindicated*, by Brownlow Maitland (S. P. C. K.); *Forschungen zur Geschichte des Neutestamentlichen Kanons und der altkirchlichen Literatur*, von Theodor Zahn, III. Theil: Supplementum Clementinum (Erlangen: Deichert); *Up High! a Collection of Ten Tracts*, by Rev. G. Everard (Nisbet); *The Divine Origin of Christianity*, by R. S. Storrs (Hodder & Stoughton); *History of the Church of God, from the Creation to the Present Day*, by the Rev. B. J. Spalding (Burns & Oates); *Inspiration: a Clerical Symposium*, edited by the Rev. F. Hastings (Hodder & Stoughton); *The Antiquity and Genuineness of the Gospels: a Handbook of the Confirmatory Arguments in support thereof* (W. H. Allen); *Thoughts for Men and Women—The Lord's Prayer*, by Emily C. Orr (S. P. C. K.); *Duty and Faith: an Essay on the Relation of Moral Philosophy to Christian Doctrine*, by Julius Lloyd (Manchester: Heywood); *Creation; or, the Biblical Cosmogony in the Light of Modern Science*, by Prof. Arnold Guyot (Edinburgh: Clark); *Travels in Faith, from Tradition to Reason*, by R. C. Adams (New York: Putnams); *The Consolations of Science; or, Contributions from Science to the Hope of Immortality, and Kindred Themes*, by Jacob Straub, with an Introduction by Hiram W. Thomas (Chicago: Colegrove Book Company); *Knocking: the Words of Jesus at the Door of the Heart*, by Dr. J. R. Macduff (Nisbet); *Readings for Public Worship and the Home*, by John Page Hopps (Williams & Norgate); *Moments on the Mount: a Series of Devotional Meditations*, by Dr. Geo. Matheson (Nisbet); *Consecrated Recreation; or, the Christian's Leisure Time*, by the Rev. Ernest Boys (Nisbet); *The Bible for Beginners*, by John Page Hopps (Williams & Norgate); *Beyond the Shadow; or, the Resurrection of Life*, by James Morris Whiton (Hodder & Stoughton); *Mission Addresses*, delivered in the Trophy Room, St. Paul's Cathedral, to Members of the London Lay Helpers Association in preparation for the London Mission, 1884-85 (S. P. C. K.); *Some Thoughts for Advent; being Daily Readings for the Season*, by the Author of "Some Thoughts for Holy Week" (S. P. C. K.); *Every Eye: Practical Addresses for Advent and for the Old and New Year*, by the Rev. George Everard (Nisbet); *Reasons why we should Believe in God, Love God, and Obey God*, by Peter H. Burnett (Burns & Oates).

NOTES AND NEWS.

MR. JAMES BRYCE's essay on *The Holy Roman Empire* is now being translated into Italian by Count Ugo Balzani, and will be published in the spring by Signor Vallardi, of Naples.

MR. J. THEODORE BENT has in the press a work entitled *The Cyclades: Life amongst the Insular Greeks*, containing accounts of antiquities and folk-lore collected during two winters' sojourn there. We understand Mr. Bent will shortly go to continue his explorations in the Sporades.

MR. S. S. LLOYD is preparing a translation

of *The National System of Political Economy*, by Friedrich List.

THE Life of Ralph Waldo Emerson, by Oliver Wendell Holmes, will be issued immediately by Messrs. Kegan Paul, Trench, & Co.

MESSRS. LONGMANS will publish this month *In the Lena Delta: a Narrative of the Search for Lieut.-Commander De Long and his Companions*, followed by an account of the Greely Relief Expedition, and a proposed method of reaching the North Pole, by George W. Melville, edited by Melville Philips.

ARRANGEMENTS are being made for publishing the correspondence of the distinguished politician and philosopher, Dr. Arnold Ruge, who resided among us a whole generation. Those who may be in possession of any of his letters in German, English or French, are particularly requested to communicate them either to Dr. Paul Nerlich, 9, Grossbeeren Strasse, Berlin, S.W., or to Mrs. Ruge, 7, Park Crescent, Brighton. Originals will be returned to the senders, if desired.

MESSRS. KEGAN PAUL, TRENCH, & Co. will publish immediately a new work, entitled *Politics and Economics*, an essay on the nature of the principles of political economy, together with a survey of recent legislation, by the Rev. W. Cunningham, author of *The Growth of English Industry and Commerce*.

A NEW edition of Mr. George Macdonald's volume of poems, *A Book of Strife*, in the form of the Diary of an Old Soul, is in preparation.

A WORK by Dr. Hestel, of Copenhagen, upon Over-pressure in Danish Middle-Class Schools, is considered to have so much bearing upon the similar question in this country that a translation has been prepared under the direction of Dr. Crichton Browne, who will contribute a special introduction to the English edition. The volume will be published in a few weeks by Messrs. Macmillan & Co.

IN our notice of M. Jules Verne's *Kéraban the Inflexible* (ACADEMY, December 13) we asked what had become of the author's *L'Archipel en Feu*. The editor of *Youth* informs us that the serial rights of that story have been acquired by the proprietors of that journal, and that the publication of it will commence early next year.

THE new volume of "The Knowledge Library"—*How to Play Whist*, with the Laws and Etiquette of Whist, Whist Whittlings, and forty fully annotated Games, by "Five of Clubs"—will be published this month.

Ichabod: a Portrait, is the title of a two-volume novel, just ready, by Miss Bertha Thomas. Mr. T. Fisher Unwin is the publisher.

MESSRS. CASSELL & Co. will publish next week a work entitled *The Year-Book of Treatment*, a Critical Review for Practitioners and Students of Medicine, with contributions by the highest authorities on the various subjects treated.

MESSRS. WYMAN & SONS will publish in a few days a book on *Practical Journalism*, by Mr. Arthur Reade. The same publishers also announce a new work on *New Zealand*, by Mr. Arthur Clayden, the author of *The England of the Pacific*, &c.

THE January number of *Blackwood* contains a story translated from the Chinese by a well-known scholar, who has given to it the title "Within His Danger." We are informed that the outline and incidents of the tale are faithfully reproduced from the Chinese original, although the translator has found it necessary to deal somewhat freely with the form of the narrative in order to render it acceptable to English readers.

MAJOR GEORGE HOPE VERNEY will publish this month with Messrs. Longmans a work entitled *Cheese Eccentricities*, which will treat of

four-handed chess, chess for three, six, or eight players, round chess for two, three, or four players, and several different ways of playing chess for two players.

A NEW weekly newspaper is to be published in February next under the title of *The Lady*; a Journal for Gentlewomen. It is to be essentially English in its character, and will represent an attempt to treat fashions and all other matters in which ladies are concerned from an English point of view.

MESSRS. WYMAN & SONS announce the early publication of a little brochure under the title of "The Siege of London," by Posteritas, which they describe as being "in the nature of a warning and a prophecy."

Beliefs and Opinions of a Unitarian is the title of a work to be issued early in 1885 by the British and Foreign Unitarian Association, London. The author is the Rev. S. Fletcher Williams, of Birmingham (formerly of Liverpool), one of the editors of the *Unitarian Herald*.

THE *Derbyshire Courier*, which claims to be the oldest penny newspaper in the country, becomes a bi-weekly from the beginning of this year.

ON December 22 Prof. Giacomo Barzellotti delivered to a large audience at the Circolo Filologico di Florence, a lecture on the life and writings of the late Karl Hillebrand.

MESSRS. DODD, MEAD & Co., of New York, will publish early this year Dr. Baird's *History of the Huguenot Emigration to America*.

MR. WHITLEY STOKES has been elected an honorary member of the Society of Cymmrodorion.

THE Christmas number of the New York *Independent* contains a new poem by Mr. Whittier.

M. FRANÇOIS COPPÉE's reception into the Académie française on December 18 attracted an unusually large audience, amongst which there were many ladies. M. Coppée had perhaps not altogether a congenial subject for his eloquence, the predecessor whom it was his duty to praise being M. Victor de Laprade. The discourse, however, made a favourable impression, though some of the journals make merry over the fact that M. Coppée several times unintentionally fell into alexandrines. The address of welcome was delivered by M. Victor Cherbuliez.

MR. G. PARKER, of Oxford, sends us the following extracts from parish registers relating to the Shakspeare family in Buckinghamshire:—

Monks Risborough.—Burial in 1593 of "Widow Shakspeare wife of [blank], vij Decem-ber."

Aylesbury.—Baptism in 1619 of "Richard the sonne of Leonard Shakspeare Decemb: the 20th."

M. ALEXANDRE DUMAS has presented to the Théâtre-Français a document bearing a signature of Molière, which is the only specimen of the great dramatist's handwriting known to exist.

AT the meeting of the Clifton Shakspeare Society held on December 20, 1884, the following papers were read:—"The Natural Tendency of Shakspeare's Mind," by Mr. J. W. Mills, who combated the theory that the bent of Shakspeare's mind was decidedly comic, a theory which had been advanced by Skottowe, who based it upon his own statement that Shakspeare's tragic characters were copies, while his comic characters were almost entirely his own; "Notes on the chief Plant-Allusions in *Love's Labour's Lost*," by Mr. Leo H. Grindon; and "The Metre of *Love's Labour's Lost*," by Mr. J. W. Mills.

THE *Indépendance Belge* notes as a sign of the "Anglomaniya" prevailing in Belgium that it has become the fashion to send "Christmas cards" bearing complimentary inscriptions in English.

THE death is announced of D. José Maria Goizueta, the author of *Legendas Vascongadas* (1850), which has been often translated, and of several other historical novels.

MESSRS. SAMPSON LOW & Co.'s annual analysis of the book trade, compiled from their *Publishers' Circular*, shows that the improvement commenced in 1883 has been continued (though the same rate of progress has not been maintained) during the past year. The total number of new books published in 1884 was 4,832, being an increase of 100 as compared with the preceding year; that of new editions was 1,541, which shows an increase of 128. Of the several classes into which the year's publications are divided in this table, the first place is taken by theology, with 724 new books and 205 new editions, being an advance of 17 as compared with the previous year. Juvenile literature, which in 1883 headed the list with 939 publications, now comes second, the number having fallen to 757. There is a reduction of 8 in educational works, in medicine and surgery of 38, and in "belles-lettres, essays, monographs, &c.," of 65; in all other departments there is more or less of improvement.

ORIGINAL VERSE.

TWO SONNETS.

I.

Mid-Ocean: Sept. 11, 1884.

Wild fields of Ocean, piling heap on heap
Thy mountainous wealth of water, but to fling
Abroad in spendthrift haste, still gathering
And scattering to the winds what none would keep;
Thou can'st not know so sweet a thing as sleep
For all thy toil, nor hope whereto to cling,—
Ploughed by the winds in one unending spring—
What harvest of the storm hast thou to reap?

My spirit owns, but will not bend before
This dull brute might, and purposeless, of thine;
The sea-bird resting on thy wave is more
Than thou, by all its faculty divine
To suffer; pang is none in this thy roar,
And all the joy that lifts thy wave is mine!

II.

Niagara: Sept. 27, 1884.

Almighty voice that callest me from sleep,
Sleepless thyself through all the past of time,
And still unspent, inscrutable, sublime,
What answer can I make thee but to creep
And hide my silence in the all sheltering deep
E'en of the music? Clash of rhyme on rhyme
Offends mine ear as 't were a futile crime,
Breaking the peace which reverence should keep.

Yet for my worship lacking better way,
And seeing how thy strength is crowned with grace,
And maddened with the beauty of thy face,
I am constrained to cry as best I may

And tell thee with my faint, adoring breath
That at thy hand I fain would taste of death.

CORRESPONDENCE.

DESTRUCTION AT ATHENS.

Somerset, Wells: Dec. 23, 1884.

May I be allowed to raise, if not a protest, which seems to be too late, yet at any rate a wail over the wholesale destruction which, as I gather from your last number, has been lately wrought on the Athenian akropolis? If the description given by Mr. Hirst is accurate, any one who loves the associations of that memorable spot in their fulness may indeed wail. The akropolis of Athens has had a long history, a history which has gone on from pre-historic days to our own. And our own days have seen some of its most memorable pages. There Sulla marched in as conqueror; thence Alaric turned away; thither the Bulgarian-slayer went up to pay his great thanksgiving; there ruled Frankish grand-sires and Italian dukes; there, while creeds rose and fell, the house of the Virgin still remained the house of the Virgin; and, not last of its memories, Gouras and Church and Odysseus and Karaïskakís fought for freedom within and around its walls. On such a spot as this, on whose soil and whose monuments the history of the world has been thus written age after age, every fragment of every age deserved to be preserved with religious care. What gave the spot its charm was not the memory, not the monuments, of any one age, but the gathering on one spot of the memories and the monuments of so many ages. On the akropolis of Athens, as on the akropolis of Corinth, the great lesson of the Unity of History was indeed written. And now, it seems, that lesson has been wiped out. One ruthless act was done before I ever saw the place. The tower of the dukes had been swept away. And now it seems that every relic of days later than some arbitrarily chosen date has gone after it. The place is to be brought back to what it was in "Grecian times." Of course it cannot be brought back to what it was in "Grecian times"; and further, what are "Grecian times"? Times, it may be, before Sulla or before Alexander. But when I saw the akropolis there were remains of at least four dates earlier than Sulla. There was work of the days of Periklès; there was work of the days of Themistoklès; there was work of two periods older than Themistoklès. If a zealot for the fifth century B.C. calls for the destruction of work of the days of Justinian, why should not a zealot for unrecorded times call for the destruction of work of the days of

Periklès? There was a piece of primæval wall to be seen; if we swept away the Parthenon and the Propylæa, we might perhaps see more of it. Those comparatively modern buildings stand greatly in our way when we wish to call up the picture of the rock as it stood in the days of Thésæus.

When will men learn that history is one; that the interest of an historic spot does not lie in the memories of one moment only, but in the records of its whole unbroken story? The Roman once ruled at Athens, so did the Frank, so did the Turk. We cannot get rid of the facts; it is foolish to try to get rid of their memorials. And getting rid of the memorials of the Turk is simply getting rid of the memorials of those by whom the Turk was driven out. I remember being once told that the dukes' tower was really only a work of Turkish times. I said, If so, keep it all the more; it is a trophy of Hellenic victory. Spain might as well destroy the Giralda of the Saracen or England destroy the Tower of the Norman.

There were two things on the akropolis of which I should greatly like to know whether they have or have not perished in the havoc described by Mr. Hirst. On the walls of the ruined church of St. Mary, once the temple of Athénè, there were still some paintings on which I fondly hoped that the eyes of Basil might have lighted on his day of triumph. Assuredly they were not of the days of Pheidias; but they were part of the history of that temple of many creeds. There was too a staircase, which, as it had once led to a minaret, was hardly the work of Iktinos or Kallikratès; yet, to my mind at least, it was closely connected with a bright day in the history of liberated Greece. From its top I heard and saw *Démós*, the very *Démós* of Athens, gathering before the palace to demand that Constantine Kanarès should again be called to save his country in its hour of need. Perhaps I am a barbarian, or a Philistine, or a Vandal, for thinking that memory as worthy as any to be found in Plutarch. If so, I cannot help it; but I should be sorry to lose a little memorial which, though a Turk must have set it up, to my mind, at least, cannot be parted from the remembrance of the hero of the fire-ships, and of the day when his countrymen showed their trust in him.

According to Mr. Hirst's account, it is too late to save anything at Athens. It may not be too late to save something in other places, if only men can be led to understand that the history of Greece did not end in 338 B.C. or 146 B.C., or even A.D. 1453, but that it was still making in A.D. 1881, and that, we may hope, it is not ended yet. EDWARD A. FREEMAN.

THE BRITISH MUSEUM CATALOGUE OF EARLY ENGLISH-PRINTED BOOKS.

York: Dec. 27, 1884.

Pray allow a humble student in bibliography to express his gratification at the appearance of this catalogue. It may exhibit, as some think, defects in arrangement, together with various errors here and there—these were to be expected—but to all scholars and librarians the work is one of great value. It may be made an excellent gauge and test of the poverty or wealth of all the libraries in the country. A reviewer stated recently that a fourth volume would probably exhaust the list of English printed books prior to the year 1640, but with this opinion I cannot agree. The library of York Minster is under my charge, the nucleus of which is the fine collection of books (chiefly foreign) made by Archbishop Matthew, who died in 1628. The Old-English portion of this consists of about eleven hundred works, which the British Museum possesses; but we

also have 450 others, which are not in this printed Catalogue. This shows that the list of *Desiderata* in the National Library must be a very large one. Many of these could easily be supplied, and it is to be hoped that the authorities will direct their special attention to their acquisition whilst they are attainable and cheap. The sum of £1,000, which is sometimes given by the nation for one scarce volume printed abroad, would supply a whole host of our Old-English books.

In conclusion, let me express again the obligations which all librarians are under to this valuable Catalogue, as well as to that most useful Dictionary of Anonymous and Pseudonymous Literature, by Messrs. Halkett & Laing (by far the best book of its kind), which is now being published by Mr. W. Paterson, of Edinburgh. It will save many a librarian days and hours of labour—often fruitless in the end. J. RAINE.

"CUSTOM AND MYTH."

1, Marlborough Road, W.: Dec. 28, 1884.

I regret that I have, in *Custom and Myth*, misnamed Sir G. W. Cox's well-known book, and mis-stated his theory of mythical animals. The necessary corrections I have made in a slip of errata. But how hard it is to put another's idea correctly! I do not even recognise my own hypothesis of Cupid and Psyche, as set forth in his letter by Sir George Cox. Manifestly he has not apprehended my notions. Again, from his remarks on my method—which, it seems, is antiquated, intricate, and scarcely a method at all—I gather that Sir George Cox does not recognise the method of evolution. Even if he did not refuse controversy, it would be of little avail for me to re-state the aim, limits, system, and arguments of my essays. A. LANG.

Settlington: Dec. 29, 1884.

When Mr. Lang attacks the accepted axioms of a great science, and assails the cautious conclusions of some of the most eminent scholars of the age, he cannot expect his novel theories to be received with unqualified assent. The conspicuous literary merits of his book must not be allowed to blind us to the absence of the scientific temper. The style is so pleasant, the arguments so superficially plausible, that it is easy to forget that we are listening to the witty pleading of an accomplished advocate rather than to the judicial utterances of the man of science who carefully weighs conflicting arguments. Mr. Lang quietly ignores the overwhelming force of the evidence accumulated by two generations of scholars in favour of the accepted theories, while in pleading for his own paradoxes he is satisfied with arguments which if brought forward by others he would deservedly overwhelm with playful banter. It may, therefore, be well in the interests of science to compare the arguments which Mr. Lang passes over as of no account with those which he adduces in support of his own thesis.

The object of the book is to prove that certain Aryan "Customs and Myths" are to be explained as survivals from the time when the Aryans were savages of the lowest type. Mr. Lang argues that the "Aryans had once been totemists, therefore savages, and therefore, again, had probably been" addicted to polyandry, or promiscuous tribal intercourse. Thus, if traces of totemism can be discovered, he assumes, with curious laxity of reasoning, that all the rest follows. Let us examine his proofs of the savagery of our own immediate ancestors. The only argument he is able to produce in favour of the former existence of totemism among the Anglo-Saxons is that Mr. Grant Allen has assured him that the names of animals

and plants enter into the composition of English village names (p. 265). But, if the names of the thorn and the oak and the salmon are found among English village names, surely it is simpler to suppose that the names arose from the existence of real thorns, real oaks, or real salmon, rather than from men who believed themselves to be descended from ancestral trees or fishes, from Divine oaks, Divine thorns, or Divine salmon, who had seduced an ancestress of the family. Even if the village-name take such a form as Farningham or Buckingham, it should be remembered that Kemble has proved that the *-ing* is not necessarily a patronymic, but often a mere possessive suffix, so that Farningham or Buckingham may merely mean the homestead among the ferns or among the beeches, without making it necessary to assume, with Mr. Lang, that the name was given by totemistic settlers by whom the fern or the beech was "revered as an ancestral plant." It would be almost as reasonable to contend that the worthy citizen who calls his suburban habitation "Laburnum Villa" really believes himself to be descended from an "ancestral plant," a Divine Laburnum, or to suppose that the names of his daughters, Myrtle, Rose, and Violet, prove, to use Mr. Lang's words, that their ancestors "had once been totemists, therefore savages, and, therefore, again, had probably" been in the polyandrous stage of civilisation. The argument is as strong as that which Mr. Lang has produced in proof of the primitive savagery of the Anglo-Saxons, while the fact that our royal line counts Plantagenets and Guelfs is stronger evidence of totemism than any he has discovered among the Romans or the Hindus.

But Mr. Lang goes further, and considers that he can produce evidence not only of Aryan totemism, which would, he considers, imply Aryan polyandry, but of polyandry itself. The Lycians, the ancient Britons, and the Irish, he says, reckoned kinship by the mother's side, which would show that paternity was so uncertain that polyandry or some form of tribal marriage must have prevailed. Unfortunately, the baptismal registers of some English villages would supply far more cogent instances of the way in which kinship is sometimes reckoned among ourselves than the pedigrees of the Pictish kings; while it is a pure assumption to say that the Lycians were Aryans, and the custom in question prevailed not among the Aryan Kelts, but among the Irish and Caledonian Picts, and the existence of this non-Aryan custom is actually one of the arguments which have been used to prove that the Picts must be considered as representatives of the pre-Aryan aborigines of these islands.

With such shadowy evidence, which Mr. Lang considers good enough to be advanced in support of his own heresy, we may compare the quality of some orthodox arguments which he passes over in silence, judicious perhaps, but not judicial.

The orthodox mythologist asserts that no explanation of an Aryan myth, however plausible, can be accepted as conclusive, unless it also accords with a reasonable philological explication of the names of the personages concerned.

Mr. Grant Allen, in his glowing eulogy—it can hardly be termed a criticism—of Mr. Lang's book, states with convenient terseness Mr. Lang's chief objection to this method. The orthodox mythologists, he says, "ought to agree among themselves as to the primitive meaning of the best known Hellenic myth-names" which, he adds, "is just what they never do." Just what they never do! Will it be maintained then, that there is not a universal agreement as to the meaning of the best known myth names, Zeus, and Hera, and Athena, and Hermes, and Helios, and Gæa, and Uranus, and

Demeter, and Mars, and Hades, and Heracles, and Eos, and Daphne, and Selene, and many more? Or, to go to the Teutonic mythology, does any one doubt that Odin is the wind, and Thor the thunder? If any scholar were to interpret a myth without reference to the accepted interpretation of any of these names, he would be held to have put himself out of court.

Mr. Lang, in attacking the views of the orthodox mythologists, scornfully rejects the philological key, which in the hands of some of the greatest living scholars, has successfully unlocked the secret of so many myths; and, in order to prove the inutility of the philological method, devotes himself to ridiculing the attempted interpretations of a few obscure and doubtful myths, and amuses himself and his readers by contrasting the various conjectures that have been put forward. To test the adequacy of the theory he opposes, he should have examined the numerous interpretations as to which all scholars are practically agreed, instead of confining himself to the attack of outlying positions which no one cares seriously to defend.

Thus the myths of Silene and Endymion, of Daphne and Apollo, of Cephalus and Herse, of Eos and Tithonus, of the death of Heracles, of the birth of Athena, or of the theft of the cattle of Phœbus by Hermes, are seen, when treated by the philological method, to be transparent nature myths. The real meaning of some of them, such as the first, must have been clear to the Greeks; the meaning of others, such as the second, was obscured when the signification of the names was forgotten, and has only been recently explained by the resources of modern comparative philology.

Here we have a *vera causa*, which has interpreted the greater number of the Hellenic myths. The scientific assumption would be that a method which in so many cases had been conspicuously successful would also be successful in others. Mr. Lang, however, grudgingly admits that there may be "two or three possible examples of myths originating in forgetfulness of the meaning of words," and then, passing over without discussion such myths as have been enumerated above, he denounces what he calls "the weakness of the philological method" (p. 70), and proceeds to propound his own new "key to all mythologies," endeavouring to show that the Greek myths were the product of savage thought, and that to interpret them successfully we must endeavour to put ourselves into the mental state of the most degraded savages.

Instead of holding with Mr. Lang that in the mythopœic age the Greeks were savages, I should rather contend that they were poets. When David speaks of the sun going forth out of his chamber like a giant to run his course, this does not show that he was a savage, but that he was a poet. Do Mrs. Barbauld's *Hymns* or Mrs. Gatty's *Parables from Nature* prove that those estimable ladies were savages? When Wordsworth speaks of the Orient Conqueror, who, bound in chains, climbs the sky in naked splendour, ought we to call him a savage or a poet? And were the Greeks savages when, actually in historic times, they described the foundation of the colony of Cyrene in the language of true myth as the flight from Thessaly of the heroic maid Cyrene, beloved by Apollo?

It may be admitted that at some period or other the Greeks and other Aryan nations must have emerged out of the savage state; but that period must have been so indefinitely remote, that, though some faint customs may have survived, there is little likelihood of actual myths having been handed down through so many scores of centuries. We know for certain that some myths, such as the myth of Cyrene, the heroic maid, arose when the Greeks were

almost as civilised as ourselves. Is it not more reasonable to attribute other myths to misunderstood metaphor, or to allegory, the key to which was lost, and to endeavour to explain them as lovely poems which have descended from the ancient world, rather than to say that we cannot possibly understand them unless we read ourselves into the state of mental degradation of the Hottentots or the obscenity of Maori cannibals? Knowing that the Greeks recognised, more or less clearly, that Zeus was the overarching Heaven, and Athena the violet Dawn, is it more reasonable for us to consider the transparent allegory of the birth of Athena as a beautiful personified nature-myth, whose explanation is now made certain by the philological interpretation of the names, or ought we to guess—for, at best, Mr. Lang's method can reach no farther than a guess—that, if rightly understood, it merely "reflects the ideas" of a degraded savage who dexterously tomahawks his father under an impression (usual among savages) that he has daughter on the brain? Here, then, is a crucial instance by which to test the methods of the orthodox mythologists, and of our new heresiarch. ISAAC TAYLOR.

Barton-on-Humber: Dec. 19, 1884.

Mr. A. Lang having in *Custom and Myth* continued his attacks upon my studies, I propose in defence to briefly analyse the Kallistô Bear-myth. Mr. Lang seldom refers to my views without more or less misrepresenting them; but this is not a matter of general interest, nor am I concerned with his lengthy attack on my suggestion—which he omits to say I freely acknowledged might be "quite incorrect"—respecting the Homeric Moly; for this onslaught necessarily fails through inability to prove a negative, and is also vitiated by omitting any consideration of Odysseus and Kirkê. If they were sun and moon here is a good starting-point for a theory that the Moly was stellar. With respect to the Bear-myth, Mr. Lang, after noticing and rejecting Prof. Müller's well-known explanation of the origin of *Ursa Maj.*, says this view "does not clear up the Arcadian story of their own descent from a she-bear who is now a star" (p. 142), and that the Arcadians are the "Bear-folk" (p. 128). This story is thus supposed to be a link between Hellas and "plenty of races all over the world who trace their descent from serpents, tortoises, swans, and so forth" (p. 264). Leaving this last statement at present, let us examine the Kallistô-myth.

A bright huntress-goddess was specially revered in Arkadia. The bear, as the "bright" (*arktos*) creature, and a prominent wild animal, was her appropriate symbol, as K. O. Müller has shown. She was called Kallistô ("the very beauteous"), was beloved by Sky (Zeus), and became the mother of Arkas ("the Bright"). This is the kernel of the story, whatever these personages may signify; and Arkas was not born of a bear, but, according to Ovid, his birth caused Juno to change his mother into a bear; and, according to Apollodôros and Pausanias, he was prematurely taken from his mother like Macduff, as if purposely to negative Mr. Lang's theory and to save the honour of Arkadia. In a word, he was a son, not a whelp; and the Arcadians no more pretended to be the descendants of a bear than their name means "Bear-folk." But what if it did? Mr. Lang knows that the meaning of names is valueless.

Next, how and why did Kallistô become a bear? The angry wife is introduced, and she punishes in a usual way—by degradation of shape (*vide my Myth of Kirkê*). Kallistô, an epithet of Artemis, becomes a distinct personification, a nymph in her train. To what shape should she be degraded so naturally as to that of the bear, the animal of Artemis, as the wolf, through play of words (*λύκος-λευκός*),

is a symbol of the bright Apollôn. And if Zeus raise her to heaven, should she not shine there as the archaic and beauteous constellation *Ursa*, already imagined? Kallistô, thus associated with the bear on earth, is naturally and, when translated, almost necessarily associated with the heavenly bear. The notion that the Arkadians thought themselves bear-sprung disappears, nor is the story in any way contrary to the theory of Prof. Müller.

In support of his descent-theories, Mr. Lang states that "one Athenian *γένος*, the Ioxidae, revered an *ancestral plant*, the asparagus" (p. 264); and the context shows that by "ancestral plant" he really means a direct ancestor. But when we turn to Plutarch, whom he quotes as the authority for this extraordinary assertion, we find that the "Ioxidae" regarded themselves as the descendants, not of asparagus, but of Theseus and the beautiful Perigynê, and that they merely revered and honoured the plant which, according to family legend, had concealed their ancestress. It is needful to "verify quotations."

On another occasion I propose to notice the Crab-myth, as Mr. Lang singles out the zodiacal Crab as a special object of attack.

ROBERT BROWN, JUN.

THE UNIVERSITY OF LONDON.

London: Dec. 29, 1884.

Prof. Karl Pearson has brought a serious charge against the University of London. "The science and art examinations," he says (*ACADEMY*, December 27),

"of the so-called London University are a check rather than an incentive to genuine teaching. They enter into no one subject with sufficient width to make it worth the student's while to become a specialist, and they are no criterion whatever that the graduate has attained that mental training which can only arise from thorough and exhaustive study of some one, however small, field of knowledge."

I proceed to consider (1) the lower arts and science examinations, (2) the higher science examinations, and (3) the higher arts examinations.

1. The degrees of B.A. and B.Sc. are often taken at the age of nineteen or even earlier. Candidates are examined in several subjects, and are offered in each subject an alternative between a pass and an honours examination. These examinations serve as a check not to real teaching, but to too early specialisation of study, and are an excellent preliminary to the thorough and exhaustive study of a single field of knowledge. The preparation for them is the natural work of the lower and middle divisions of our university colleges.

2. Candidates for the D.Sc. degree are required to show a thorough knowledge of some one out of sixteen branches of science, and may offer in lieu of the examination their own printed contributions to science. There is here full scope for the "mental training," to which alone Prof. Pearson will concede the name of "genuine teaching."

3. The M.A. examination corresponds to the D.Sc., and here there is need of change. Other branches should be added to the present ones (classics, mathematics, and philosophy), and the examinations should be more specialised.

The training for the D.Sc. and for the reformed M.A. examinations will soon be the natural work of the higher divisions of our colleges.

HENRY CLARKE.

VALERIUS FLACCUS.

London: Dec. 24, 1884.

Prof. Ramsay, in Smith's *Dictionary of Greek and Roman Biography and Mythology*, ii. 160, says that

"Valerius Flaccus seems to have been altogether

unknown in the middle ages, and to have been first brought to light by Poggio Bracciolini, who, while attending the Council of Constance, in 1416, discovered in the monastery of St. Gall a MS. containing the first three books, and a portion of the fourth."

I think, however, I have found a trace of Valerius Flaccus in the Book of Armagh, a codex written in Ireland about the year 707. Describing the miraculous absence of night for some time after St. Patrick's death, his biographer Muirchu (fo. 8a, col. 2) writes, "Nox non inruit et fuscis tellurem non amplexerat alis, et pallor non tantus erat noctis et astriferas non induxerat bosferus (sic, leg. Hesperus) umbras." This passage is obviously founded on three or more hexameters, one of which seems the following:

"Nox simul astriferas profert optabilis umbras."

This is in C. Valeri Flacci Argonauticon liber vi. l. 752. Another is in Verg. Aen. viii. 369:

"Nox ruit, et fuscis tellurem amplectitur alis."

WHITLEY STOKES.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 5, 8 p.m. Royal Academy: "Decline of Italian Art in the Sixteenth Century," by Prof. J. E. Hodgson.

8 p.m. Victoria Institute.

8.30 p.m. Geographical: "Journey from Shiraz to Jask, via Ferg and Minab," by Mr. J. R. Preece.

TUESDAY, Jan. 6, 8 p.m. Royal Institution: Juvenile Lecture—"The Sources of Electricity," by Prof. Tyndall.

THURSDAY, Jan. 8, 8 p.m. Royal Institution: Juvenile Lecture—"The Sources of Electricity," by Prof. Tyndall.

4.30 p.m. Royal Society.

8 p.m. Royal Academy: "Titian and the Venetian School," by Prof. J. E. Hodgson.

8 p.m. Mathematical: "The Binomial Equation $x^n - 1 = 0$, Quinquesection," Second Note, by Prof. Cayley; and "Limits of Multiple Integrals," Second Paper, by Mr. H. M. Coll.

8.30 p.m. Antiquaries: Election of Fellows.

FRIDAY, Jan. 9, 8 p.m. Quekett Microscopical Club.

SCIENCE.

The Ordinances of Manu. Translated from the Sanskrit by the late A. C. Burnell. Completed and Edited by E. W. Hopkins. (Trübner.)

It is impossible to open the late A. Burnell's translation of the *Ordinances of Manu* without a feeling of sadness. Few men were more competent than Burnell to give us a really good translation of this well-known law-book, first rendered into English by Sir William Jones. Burnell was not only an independent Sanskrit scholar, but an experienced lawyer, and he joined to these two important qualifications the rare faculty of being able to express his thoughts in clear and trenchant English. I had, therefore, selected him to undertake the new translation of Manu for the "Sacred Books of the East." We had a long correspondence on the subject extending over several years, and some of his letters explaining the principles which he thought should be followed in a new translation are so full of interest that I regret they could not have been published with his translation. Repeated attacks of illness, however, made it impossible for Dr. Burnell to finish his translation by the time which had been stipulated, and I released him much against my will from a task which at one time had seemed very congenial to him. The arduous task of producing a new and critical translation of Manu has now been undertaken by Prof. Bühler, and I hope that his translation will soon appear as the first volume of the "New Series of the Sacred Books of the East."

We ought to feel very grateful to Dr.

Hopkins for having given us all that could be published of the translation left by Burnell. Unfortunately it is much less than we had hoped for. Burnell's translation ended with viii. 16; from viii. 16 to the end, xii. 126, the translation is the work of Dr. Hopkins, so that really more than half of the book, that is, 205 pages against 179, besides the numerous bracketed notes, must be placed to the credit of the editor. Dr. Hopkins has conscientiously tried to follow Burnell's principles, namely, to give us an interpretation based on the text of the commentator Kullūka, "over against modifications of that text by acceptance of the sacred readings found in Medhātithi." He confesses, however, that this principle has not been followed consistently either by himself or by Burnell. "If here and there," he says, "the editor has altered the *textus receptus* of Kullūka, to suit a reading preferred by Medhātithi, and seemingly better, he has but followed when the author [Burnell] led." Again, "Differences of opinion on the part of the commentators, when based on a desire to reconcile the text with itself, or with other tradition, are seldom noticed; occasionally special remarks only are noted; the explanation of one commentator is sometimes omitted entirely when that of another is preferred." As in the case of a scholar of Burnell's eminence, even mistakes in the interpretation adopted by him would have been of interest, we may trust Dr. Hopkins when he assures us that he has but seldom made changes in the wording of Burnell's original work. Even these occasional changes will be regretted by some of Burnell's friends and admirers, though any real mischief has been prevented by not making such changes without due remark and explanation. "Nothing," we are told, "has been altered which the editor did not believe would have been altered by Dr. Burnell himself, had he lived to revise his work."

Of the native commentators Burnell preferred Kullūka, then came, in his estimate, Medhātithi, and, last, Rāghavānanda. Dr. Hopkins naturally follows his lead, though in Lectures viii. and ix. he has added the Nandinī. He deplores having had no more but fragments of Govindarāga, and regrets the scant use made of Nārāyaṇa in Lecture viii. He complains of the dilatoriness of others in returning to the India Office certain indispensable MSS. This is a very serious and damaging charge, and will, we doubt not, be fully cleared up by Prof. Bühler and Dr. Rost.

On one point we shall all feel very much disappointed. We had all hoped that Dr. Burnell was in possession of facts whereby to fix once for all the date of Manu's Ordinances. That not one of the dates assigned to Manu by various Sanskrit scholars would stand the test of modern criticism I had stated as far back as 1859 (*History of Ancient Sanskrit Literature*, pp. 62-86, 132 seq.). At that time, however, I had to be satisfied with assigning the Laws of Manu to a post-Vedic period—a period marked by the use of the uniform sloka metre (p. 68). This opinion has generally been adopted, and in my Lectures, "India; what can it teach us?" I summed up once more all that was known up to that time, laying particular stress on the fact that Manu's law-book was not quoted in the early Buddhist literature, that it was quoted by

Varāha-mihira (died 587 A.D.), and that the Greek Zodiacal signs were known to Manu as well as to Varāha-mihira. My last words were, "How much later than the fourth century A.D. our Manusamhitā may prove to be, I do not wish to discuss at present, as I have no doubt that this question will soon be treated by far abler hands—Dr. Burnell and Prof. Bühler." I cannot possibly think that what we find in Dr. Burnell's Preface, as now printed, contains really all the evidence which he had collected. Some materials, I am afraid, have here been lost. After summing up the arguments which show that the book must have been written between 100 A.D. and 500 A.D., he only adds that the name of the Kālūkyā kings—namely, Mānavya, shows that a Mānava Dharma-sāstra was patronised by one of the Kālūkyā kings, most likely by the great Pulakeśi, who flourished about 500 A.D. I doubt whether Dr. Burnell would have left this argument in this unsatisfactory state. No doubt, kings often adopted the *gotra* or family of their purohitas or domestic priests, and the domestic priests of some of the Kālūkyā kings may have belonged to the Mānava-sākhā. But where is the proof that these priests possessed not only the Samhitā, Brāhmaṇa, and Sūtras, including a Dharma-sūtra, according to the Mānava tradition, but a metrical Mānava-Dharma-sāstra also? Dr. Burnell was not the man to take such things for granted, and I can, therefore, only repeat my hope that Prof. Bühler in his forthcoming translation may draw the strings of the argument as to the exact date of the metrical Manu a little more close together than they have been hitherto.

This is not the place to criticise the translation of single verses—a task which will be far better performed by Prof. Bühler in his own translation of Manu. What the translators say as to the difficulty of finding English words exactly corresponding to Sanskrit words is very true. "Language cannot go back to suit primitive and barbarous ideas." They were also quite right, I think, in not attempting to render the same word or phrase persistently in the same way. This kind of mechanical pedantry often destroys the real faithfulness and freshness of a translation. Now and then we could have wished the notes to have been fuller, and we occasionally miss that *Balasanhit* (well-readness) which distinguished all Dr. Burnell's publications. I shall give one instance. In Manu x., 107, we must read Bribu instead of Vridhu or Ridhu, as I had pointed out in my notes to Śāyana's Commentary on the Rig Veda, vi. 45, 31. Nirgane for viganē, mahātapaḥ for mahāyasaḥ, are but various readings, but Vridhu and Ridhu are mistakes due to the misreading of MSS., written possibly in a Dravidian alphabet (see *Introd.*, p. xxix). The Index might have been fuller, and references to other law books would have rendered the edition more practically useful.

Grateful as we feel to Dr. Hopkins for the labour of love bestowed on Dr. Burnell's manuscript, we believe that he himself will share our feeling that this posthumous work shows us not only how much we possessed, but also how much we have lost by the early death of that honest and hardworking scholar.

F. MAX MÜLLER.

TWO BOOKS ON ICELANDIC LAW.

Grágás. Stykker, som findes i det Arna-Magnæanske Haandskrift. No. 351 Fol. Skálholts bok og en Række andre Haandskrifter. Ed. Dr. W. Finsen. Udgivet af Kommissionen for det Arna-Magnæanske Legat. (Copenhagen.)

Die Njala-Sage insbesondere in ihren juristischen Bestandtheilen. Ein kritischer Beitrag zur alt-nordischen Rechts- und Literaturgeschichte von Karl Lehmann und Hans Schnorr von Carolsfeld. (Berlin.)

WHAT the venerable Schlyter has done for the old Swedish Laws, and Münch for the old Laws of Norway, has now been accomplished by Dr. W. Finsen for the Old Laws of Iceland. Not a scrap of MS. bearing on the subject now remains at the mercy of the fire, the shell, or the hundred other accidents that may befall paper or parchment. The present and final volume of the Arna-Magnæan edition of *Grágás* contains the end of the MS., Church Law or *Kristinna-laga-tháttur*, with parallel portions of nine other copies printed at length, together with all the other scraps which have not yet been included in the editions. These texts, which are accompanied by a set of useful cross-references which show a really wonderful knowledge of the various complex divisions of the vellums, are followed by tables enabling one to see at a glance the comparative contents of each MS., and completed by full indices of persons, places, and law-terms. A number of careful facsimiles are affixed to the volume, among which appears that of A.M. 315, D, a precious fragment dating from 1130 of one of the original separate scrolls that formed the basis of the later compilations. The editor must be well pleased to see this satisfactory conclusion of labours which were begun in 1850, when the first fasciculus of the Royal MS. of *Grágás* appeared under his care. His labours are indeed worthy of one whose family of four generations have filled no small place in the annals of Icelandic literature. John Hall-dorsson's interesting "*Biscopa Æfi*" (still unprinted, but of which, by the way, there is an excellent MS. in the Advocates' Library); Finn Jonsson's indispensable *Historia Ecclesiastica*; Finsen's pretty *Quædunður*, the delight of Icelandic children, are now matched by these excellent and definite editions of the Icelandic Laws, which will certainly appeal to a wider public than the aforementioned books can do, for they must be studied by every jurist and historian of old Teutonic Law or Politic. If it be allowable to criticise, when there is so much to praise, one might regret that the editor has wasted so much time and care upon A.M. 125, a wholly valueless paper MS. which is not, as Dr. Finsen here holds, a fresh sister authority, but, on the contrary, a mere compilation of late date from the vellums which we possess, as can be shown by some of the mistakes of its writer. The references in the tables and indices from pp. 411-442 should therefore be cancelled by the student. We would urge upon the Arna-Magnæan Committee the advisability of having such notes and prefaces as accompany their editions in Icelandic or else in French (since German is, we suppose, out of the question), they would thus remove an initiatory difficulty which many scholars find and complain of. Nor would such action be really unpatriotic. If Linnaeus had written in Swedish, his work would have been slow in producing its marvellous effect. People will not take the trouble to learn a language in which there is no first-class literature, and will wait for a translator, or ignore (of course, to their own detriment, but also to that of the author in question) the treasure which is locked away in an unknown tongue. If this difficulty is operated so largely down to our own day in the case of German books, as we know that it has, much more will it do in the case of Danish scientific books such as this. It would

go some way towards repairing the mistake in the present case, if Dr. Finsen could be prevailed upon to write in some known tongue a brief introduction to the whole corpus of Icelandic law, embodying the contents of the law-glossary which forms so notable a feature of this valuable book.

Another important work on this subject is the essay on the juristic aspect of Nial's Saga, the title of which we have quoted above. In a charming preface, Dr. Konrad Maurer tells us how it owes its origin to the meetings of a newly founded "Law-Seminar," in which its subject matter was discussed. It is impossible to read this without thinking that associations such as this, between teachers and advanced students, might, even at our universities, be expected to produce good fruit. For instance, in this very department of law, it is not creditable to us that we should have to learn from Dr. Steenstrup the worth and meaning of our Latin customs, or that the best, indeed, the only adequate account of the *Dialogus de Scaccario* should be the early work of a young German student. There are indeed rumours that, by American enterprise, societies of the nature of a "Seminar" have been set a-going at Oxford for the study of history, and if this step in the right direction be followed up, though we cannot yet expect such work as has resulted from the research of Dr. Karl Lehmann and Mr. Schnorr von Carolsfeld, under the guidance of Prof. Maurer, one may look for something better than the ordinary run of prize essays has yet shown in our older universities. The work before us falls into two parts: the first is a systematic and minute investigation into the legal phenomena of Nial's Saga with the result, anticipated by Dr. Vigfusson, that the late composition of the story in its present form renders it a most fallacious guide for legal antiquaries to follow blindly. We knew that the story of Gunnar's death is an adaptation of the lost legend of Egil the archer, that the adventures of Nial's sons abroad, and the love of Gundhild for Hrut are pure fabrications, that the court-metre verse, sprinkled through the course of the whole tale, is of late Icelandic manufacture, that the epic colouring of the narrators, early and later, have given a strange and romantic turn to events of which the sober truth is plainly told in a few words by Ari in his *Landnámabók*, and now we have it proved beyond doubt that the legal part of "*Njala*" is almost as romantic and mock-archaic as any of Scott's mediæval novels. This Saga is indeed the Law Saga *par excellence*, and the compiler who worked up the local family tales of Gunnar, Thrain, Nial, and Floi into the present compound prose epic was a legal-minded man versed in the legal technicalities of his own day (which were already largely tinged by continental influences), who set himself to reconstruct by imagination and inference the law of Nial's day. His law scenes are successful as epic narrations, and the great purpose of their introduction is abundantly justified. Nial is rightly set forth by their dark-gray background as the fair-dealing law-skilled sage, whose influence and example both in life and death are directing the turbulent, lawless, unorganised generation in whose midst he lived towards law, order, peace and progress. We have, of course, no quarrel with the tale-teller as long as the impression he produces on the mind is true and real. Who save a foolish commentator ever objected to the cannons of King John or the rapier of Hamlet? But the historian and the lawyer must know exactly what is true and what is merely the epic poet's subjective reality; hence the necessity and use of such careful and sagacious studies as the present one. It is not too much to say that (in spite of repeated warning from at least one quarter) the greater proportion of what has been written upon the

development of the Icelandic constitution and law is completely vitiated by the total neglect of the true epic position of the family Sagas and King's Lives. The actual creation of an imaginary character, a leading lawyer in this story, and a complete perversion of the origin of the Fifth Court, not to speak of chronological and genealogical difficulties and discrepancies, have been all accepted without question, and "reconciled and harmonised" with real facts by the help of that perverse ingenuity which will go any lengths rather than condescend to bow to the preliminary toil which every study requires. The second part, appendices upon the historical and literary difficulties, anachronisms, discrepant genealogies and the like, of the Saga is no less interesting and useful than the foregoing chapters. Detailed criticisms on the whole book would be impossible here. One or two mistakes may be noted. Mention is made more than once of "all the MSS." of *Landnámabók*, as if there were more than two—C and B; for E, the *Compilatio Sira Thórdar* of 1640, is only of value where it represents *Mela-bók*, and in ninety-nine cases out of a hundred simply follows C or B; while the other copies are just worthless altogether. The baseless and unreasonable respect paid to late paper copies in recent editions (of *Njala* itself, for example) merely cumbrous and disfigures the foot of the page and misleads the student, who does not know that their genealogies have all been traced, and that the variants they exhibit are but the freaks of ignorant or imaginative copyists. The conclusions of the older school of Icelandic scholars upon the age of vellums are far too quietly accepted by our authors; for these judgments are too often guesses, founded neither on comparison of native nor upon analogy with foreign MSS.—the only means of arriving at the truth of the matter. The importance of the genealogies of *Flatey-bók*, which exhibit the old pure text of the corrupt and mangled *Hyndlu-liód*, is not recognised. The examination of *Darrada-liód* (the true title, as its concluding lines show) is not satisfactory, the poem is a connected whole, though lines have fallen out here and there. Its true purport is seen from the parallel Irish legends and poems on Brian's battle. The corruption of the fragment of Thorstan Hall o' Side's son's Saga, where it copies the lost Brian's Saga, is not noticed. It is possible to get the right reading in some cases from setting it side by side with the text as the *Nial's Saga* MSS. give it. This book may furnish an excellent pattern for that minute and systematic criticism of the Icelandic family Sagas, which has been long called for, and the plan for which was set out some years back in the *Sturlunga Prolegomena*.

F. YORK POWELL.

ANCIENT NAVIGATION IN THE INDIAN OCEAN.

Peking: Oct. 18, 1884.

THE probability that the Devanāgarī writing was introduced to India by sea from Arabia or some other country in Western Asia is now generally admitted. The paper by Mr. Cust on this subject at the Leyden Congress, with the discussion which it originated, prove this. If the foreign origin is not proved, it is highly probable, and may be regarded as the opinion of the majority. The Southern Asoka alphabet, it may now be said, was introduced on the Indian Coast by merchant colonists, such as were in ancient times accustomed to settle in sea-ports to carry on trade. But, if writing came into India in this way, how did the Egyptian metempsychosis enter? The idea of a cosmogony with legends of the sea, a trinity of divine manifestations, the notion of a Saviour, and other like ideas not found in the Vedas,

may with great probability be regarded as having also entered by the same path. The same merchant colonies at seaport towns that made the introduction of a Semitic alphabet possible made the transmission of astronomical knowledge and of mythological and geographical legends from across the sea equally possible. India would, with the increase of trade, especially since the days of Solomon, become stocked with foreign ideas by means of the colonies speaking two languages that settled along her shores. These colonies would, as a matter of course, have their own temples, priests, and schoolmasters; and in the temples erected for the maintenance of their religion there would necessarily be images and pictures. The Hindus of those days were deeply sensitive to impressions of a religious and meditative sort. They would certainly not limit the acquisitions they chose to accept from the strangers to the art of writing. Nor would they first borrow an alphabet, and then borrow other things because they found the alphabet good. They would be more likely to take the metempsychosis first; and the wide view of the world, with its rocky mountain barrier forming the outer rim of a vast ocean dotted by islands, occupied by dwarfs and giants, and itself inhabited by various marine monsters, would suit them well also. They would see the strangers writing their information on papyrus, and they would adopt both the ideas communicated and the art of writing as precious possessions. The papyrus sheets representing cosmographical and mythological scenes which would be hung in the temples in the "chambers of imagery," would impress profoundly the meditative Hindu. In this way we may account for the Buddhist view of the world with its continents and seas. It was the result of Hindu thought ruminating on Mesopotamian, Phœnician, and Egyptian legends and pictures.

In Prof. Max Müller's *History of Ancient Sanskrit Literature*, the author draws particular attention to the abrupt change in the flow of Hindoo thought which took place after the Vedic age. A deluge of new ideas came in, causing fundamental changes in Sanskrit literature. This new influence has left its traces indelibly imprinted in the popular legends in the history of Buddhism and Brahmanism, and in the development of the systems of Hindu philosophy. It seems to me that commerce all round the Indian coast, and to a less extent the land trade through the mountain passes on the North-West of India, must have been the main source of the influences which then wrought so powerfully on the Hindu mind. At the same time trade was carried farther east to Birmah, the Malayan Archipelago, and Cochin China. The same influence was extending through all this wide region at the same time. Cassia and cinnamon had to be brought from Cochin China, because at that time China was the only country where this article was known (ACADEMY, Nov. 3, 1883, p. 299). How long ago in the passage of the ages trade was carried on between the West and Cochin China may be judged by the embassies to China in the eleventh century, to which M. Terrien de la Couperie has lately recalled attention, and much earlier in the third millennium before Christ, when the Chinese empire extended far to the south. But if we look for any contemporaneous effect in China such as may be regarded as parallel to that noticed in the Post-Vedic literature and religion of the Hindus, we must look for it in the period commencing with Lautze's *Tau te king*, and continued in the works of the Taoists Lie tsze, and Chwang tsze, the poet Chii yuen, and the geographical work known as the *Shun hai king*. These works embrace four centuries, and the whole of them are quite new in style of thinking and in their philosophical basis, as

shown by their having originated the Tanist religion. They contain a cosmogony like the Babylonian. They embrace a legendary account of the emperors Fuh, Shennung, and Hwangti. They represent the Taoist religion as originating with Hwangti and Taoist sages of his time. They deal profusely in fabulous accounts of countries beyond sea. They teach that ancient heroes and various new divinities had and have bodies half beast and half man. They taught immortal life for the virtuous ascetic. They depict a fairy life in floating islands of the ocean where death is unknown. They prefix to Chinese history a mythic period of enormous length, embracing the reigns of a multitude of fabulous kings. They have a trinity of sacred names, which as many excellent writers have thought, are a transcription for Jehovah and which I rather suppose to be the Babylonian trinity. Beside these novelties in Chinese literature we have the poetical philosophy of Chwang tsze and the poems of Chii yuen. We have the romance of Mu wang, and a complete system of astrology, with the chronology of the Bawboo books. The Astronomical Nomenclature that was new in this period embraced between twenty and thirty absolutely foreign terms, the original language of which has not yet been discovered.

Through all we observe, as in India, that the native mind became extremely active under the foreign stimulus, and when legend was admitted it was clothed at once in a Chinese mythic dress. In India the new alphabet was ascribed to the Devas, and both in India and China the new legends became, under the manipulation of native scholars, mythic addition to the native world of ideas. The sea more than the land has in the Oriental world been the principal medium for the transmission of mythological ideas and useful inventions, and this fact is due to the immense mountain barriers which separate from each other the countries which support large populations. This part of ancient history is unfortunately not to be recovered from the existing literature of southern Asia. No chronicles of the old navigation of the Indian Ocean before the age of Alexander have been preserved. But we know that Necho's mariners circumnavigated Africa in the sixth century before Christ, and that the ships of Ur (just within the mouth of the Euphrates) went to sea from that city at about B.C. 2300. What history does not record must be recovered by persevering archaeological research.

JOSEPH EDKINS.

CORRESPONDENCE.

"THE EMPIRE OF THE HITTITES."

London: Dec. 29, 1884.

With respect to Mr. Ball's letter in last week's ACADEMY, there is, I think, scarcely any point which it is necessary for me to notice except the assertion that I was in error when I stated that the horse is not represented in the Hittite hieroglyphs. On account of this assertion, I have examined anew the monuments from Jerablûs (a name which was probably derived from Hierapolis), and I most certainly cannot withdraw my statement. By the length of the ears, it is clearly shown that the ass, and not the horse, is intended. In Mr. Rylands's drawings some of the heads have assumed a rather more horse-like character than is to be seen on the monuments. In the inscription of Tarkutimme, one of the heads (that behind the king) has been somewhat elongated, so as to give some excuse for Mordtmann's mistake that the horse is intended. In the other case it is clear that the goat is represented; and, notwithstanding the elongation of the more horse-like head, there is in both cases a beard, which leaves no doubt as to the animal really intended.

The question is of some importance with respect to the age of the Jerablûs monuments. It may possibly turn out that they had their origin in a period anterior to the introduction of the horse among the Hittites.

That those who think that here and there in the Hittite inscriptions they can see a glimpse of meaning are merely constructing a "Nepheleococcygia" is a thing which no doubt it is easy, if not very wise, for anyone to say, especially if he have such intentions as those which Mr. Ball apparently intimates.

THOMAS TYLER.

London: Dec. 29, 1884.

I should have taken no notice of Mr. Tyler's depreciatory remark had I not considered the signature in the ACADEMY a guarantee for the fullest candour. He now admits that the statement he made about me was not in accordance with the information which he possessed, and he justifies his canon of criticism by legal custom, implying that his criticism was in accordance with the meaning of the passage as "known to the ordinary reader." Before showing that Mr. Tyler's assertion was not in accordance with the meaning of the passage as "known to the ordinary reader," I must notice an assertion and an insinuation. Mr. Tyler says "just before meeting me, Dr. Wright's error had been pointed out to him, as I have reason to know, in the British Museum," and then he insinuates that my construction of the passage arose from the error having been discovered. Now, "just before meeting" Mr. Tyler, I was going to the British Museum, and he knows that I met him coming out at the gate as I was going in. I had heard that he was running about from one to another in the Museum, quoting one sentence from my book, and declaring that I had made a mistake, and I was going to the Museum with the book to show what the plain meaning of the passage in its entirety was.

No error was pointed out to me in the British Museum, but a clause was suggested for one phrase to bring the sentence into verbal harmony with the scope and bearing of the passage, and to disarm "gimlet criticism." The clause, however, could not be printed as errata, and it was suggested that criticism that could not understand the scope of a passage without each word and clause being qualified was unworthy of consideration.

I should ill repay the unfailing courtesy of my friends at the British Museum by bringing any of their names into this personal matter, and it is quite unnecessary that I should do so. The question at issue between Mr. Tyler and me is a simple one, and I confidently appeal to every reader of my book as to "the meaning fairly to be inferred from the words employed."

Mr. Tyler becomes playful over the phrase "Semiticised Hittite," and professes not to know what it means. I must therefore refer to what I have written in my book to show how groundless is Mr. Tyler's insinuation that my assertion as to a certain name being "Semiticised" is an afterthought.

In the passage to which he refers I point out that the Hittite names which have come down to us are partly Semitic and partly non-Semitic. Referring to Hittites with pure Semitic names, I said:—

"A Hittite who had thrown in his lot with King David might be called Ahimelech, 'brother' or friend of the king, without being of Semitic origin, and a Hittite residing among the Canaanites might be called Beer, or 'Fountain,' from some special circumstance connected with a well or fountain" (p. 80).

Referring to the double names of Esau's Hittite wives, which have so puzzled commentators, I suggested that where in Gen. xxxvi. 2, Judith is called Aholibamah, and h

father Beeri is called Anah, they were "doubtless their old Hittite names," and I illustrated my point by the Persian title *Khidewi* changed into *Khedive* for the ruler of Egypt without making him a Persian, and I added:—"Foreigners writing Hittite names would write them, to a certain extent, in their own way. Take, for instance, the Egyptian Mazor, which was called by the Hebrews Mizraim, a dual form, by the Persians Mudraya, by the Assyrians Muzur, and by the Arabs Misr, each fitting the name into the groove of his own language" (p. 81).

The audacity of Mr. Tyler's insinuation will be appreciated when it is understood that these words were under his eyes when he wrote his critique, and that his attention had been called to them when he repeated his offensive insinuation. I did not use in my book the word "Semiticised," as I avoided as much as possible difficult terms; but when I illustrate my meaning by *foreigners writing Hittite words in their own way, and fitting names into the grooves of their own language*, I described the "Semiticising" process as clearly as I could by words. Passing from the category of Semitic or "Semiticised" names, I add—"The great mass of Hittite names that have come down to us are clearly of a non-Semitic origin" (p. 81).

I used to watch with much interest the Semiticising of foreign names in Syria. An eminent American friend of mine was called Bliss; but the natives, finding a difficulty in starting with a consonant, pronounced the name sometimes "Iblis," which is Semitic for "Devil." Another American gentleman, called Dennis, had his name Semiticised into "Danas" which means "dirt." The Arabs fitted the words into the groove of their own language, and the future gimlet and dictionary critic will doubtless feel quite sure that the gentlemen were Semites.

Arguing from the known, I believe that when the Hittites from the north came among the Semites with unpronounceable names, such as Thargathazas or Tarthisebu, some of them got pure Semitic names, and others, like my friends Bliss and Dennis, had their names occasionally Semiticised, and some of them may have received Semitic names like Judith and Beeri, while their Hittite names may have been Semiticised into such forms as Anah and Aholibamah.

I have no desire to dogmatise on any suggestion which I have advanced. My only object in writing is to correct mis-statements as to what I did advance. WILLIAM WRIGHT.

THE SOMA PLANT.

Dec. 27, 1884.

In common with many of your readers I have been impressed by Prof. Max Müller's very original idea that the soma plant was simply hops. Any confirmation of this, drawn from such a very disreputable source as gypsy, is, indeed, not worth much; yet it may be borne in mind that the Romany contains many odd and ancient fragments of old Sanskrit—like gems imbedded in petrified mud and gravel. In this tongue, *soma* or *sumer* (the pronunciation is not fixed) means a scent, smell, or flavour. Thus the hop gives the *sūma* or *soma* to the beer, or the lemon to punch. The fact that the hop is not found south of a certain range, or where the Hindus now dwell, rather proves than disproves Prof. Müller's theory. Having left the plant far behind, while yet retaining its tradition, it is extremely possible that the early Indians attached the latter first to one and then to another vegetable with a bitter or acid juice. The common gypsy word for hops is *lewinor* (German Romany *Löwina*), which is also the name for beer.

CHARLES G. LELAND.

*Some consider *Iblis* a "Semiticised" word.

SCIENCE NOTES.

MM. CHARLES AND GUILLAUME VAN STEINEN and M. Othon Claus have arrived at Belem, after having spent several months in a scientific journey through Northern Brazil, the principal objects of which were to ascertain the course of the river Xingu, and to study the anthropology of the native tribes inhabiting the regions bordering on this river. They report that the Indians are, physically, a very powerful race, and use weapons and tools of stone, metals being entirely unknown. Although the natives had never before seen a white man, they received the travellers with the greatest friendliness, supplying them with provisions and guides to conduct them over the cataracts. The country is described as eminently fertile, abounding in the *Siphonia elastica* (valuable for the production of caoutchouc) as well as in cacao and manioc.

THE Geological Survey of Sweden, under the direction of Prof. Otto Torell, has just issued a very useful map of the southern part of Sweden, on the scale of 1 to 1,000,000. The map is accompanied by an explanatory memoir by Dr. Nathorst, of which a French translation has been prepared by Mr. Kramer.

PHILOLOGY NOTES.

THE new number of Bezzenberger's *Beiträge zur Kunde der indogermanischen Sprachen* contains a paper, by Prof. Fick, on the original form of the Homeric hymns. It appears that the three hymns to Aphrodite (Nos. iv., vi., and x., according to Baumeister's edition) were sung by rival rhapsodists at Salamis, the capital of Cyprus. The hymn to the Pythian Apollo (No. ii.) was composed by a Boeotian before 595 (when the chariot-race at Delphi was introduced), and sung at the foot of Parnassus. The hymn to the Delian Apollo (No. iii.) was sung at Delos, and composed about the thirtieth Olympiad by Cynaethus, a Homerid of Chios. The hymns to Hermes (No. iii.) and Artemis (No. ix.) belong to Colophon, that to Demeter (No. v.) to Eleusis. Inscriptions show that in the dialects of Cyprus and Delphi the digamma (*vau*) was retained down to the fifth century; but in Ionic-Attic places, such as Delos, Colophon, and Eleusis, no trace of *vau* is found in the oldest monuments. With this the hymns agree. The *vau* is required by the three Cyprian hymns to Aphrodite and by the hymn to the Pythian Apollo; but it is quite otherwise with the hymns to the Delian Apollo, to Hermes, and to Demeter, in which it is impossible to restore the *vau* without spoiling the metre. The inference drawn by Prof. Fick is that each of these hymns was composed, not in the so-called epic dialect, but in the speech of the place at which it was sung, and he gives them in what he holds to be their original linguistic forms.

THE same number contains an etymology, by Mr. Whitley Stokes, of *amella*, a Gaulish plant-name preserved to us by Servius ad Vergil. Georg. iv. 271. This is explained by "binensug" (thyme) in a glossary quoted by Diefenbach, and a sister form, *amellum*, is glossed in Ducange by *μελίφυλλον*, *melissophyllum* (*apiastrum*). *Amella* may stand for *ampella*, with the loss of *p* regular in Celtic, and this may be cognate with Greek *ἄμψις*, Old High German *imbi*, and Latin *apis*, which has lost the *m* because the accent was, as in Greek, originally on the last syllable.

THE December Circular of the John Hopkins University contains a paper by Prof. A. M. Elliott on "A Philological Expedition to Canada." Prof. Elliott states that the use of the French language is decidedly on the increase. Not only is the natural growth of the *habitant* population more rapid than that of their

English-speaking neighbours, but in certain districts the descendants of English and Scotch settlers, bearing such names as Warren, Fraser, McDonald, &c., and having the marks of British ancestry in their blue eyes, light hair, and florid complexion, have become assimilated in language to the majority surrounding them, and are unable to speak a word of English. Prof. Elliott describes the *habitant* French as a direct development of the French of the sixteenth century. It has, however, been greatly influenced by contact with English. This influence is seen not only in the number of borrowed words, such as *biter*, to beat; *scréper*, to scrape; *le cheval a bolté*, the horse bolted; but in the general intonation, which is much quieter and more monotonous than in European French. One interesting fact mentioned by Prof. Elliott is that in French Canada the creation of new surnames is still going on. Thus—

"Monsieur Guérin has two sons, named respectively Charles and Jacques. The former is a special favourite of his father, and receives the soubriquet *La Joie*—i.e., Charles Guérin dit La Joie. As the said Charles grows up he drops entirely the name of his father (Guérin), and is only known as M. Charles La Joie, his brother all the time continuing to bear the original designation of his father's family."

FINE ART.

Les Manuscrits et la Miniature. Par Lecocq de la Marche. (Paris: Quantin.)

THIS is one of the volumes of the "Bibliothèque pour l'Enseignement des Beaux-Arts," and, if it be a sample of the rest, there can be no doubt that they will truly fulfil the purpose of their publication.

The author of the work before me is one of the keepers of the French national archives; he may, therefore, presumably be credited with an ample acquaintance with his subject. One of the results of this *quasi ex cathedra* character of the work is that it is not merely a compilation or even a history, but sets forth several original views with respect to the right treatment of the question, and especially with regard to its nomenclature and classification. The object of the book, according to the opening sentence of the Preface, is—

"Esquisser l'histoire du livre manuscrit depuis ses premiers débuts jusqu'à l'avènement du livre imprimé et spécialement celle de sa décoration par le pinceau."

In point of history, the writer takes as his first instances of MS. the Babylonian bricks and the stone or marble calendars of remote antiquity. Among existing documents of this description he cites the Arundel Marbles as a Greek example of a kind of lapidary chart which was at one time the usual form of public record. He then passes on to metals, and from these to vegetable substances, referring by the way to the most recent authorities on the several topics touched upon. He tells us from Pliny that the Romans reproduced on pieces of cloth the verses of the Sibylline oracles, and mentions a letter on papyrus, written, according to the same authority, by Sarpedon during the siege of Troy—a document which ought for ever to have settled the question of the terrestrial as against the solar basis of that famous myth. The Louvre possesses a fragment of papyrus dating from 273 B.C., and from recent study it appears that the Greeks used it in the seventh century B.C. for ordinary correspondence. Next is de-

scribed the roll and its construction—codices and their various details of form and decoration, already familiar to us from ancient writers. Leaving the materials, M. Lecoy then introduces us to the artist and speaks as of a common fact, that in the early Middle Ages a man would take a simple rough sheepskin and with his own hands convert it into a missal, illuminated and "noted" for music. "Graduale unum propria manu formavit, purgavit, punxit, sulcavit, scripsit, illuminavit, musiceque notavit syllabatim." Among other interesting particulars brought before the reader we learn that the process of the Inquisition against the Knights Templars was engrossed on a roll more than seventy feet long—a charge inevitably as fatal, though by no means as brief, as that brought by the Spartan judges against the poor Plataeans after the fearful two years' siege. With the introduction of parchment begins the systematic history of miniature. The use of linen paper, however, is spoken of as early as 1125, the most ancient fragment extant being that on which the Sire de Joinville wrote a letter to King Louis X. in 1315. Pens, pencils, inks, in short, everything belonging to the art of the scribe and the miniaturist, are minutely treated of and particulars given, from reliable sources, of the cost which the decoration of an illuminated book would reach when such books were executed for wealthy patrons. Altogether the little volume contains eight condensed chapters, three of which are taken up with what has been here glanced over.

Chap. iv. is "On Miniature in General, and especially in France," and here the writer expounds his ideas on classification, insisting that out of previous systems and nomenclatures has arisen all manner of confusion and misunderstanding. Alluding to the poetic conception covered by the word "illumination," he considers the name "miniature" to be an abuse of the true meaning of the word, which, of course, it is; but then it has fairly served its purpose. This is not the place to discuss M. Lecoy's discussions, or perhaps further original views might be developed on the question of names. It must be acknowledged that the cumbrous phraseology of the Benedictines and Count Bastard, acceded to by M. Ferd. Denis and M. E. Fleury, is anything but elegant or definite, and certainly of no practical use. M. Lecoy cuts the matter short by using the terms "hieratic" and "naturalistic," and at some length goes on to show the propriety and definite applicability of these terms. All miniature art in which church symbolism and clerical ideas prevail, he calls "hieratic." All those in which the study of nature is made clear, as distinct from the mere delineation of doctrinal matters, he calls "naturalistic."

Under these main headings he places the various examples in their respective national order. Thus he contends there is a real distinction between Roman, Merovingian, Carolingian, Romanesque, Gothic, and Renaissance.

As to the duration of the hieratic sway over miniature art, it begins, says our author, with the Merovingians, and lasts until the reign of St. Louis, being gradual both in its formation and in its decay. The sign of its death is the appearance of portraiture; but

when portraiture first appears is still a subject of dispute. Laborde assigns it to the thirteenth century, formulating his rule somewhat like this:—"In the twelfth century no portraits; in the thirteenth century nothing but portraits." But M. Lecoy thinks this too strict, which it certainly is. Everybody, however, must allow that the French miniaturists of the best Gothic time are the best miniaturists, taking them altogether and with all their qualities, of any time, for the miniaturists of the Renaissance—Italian or Flemish, however faultless they may be in technic—never surpass the great Gothic miniaturists in downright power of drawing. In composition and good taste the French miniaturists of the fourteenth century have never been surpassed. Less ideal than the Italian, less original than the English, less sentimental than the German, French miniature art is deficient perhaps in imagination; but still it holds its place, nor must it be forgotten that it has given the very name, as Dante says, to the splendid craft itself.

Chap. vi. treats of portraiture in other countries, and particularly Flemish. The following chapter deals with processes interesting to the practitioner. There are, says an authority quoted, eight colours—viz., black, white, red, yellow, blue, violet, green, and rose.

Lastly, chap. viii. speaks of the closed volume and its outside—an account of the progress of the binder's art appropriately concluding a volume full of information, which, if not always such as the reader can quite agree with, is rarely or never, within its chosen limits, chargeable with ignorance or want of grasp. Some statements may fairly be contested, some opinions challenged as a little too French, and some parts of the subject might be easily and profitably developed for a clearer and completer knowledge; but whoever wants to know about texts and illuminations, and such matters, without going too deeply into them, will not find a better or more readable guide than this compact little volume.

JOHN W. BRADLEY.

ART-BOOKS.

WE have received from Messrs. Macmillan a handsome portfolio containing some twenty proof impressions of woodcuts originally published in the *English Illustrated Magazine*. It affords satisfactory evidence—if such were needed—that the publishers had something higher in view than merely to start a new monthly at a popular price, or even to rival the Americans on their own ground. The writers of magazine articles, who form almost a class apart, can take care of themselves, if only because their audience is cosmopolitan. But it is a matter of national concern that the English school of wood engraving should be able to speak with the enemy in the gate. All the engravers here represented are (we suppose) English, in the sense that they are not American; but we must confess, under this aspect of the matter, to a feeling of regret that so few of them bear English names. We have observed the same thing, however, even in the so-called American school. If we must particularise where nearly all are excellent, we would give the chief praise to Mr. Theodore Knesing's rendering of Rossetti's "Lady Lilith." The same engraver has finely re-

produced Cranach's well-known portrait of "Luther" and Gainsborough's no less familiar "Mrs. Siddons." In a different style Messrs. W. and J. R. Cheshire have achieved success with Mr. C. Whymper's drawing of "Humming Birds," which illustrated an article of Mr. Grant Allen. We thought that Mr. Sandys's portrait of Mr. Matthew Arnold was lamentably marred by Mr. Octave Lacour when it first appeared in the magazine; but the effect as of tattoo marks is absent from the proof. Mr. C. Napier Hemy was fortunate throughout in the engravers of his Cornish scenes, the two best perhaps being those here given from Mr. Balclez Istvan and Mr. R. Paterson. But the entire contents of this portfolio form a lesson in wood engraving, which ought to prove no less instructive to our artists than to the general public.

Etchings of Old London. By Ernest George. (Fine Art Society.) These admirable etchings have something more than artistic value. They will rescue from oblivion many of the curious old houses and quaint bits of architecture which now exist or have till recently existed in odd nooks and corners of London, but are rapidly disappearing, some through natural decay and some to make room for "improvements." One, at least, of these plates—that of Temple Bar—represents a building already of the past, but it is scarcely in structures of this type that the art of Ernest George is seen to most advantage. The more irregular, the more quaint, the more "tumbledown" a building is, the greater is the field for this artist's love of the picturesque. Of his skill as an etcher, his firm draughtsmanship, his expressive touch, his management of light and shade, there is no occasion here to speak; it will be enough to say that the fine qualities already shown in his etchings in Belgium and elsewhere are fully as conspicuous in these later plates. Perhaps the best of all is the frontispiece, which shows us the fine old house in Bishopsgate, once the residence of Sir Paul Pindar, and (till it was pulled down, after many years' existence as a public-house) "the richest example of domestic architecture in London." But the scene in Wych Street, the houses overhanging the river at Limehouse, Foubert's Alley, and Bartholomew Close compete with it very closely, while the rest are not far behind. In the matter of figures the artist leaves something to be desired; many of them seem as if they would be more at home on the Continent than in London.

Vere Foster's Drawing Books. (Blackie.) The last instalment of this numerous and useful series of drawing books comprises two volumes on "Painting for Beginners," and two of "Studies of Trees in Pencil and Water-Colours." The former are anonymous, except for the dominant name of Vere Foster, who appears to occupy a position of an editorial character between author and publisher. They are sound little books as far as they go, teaching the elements of "washing" with much clearness by means of plain directions and well-executed plates. The studies of trees are by Mr. J. Needham, whose work is of a more ambitious order; but the coloured plates are not so good as the facsimiles of pencil drawings, and though both may be useful to the student and may aid him in discriminating the touches best adapted to generalise different kinds of foliage, they should be used with caution and not without direct study of nature.

Notes on Civil Costume in England. By the Hon. Lewis Wingfield. (Clowes.) The remarkable series of English costumes exhibited at the International Health Exhibition deserved a memorial, and some of the most striking of the figures are here fairly repre-

sented by chromolithographs after Mr. Lewis Wingfield, who has added a short, but interesting, essay on the "History of Costume in England," and some explanatory notes to each plate.

The Art Year-Book. (Boston, U.S.: New England Institute.) This sumptuous volume, with its gorgeous cover and numerous illustrations of all sorts and kinds, appears under the auspices of New England Manufacturers and Mechanics' Institute. The Preface is signed by John Mason Little, Vice-President and Chairman of Committee on Exposition (whatever that may mean), and countersigned by Frank T. Robinson, Art Director, Hotel Pelham, and on another page we are told that the book was made by Arthur B. Turnure. The Preface informs us that the object of this publication is to present to the world a volume in which the highest American art products of the year are represented by means of suitable graphic arts, and produced entirely by means of American brains, labour and material, the only exceptions being in the use of Chinese, Japanese and India papers to be found in the limited copies. The book thus presented with such a flourish of trumpets is nothing more than numerous examples of various graphic processes, some of them good, but none of them first-rate of their kind, accompanied by poorly written and inaccurate letterpress. Though the idea of the volume is a good one, and its "get-up" is striking, we should be sorry to accept it as in any way representative of the best art or taste of America.

EGYPT EXPLORATION FUND.

THIS season's work of the Egypt Exploration Fund has now begun. Mr. Petrie, shortly after the general meeting, sailed for the field of operations. In a few days he was established at Nebireh, the promising Greek site mentioned at the general meeting. This site is a short distance north-eastward of the station of Tell-el-Barud, on the railway from Alexandria to Cairo. Its position will be best understood, if it is described as west of Tanta, south of Rosetta, and near the edge of the Delta. Mr. Petrie's first report was posted on December 5, and on December 6 I received, through Messrs. Cook's Office at Cairo, a telegram informing me that an inscription, with the name of Naucratis, had been found by the fortunate explorer. The Committee of the Fund reserved this information as not sufficiently identifying the site. Mr. Petrie's report of the 5th, received on the 13th, gave the text of the inscription. His subsequent reports have repeated his conviction, therein expressed, that the inscription identifies Nebireh with Naucratis. It is true that the stone was not found *in situ*, but had been carried home to the Pasha's farm, yet certain circumstances point to conditions which no site but Naucratis could be expected to fulfil. The mound is almost composed of Greek pottery of all ages, and thus marks a settlement dating from, at least, the reign of Psammetichus I. to the Roman dominion. The historians and geographers indicate no other city in Egypt of which this could be true but Naucratis, a Greek emporium, with some six centuries of Hellenic life. The situations hitherto assigned to Naucratis are at no great distance northward, and it seems impossible that there should have been for centuries two Greek marts, Naucratis and another unnamed by history, near together, which would be the inference resulting from a denial of the correctness of M. Petrie's identification. Farther, the nearness to Saïs of this site, as compared with the others, favours the identification with the emporium granted by the Saïte king.

An inscription is thus given by Mr. Petrie,

with the addition of some obvious restoration:—

Η ΠΟΛΙΣ Η ΝΑΥΚΡΑΤΙΣ
 ΗΑΙΟΔΩΡΟΝ ΔΩΡΙΩΝΟΣ ΦΙΛΟ . . .
 ΤΟΝ ΙΕΡΕΑ ΤΗΣ ΑΘΗΝΑΣ ΔΙΑ ΒΙΟΥ . . .
 ΣΤΙΤΤΑΦΟΤΑΑΚΑ ΑΡΕΤΗΣ ΚΑΙ ΕΥΘΥΙΑΣ
 ΕΝΕΚΑ ΤΗΣ ΕΙΣ ΑΤΤΗΝ

From the form of the letters this inscription is of the Ptolemaic age, probably of the third century B.C. The most interesting facts it proves is that Athens had a temple here, and that Naucratis was rather on the footing of Alexandria and Ptolemais Hermin than of the native cities.

The second inscription, a short dedication to Ptolemy Auletes, reads:—

ΒΑΣΙΛΕΑ
 ΝΕΟΝ ΔΙΟΥ
 ΠΤΟΛΕΜΑΙΟΥ

The third is as follows:—

ΝΕΙΛΟΥΣΣΗΣ ΑΛΟΧΟΥ ΤΗΝ Δ ΕΙΚΟΝΑ ΠΑΡΘΕΝΟ-
 ΠΑΙΟΥ
 ΜΗΤΡΟΣ Δ ΗΜΕΤΕΡΑΣ ΣΤΗΣΑΜΕΝ ΕΝ ΤΕΜΕΝΕΙ
 ΟΥ ΘΕΟΝΟΣ ΑΛΛΑ ΖΗΛΟΣ ΕΝ ΑΝΑΡΑΙ ΓΙΝΕΤΑΙ
 ΑΝΑΡΟΝ
 ΟΙ ΣΤΗΣΑΝ ΓΟΝΕΟΝ ΕΙΚΟΝΑΣ ΑΜΦΟΤΕΡΩΝ

The occurrence above ground of three Greek dedicatory inscriptions, the last set up in a temenos, leads us to expect a harvest of new documents of the kind from systematic excavations.

Whether the learned world accept or not the identification of Nebireh with Naucratis, there can be no doubt that Mr. Petrie has selected for his work a site of no common interest—a site which, as affording a succession of vases and other antiquities of all ages of Greek art, is sure to contribute largely to the scientific knowledge of Hellenic archaeology, especially in fixing the age of the earlier and most debated phases of art. It is well known that, although the Egypt Exploration Fund has from the beginning engaged to pay attention to the Greek antiquities of Egypt, yet many of its supporters are solely interested in the Egyptian, and yet more the Biblical, problems, of which M. Naville has already resolved some, and is now in the land of Goshen steadily pursuing the same object; and, further, that a certain part of the society's funds is specially reserved for the territory of Zoan. It is, therefore, to be hoped that the lovers of classical archaeology will for this season at least do somewhat for the work in which Mr. Petrie is engaged.

REGINALD STUART POOLE,
 Hon. Sec. Egypt Exploration Fund.

CORRESPONDENCE.

THE WEST PARK BUST.

Ouddesden Palace: Dec. 28, 1884.

May I correct a mistake I made in the *Journal of Philology* (vol. xii., p. 296) in reference to a bust preserved at West Park, near Salisbury? I said (on the advice of others) that the bust was "perhaps that of a Roman emperor." An engraving in Baumeister's *Denkmäler* of the statue of the Lionhelmed Athena, now in the Villa Albani, made me enquire further, and Dr. Waldstein has been kind enough to inform me that, beyond all doubt, the West Park bust "represents the same type" as the statue in the Villa Albani. Apparently the latter is the only recorded example of the Lionhelmed Athena. I would add that the bust is not noticed in Prof. Michaelis's *Ancient Marbles in Great Britain*, and is only an example of the many pieces of sculpture, &c., which are lying hidden and uncatalogued in country houses, and concerning which Prof. Michaelis, in the last number of the *Hellenic Journal*, entreats for information.

F. HAVERFIELD.

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. TOOTH & SONS have prepared for publication an exquisite etching by M. Chauvel, which renders—and we think almost more than renders—such beauty as there may be in a work of Mr. B. W. Leader's. The work is called "On the Banks of the Joy, O!" and it is a companion—and quite a worthy one, to say the least of it—to the famous "February Fill-Dyke" of the same painter. M. Chauvel has interpreted both in his art of etching; but he is, as we have almost implied already, so original an artist that it is with difficulty that he restrains himself within the limits of a mere translation. Chauvel's own method in the rendering of landscape is larger than Leader's. If it is less realistic in matters of detail, we are bound to say that it is more suggestive, and we confess that when the one artist is in alliance with the other we like what we may term their joint work. M. Chauvel, without being really false to his original, seems to have the gift of liberating Leader's touch and of conveying some quality of poetry into that which, as it stands on Leader's canvas, is wont to have an air of somewhat prosaic precision. M. Chauvel is assuredly one of the masters of his craft.

THE proposals of the Union Centrale with regard to the establishment of a Museum of Decorative Art at Paris have been definitely accepted by the Minister of Public Instruction. The Government will grant the site of the Cour des Comptes on the Quai d'Orsay to the Union Centrale, which is to erect the building at its own expense. After thirty years the Museum and its contents are to become the property of the State. The cost of construction is estimated at 4,000,000 francs. The journal *L'Art*, to which the original suggestion of this institution is due, complains that the Museum, according to the plan now proposed, is to serve merely for the gratification of amateurs, and not for the instruction of art-workmen.

MR. J. L. ATKINSON has just completed a mezzotint place of Mr. Millais's poetic study, "The Love Bird," exhibited in the Royal Academy, 1883. If the picture has lost some of its force by translation into black and white, it has gained in sentiment and refinement by its reproduction into the soft tones of mezzotint. The plate also shows that Mr. J. L. Atkinson is making progress in an art which has now but too few exponents, and is producing work worthy of his early master, Mr. Samuel Cousins. A trial proof of the plate may be seen at Messrs. Tooth's Galleries, Haymarket.

THE first number of the new series of the *Art Journal*, in its pretty new cover, seems to us to show that the proprietors have done wisely in reducing the price, and omitting two out of the three engravings on metal. The place of the latter is well supplied by an addition to those excellent wood-engravings which have always been a speciality of this magazine; and the etching this month by C. O. Murray, after a picture by Henry Mosler, of a wedding morning in Brittany, is admirable. Among other interesting articles is one by Walter Armstrong on the new Women's University at Mount Lee, built and endowed as a memorial to his wife by the late Mr. Thomas Holloway.

THE Christmas Number of this periodical is, as we have already announced, devoted to the work of Sir Frederick Leighton. The account given by Mrs. Andrew Lang of the art and career of the President of the Royal Academy is written with good taste and judgment.

THE bequests made by the late Baron

Davillier to the Bibliothèque Nationale, the Savres Museum and the Louvre, have been formally accepted by the French Government. The objects given to the Louvre have been placed in a portion of what was formerly known as the Musée des Souverains.

M. EUGÈNE MÜNTZ has been chosen to take the place of M. Taine as professor of Aesthetics and History of Art at the Ecole des Beaux-Arts.

THE STAGE.

M. SARDOU's new play, "Théodora," has at length been produced at the Porte St. Martin, where for three months it has been in preparation. It deals, as half the world knows by this time, with the character of an Empress who had no character to lose, and with the fortunes of a personage whose fortunes were wonderfully various. The subject is about as repulsive as was that of M. Sardou's last successful work, "Fédora," and again the interest aroused by the writer's development of his theme is chiefly one of curiosity. Even the critics most disposed to be favourable to M. Sardou confess the absence of charm, and aver that though they are stirred they are not touched by the succession of incidents which his ingenuity furnishes. The disadvantage under which "Théodora" suffers—the burden which the piece bears—is that which presses upon nearly every piece written to display the capacities of a given artist. Naturalness is almost invariably wanting to such a drama: the disproportionate importance of one of its characters throws the picture out of scale, and, moreover, the genesis of the work is a false one. The all-absorbing part is, of course, in the present instance played by M^{me}. Sarah Bernhardt, who has so completely recovered from her *crise de nerfs* of last autumn as to be able to perform it with unflagging energy. Whether, however, this "frêle comédienne"—albeit she be made "of steel"—will support the exertion with impunity, night after night, is the question which just now rouses anxiety in the breast of M. Francisque Sarcey. And, however this may be, it is certain that M. Heulhard's clever demolition of her claims as an artist has been somewhat premature. Of the remaining parts the two which are most important—or, more properly speaking, the two which are least effaced in the determined effort to bring prominently to the front the Empress-courtesan—are those enacted by M^{me}. Antonine and M. Marais. Not less remarkable than any single interpretation of a character is the *ensemble* produced by a long series of rehearsals, such as it is M. Sardou's wont to carefully superintend, and, again, the completeness of a *mise en scene*, which is of extraordinarily costliness.

MUSIC.

RECENT MUSICAL PUBLICATIONS.

St. Elisabeth. Oratorio. By Franz Liszt. (Novello.) Nearly ten years ago this work was performed at one of Mr. Walter Bache's concerts, but since then no choral society has ventured to take it in hand. The English musical public has not, as yet, given Liszt a fair trial. For many years it neglected Wagner and Berlioz, and it will be strange if the future shows that we have too long turned a deaf ear to the companion and friend of these two illustrious men. Liszt's piano-forte pieces and his orchestral compositions are not unknown to us; but he attaches more value to his masses and oratorios, and before we can pass judgment on him these must be heard. The short excerpts which from

time to time have been given at concerts have certainly not met with a favourable reception, so musicians manifest no curiosity, still less anxiety, in the matter. The vocal score of the *St. Elisabeth* just published by Messrs. Novello, gives us, of course, only an imperfect idea of the work. The composer, as is well known, handles the orchestra with great dexterity, but the score indications, so general in publications of this kind, are here totally wanting. There is a letter from Liszt to the clever arranger, Mr. W. Bache, acknowledging the indefatigable zeal which for many years he has displayed in his master's cause; and an interesting preface by Mr. C. A. Barry, giving an account of the libretto, and some remarks about the principal themes which are constantly recurring throughout the work. These have been culled by the composer from breviaries and choral books of the sixteenth and seventeenth centuries, or from Hungarian music. In reading through this oratorio we fail to understand the enthusiasm of Liszt's disciples. We come across many charming phrases, much that is skilful, but, on the other hand, the greater portion leaves either a very vague or else disagreeable impression upon our mind. The *leit-motive*, too, seem to be employed in such a mechanical manner. They come in little patches, or else are tediously developed: the logic, the insight, the ingenuity of Wagner are wanting. The oratorio is divided into six scenes, and of these the fifth and sixth appear to be by far the most interesting. No one could listen to the March in the "Crusaders" scene without being struck with the charming trio; but on turning to the preface we find that it is not Liszt's, but derived from an old Pilgrims' song, supposed to date from the time of the Crusaders. We will speak again about this oratorio, if we have "a more convenient season"—that is, if we have to attend a performance of it. The words are ably translated from the German of Otto Roquette by Constance Bache.

Organist's Quarterly Journal, vol. 8. part lxiv. (Novello), contains nothing of any special importance. The *Adagio* by O. Dienel is dry. The *Postlude* by W. N. Watson, with its uncertain tonality and stiff part-writing, would soon empty a church. The *Gavotte* by E. Walker is unsatisfactory in form and tonality, and, besides, not original. B. Gilholy's "Voluntary," H. Maxfield's "Andante," and J. Matthew's "Fantasia" are not interesting pieces. Part 64 is decidedly not a strong one.

Fantasia for the Organ. By W. Spark, Mus. Doc. (Novello.) The first movement is light in character, and the middle section in B flat pleasing. The *Andante* opens with a nice flowing subject, but the continuation is weak. The *Finale* is lively, and indeed the best of the three movements.

Golden Days. Boudicca. By Farley Newmann. (Brighton: J. & W. Chester.) The first is a *Gavotte*, but reminds us little of the eighteenth century, the "golden days" of the *Gavotte*. The second, *Boudicca*, is a March, weak both in character and form.

Album Leaves. By J. Gledhill. (Brighton: J. & W. Chester.) Three unpretentious pieces: the first, "In the Woods," has not much charm; the second and third are more pleasing, although the composer is too much influenced by Chopin in the one and by Mendelssohn in the other.

Two Dances in Slavish Style. By F. Sawyer, Mus. Doc. (J. & W. Chester.) These two pieces were written for orchestra, but here we have them arranged as duets for the piano. They appear rather interesting, but we should prefer to judge them in their original form.

TRÜBNER & CO'S LIST.

Small 4to, pp. xx—193, handsomely bound in cloth, 21s.

AN ILLUSTRATED EDITION OF
MR. EDWIN ARNOLD'S POPULAR POEM,
THE LIGHT OF ASIA;
Or, the Great Renunciation.

The Illustrations being taken from Photographs of
Buddhist Sculpture and Frescoes found in
Ancient Ruins in India. [Now ready.

"Differs agreeably from most modern editions de luxe in being of a portable size."—*Times*.

"A very superb production."—G. A. S. in *Illustrated London News*.

* The same work in post 8vo, cloth, 7s. 6d.; or in crown 8vo, limp parchment, 2s. 6d.

Crown 8vo.

THE SECRET OF DEATH:

Being a version, in a popular and novel form,
of the "Katha Upanishad" from the Sanskrit.
With some Collected Poems.

By Edwin Arnold, C.S.I., &c.

Author of "The Light of Asia."

[Early in February.

Now ready, demy 8vo, pp. viii—314, with Ten Plates, cloth, 12s. 6d.

THE WAVE OF TRANSLATION

In its Application to the Three Oceans of
Water, Air, and Ether.

By the late J. Scott Russell, M.A., F.R.SS.,
London and Edinburgh.

Now ready, crown 8vo, pp. iv—312, cloth, 10s. 6d.

AN ANALYSIS of the

PATENT and COPYRIGHT LAWS.

Including the various Acts relating to the Protection of Inventions, Designs, Trade Marks; Literary and Musical Compositions, Dramatic Performances; Engravings, Sculpture, Paintings, Drawings, and Photographs.

Author of "Patent Law and Practice."

By A. V. Newton,

2 vols., demy 8vo, with index, cloth, 2s.

CREEDS of the DAY;

Or, Collated Opinions of Reputable Thinkers.

By Henry Coke.

"This is a serious effort to compare our leading thinkers with one another and with themselves."—*Contemporary Review*.

"A very able book. Well written and eminently fair."—*Modern Review*.

"A successful attempt to define every important school of modern thought."—*Sun* (New York).

"Its style will fascinate all who read it."—*Nation* (New York).

"An accurate view of the opinions on the most important questions of the day."—*Scotsman*.

NEW VOLUMES OF

"TRUBNER'S ORIENTAL SERIES."

DEDICATED BY PERMISSION TO H.R.H. THE PRINCE OF WALES.

2 vols., post 8vo, pp. cviii—212 and viii—379, with specially prepared Map, cloth, 24s.

BUDDHIST RECORDS of the

WESTERN WORLD.

Translated from the Chinese of HUIEN TSAING (A.D. 639).

By Samuel Beal,
Professor of Chinese, University College, London.

Post 8vo, pp. viii—464, cloth, 16s.

THE SANKHYA APHORISMS

of KAPILA

With Illustrative Extracts from the Commentaries. Translated.

By J. R. Ballantyne, LL.D.

late Principal of the Benares College. Edited

By Fitzedward Hall.

Post 8vo, pp. xiviii—306, cloth, 12s.

MANAVA-DHARMA-CASTRA:

The Ordinances of Manu.

Translated from the Sanskrit, with an Introduction by the late

LITERATURE.

The University of Cambridge from the Royal Injunctions of 1535 to the Accession of Charles the First. By James Bass Mullinger. (Cambridge: University Press.)

IF Mr. Mullinger has the good fortune, given to so few historians of mark, to carry to its legitimate conclusion the important task which he has undertaken, his name will be enduringly associated with the history of his university. The second volume of his book has followed the first with no undue speed, but it more than fulfils the expectations raised by its predecessor. As the progress of his theme demanded, Mr. Mullinger shows himself more and more of a specialist, although again it is by no means only professed antiquarians for whom he has worked and who owe him thanks for his long and unstinted labours. Unlike those authors who, in their prefaces, are at the unnecessary pains of stating what their books will not be found to contain, Mr. Mullinger, in the pages introducing his new volume, plainly places before his readers "the high ideal which it has been his endeavour to realise." He subscribes to the opinion of Aschbach that the history of a university should deal, not only with its institutions and with the influence exercised upon its growth by events and transactions in the history of Church and State, but also with its scientific and literary life, as finding expression in the most noteworthy productions of its most eminent members. And, to my mind at least, he seems likely to succeed in accomplishing this threefold scheme without allowing his work to lose the requisite unity, and to become, like I must say Aschbach's own *History of the University of Vienna*, a rather formless mixture of narrative and *Gelahrtenlexikon*. We live in days when even very masculine readers might tremble if asked to digest an English Crevier; while, on the other hand, Mr. Mullinger's subject is too large to be dealt with in an attractive monograph like that in which Kampschulte related the rise and fall of the University of Erfurt. But our Cambridge historian is something more than readable; and he has caught from Mr. Gardiner, or taught himself, a manner of writing history singularly suitable to his theme. In general, he restrains without altogether concealing his enthusiasm, but here and there he allows it to break forth into passages of genuine, though temperate, eloquence. Such passages are that early in the volume, where the author hints at what the country, as well as the universities, may have lost by the total abolition of the monastic system, and that in which he deprecates the hard lot of a true student and thinker who had to quench his thirst by draughts such as refreshed (say) Gabriel Harvey or his adversaries. Of course, nobody knows

better than Mr. Mullinger that in such a book as his, dedicated though it be to an orator to whom Queen Elizabeth would have lost her heart, declamation would be altogether out of place. But his interest in his matter never flags, and communicates to his style a genial warmth. I do not refer to those instances in which readers for whom there exists "a dearer name" than Cambridge might be excused for considering that Mr. Mullinger "cantabrizes." He cannot be blamed for noting with a certain emphasis the fact that the University of Dublin was "far more largely inspired by Cambridge than by Oxford"; for dwelling with satisfaction on the conclusion that the *Institution of a Christian Man*, by which it was once hoped that even Charles V. might be brought over to the cause of Reformation, though not to that of the German Reformers, is "essentially an exposition of the Cambridge theology of the time"; or even for pointing out that in a very different assemblage of divines, those who met at Dort, four out of the five representatives of the Church of England, and the one representative of the Church of Scotland, were Cambridge men. Moreover, in the sixteenth century, at all events, as in some later periods, the rivalry between the two English Universities was not altogether that friendly rivalry which it is so pleasant to extol in our milder days. The greater share of patronage bestowed upon Oxford under Mary was, as Mr. Mullinger very distinctly shows, "the result of the greater degree of favour with which Catholic doctrines were there regarded." On the other hand, and not less naturally, Elizabeth's "first signal mark of goodwill was accorded to Protestant Cambridge"; and, on the whole, she had good reason for remaining true to her predilection; for Cambridge was once more the seminary proper of what, for a time at least, was to become the distinctive theology of the Church of England, and found its embodiment at different periods in two primates so dissimilar in many other respects as Parker and Whitgift. The preferences of James I. were, of course, more a matter of caprice; and Mr. Mullinger's story has, in more senses than one, to descend to the level of farce when he comes to narrate how the representatives of Oxford looked on with eager envy while at Cambridge beardless boys and graceless graduates were delighting the King by the performance of "Ignoramus." Yet it must be conceded that the universities owed something to James I. besides discriminating remarks on plays and acts. I wonder how many of our Conservative friends who refuse to listen to any proposal for depriving the universities of their representatives in Parliament are aware that it was James I. who first accorded the privilege which Oxford and Cambridge, at least, could now well afford to forego? It was under James, also, that the English universities acquired the right of filling up livings in the hands of Roman Catholic recusants, and that they, the colleges as well as the universities, were on three occasions exempted from subsidies. While Mr. Mullinger treats all questions affecting either of the two universities as such in the spirit of a historian, he is not unjust to those colleges at Cambridge which cannot boast a history so long or so illustrious as his own. Indeed, no passages in the pre-

sent volume are more interesting than those in which he relates the *origines* of some of the smaller colleges in the university. The early history of Magdalene, for instance, is that of a hard struggle for existence; the memories of its early straits clung to it even in the days of Fuller, who speaks of it as every year producing "some eminent scholars, as living cheaper, and privater, freer from *Town-tentations* by their remote situation." The remembrance of the beginnings of Emmanuel has been widely revived of late in connexion with the recent celebration of its tercentenary. The history of this college is intimately bound up with that of Puritanism, or rather of the Puritan ministry, since not a single fellowship in it was reserved for the civil law or for medicine. Thus it came to pass that during the Commonwealth period not less than eleven heads of other houses came from Emmanuel. Less familiar are the records, in its earlier years, of another college which shared the tendencies of Emmanuel; but, though Fuller calls Sidney the Benjamin of the colleges of Cambridge, it deserves most honourable mention as the first among them which opened its fellowships to candidates of Scottish or Irish birth. Milton's college was, of course, Puritan, as well as Cromwell's; but Mr. Mullinger gives an interesting account of the attempts made under the mastership of Valentine Cary (1609-1620) to alter the character of the college. It furnishes a curious illustration of the skill with which, in his earlier days, Buckingham knew how to conciliate the favour of the Puritans, that in 1622 he should be found successfully intervening to preserve Emmanuel from the possibility of a similar mastership. To an earlier date belongs the refoundation of Gonville Hall by Dr. Caius, one of the most original figures in the annals of the university, and, notwithstanding Shakspeare, one of the most pathetic. Such at least he seems to me, not only because of his part in the scene well described by Mr. Mullinger, when the master and founder of his college had to witness the burning in one of its courts of the "popish trumpery" which he had hidden away against the advent of better times, but in general as a man out of sympathy with his own college and with the university for whom he had done so much, but from whom he had come to differ in many things besides religious faith. Caius was a man above as well as behind his age. To return, however, to St. John's, Mr. Mullinger cannot but have found it difficult to abstain from an excess of detail concerning that foundation, more especially as in this instance he had at hand the most valuable history of a college which Cambridge possesses, viz., that by Baker, recently edited by Prof. Mayor. Although he cannot always assert of St. John's, as he can with regard to the period about 1540, that "to its lasting honour, it may fairly claim the distinction of including among its members at this time a majority of the most able teachers and the most promising students in the university," he dwells with just pride upon the various ways in which this college added to the sum-total of its fame even in the periods of decline which even large colleges have to undergo. Thus, in the first quarter of the seventeenth century, when St. John's

diminished both in numbers and in reputation for learning, not only was the most beautiful of its courts called into life and its library built, but several of its former fellows were presiding as masters over other colleges; while among the undergraduates within the walls of St. John's itself not a few were destined to become illustrious in the national history. By this time St. John's had already been far outstripped in numbers by Trinity, which thenceforth never lost the lead. Mr. Mullinger makes no attempt to detract from the magnificence which was the characteristic of Trinity, at all events from Neville's days; on the other hand, it is his duty as a historian to compare the church patronage of St. John's with that of Trinity, and to point out that in the long list of livings to which the wealthier college presents no *rectorial* living—i.e., none with the great tithes—appears as derived from monastic property. It is a curious speculation for the future what place in the hierarchy of Cambridge colleges may be destined for King's. Had the sixth Edward lived to the age at which the sixth Henry founded King's, it seems that an Edward's college might have risen to outshine all the other members of the academic sisterhood.

That Mr. Mullinger's work should admit of being regarded as a continuous narrative, in which character it has no predecessors worth mentioning, is one of the many advantages it possesses over annalistic compilations even so valuable as Cooper's as well as over *Athanas*, conscientious or the reverse. And to those who read this history of the University of Cambridge from the days of Thomas Cromwell to those of Northampton and Suffolk it will certainly not appear to lack dramatic interest, or even heroes of its own. Within the ninety years comprised by this volume, the university passed through vicissitudes graver than any experienced by it in other periods of the national history. In the troublous times of the Wars of the Roses, while the baronage was wasting itself away, the collegiate system at Oxford and at Cambridge benefited by the anxious piety of both York and Lancaster. In the days of the Commonwealth and the Protectorate the two universities had already fixed their roots too firmly in the national life to need to fear anything worse than a new model, and possibly an untoward competition from the outside. Whatever future may await the country, the universities at least, and Cambridge in particular, have lost no time in making to themselves friends of the spirit of democracy. But in the century of the Reformation the question was at one time simply this: whether a despotic government was about to give the colleges, which had already come to form the backbone of the university system, their *quietus*; whether, in a word, they were destined to share the fate of the monasteries and become the prey of the "gaping wolves" at the King's court. In the end, so far as the reign of Henry VIII. was concerned, the long-dreaded confiscation of the college estates, by means of an Act for the Dissolution of Colleges, was averted by one of those generous impulses of which King Henry was not altogether incapable even in his worst days, by the goodwill of Queen Katharine (Parr), and by the exertions of two illustrious members of the university, Sir Thomas

Smith and Sir John Choke, co-operating. But the seductive scheme was only abandoned in order to be revived under Edward VI., and even, if rumour is to be trusted, in the earlier part of the reign of Elizabeth. Other dangers threatened in or about the latter half of the sixteenth century, together with the greed of courtiers and the fickleness of monarchical favour. The worst of these, of course, sprang from the condition of the universities themselves; and there could be but scant consolation in the fact that, when Cambridge had sunk low, Oxford had sunk lower still, and those continental universities with which the English were in the closest contact had reached the deepest decline of all. In the last years of Henry VIII. the number of candidates admitted to the degree of B.A. at Cambridge seems to have fallen to an average of little more than thirty *per annum*, the list of university officers had to be reduced, the salary of one of the university lecturers stopped, and money borrowed to supplement the *fundo suspirantes nummos in imo*—the last £20 in the university chest. Nay, an even more humiliating expedient (as, at least, it would seem to our days) had to be resorted to: the "useless books" in the university library had to be sold, so that as late as 1574 it only numbered 180 books, as against 370 just a century before.

In part, no doubt, the decline of the English universities in the middle of the sixteenth century was due to common causes, the operation of which nothing short of an intellectual originality uncommon in corporate action could have enabled the academical bodies to resist. In England, as elsewhere, the Renaissance and the intelligent despots whom its influences inspired had overthrown the *régime* of the old scholastic studies, though how imperfect had been the victory over their method is shown by many things. Among these is the fact, excellently put by Mr. Mullinger, that even Calvinism, which was so soon to seek to leaven the whole lump,

"could not altogether shake off its scholastic modes of thought; and Whitgift and Cartwright, when they disputed respecting the Scriptural sanction for the prescribed usages of the Anglican Church, still deferred to traditional rules of logical form and figure, much as did the doctors of the schools a century before."

Royal injunctions were no more able than Acts of Parliament have been in later times to recast of a sudden the intellectual life of a community unable to forget the traditions of its past. It is surprising to find how far from radical were the changes effected in the ordinary courses of study by the establishment of the public lectureships in Greek and Hebrew, and at a rather later date of the Regius professorships. Indeed, it is questionable whether, while collegiate tuition became more instead of less active (for already the "main chance," if I may say so without irreverence, had become a controlling influence at Cambridge), one of the chief results of the new professorships was not the killing-off of that voluntary system of instruction which has never since been very vigorously revived in the university, except in the more doubtful form of the private tuition of later days. The changes made by the Statutes of 1549 in the arts curriculum (as remodelled on the

basis of the Injunctions of 1535) are chiefly noticeable as showing the desire to emancipate the university from the task of school work. Grammar was now discarded from the first year's course, Jesus alone, the Cavendish of its day, being left open to this schoolboy study, for which that of "mathematics" was substituted. But the Elizabethan Statutes of 1570 were capricious enough to put rhetoric in the place of what in those high-flown days was regarded as too mechanical a discipline. Logic was the chief prescribed study of the second and third years, but though Cromwell's Injunctions had prohibited the "frivolous questions and obscure glosses" of Scotus and the Scotists, it was not till the middle and latter part of Elizabeth's reign that the system of Ramus began to establish itself at Cambridge. Among the higher studies, those which led up to the degree of M.A., and proficiency in which was the test of matured scholarship, or, at least, the qualification for collegiate preferment, divinity held an unrivalled pre-eminence, and here, at least, it might have been expected that the times would have been favourable to the maintenance of a high level of attainments. But it is obvious enough that in England the new studies favoured by the Renaissance had not yet taken a sufficient hold of the academical mind to be able either to withstand the encroachments of theology, or to imbue with their own spirit the one study to which the changes, the reactions, and the counter-reactions of the Reformation period gave an unrivalled importance. English Protestant theology, on the one hand, as yet unequipped with systematised methods of attack and defence peculiar to itself, on the other hand, without a sufficient command of those materials on the use of which it depended as a branch of the New Learning, inevitably found it difficult to play the all-important part in English academical study which the force of circumstances had assigned to it. Hence, at first the aid of foreign scholars—Alesius, Bucer, Fagius at Cambridge—had to be called in; and then, after the Marian reaction had passed away, the university settled itself down to the controversy between eclecticism and Puritanism, which to us seems as unrefreshing as the great Oxford conflict of the nineteenth century, when all the memoirs concerning it have been at last published, may seem to the twentieth.

Other reasons for the decline of the intellectual vigour of Cambridge in the later Tudor days are to be sought elsewhere, and have been fully illustrated by Mr. Mullinger. In a word, the universities were no longer solely or mainly the abode of real students, but were becoming places where the young aristocracy and gentry disported themselves, and where even the sons of ropemakers imitated some of the extravagances of their social superiors. Undoubtedly, the collegiate system in its later development was not best adapted for the repression of this tendency; and the utterly indefensible abolition of the obligation to reside for the degree of M.A. (to be followed in due course by the abolition of all exercises or examinations for that degree) first created that broad gap between undergraduates and "dons," which remained unbridged, and which only the social changes of our own times have almost succeeded in

filling up. A more difficult question to solve is the effect upon the progress of the university of the constitutional changes imposed by the Elizabethan Statutes, more especially those relating to the election of the Vice-Chancellor and of the *caput*—changes which, as Mr. Mullinger shows, by no means owed their origin only to the fears excited by the teachings of Cartwright and his followers. While it is certain that the strong oligarchical element thus introduced into the academical system of government, the tardiness which came to characterise the progress of many things in the university was largely due, it is difficult to guess what that progress might have proved, had the "untamed affections" of the younger regents controlled the fortunes of Cambridge from Cartwright's days to our own. It is probable that to the conservative spirit which gradually gained the ascendant in the university may be attributed much of that feeling of self-dependence which has so honourably distinguished Cambridge. Even a time-serving head like Dr. Perne (otherwise to be remembered with respect and even with gratitude) was found on one occasion to resent a royal commendation to a fellowship at his college; for the rest, though commendations had "grown stale i' th' universities" before the days of the Civil War, perhaps nothing short of such a revolution could have broken up a baleful system, which is, on the whole, the least pleasing feature in Mr. Mullinger's picture of Elizabethan and Jacobean Cambridge.

I have, literally, only arrived at the beginning instead of at the end of my notes of specially interesting points in this volume. As observed, its story is not without its heroes, and it would have been interesting to examine Mr. Mullinger's contributions to a juster estimate of Whitgift than is to be found in certain other quarters. It is remarkable that Whitgift warmly recommended his old pupil, Essex, for the chancellorship of the university, to which he was elected in August, 1598—a date showing, by the way, that the Queen must already then have, in some measure, relented towards him after the famous explosion in the preceding June; for Mr. Mullinger notes that it was through her caprice that he had, seven years before, lost the corresponding honour at Oxford. Of his successor at Cambridge, and rival in political life, Robert Cecil, Mr. Mullinger draws a character which, I think, hardly does justice to his "far from contemptible powers," and which, perhaps, it was hardly necessary here to attempt at all. But, on the whole, there are few things in this volume which one might wish away; certainly these do not include a number of memoranda possessing a more general literary interest, and including a series of notes on the history of the academical drama, from "Pammachius" to "Ignoramus." From a literary, as well as from a historical, point of view, no book has been recently issued by the Press more worthy of the university than this volume, which few will close without rejoicing that its tale is still only half-told.

A. W. WARD.

The Relations between Religion and Science.
The Bampton Lectures for 1884. By the
Bishop of Exeter. (Macmillan.)

No one can lay down these lectures without a strong sense of their spiritual force and masculine piety. Dr. Temple's sermons are always telling, and these are certainly no exception, and when preached they must have been even more telling. They are full, too, of lucid exposition and fearless statement of opinion, which in an apologist are qualities very necessary and very uncommon. And this makes it all the more to be regretted that in what constitutes their main purpose—a discussion of the relations between religion and science—they give us little or no help.

Of the various subjects treated in the volume we have only space here to notice one, which is after all the main question in dispute—the question of miracles. What by ordinary people are accounted miracles, and by scientific men incredible stories, are to Dr. Temple interferences with a supposed uniformity of nature for a moral purpose, exactly paralleled by the action of the human will, that is to say, they are instances of higher or moral law superseding lower or physical law. This is Dr. Temple's contribution to apologetics reduced to its lowest terms, and, as will be seen, it rests upon the well-known rhetorical figure *paronomasia*. By moral law we mean right conduct considered as binding upon everybody, by physical law we mean generalisations from phenomena. In each case no doubt the term is a metaphor from jurisprudence, but the points of resemblance are different. Dr. Temple's argument, therefore, has no more value in logic than any other play upon words. It is almost incredible that Dr. Temple should not have seen this. As a matter of fact, he makes the equation easier for himself by using each term as far as possible in the sense of the other. Thus (p. 195) we are told that the moral law "often takes the form that, given certain conduct, there will follow certain consequences." On the other hand (p. 53), we are told that it may be our duty to "disobey physical laws." But even if *paronomasia* could be accounted a logical figure, there remains the word "higher" still unexplained. In the sense of moral law it is obviously meaningless; and how, we may ask, can one generalisation take higher rank than another? Here again, we are only dealing with metaphor.

It remains to consider what Dr. Temple has to say about the "uniformity of nature." He regards it as the scientific postulate which, nevertheless, is obtained by induction, and, therefore, is liable at any instant to be upset. The truths of physics do not, in his idea, share the same character of necessity as the truths of mathematics. "I am constrained to believe that two and two are four, and not five; I am not constrained to believe that if one event is followed by another a great many times it will be so followed always." But why is Dr. Temple constrained to believe that two and two always make four in the very teeth of the miracle of feeding the five thousand? Or if mathematical truth does not rest upon instances, why need physical? The savage does not admit that two and two always make four; he is in the same condition with regard to mathematical truth as Dr. Temple in regard to physics. He might admit that two and

two make four in eggs, and deny it as unproven in feathers. On the other hand, Dr. Temple's state of mind in regard to the necessity of mathematical truth is simply that of scientific men in regard to physical truth. To both, when their truth is once established, it becomes necessary. And the establishment of a truth in mathematics or natural science means simply this—that one term of the proposition shall be capable of analysis into the other, that an effect shall be wholly contained in its cause; and this is what is meant by the uniformity of nature. It follows, therefore, that Dr. Temple must either surrender his belief that two and two make four, or admit the equal necessity of scientific truth. If the one cannot be considered certain without a complete induction of instances, neither can the other; if one is established by showing a causal connexion, so is the other. It is worthy of remark that Dr. Temple, who, later on in the volume, when treating of morality, argues with great force against the supposition that the growth of the perception of a fact at all invalidates the fact, should himself point to the growth of the idea of cause in order to invalidate it.

To apply this to miracle. "If a miracle were worked," says Dr. Temple,

"science could not prove that it was a miracle, nor of course prove that it was not a miracle. To prove it to be a miracle would require not a vast range of knowledge, but absolutely universal knowledge, which it is entirely beyond our faculties to attain. To say that any event was a miracle would be to say that we knew that there was no higher law that could explain it, and this we could not say unless we knew all laws; to say that it was not a miracle would be *ex hypothesi* to assert what was false."

Now this need not be so. One scientific law cannot be higher than another; and a reported occurrence has only to be shown to contradict one ascertained law to be disbelieved or treated as a miracle. A stone crying out could at once be pronounced either impossible or, if properly authenticated, a miracle. So far, then, as Dr. Temple's object in these lectures was to show that miracles are not miracles at all, because there is no uniformity of nature for them to infringe, he cannot be said to have succeeded. On the other hand, the historical case against them is put with hardly sufficient force. Dr. Temple admits that for those recorded in the Old Testament there is no evidence; but he is inclined to give full weight to Paley's argument for those in the New. Now, in an eirenicon it is unwise to overstate one side of a case, and the case for the historical probability of miracles is certainly here overstated. Not that most of the arguments on the other side are not in some way recognised, but they are not brought together and applied where they would have the greatest effect. For example, it is said (p. 153) of the gospels that "the miracles are embedded in, and indeed intertwined with the narrative," but all the instances quoted where this really is so, are instances of works of healing which science is not disposed to consider miraculous. Again Dr. Temple admits (p. 154) that "the disciples had no strictly scientific conception of a miracle," which would mean that they, and certainly the next generation, would be eager to believe any wonder about some one they revered. And so, too, the statement (p. 209)

that St. Paul died *for* and *in* the belief that our Lord rose from the dead is no evidence for that miracle, it is evidence only for St. Paul's attachment to the spiritual truth which that fact represented to himself. Finally, and in a modern contribution to apologetics this is a grave omission, there is no mention of the fact that in the documents themselves there is evidence of an earlier and a later, so as to make it probable that textual criticism may have an important word to say on this side of the question.

About Dr. Temple's chapter on the Will we have no space to say anything, except to express our wonder that a writer who holds so strongly the doctrine of a spiritual principle in man which gives him his persistent sense of identity and responsibility, should hold that the will is free only now and then.

H. C. BEECHING.

Travels in the East: including a Visit to Egypt and the Holy Land. By his Imperial and Royal Highness the Crown Prince Rudolph. (Bentley.)

ROYALTY in our time is nothing if not literary. The Austrian Crown Prince, having visited the Nile and the Jordan (chiefly for the purpose of slaughtering every winged and four-footed creature that had the ill-fate to come in his way), has accordingly written a book; and it is not difficult to discover how his book has been written. He evidently kept a brief diary, or game-book, in which were hastily jotted down the particulars of each day's shooting. Returning home to the pretty study vignettied at the head of his first chapter, he recast and expanded this diary, padding it with voluminous quotations from Brugsch, and borrowing his local colour from Baedeker. The result is an imposing volume written in the sententious style of a school-exercise, and profusely illustrated with indifferent whole-page woodcuts after sketches by Pausinger. Regarded as a merely boyish effort designed for the gratification of his family, the prince's book might be allowed to pass without comment, were it not for the sporting details; but these are revolting. That a professed shot should desire to secure specimens of curious foreign birds and beasts is intelligible. That he should use his skill and risk his life to exterminate savage beasts of prey is worthy of all admiration. But it is neither intelligible nor admirable that any man, prince or peasant, should systematically slay every living thing, no matter how common, how harmless, or how abundantly bagged on former occasions. Nor is the slaying the worst part of it. We read again and again of birds and beasts severely wounded, tracked by their blood, and yet escaping to die in lingering agony. All this is told without a word of regret, except for the trophy that is lost. Some of the minor incidents are especially pathetic. A pair of ravens had built in the cornice at Denderah, and the prince actually shot the hen bird as she rose from her nest. At Luxor, among some outlying ruins near the sacred lake, a flock of migratory birds, "overcome by the fatigue of their journey, sat pitifully on the bare stones," writes the royal sportsman. Yet not even these wretched little travellers

were spared; "a brief crusade soon put an end to their troubled existence" (p. 130).

In Egypt, His Imperial Highness went only as far as the First Cataract. He does not appear to have seen a live crocodile; and not even in the way of sport has he anything new to tell. Near Erment, however, where there are some fast-vanishing remains of two temples, one dating from Thothmes III., and the other from Ptolemy IX., Brugsch Pasha, who accompanied the Crown Prince through Egypt, discovered part of an inscribed column in black granite, of the time of Amenhotep II. This important fragment, we are told (p. 132), was found during one of the prince's hunting expeditions, and has been transferred to the Imperial collection at Vienna. A translation by Brugsch is given *in extenso*. Couched in the fervid and elevated style of the famous "Hymn of Victory" of Thothmes III., and composed possibly by the same scribe, it proclaims the praises of the Pharaoh, "the king of the strong hand, whose bow no man can span, neither among his warriors, nor among the princes of the people, nor among the kings of Assyria." He is compared, in the usual strain of these panegyrics, to "the leopard in his wrath," to Horus, to Khem, to Ra, and to Amen; and he is especially designated as "the friend of the Great God Knum of Elephantine," to whom it is said "he gives this Temple," which he furthermore endows with offerings of bread, beer, wine, oxen, calves, doves, and winged fowls of all kinds in abundance. The stone bears date the fifteenth day of the month Epiphi, in the third regnal year of Amenhotep II. The text in part reproduces an inscription at Amada; but its especial interest lies in the fact that this fragment proves the former existence of a hitherto unknown and unsuspected temple dedicated to Knum by Amenhotep II. in the near neighbourhood of Erment, for further remains of which it might be well worth while to seek. Being no Egyptologist, the Crown Prince is not to blame for omitting to point out this important piece of inductive evidence; but it seems strange that it should not have been suggested to him by his learned guide. We are not told in what year the prince's Eastern journey was undertaken; but the internal evidence goes to show that it must have been previous to 1882.

AMELIA B. EDWARDS.

Safe Studies. By the Hon. Mr. and Mrs. Lionel A. Tollemache.

Stones and Stumbling. By the Hon. Lionel A. Tollemache. For Private Circulation. (C. F. Hodgson.)

THE bulk of the articles which form these two volumes appeared in the *Fortnightly Review*. In a modest and touching preface Mr. Tollemache answers those friends who have asked him why he has lately written so seldom "valetudinem causam, non ignaviam fuisse," and, with a sorrowful *viximus*, offers them, instead of new contributions, these gathered fragments of his literary life. It is ungracious to look at the title of a gift-book, and we should have said nothing of the harmless conceit were we not certain that the volumes will sooner or later be given to the

world. In that case the author will doubtless relinquish the amiable but futile effort not to scandalise weaker brethren, restore the article on "Courage and Death," which loses greatly by its present trifurcation, and follow the natural division into biographical reminiscences and moral and philosophical discussions. We think that the author, living, as he tells us, mostly abroad, has hardly realised the revolution in public opinion that has taken place since first he began to write. Mr. Tollemache's name is best known by his advocacy of Euthanasia, and some of us can remember the storm of indignation that that article provoked. We are no nearer to legalising Euthanasia than we were twelve years ago, and Mr. Tollemache's own zeal has waned with years that bring the philosophic mind—"not in our time nor in our children's time" is the proviso of his preface—yet we venture to affirm that if the article were now published for the first time it would excite as languid and as passing an interest as the earthquakes in Spain. (One suggestion in passing. Mr. Tollemache fathers the doctrine of Euthanasia on More. Why does he not refer to Bacon? In the *Advancement of Learning*, ii. 10, 7, he will find a more convincing argument *de euthanasia exteriori* than any derived from the imaginary *Utopia*.) Contemporaries of Mr. Tollemache who read, a month or two ago, an article by the most philosophic of our judges contending that Christianity was, on the whole, a mistake, and that now, at any rate, the world could get on just as well without it, could not help smiling as they recalled the *fluctus in simpulo* raised by that crude and halting propaganda of twenty-five years ago, *Essays and Reviews*. Thus, too, we feel that one of the most striking essays in the second volume—"Divine Economy of Truth"—though we still admire its trenchant logic and apt illustration, has, as a contribution to theology, become as obsolete as one of the *Provincial Letters*. There are people who still hold to verbal inspiration, as there are still Jesuits who found their morality on Escobar's Fathers, but we fear the former will be as impervious to Mr. Tollemache's logic as the latter have been to Pascal's irony. Mr. Tollemache lets us see that he was bred and born in the strictest sect of the Evangelicals, and that he rid himself, after a painful struggle, of that narrow rule "that doth the human spirit cool." He writes as one escaped from prison, not as a free thinker by birth; not like Renan, with a longing lingering look behind at the lost City of Is, but, like Christian, flying from the City of Destruction. His favourite poet is Lucretius, and his favourite motto is "Tantum religio potuit suadere malorum."

Far pleasanter reading, and of more permanent interest, in our opinion, though the author thinks otherwise, are the biographical sketches. With one exception these are *croquis*, not finished pictures, and all who read this one will regret that ill-health and physical drawbacks have prevented Mr. Tollemache from portraying the leading men of the day. He possesses in a high degree the first requisite of a biographer, the *admiratio Boswelliana*, and he combines with the exact memory of Mr. Hayward some of the sympathetic appreciativeness of Lord Houghton. Of Grote, Babbage, Wheatstone, Kingsley,

and Dean Stanley we have only a few personal reminiscences, some striking *obiter dicta*, and some capital stories. We can only find room for two of the stories. At an interview between Stanley and Pius IX., the Pope asked him "*Connaissez-vous Pusey ?*" Stanley thought he said, "*Étes-vous épousé ?*" (Stanley was an indifferent French scholar.) After this little misunderstanding had been cleared up, and the answer duly given, the Pope exclaimed, "*Pusey c'est une cloche qui sonne, sonne, sonne, pour inviter tout le monde à l'église, et qui lui-même n'y entre jamais.*" The other story is of Kingsley's handwriting, which in badness was next to Stanley's, though next by a long interval.

"I received from Mr. Kingsley a most kind letter inviting me to Eversley, and containing in the postscript the seemingly harmless assertion, 'My station is Wokingham.' I showed the letter to an extreme Tory and evangelical lady, in the hope that the sight of his autograph might soften, if not convert, her. She read patiently through the arch-heretic's epistle until she came upon the fatal postscript. She then exclaimed in a voice more of sorrow than of anger: 'Oh! how mistaken he is!' I modestly suggested that, in indifferent matters, such as the name of a railway station, even a Liberal would generally tell the truth. 'Oh! is that it?' she said; 'I thought the words were, 'My trust is the working man.'"

The full-length portrait to which we referred is that of Charles Austin, who, for the last fifteen years of his life, which, but for this record would be to the world at large a blank, stood to Mr. Tollemache *in loco parentis*. A striking parallel might be drawn after the manner of Plutarch between the two brothers John and Charles Austin and the Scottish pair, Robert and William Chambers. In either case the less gifted and less distinguished brother has managed to catch the eye and ear of the public, and as Robert Chambers has lately found a champion in Mr. James Payn against the popular verdict, so has John Austin in his friend and disciple, Mr. Tollemache. It is true that the last period of his life, when Mr. Tollemache knew him, was a period of partial eclipse, that his mental powers flagged, if they did not decline; that he became "a great intellectual torso"; yet we are keen to know everything about a man who exercised "a dominating influence" over Macaulay, who, to use Mill's own words, attached J. S. Mill to his ear, whom Sir Erskine Perry considered the superior of Macaulay, Sydney Smith, and Theodore Hook in talk, and of whom Mrs. Grote, the last woman in the world to flatter, wrote, "This accomplished gentleman and—I say it advisedly, considering myself qualified to apply the epithet—first of conversers." We have left ourselves little room for extracts, and must be content to quote a few of the *obiter dicta*. Charles Austin, of all his contemporaries at the Bar, was most impressed by Scarlett, who "to the world at large seemed to show no ability in pleading, but to have the good luck to be always employed on the right side." He was not an enthusiast for trial by jury. Its chief importance, he thought, lay in the fact that the judge, having to sum up, is bound to listen to the evidence. He records the opinion of Lord Lansdowne that Mr. Bright as an orator was fully equal to Charles Fox, and that

none of Fox's contemporaries were equal to Mr. Gladstone. He was a consistent utilitarian, and (a strange combination) a pessimist. Consequently, when pressed by logic, "he admitted that, if by lifting a finger he could annihilate the sentient universe, he should feel bound to lift it." Yet his practice was better or worse than his creed, as is shown by a story which we commend to the notice of the Bishop of Oxford and the anti-vivisectionists. Mr. Tollemache had refused to let his eyes be experimented on, unless he could be assured that the experiment was solely for his personal good. Charles Austin, on being consulted, acknowledged that this was a violation of the Utilitarian creed. "But would you have acted otherwise?" "I certainly should not," he answered, with a grim smile and presently added,

"No, you could not be expected to make a scientific martyr of yourself; but in a healthier state of society, a policeman would knock at your door and say, 'You must come with me and have your eyes experimented on; and if you go blind, remember that a few persons, some centuries hence, may possibly see the better for it.'"

We had intended to say something of Historical Prediction, which forms a happy bridge between theology and anecdote, and to have quoted one at least of Mrs. Tollemache's pure and simple lyrics, which her husband somewhat wickedly offers as an antidote to the volume labelled poison; but we must end with a hope that this imperfect notice will induce the author to let the public share the entertainment he has provided for the privileged few. May we suggest that he should add a notice of Mr. Mark Pattison, with whom during the last years of his life he lived in closer intimacy than any other of his men friends?

F. STORR.

The Wreck of the "Nisero," and our Captivity in Sumatra. By W. Bradley. (Sampson Low.)

THIS is a straightforward and unvarnished narrative, by the third engineer, of the misfortunes which a few months ago excited so much attention. If it leaves something to be desired—for instance, as regards the negotiations for their deliverance, the writer confines himself to what came within the cognisance of the captive party—it is, at all events, a simple and, in its remarkable simplicity, a very moving picture of their life and sufferings. It cannot, indeed, be said that these were very acute, though rendered deadly in some cases by the climate and adverse hygienic conditions. The food and shelter given, though telling on men without resources in themselves, and weighed down by the uncertainty and anxiety of their position, would have been sufficient to maintain health under the excitement of fighting or sport, or even of work. A large proportion of the deaths, besides, was from cholera, which was hardly "preventible." We are struck, by the way, with the efficacy which the writer frequently attributes to remedies supplied them by the natives in cases of severe sickness. It is evident that throughout, from the point of view of their Malay captors, no unnecessary severity was practised, far less any intentional cruelty. A considerable

amount, at all events, of the stores liberally supplied almost from the beginning, by the English authorities at Singapore, reached their destination. Nor was there any interference with the melancholy labour, which occupied much of the men's time and care, of preparing and fencing in their cemetery, and erecting memorials to their dead. A severe blow with the blunt edge of a sword, which the writer indignantly, and as a Briton naturally resents, was nevertheless really a very mild show of retaliation from a Malay rajah whom he had first threatened with a big stone, and then challenged to fight! In short, the most serious risk they ran, and certainly it was a very serious risk—was the being identified with the Dutch. The Rajah of Penom told them plainly that but for the chance of their having a Chinese interpreter, who informed him that they were not Dutchmen, every one of them would have been put to death. Nothing comes out more clearly in the narrative than the detestation in which the Dutch are held in that part of Sumatra, where their treatment of the independent tribes is, by all accounts, a great contrast to their enlightened administration of a subject race in Java. It is not unlikely that the Dutch local authorities may have desired to make the natives suppose that we were their allies; but their bombardment of Penom not only led to the hurried removal of the prisoners into the interior, but might have easily caused their massacre. On the other hand, it was only natural that the natives should, as they expressed it, look on the shipwreck as "the work of Allah . . . to be a means of getting their troubles with the Dutch brought to an end," and that they should make the best possible terms for themselves out of such a windfall. It seems probable, however, that if the English authorities had chosen to dissociate themselves from the Dutch, and to act independently, the natives would have willingly given up the prisoners to them on easier terms, and without the delays which led to so much risk and suffering. Of the accusation made or hinted by Dutch writers that the *Nisero* was carrying contraband of war to the Atchinese the author says nothing. He does, however, mention that a few days after leaving Bali Straits for Aden, "strange to relate, it was suddenly discovered that we were rather short of coals . . . and so the ship was put about for Acheen Head." The reader must judge for himself how much is implied by this.

We should like to know the origin of the term "Blunno," signifying, Mr. Bradley says, a Dutchman, but apparently not any other European. Possibly it is of kindred etymology to "Oui-oui" and "Goddam."

COURTS TROTTER.

NEW NOVELS.

Venetia's Lovers: an Uneventful Story. By Leslie Keith. In 3 vols. (Bentley.)

From Post to Finish. By Hawley Smart. In 3 vols. (Chapman & Hall.)

John Ford: his Faults and his Follies. By Frank Barrett. In 2 vols. (Ward & Downey.)

On the Square. (Dublin: Hodges, Figgis, & Co.)

Tower's and other Stories. By Tighe Hopkins. (J. & R. Maxwell.)

The Captivity of James Towker. By Henry Lloyd. (J. & R. Maxwell.)

A City Violet. By M. E. Winchester. (Seeley.)

Just about Christmas time the world at large is so obtrusively cheerful, not to say hilarious, that we may, perhaps, be all the better for something in the way of an antidote to the prevalent light-heartedness; and such an antidote we certainly have supplied to us in "Leslie Keith's" uneventful story of *Venetia* and her lovers. A certain royal personage, referring to his not very prolonged experiences, once remarked that in France we had known young gentlemen who "would be as sad as night, only for wantonness"; but if Prince Arthur had been a nephew of Queen Victoria instead of King John he need not even have crossed the Straits of Dover to find examples of wilful melancholy. The results of a year's subscription to Mudie's or the Grosvenor would suffice to convince him that some English novelists of the present are quite equal to the French young gentlemen of the past in the art of inducing spontaneous sadness, and that, indeed, they excel their predecessors, in as much as they are not only mournful themselves, but are the cause of mournfulness in others. Here, for example, is that very charming and graceful writer, "Leslie Keith," who is undoubtedly possessed of a capacity for delicate observation and a fund of quiet humour, which would amply suffice to produce a bright, cheery, and exhilarating story, but who perversely prefers to make us unhappy by forcing us to contemplate the sorrows of a young lady who is so delightful, and of a young man who is so manly and loyal, and in every way loveable, that in seeing them suffer, we, for our part, cannot escape the burden of vicarious suffering. Of course, in fiction, as in real life we expect occasionally to meet people who seem destined to an untoward fate—neither *Clarissa Harlowe* nor *Maggie Tulliver* could well be the heroine of a light-hearted novel; but in *Venetia's Lovers* the sorrow seems thrust upon us gratuitously, and we resent it accordingly. *Venetia Dundas* and *Richard Fraser* are just the sort of young people who seem to demand a smooth and sunny environment, and we somehow have the feeling that their biographer goes out of her way (we think "her" is the proper pronoun) to provide them with a cup of misery, full and overflowing. She must, however, regard it as a tribute to her power that we have made so much of our solitary complaint; for *Venetia's Lovers* is depressing in virtue of the vitality of its portraiture and the fine fidelity of its workmanship. *Dick* and *Venetia*, in the days when they are boy and girl lovers, are a delightful pair, and the winsome *Dinah* is equally fascinating, while *Lord Heatherleigh's* wooing and *Mrs. Murray's* "high-flying at fashion" are given with very delicate and piquant humour. The story of *Mrs. Murray's* attempt to establish an interchange of sympathies between the members of the Botticellian brotherhood and her old friends at Islington is genuinely amusing; and the only blot upon the book is the unreal and incredible *Mr. Challice*, who, very

clumsily but only too effectively, plays the part of the serpent, and brings to the other personages "all their woe with loss of Eden." Apart from him and his misdoings *Venetia's Lovers* is a very captivating novel.

We always know what to expect from *Mr. Hawley Smart*, and what we expect we always get. The title, cover, and contents of *From Post to Finish* are alike horsey; when we are not breathing the atmosphere of *Tattersall's*, we are inhaling the healthier but still horsey breezes of *Newmarket Heath*; and yet the story as a story will be found quite sufficiently interesting by people who never "backed the favourite," and to whom the paddock is a *terra incognita*. *Alister Rockingham* is "a fine old English gentleman, one of the olden time," with many of the virtues, but with one at least of the weaknesses of his tribe. He is an inveterate turf gambler, and as he places confidence in just the wrong people, his money goes with terrible rapidity, and his fortune and his life come simultaneously to an end. His son *Gerald*, a manly lad, with no profession, and not overburdened with brains, finds himself left pretty nearly penniless, with a mother and sister partially dependent upon him; and as his sole intellectual acquisition consists of a knowledge of horses, he decides to become a stable-boy, and enters under an assumed name the establishment of the trainer who has had much to do with his father's ruin, but who has also become himself the father of a very charming daughter, between whom and *Gerald* there have been various tender passages. The new stable-boy proves himself the master of a vicious animal which nobody else can manage; rides him in a big race, and wins; becomes a popular jockey; makes a fortune, with which he buys back the paternal estate; and finally marries the pretty *Dollie Greyson* and, we suppose, lives happily ever afterwards. The story is well told, is full of stir and movement, and is sure to be found attractive by ordinary novel-readers, as well as by the turf audience to whom it specially appeals.

There is a good deal of cleverness and originality in *John Ford*, though the construction of the story is of the slightest possible kind. The great charm of the book is to be found in its literary style, which in its simplicity, ease, and directness, reminds us of some of the classical novels of the eighteenth century. *John Ford* himself is the son of a village blacksmith, and is, when we make his acquaintance, an apparently untamable young cub. His cubbishness, not to say blackguardism, would probably soon have landed him in gaol had he not happened to fall in love with a certain *Miss Westlake*, a ward of the village squire. The story of the manner in which love works out his redemption is told by *Mr. Frank Barrett* with a good deal of power and realistic vividness; and it is clear that his sketches of rural life are an outcome of personal and intimate knowledge. The only prominent defect of *John Ford* is that it is little more than a study of a single character, and that the subsidiary personages in the narrative are somewhat shadowy. Even *Ruth Westlake* is so very unsubstantial that we never learn the secret of the inspiring

influence which she exercises upon her very unpromising lover.

If the truth must be told concerning *On the Square*, we fear that the critic will not win the goodwill of the anonymous author; for the truth is, that we have seldom read a more utterly rubbishy novel. A leading incident—the personation of a murdered man by his murderer—is stolen unblushingly from *Henry Dunbar*, but it is much marred in the stealing; and certainly there are not at present any signs that *Miss Braddon* has found a formidable rival in the teller of this supremely ridiculous story. We have the accomplished murder just mentioned, an attempted murder, which does not come off successfully, an abduction which is a trifle more absurd than most of the abductions of fiction, and various other attractions of the same kind. We might add that the title of the book is so irrelevant as to be altogether meaningless; but this is a minor detail hardly worth mentioning.

The name of *Mr. Tighe Hopkins*—or is it *Mrs.* or *Miss Hopkins*?—is entirely unfamiliar to us, but we shall be glad at any time to meet again the author or authoress of *Tower's* and its companion stories. The tales are all pleasantly light without being provokingly trivial, and the author strikes with unflinching good fortune a vein of genuine fun, or of unstrained pathos. The title-story is, we think, one of the least successful, and "The Lady of the Pier" is an undue elaboration of a very insufficient motif; but "Pepinwater," which tells how a young lord disguised himself as a carrier and what came of the adventure, is in its way quite perfect; while "The Wood Nymph," "Miss Rose Chester," and "A Very Modern Love-Story," are equally good. It is seldom that a volume of this kind is so readable and enjoyable.

In *The Captivity of James Towker* the humour is more farcical than in *Tower's*, and not so much to our taste. In form it is a continuous tale, but in substance it is a series of narratives very slenderly connected with each other, and dealing for the most part with the adventures of a set of practical jokers. We must confess to having paid the tribute of laughter to the story of the man who is persuaded that he has, in a state of intoxication, committed a murder, and is induced to fly from justice in a most grotesque disguise; but, howsoever good this kind of thing may be, a very little of it goes a long way, and satiety follows quickly upon satisfaction. Still, in the course of a long railway journey, it would not be difficult to plod on to the end of the volume, in order to learn how the unfortunate *Towker* escapes from the clutches of the merciless *Mrs. Jubb*.

A City Violet is of the same character as *Miss Winchester's* previous stories, which have won considerable popularity among lovers of juvenile religious fiction. We think that even as a didactic tale it would have been all the better for being less aggressively edifying; but *Miss Winchester* naturally adapts her work to the tastes of her probable readers. Children of the more serious kind will be pleased with the story, which is very gracefully told, decidedly interesting, and much more healthy in tone

than many books of a similar order. It has, in short, all the merits of its pretty predecessor, *A Nest of Sparrows*.

JAMES ASHCROFT NOBLE.

RECENT VERSE.

Somnia Medici. By John A. Goodchild. (Kegan Paul, Trench & Co.) This volume is much above the average. The author has, at least, the gift of direct and forcible expression. Here and there (perhaps in imitation of Mr. Browning's wonderful emphasis), there is some sacrifice of music to the necessities of the thought. A sonnet beginning, "None mourn this hideous sodden heap of clay," is undoubtedly as direct as prose could be. In no other sonnet has Mr. Goodchild quite realised the full scope and proper aim of sonnet structure. There is a vigorous assault on the anti-vivisectionists, from a medical man's point of view. The narrative poems, "The Idiot," for example, strike us as less excellent. "A Story of Paralysis" is rather an appalling title. If doctors at leisure on the Riviera must perforce write poetry as a relaxation, let such of us as are victims to insomnia pray of them not to give us "Nocturnes on Neuralgia," "Fancies on Fever," "Studies of Small-pox," and similar enlivening strains. Mr. Goodchild's "Paralysis" touches the limit of the nervous powers of the weaker brethren.

A Sheaf of Ballads. By J. J. Britton. (Elliot Stock.) We have no worse fault to find with Mr. Britton's poems than to say that they are inaccurately labelled. Few of them are ballads in any proper sense of the word; some of them are narrative poems, and the remainder are ballad romances. They are chiefly from old sources, and are none the worse for that. Some are modern as to origin. The best in our judgment is "La Reine Margot." The "Legend of St. Augustine" shares with several of its companion poems a certain indefiniteness of story. The lines of incident are never very clearly cut, and a good deal of the effect of strong situations is lost from this cause. A love story called "Carrella" opens exceedingly well, but falls off considerably in dramatic strength towards the close. The heroine's later spirituality is hardly in accord with her earlier life. It is at once less natural and less lovable, and gains nothing in womanliness from its too rigid purity. The short poems in the volume are below the level of the longer works. The fragments entitled "Smoke Wreaths" have the strongest pretensions to lightness of touch:

There—just outside my window as I sit,
A slender silver birch there is;
I may not see it, all is very gloom,
And yet 'tis ever there, I wis.
My thoughts go wandering from this darkling room

To where the night-born creatures swiftly flit.
'Tis there—and its leaves rustle—hark!
And lies its whole stem ever on the stark
Broad bosom of the outer dark;
No lives a white soul compassed round by woe,
Nor all who should its silver presence know.

These lines (awkward in certain phrases) afford only an imperfect idea of the merit of this volume. Mr. Britton is clearly a writer of promise.

Poems, Real and Ideal. By George Barlow. (Remington.) There is not much to say of Mr. Barlow's poetry that has not been said repeatedly. That it is fluent, and often eloquent; that it is full of sweet sound and is sometimes destitute of any higher quality, may still be said in a general way of Mr. Barlow's

verse. Without special invention, without substance of thought, with only a narrow range of feeling, and with a most fatal tendency to gravitate to the praises of roses and sea foam, whatever the subject treated of, the voluminous work of this tireless and unconquerable poet is apt to weary the most patient and sympathetic reader. The present volume is, strange to say, appropriately named. It contains both real poems and poems that are ideal, at least in a dubious sense. The philosophical implication in the title we cannot take it upon ourselves to discuss. A great part of the book is made up of sonnets. Mr. Barlow can undoubtedly write fourteen lines in the legitimate sonnet structure with as much force and swing as most men; but then the force is too often wasted force, and the swing, so far as essential substance goes, would, perhaps, be better described as fling. We have here, for example, a poem entitled "Bethlehem and the Green Park," and the only reason for its existence, so far as we can see, is to say that even as Ruth sat at the feet of Boaz in the barley-fields of Bethlehem and as a soldier sits in the Green Park with his arm about his sweetheart's waist so love is immortal. Mr. Barlow is obviously abreast of the period as to intellectual interests. We gather that he is a politician of the colour of, say, Mr. Joseph Cowen; that he is a worshipper of Victor Hugo and Sarah Bernhardt, and a doleful prophet as to the future of England.

Musa Silvestris. By Gerard Bendall. (Kegan Paul, Trench, & Co.) The average volume of verse is so entirely without noticeable quality good or bad that it is not always easy to hit upon the simplest phrase that will distinguish it from the many volumes of its kind. It is therefore refreshing to meet with a book like this having one positive property by which it may be known. That property is boundless egotism. The great Shakespearian sonnet, which bears witness to the dramatist's consciousness of his own genius and to his anticipation of immortality, is really a very modest and reticent effusion compared with the poemlets of this little booklet in which Mr. Bendall foretells the golden future that awaits his "rhymes most sweet" and "long lines musical." The poet assures a young lady who ventures to ask for rondeaux and triolets that his stronger line will outlast the cheap display of such outlandish forms, and that fresh for his praise she herself shall to "endless time endure." It would perhaps be a tiresome, and certainly a profitless, task to follow Mr. Bendall through those devious poetic by-paths in which he is determined to bend all other bardic functions to the function of personal prophet. Sufficient to say that the noble poet is conscious of the superiority with which he sits high up above "the fevered follies of the day."

Athelney, and other Poems. By Eliza Down. (Bell.) These are well-meaning poems of no remarkable quality. The author shows some knowledge and much love of nature; her verse, though not distinctly devotional, is deeply imbued with religious fervour. A poem on Garfield has feeling, but lacks intellectual force; and the same may be said of the lines on the death of the Princess Alice.

Songs and Poems. By A. Stephen Wilson. (Edinburgh: Douglas.) The writer of these poems has both powers of thought and powers of expression. There is so much that is good in the book that it is with a sense of comparative disappointment that we find nothing that is very good. No excess, and no glaring immaturity, disfigures any part of the book; but then no special and individualising merit discloses itself. Several batches of what are called "Crumbs of Bread" (irregular fragments of the nature of epigrams) show a certain gift

of emphasis and condensation. Here are a few of the "crumbs":—

The record of her life will tell
She had done worse had she done well.

Whate'er I know with me will die;
Whate'er I teach death passes by.

This maxim Christ Himself endorsed:
The wickedest are not the worst.

There's many a man requires God's grace
To shield him from a pretty face;
But there is many a pretty face
Which holds its own against God's grace.

We should be prepared to meet with a noticeable book from the writer of these poems.

Robert de Bruce. By David Graham. (Chapman & Hall.) There is no more dramatic, or even theatrical, quality in this historical play than in the great body of what are called "closet dramas." A certain cumbrousness of line, especially at the beginning, suggests that this is perhaps a first effort. In that case it is creditable without being specially promising. The best situation, we think, is that in which Badenoch sees the vision of himself lying dead; but this is merely in monologue, and has not even a strong psychological interest. The play improves rapidly towards the close, and is, on the whole, an interesting production.

Rienzi and other Poems. By the Rev. W. H. Winter. (Dublin: McGee.) This little volume is dedicated to Prof. Dowden in a few words of graceful and well-merited praise. The verse is not of remarkable quality, but then it is usually modest as to tone, and that of itself is a virtue. An undercurrent of somewhat confident self-assertion is, however, not difficult to trace—

Mayhap yet, that this my rill
If heaven is kind unto me still,
Will grow into a mighty stream
Bearing merchant-vessels tall,
Taking goods both great and small,
Cargoes—thoughts of noble men
Written with a golden pen—
To enrich the nation's heart,
Of its greatness build a part,
And I yet may catch the gleam
The consecration and the dream,
When I long in patience wait
And make life a poem great.

Legenda Monastica, and other Poems. (Oxford: Mowbray.) This book does not bear an author's name on the title-page. We gather from the dedication that it is the work of the Superior and Sisters of S. Thomas-ye-Martyr, Oxford. It may be the production of one mind only. The narrative poems, at least, are all, we should say, from the same hand. The poems are devotional. They are by no means ambitious as poetry, but they are of good quality. A moral aim is always apparent. The stories in verse are concerned with monastic life, and afford a clear picture of its asceticism. The best of the series, perhaps, is "The Abbot's Story," after which "Brother Wilfrith's Story" follows closely. These simple narratives afford a good deal of pleasure. The book as a whole is sure to be widely read among Catholics.

Poems. By the late Thomas George Youngman. (Kegan Paul, Trench & Co.) Sentiment is the distinguishing feature of the late Mr. Youngman's poetry. Pure and noble, if never of special elevation, is the feeling pervading these poems. A sonnet on the Vale of Llanberis is as good as anything else in this volume. The address to the Laureate is good in another way.

Life Songs. By the Marchioness of Waterford and the Countess of Tankerville. (Nisbet.) This gorgeous volume consists of verses, illustrations, and illuminations. The verse is for the most part homely and good, but is not distinguished by any special literary quality. The illuminations are often truly beautiful. The

ustrations are no less excellent. Especially agreeable to the eye, and well felt as to scenic effect, are the little "patera" landscapes in their soft and dreamy blue. The treatment throughout is the reverse of what is called conventional. Art to the talented authors is not merely allied to nature (as artists of Mr. Walter Crane's aims are earnestly and consistently protesting that it is), but the mirror and counterpart of nature. The book as a whole is a remarkable production.

The Rueing of Gudrun, and other Poems. By the Hon. Mrs. Greville-Nugent. (Bogue.) This volume partakes largely of the special mediæval spirit signalised by the advent of Morris and Rossetti, who are obviously the models on which some of the poems in it are produced. Of experiments in foreign forms of verse Mrs. Greville-Nugent gives us enough and perhaps to spare. We have chants royal, the ballade, sestines, the villanelle, trios, rondeaux, and the rondeau redoublé. In addition to these exotics—if Mr. Lang will still permit us to describe them as such—we have the more acclimatised sonnet, songs in various measures, and a translation from the *Inferno*. It will thus be seen that Mrs. Greville-Nugent is fully equipped among the kettledrum poets. Naturally, symbol plays an important part in this volume. The book closes with a poem entitled "The Buried Book," which is further described as In Memoriam Dante Gabriel Rossetti. The well-known story of Rossetti's first volume is told with sympathy if not with any particular directness, force, or picturesqueness. The motives assigned for the exhumation are perhaps not quite satisfactory either as a record of fact or as incidents in an heroic narrative. The following suggests no higher motive than envy:—

"But time too swiftly ran,
And younger men began
With heated lips, to vaunt their new-found fame;
Mocking his feeble flight,
Till in his grief's despite
The poet woke to right his clouded name;
And give the narrow world he once forsook
The new-born wonder of his buried book.

Boys Together, and other Poems. By Margaret Scott Taylor. (Kegan Paul, Trench & Co.) *Boys Together* is the story of two schoolfellows, whose subsequent careers are divergent. The poem has some tenderness of feeling, but no special literary force. The descriptive pieces are perhaps the best in the volume. The poems on Derwentwater and Rydal Water, however, will scarcely realise the scenes to persons to whom they are unknown. "A Lancashire Lad's Wooing" and the "Prodigal's Return," are, as their names may show, chiefly sentimental.

Love's Letters. By a Violinist. (Field & Tuer.) This "modern antique" of the printer's and bookbinder's craftsmanship, bound in parchment, lettered in gold, adorned with rustic cuts, and tied on three edges with yellow silk ribbon, is, as a poem, perhaps the most solemn and awful warning since *The Death-Wake, or Lunacy*, against the delirium of what is known to some young poets as "passion." The ribbons suggested that extremely delicate disclosures were to be made in the bound-up pages. This surmise was verified; but we must leave our readers to their own conclusion as to the nature of the disclosures which justified such a symbol of secrecy. The "Violinist" has all the reckless self-abandonment peculiar to one well-known phase of the distemper.

"Behold!" I cried, "Behold, how fair to see
Is this white wonder!" And I wished thee
well;

But, like a demon out of darkest hell,
I sought thy sire, and claim'd thee on the plea
Of bad old Shylock; and there came to me
The far-off warning of a wedding-bell."

This conscious villany on the part of the dis-

ciple of bad old Shylock becomes distressing at a later stage.

"I urged my suit. 'My bond!' I did exclaim
'My pink and white, the hand I love to press,
The golden hair that crowns her loveliness;
And all the beauties which I cannot name;
All, all are mine, and I will have the same.'
And then I trembled in my love's excess."

Whether the gentleman eventually succeeds in having the same is not so important as that he arrives at a reasonable notion of his condition—

"Yes, I was mad. I know it. I was mad."

Unhappily not any subsequent "sorrow," or "regret," or "confession," saves this follower of bad old Shylock, this imitator of a "demon out of darkest hell," from an outburst like the following:—

"And could I enter Heaven, and find therein,
In all the wide dominion of the air,
No trace of thee among the natives there,
I would not bide with them—No! not to win
A seraph's lyre—but I would sin a sin,
And free my soul and seek thee elsewhere."

The Violinist has our sympathy as a lover, our pity as a poet, and our sorrow as a man. What more could he wish for? He has his bond.

Conradin. By Lieut.-Col. Rous. (Kegan Paul, Trench & Co.) The author tells the story of Conrad the Fifth with no little vigour and dramatic force. The usurpation of Manfred, his overthrow and death, the struggle of Conrad with Charles, the betrayal and execution, are narrated with power. The verse is the heroic couplet, and it is well sustained. Occasional lyrical interludes in lighter measures are equally well written. We think we like best the minstrel's song beginning—

It was the bishop William
Came sailing o'er the sea
With news of the loss of the Holy Cross
In distant Galilee.

Dudley Castle. By Edward White Bewley. (Wymon.) *Dudley Castle* is (to use John-sonian language) the most portentous poetic monument that has yet encountered our knowledge. To give the very vaguest idea of the metrical quality of the poem is beyond our power, and to convey a notion of what the entire work is about is equally an impossibility. There is a certain "young Hubert" who visits iron mines in the "wild black country." Beyond this statement of the constituents of that curious compound *Dudley Castle* we should consider it too venturesome to go. We may add, however, that a vague shadow of a mysterious Alice occasionally flits across the fair surface of this luminous creation. Our readers shall judge for themselves:—

"On that old tower long, in abstract mood,
He stood; he thought of her whom he had
woo'd,
In distant shire, and hoped to make his wife.

Was he to bring loved Alice here?
So delicately beautiful, so dear!
Could she live in this arid blight?
Is this a place for ladies?
Can angels live in Hades?
Can roses blush in sulphur? or the lily in smoke
bloom white?"

Really, this is not the place for conundrums. The author is better in humour. There is a funny story of a poor fellow named Joe, who accidentally tips himself into a furnace, and is burnt to a cinder. His wife comes and laments his loss. She remarks that to save her husband she would gladly have thrown herself into the flames, "had she known" that he meant to overbalance himself.

"Then her feelings to mock and to harrow,
His own jacket she saw on a barrow,
O'er her mind flashed a vacant arm chair, &c."
She survived nevertheless. A portrait of the author accompanies the volume. Quite a harmless elderly gentleman.

NOTES AND NEWS.

MR. J. H. MIDDLETON has written the article on "Raphael" for the forthcoming volume of the new edition of the *Encyclopædia Britannica*.

MESSRS. RICHARD BENTLEY & SON will publish in the course of the present month an English edition of Dr. Gindely's *History of the Thirty Years' War*, translated from the original by Prof. Ten Broeck. A companion volume to the work will appear about the same time, in uniform size—viz., *A Memoir of Gustavus Adolphus*, by Dr. Stevens, recently Ambassador of the Government of the United States at Stockholm.

MESSRS. BENTLEY will also issue shortly a translation of M. Renan's *Nouvelles Etudes d'Histoire Religieuse*, from the pen of M. Raphael Leclerc Beaufort.

MR. J. S. COTTON's work on India, which forms half a volume in the "English Citizen" series, has been translated into Guzarathi by Mr. Chimanlal Harilal Setalvar, a graduate of the Bombay University. It is printed and published at the little town of Khadia, in the District of Ahmedabad, and the copy sent to us has been handsomely bound at the Byculla Press, Bombay. The translator has aimed throughout at giving the substance of the original in his own vernacular rather than a translation word for word; and he has not scrupled to modify a few passages in which Mr. Cotton seems to him not to have represented the facts quite accurately.

MR. ROBERT BROWN, JUN., has in the press *The Phenomena*; or, "Heavenly Display" of Aratos, done into English verse. The work will contain an introduction, notes, and appendices, and sixty-eight engravings from rare works, MSS., Euphratean boundary-stones, and other sources, of the constellation-figures and mythological personages mentioned in the poem, together with a folding map showing in colours the constellations on the equinoctial circle with the stars adjacent, for the year 2084 B.C., in illustration of the archaic statements preserved by Aratos, and hitherto unexplained. Messrs. Longmans & Co. are the publishers.

OLIVER CROMWELL's alleged "royal descent" from the Stewarts—moralised over by Carlyle and others—will be denounced as a fabrication by Mr. Walter Rye in the forthcoming issue of the *Genealogist*.

MAJOR G. A. RAIKES has in the press a work called *Roll of the Officers of the York and Lancaster Regiment*, which will record the services of all the officers of the regiment from the date of formation of each battalion to January, 1885, and will comprise upwards of 2,000 names. This book is to be followed by *The History of the York and Lancaster Regiment*, in three volumes, which it is stated will be the first history ever written of any territorial regiment. Messrs. R. Bentley & Son are the publishers.

THE Institution of Civil Engineers, which was established for the promotion of Mechanical Science, has just entered upon its sixty-eighth year. According to a list corrected to the Jan. 2, 1885, it now numbers 4,668 members of all classes, distributed thus:—1,447 members, 1,889 associate members, 508 associates, 20 honorary members, and 804 students. Ten years ago the gross total was only 2,491.

IN his recent message to Congress President Arthur specially mentioned the question of International Copyright. This has led the *Publishers' Weekly* of New York to propose a draft embodying the principle of domestic manufacture. The Dorsheimer bill, it will be recollected, studiously ignored this point.

WITH reference to a statement in the ACADEMY last week regarding Dr. Richard Allstreet's

connexion with the *Whole Duty of Man*, we hear that the Bodley Librarian has officially accepted Mr. C. E. Doble's conclusions by placing the series of works referred to under Allestree's name in the catalogue.

A VERY interesting sale of works relating to the French Revolution will be held in Paris on January 19, and is expected to last ten days. The collection was formed by Count B. de Nadaillac, and comprises many works which were purchased at the sale of M. Rochet-Deroche's interesting library of the same kind. Among them are several MSS. of Babaut, a very rare edition of the *Petit Gauthier*, and the sole extant copy of the *Logographe*, a journal in which the debates of the National Assembly were reported in full. It was in the box allotted to the reporters of this journal that Louis XVI. and his family sought refuge and appealed to the National Assembly for protection after the events of August 10. Most interesting of all is a collection of twelve volumes of Marat's works, which he had got together himself with the intention of bringing out a fresh edition. These volumes contain a quantity of marginal notes in ink, written by Marat; but he met with his death before they could be printed, and the volumes were preserved by his sister Albertine, at whose death they were sold for a mere song.

In the *Chicago Scandinavia* for January Mr. Clemens Petersen criticises with some severity Mr. Gosse's article on "Norwegian Literature," in the *Encyclopædia Britannica*. Mr. Petersen, like most of the other contributors to the *Scandinavia*, writes very eccentric English, but his remarks are not without interest.

MR. ROUND will complete in the *Antiquary* for February his "True Story of the Leicester Inquests (1253)," proving the entire falsehood of the narrative accepted by the late Mr. J. R. Green and other writers, and impugning the Report on the Leicester Muniments by the Historical MSS. Commission.

WE are informed that Dr. Franz Hirsch will retire from the editorship of the *Magazin für die Literatur des In- und Auslandes*, on April 1, and that Dr. Eugene Oswald will then resume his London letters to that paper.

COMMENTING on the announcement (apparently taken from our own columns) of a forthcoming periodical devoted to the antiquities and history of the Isle of Man, the *Polybiblion* observes:—

"Il faut croire qu'elle rectifiera la bëve commise par Walter Scott dans son roman de *Péroril du Pic* dans lequel il a fait de la châtelaine de l'île de Man, Charlotte de la Trémouille, Comtesse de Derby, une catholique altière, quand son histoire et sa correspondance font connaître qu'elle était d'un caractère aimable et qu'elle était élée protestante, comme sa mère, Charlotte de Nassau, fille de Guillaume le Taciturne."

PROF. HIRAM CORSON, of Cornell University, is to deliver during the coming term at the Johns Hopkins University, Baltimore, a course of twenty lectures on Shakspeare. The first lecture will be given on January 23. The Johns Hopkins students have founded this winter a society for the study of Shakspeare, which will be carried on under the general guidance of Dr. Browne and Dr. Wood.

THE January number of the *Antiquarian Magazine* contains, *inter alia*, a paper by Mr. E. Solly on "Swift's Cadenus and Vanessa," and also one by Mrs. C. G. Boger on "King Alfred and St. Neot in Somersetshire."

AT the Royal Institution Prof. H. N. Moseley will on Tuesday next (January 13) begin a course of five lectures on "Colonial Animals: their Structure and Life Histories"; Prof. Dewar will on Thursday (January 15) begin a

course of eleven lectures on "The New Chemistry"; and Dr. Waldstein will on Saturday (January 17) begin a course of three lectures on "Greek Sculpture from Pheidias to the Roman Era." The Friday evening meetings will begin on January 16, when Prof. Tyndall will give a discourse on "Living Contagia."

THE ordinary Wednesday evening meetings of the Society of Arts will recommence on January 14, when Mr. R. H. Tweddell will read a paper on "The Employment of Hydraulic Machinery in Engineering Workshops." The following are the papers arranged for subsequent evenings:—"Labour and Wages in the United States," by Mr. D. Pidgeon; "The Influence of Civilisation upon Eyesight," by Mr. R. Brudenell Carter; "The History and Manufacture of Playing Cards," by Mr. George Clulow; "The Musical Scales of Various Nations," by Mr. A. J. Ellis; "A Marine Laboratory as a means of Improving Sea Fisheries," by Prof. E. Ray Lankester; "Recent Improvements in Coast Signals," by Sir J. N. Douglass; "The Evolution of Machines," by Prof. H. S. Hele Shaw; "Education in Industrial Art," by Mr. Charles E. Leland; "The American Oil and Gas Fields," by Prof. James Dewar; and "Past and Present Methods of Supplying Steam Boilers with Water," by Mr. W. D. Scott Moncrieff.

OBITUARY.

OUR readers will have learned from the daily paper the news of the death of the Bishop of London, which took place on Tuesday morning. Dr. Jackson's life contained little which calls for comment in a purely literary journal. Although he took a first-class at Oxford, he was never considered eminent as a scholar, and his only published work, with the exception of a few sermons and visitation charges, was a little volume on *The Sinfulness of Little Sins*, which has gone through a score of editions. He was born in February 1811, and was educated under Dr. Valpy, at Reading Grammar School. From Reading he went to Pembroke College, Oxford, and in 1833 took, as we have mentioned, a first-class in classics. In the following year he obtained the Denyer Theological Prize, and in 1835 became curate at Henley-on-Thames. In 1836 he was appointed headmaster of a proprietary school at Islington. As rector of St. James', Piccadilly, he acquired considerable reputation as a preacher. He several times officiated as select preacher at Oxford, and in 1853 was chosen as Boyle Lecturer. In the same year he was appointed by Lord Aberdeen Bishop of Lincoln. His administration of the affairs of his diocese was so free from public display that he remained almost unknown; and much surprise was expressed when, in 1868, it was announced that he was to succeed Dr. Tait as Bishop of London. The selection, however, seems to have been justified by its results. If Dr. Jackson was more withdrawn from the public eye than many of his predecessors, he does not seem to have proved unequal to the onerous charge which was laid upon him; and probably none of those who have held the same high office for so long a period have been able to retain so much of the approval and esteem of men of all parties and schools.

It is with deep regret that we hear of the death of Dr. Andrew Findlater at Edinburgh on New Year's day. For some time he had been more or less of an invalid, and had ceased from those active labours as an editor which, for so many years, had made him the centre of a wide circle of literary friends. These friends, as many of them as survive, will not readily forget the most genial and gentle of men, ripe in learning and with a generous welcome for every new effort to enlarge the boundaries of

knowledge. Born in 1810, and educated at the University of Aberdeen, he first settled down in 1853 into that career with which all the rest of his life was to be associated. In that year he became connected with Messrs. Chambers the Edinburgh publishers. Under his editorship *Chambers's Encyclopædia* acquired the great public favour which it continues to enjoy. Himself a large contributor to it, he had the gift of attracting and retaining willing and able assistance. So also when Messrs. Chambers projected their *Etymological Dictionary* the rich stores of his knowledge were brought to its aid. For the Educational Course, published by the same firm, he wrote several of the "Manuals" and edited some of the others. In all his work he was thorough, and though the educational aim of most of it was against its making much show, yet none the less were the quality of his mind and the extent of his learning such as to call forth, among the many who knew him, a sincere grief at his passing away.

MAJOR-GEN. GIBBES RIGAUD, who died at 18 Long Wall, Oxford, on January 1, was born in May, 1820. Both his elder brother, Dr. Rigaud, the Bishop of Antigua, and his father, Stephen P. Rigaud, the Professor of Astronomy, were Fellows of Exeter College, Oxford, and General Rigaud had for many years past studied the history and traditions of the university and the city of Oxford, with which his family was connected so intimately. About thirty years since he drew up a paper on the "Lines formed round Oxford, with notices of the part taken by the university between 1642 and 1646"—a useful chapter in the history of the Civil War—and his enthusiasm for the subject remained unabated to the last. The founding of the Oxford Historical Society met with his warmest support, and had his life been spared his contributions would have added to the value of its publications. He contributed to the chatty pages of *Notes and Queries* many interesting notelets containing his reminiscences of Oxford life a generation or two since.

MAGAZINES AND REVIEWS.

THE January number of *Temple Bar* contains some "Recollections of Mark Pattison," written by a young graduate of Lincoln College to whom the late rector evidently extended an unusual share of his intimacy. Mark Pattison was a many-sided man, and he had the habit of showing different sides of his nature to different people. The writer in *Temple Bar* has succeeded, with no less tact than boldness, in drawing a sharply-defined portrait of him as he showed himself to many during the last years of his life—keenly interested in all literary topics; not anxious to obtrude his company or counsel, but prodigal of both where they were desired; somewhat chilling to the enthusiasm of youth, but making more than amends when his interest had been aroused by good work. To those who were privileged to know him—especially the non-residents—Oxford is no longer quite the same place, for there is none left to represent as he did the ideal of learned leisure and a wise old age. When the time comes for writing his biography, these faithful "recollections" in *Temple Bar* will not be overlooked.

Blackwood's Magazine contains, as is fitting, an appreciative sketch of the life and works of Sir Alexander Grant. There is a good Chinese story, "Within his Danger," written by one who is well versed in the social life of China. It reads like a modern version of a tale in the "Arabian Nights." An article on "A Quartette of Italian Novelists" ought to turn attention to the modern literature of Italy. Farina, Verga, Matile Serao, and the Marches

Colombi, are all writers of fiction who deserve to rank high at the present day. Verga's "I Malavoglia" is the first step in the creation of a naturalist school in Italy, which aims to be purer, stronger, and more truthful than that of France. The life of a family of Sicilian fishermen, the entire life of the village in which they live, is drawn by Verga with a force and vividness which no writer has attained since Balzac.

Macmillan's Magazine shows an increasing tendency to wander from literature into political and social subjects. The only article of general interest this month is an amusing sketch, by H. D. T., of the perils which threaten to beset the editors of posthumous papers, and the intrigues to which their publication gives rise.

The new series of the *Expositor*, with which the name of Nicoll, once so honourably known to Orientalists, is most appropriately connected, opens with a paper read at the late Church Congress by the Bishop of Durham. Popular in the best sense, it brings before the mass of intelligent readers the gleanings which a single year (1883) has yielded in the field of New Testament archaeology—a year, no doubt, destined to receive a white mark. Dr. A. MacLaren follows with a first paper on the "Epistle to the Colossians"; like the article on "Dives and Lazarus," by Dr. Marcus Dods, it represents the better type of homiletical exegesis. Prof. Henry Drummond begins a weighty and eloquent discourse on the "Contribution of Science to Christianity." Mr. Gosse, in his own charming style, sketches the life of Bishop Martensen; but are we bound to accept his estimate of Martensen as "the greatest Protestant theologian of the present century"? Prof. Strack's survey of recent foreign books on the Old Testament promises to be most helpful, while a few concluding pages are usefully occupied by short notes, or Brevia, of which the only fault is their fewness.

THE December and January numbers of Grätz's *Monatsschrift* contain two noteworthy articles by the principal editor, one discussing the military history of the Jews in Palestine at the close of the second century, the other explaining some difficulties in Jewish traditions of the early post-Christian period. Dr. Frankl continues his learned Karaite Studies, and collects the data on the famous family of the Kimchi. Dr. Kaufmann treats of the date of the composition of Ibn Ezra's commentary on the Pentateuch, and defends Juda Moscovi against the charge of falsehood.

LETTER FROM EGYPT.

Cairo: Dec. 29, 1884.

READERS of the ACADEMY are, doubtless, already aware of the important discovery made by Mr. Flinders Petrie. He has found the long-lost site of Naucratis, which the language of Herodotos had erroneously led former explorers to seek at the mouth of the ancient Kanopic arm of the Nile. It turns out to be really a considerable way inland, on the banks of a canal which now joins the Nile above Kafr-az-Zayab, and not far from the railway station of Teh-el-Barûd. It is known as the Tel-en-Nebirah, from the name of the neighbouring village of Nebirah, which seems to stand on the site of a Roman temple. Even apart from the discovery of a Greek inscription which settles the question of the ancient name of the place, the large extent of the mounds, the entire absence in them of Egyptian remains, and the enormous quantity of Greek potsherds of all periods, from the prehistoric to the late Roman, would be quite sufficient to show that the site could be no other than that of the famous emporium of the early Greek settlers in Egypt. I spent a couple of days there with

Mr. Petrie last week, and we determined, I believe, the position of the Hellenion, or common sanctuary of the Greek inhabitants of the town, which, in accordance with the statement of Herodotos, consisted of an altar and temenos, or sacred enclosure, surrounded by a lofty wall of brick. The excavations which Mr. Petrie has begun on the spot may be expected to yield important results for the history of early Greek art and writing, even if they produce but little in the way of striking monumental remains. I may mention in passing that a fortnight ago I picked up a fragment of archaic Greek ware among the ruined houses on the north-eastern side of the temple of Bubastis, near Zagazig, though the rest of the pottery I noticed on the spot belonged to the classical epoch.

M. Maspero is already at Thebes, where he is engaged in excavating at Medinet Abû. He has made a good many additions during the past year to the Bûlak Museum, including some Greek inscriptions, so that his invaluable *Guide du Visiteur*, which has just appeared, already needs a supplement. During his absence Brugsch Bey is watching over the interests of the Museum, and preparing a work on the site of On, which will be full of new and important material, and is likely to excite a good deal of controversy among Egyptologists and Biblical scholars, on account of its novel conclusions.

I will end my letter with a copy of an inscription on a stone found last year by Dr. Lansing in a village between Kûs and Koft, where it was being used as a door-step. As will be seen, it is dated in the eighteenth year of Septimus Severus.

CORRESPONDENCE.

THE UNIVERSITY OF LONDON.

Kew: Jan. 2, 1885.

In the ordeal of criticism to which the University of London is just now subjected, if we should be generous, we may, at least, claim the right to speak frankly. For my own part, then, I feel bound to say that there is scarcely anything in the admirable article of Prof. Karl Pearson with which I do not entirely sympathise and agree. I demur very much to the defence of the existing arrangements set up by Mr. Henry Clarke. And as I have served the office of one of the examiners in the university, and in that capacity have more than once examined for the D.Sc. degree, I can speak with some confidence as to the little value it possesses as an incentive to anything that deserves to be called thorough and exhaustive study. I admit that the B.Sc. degree, as at present conferred, is a useful test of a fair rudimentary scientific education. I dare say the details of the examinations might be from time to time improved. If there were, as would be the case at Oxford or Cambridge, a board of studies charged with the duty of watching their working, changes which the experience of the teachers and examiners showed to be desirable would from time to time be readily made. The examinations in this way would keep touch with the available instruction. I do not say that it is impossible to get such changes made now; but the process requires more energy and persistence than every one has the disposition to give. Still, the remedy for this state of things is one of the reforms which must come in due time.

Mr. Clarke is, I think, in error—at any rate, as regards the B.Sc. examinations proper—in saying that there is any alternative allowed between the pass and the honours. The requirements of the former must be satisfied before the latter can be attempted. The number of candidates who bring up the results of more preparation than is required for the pass is never very large, and in my experience the standard of ability shown is not very high. I have no hesitation in saying that the average of the honours papers is—as

regards my own subject—decidedly inferior to those which have been submitted to me for the natural science tripos at Cambridge.

No doubt this is partly to be accounted for by the fact that the candidates, to a large extent, can neither afford the time nor the expense of devoting themselves to honour reading; but I think a deeper-rooted explanation is to be found in the fact that the London educational bodies do not for the most part afford any means of instruction of the higher kind such as is to be had at Oxford or Cambridge. I do not myself see how this defect is to be remedied without giving the teaching bodies more endowment. The number of honour students must always be relatively small, and the appliances and accommodation alone required for their instruction can never be supported by any fees they could afford to pay. Here, again, the isolated position occupied by the university as a mere examining board, occupied solely with the business of pronouncing judgment on the outcome of the work of the teaching bodies, leaves these without any support in the quarter from which it would have most weight in getting any material help to better fit them to accomplish the tasks which the university demands of them. The university frames syllabuses; but, unluckily, these do not act as charms in effecting the erection of laboratories or the endowment of chairs. If the university ever took occasion to review the work it is doing, it might produce some effect by pointing out how badly the work of the higher education is cared for in London.

This being the state of things, it is scarcely to be expected that the D.Sc. degree can produce any very useful results. As I have said, I am quite prepared to concede that the B.Sc. degree marks the acquirement of a tolerable rudimentary education in science. Ambition to obtain the further degree ought to be an inducement to students to seriously specialise themselves to show some capacity of using the tools of knowledge with which they are equipped. The difficulty of getting the necessary training in London is, from the circumstances I have pointed out, not small. A large number of our younger scientific men have, however, found the help in foreign universities which their own metropolis at any rate is unable to give them. What I should like to see is that any B.Sc. who had succeeded in making some addition to the field of knowledge should be able to offer his work as the ground on which he might claim to proceed to the D.Sc. This principle, it is true, has been so far acceded to, that original work may now be offered in lieu of some part of the examination prescribed. But the change has produced little result at present, and for my own part I shall not be satisfied till examination in awarding the superior degree in science is wholly discarded and original work made compulsory. In my judgment the habit of acquiring knowledge at second-hand is beyond a certain point positively mischievous. Instead of encouraging "true mental training, which can only arise from thorough and exhaustive study" it appears to me that the perpetual atmosphere of examinations, which is as the breath of the nostrils in Burlington Gardens, is the most effectual means of suffocating it.

I will not dwell on the extraordinary distribution of scientific knowledge into sixteen branches, under one or other of which the candidate for the D.Sc. must present himself. It is sufficient to say that in my own subject nothing is at present recognised but vegetable physiology on the one hand and systematic botany on the other. Comparative anatomy—at the moment the most fertile field of discovery in the study of vegetable organisms—is only admitted by the university on its animal side. Were practical teachers associated with the work of the university, a clean sweep would

soon be made of limitations so antiquated as these.

The pith of the whole matter lies in this:—Examinations are only a means; to the University of London as at present constituted they are a final aim.

W. T. THISELTON DYER.

"CUSTOM AND MYTH."

1, Marlborough Road, W.: Jan. 5, 1885.

Mr. Brown is justified, I think, in blaming me for calling the asparagus of the Ioxidae "an ancestral plant." What I mean is this: in Australia, for example, or Africa, or America, we find that there are many stocks which are named after and venerate certain vegetables, and in Australia, at least, they count cousins with these herbs. In Attica we find many demes also named after vegetables, and it appears to be thought probable that many of the demes were styled from the *γέρος* previously settled there. If this be so, there must have been *γέρος* named from plants, in Attica, as there are totem kindreds named from plants among rude races all over the world. But we know very little of the *sacra* of the *γέρος*. We do not know that they venerated the plants from which, perhaps, they were at one time named. I thought I had one example of a *γέρος* revering a plant, namely, the Ioxidae. They were descended from Theseus, according to their belief, by his connection with Perigyne, daughter of Sinnis. Neither man nor woman of the stock would burn, but, on the other hand, honoured and revered, the asparagus, and *στρούθ*, "a shrubby plant," says the dictionary. They explained this custom by a myth, alleging that their ancestress had prayed to and been favoured by asparagus (Plutarch *Theseus*, vii.). Certainly, to call the asparagus "an ancestral plant" was to substitute my inference for Plutarch's facts. But my inference still seems to be a plausible explanation of what will be admitted to be a curious thing, that a *γέρος*, claiming descent from Athenian Theseus, "held in honour and worship" a plant, just as if they had been totemists. But, it may be answered to me, that the Bruces do not eat, but worship and honour, a spider. Certainly I do not claim the Bruces as totemists, though I wish we had some evidence for a Spider totem kin in pre-Christian Scotland. I make my adversaries a present of the Bruce business, which seems a very good parallel to the asparagus of the Ioxidae. Perhaps they will find, if they look, that I mention Aryan totems as things but dimly indicated, though the convergence of the hints of totemistic practices towards one point, to which exogamy and traditions also tend, seems not without importance. By the way, the "bright" bear must surely have been the white or Polar bear. There is nothing very "bright" about the brown bear, but the Polar bear deserves the name. Perhaps our Aryan ancestors came from the Arctic Circle, where bears are bright, or, at least, white.

A. LANG.

"BEZONIAN."

Cambridge: Jan. 3, 1885.

This Shaksperian word has been discussed by Dyce, Staunton, and others. I am principally concerned with its etymology.

Dyce speaks of the word as being "of Italian origin"; but I shall show that he is wrong, for the word is certainly French. Staunton says, "a term of contempt derived, it is thought, from the Italian *bisogno*, which Cotgrave explains 'a filthie knave or clowne, rascall, bisonian, base-humoured scoundrell.'" But the word which Cotgrave thus explains is not the Italian *bisogno*, but the French *bisongne*. Dyce concludes that, because of its (assumed) Italian origin, it properly means a needy fellow, a

beggar. This is the right sense, certainly, but it does not prove an Italian origin.

None of the writers really explain the *form* of the word; they throw no light on the suffix *-ian*; yet this is just the very thing that settles the matter. This suffix is due, in fact, to the suffix of the French present participle. The original French is *besognant*, which Cotgrave duly cites, and explains by "working, labouring, travelling, busying himself"; but he omits to tell us that the original sense of *besogner* was "to be in need." This omission is easily supplied by examples to be found in Littré, Burguy, Bartsch, &c. Combining all our information, we shall find that the form is French, that it is a present participle, and that the literal sense is "a begging man, a beggar." As used in Shakspeare, it may be exactly rendered by the equivalent modern English slang phrase "you beggar." The present note was suggested by my finding the word in actual use in Anglo-French. I may again remark, parenthetically, that Anglo-French abounds with illustrations of English which have not by any means been fully sifted.

In the *Testamenta Eboracensis*, i. 159, is an undated will (about A.D. 1391) of William Moubray. The testator wills that his funeral shall be conducted at a small expense, "*œunz ascun mauniori ou assemble, ou ascun autre vaynglori*," in order that the money thus saved may be given to the poor for the good of his soul; or, as he expresses it, "*issint qe mez bienz a dispender sur tiel vaynglori povunt estre dones as pours besoignantz pour mon aulme*."

The French word is not borrowed from Italian, but is only cognate with it, and from the same source. As to this source, which is Teutonic, see Diez, s.v., *sogna*, and the English *essoin* in the Supplement to the second edition of my Dictionary. Littré discusses the prefix *be-*, but does not convince me; the more likely explanation is that it is the Old High German *bi* (German *bei*).

WALTER W. SKRAT.

"AUREUS DE UNIVERSO."

St. Catharine's College, Cambridge: Dec. 24, 1884.

Will you allow me to appeal to the wide circle of your readers for information which I have not as yet been able to find?

Caxton, when continuing Higden's *Polychronicon*, apologises for his work, and says he can get no books of authority from which to draw, only one named *Fasciculus Temporum*, and another called *Aureus de universo*. The former is well enough known, but for the latter I have, as yet, sought in vain. Caxton's continuation embraces English and French history between 1358 and 1460. It seems to me that *Aureus* probably means *Liber aureus*, but of this I am not sure. Doubtless it was some early printed book.

There is a note in Dibdin's edition of Ames's *Typographical antiquities* which states that by *Aureus* is meant *Petrus Aureolus*, but anyone who looks at the writings of that author will see that he could not be Caxton's authority on the history of England and France.

J. RAWSON LUMBY.

VALERIUS FLACCOUS.

Combe Vicarage, near Woodstock: Jan. 3, 1885.

In this day's ACADEMY Mr. Whitley Stokes cites some words of the Book of Armagh, comprising the following:—

"*astriferas non iaduxerat bosferus (leg. Hesperu) umbras.*"

These words seem to him to be founded on those of Valerius Flaccus (vi. 752):—

"*Nox simul astriferas profert mortalibus umbras.*"

The similarity does not appear to me sufficient to justify his inference.

As to "astriferas," Statius (*Theb.* viii. 82, 83) has this sentence:—

"Non fortius aethera voltu
Torquet, et astriferos inclinat Jupiter axes."

As to "induxerat [not "protulerat"] umbras," Horace (*Sat.* I., v. 9) has this (thought by Orelli to be, perhaps, taken from Ennius):—

"Jam nox inducere terribis
Umbras, et coelo diffundere signa parabat."

J. HOSKYNs-ABRAHALL.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 12, 8 p.m. Inventors' Institute.
8 p.m. Society of Arts: Cantor Lecture, "Climate, and its Relation to Health," by Dr. G. V. Poore.
8 p.m. Royal Academy: "Velasquez and the Spanish School," by Prof. J. E. Hodgson.
8 p.m. Aristotelian: "Lucilius Vanini: his Life and Philosophy," by Miss C. E. Plumpton.
TUESDAY, Jan. 13, 3 p.m. Royal Institution: "Colonial Animals," by Prof. Moseley.
8 p.m. Biblical Archaeology: "The Babylonian Kings of the Mythical Period," by Mr. T. G. Pinches.
8 p.m. Civil Engineers: President's Inaugural Address, by Sir F. Bramwell.
8 p.m. Anthropological Institute: "Account of a Collection of Human Skulls from Jervis Island," by Mr. Oldfield Thomas; "Notes on some Tribes of New South Wales," by Mr. A. L. P. Cameron.
WEDNESDAY, Jan. 14, 8 p.m. Geological: "The Metamorphism of Dolerite into Hornblende-Schist," by Mr. J. H. Teall; "Sketch of the Geology of New Zealand," by Capt. F. W. Hutton; "The Drift Deposits of Colwyn Bay," by Mr. T. Mellard Read.
8 p.m. Society of Arts: "The Employment of Hydraulic Machinery in Engineering Workshops," by Mr. Ralph H. Tweddell.
8 p.m. Microscopical: "Notes on the Life History of some of the little-known Tyroglyphidae," by Mr. A. D. Michael; "A New Species of Acineta," by Mr. C. Thomas.
THURSDAY, Jan. 15, 3 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
8 p.m. Linnean: "On Plants collected by Joseph Thomson in the Mountains of East Equatorial Africa," by Sir J. D. Hooker and Prof. Oliver; "Flora of Madagascar," by Mr. J. G. Baker; "Orchids of Madagascar," by Mr. H. N. Ridley; "Japanese Colydiidae," by Mr. D. Sharp.
8 p.m. Historical: "Difficulties in Writing Oriental History," by Major-Gen. Goldsmid.
8 p.m. Royal Academy: "Rubens and the Flemish School," by Prof. J. E. Hodgson.
8 p.m. Civil Engineers: "Physiography," by Mr. John Evans.
8.30 p.m. Antiquaries: "Two Heraldic Panels," by Mr. J. O. Robinson; "Some Inscriptions from the Catacombs at Rome," by Mr. A. G. Hill.
FRIDAY, Jan. 16, 7.30 p.m. Civil Engineers: Students' Meeting; "Secondary Batteries," by Mr. F. Geere Howard.
8 p.m. New Shakspeare: "The Authorship of 'Henry VIII.," by Mr. Robert Boyle.
9 p.m. Royal Institution: "Living Contagia," by Prof. Tyndall.
SATURDAY, Jan. 17, 8 p.m. Royal Institution: "Greek Sculpture," by Dr. Waldstein.

SCIENCE.

Comparative Anatomy of the Vegetative Organs of the Phanerogams and Ferns. By Dr. A. de Bary. Translated and Annotated by F. O. Bower and D. H. Scott. (Oxford: Clarendon Press.)

A TRANSLATION of Prof. de Bary's *Vergleichende Anatomie* was so obviously desirable in the very highest degree that it may be regarded as having come to us almost in the natural course of things, though none the less is it a matter of gratification that it has come. Difficulty might have been anticipated in finding translators specially qualified for the task—one which is in general so seldom rewarded with due appreciation, and in this particular case so likely to offer subject for criticism. That Mr. Bower, in whose hands original anatomical research has been so fruitful, should have laid aside from it the time and labour for a share in this work may be explained largely by the enthusiasm with which Prof. de Bary inspires his pupils, and by the fact that he is one of the few in this country to whom the wealth of the original

was familiar. Much more than a mere translation was necessary, since suitable English equivalents for many German anatomical terms did not exist to the translator's hands. These had to be "invented"; and undoubtedly this part of the work must have been of more anxious consideration than any other. From another point of view, however, the book is peculiarly adapted for translation, dealing as it does in general with well-ascertained facts—a state of things unshaken by controversy, and to be affected by the progress of science more in bulk than in arrangement. For this reason the delay that has taken place in its production here matters little, so far as it has reference to current literature.

A review of the original at the time of its publication in 1877 appeared in the pages of the ACADEMY, and, therefore, the present notice may be confined to the translation, and to an estimation of the place it will occupy in our scientific literature. Just as the translation of Sachs' *Lehrbuch* marked an era in the teaching of botany in this country, so I venture to think this book will mark another in the progress of those taught by the former. In the earlier days botanical text-books were plentiful enough, but they were mostly designed for the purpose of enabling students of medicine to acquire the small and necessary knowledge of the subject demanded of them by their examiners. He who penetrated beyond this found storehouses of information on classification, external morphology, and the like; but for histology and physiology a number of statements, sometimes conflicting, often unintelligible, fearful and wonderful in arrangement, and for the most part fit only for the flames. The "happy British child" of the poet, if he intended to become a botanist, was driven to other tongues, when warned in time to save himself the trouble of having to unlearn and lament in after years. The few distinguished plant anatomists of the generations preceding the present younger one were mostly "self-made."

Of recent years there has been all round an increased attention to vegetable histology, embryology, and physiology throughout the country; and notably at South Kensington, Cambridge, and Edinburgh, botanical schools have arisen in which the value of these branches of botany has been recognised to the full. Perhaps in certain quarters this new movement has been advanced to the undue exclusion of systematic botany, and it is possible that the eminent position held by our countrymen in this department may be in this way endangered for a time. Anyhow, no one can dispute that such a training in morphology as is now to be had without leaving this country is by far a better education for systematic work than the old somewhat superficial and uninviting practices. The danger lies in the seductiveness of the morphological studies. To a very enthusiastic class of workers the present volume contains a useful warning:—

"It was more the object of this work to put that stage of development which is called mature to the fore, since the present overruling preference for the earlier stages has often brought it about that in the 'voir venir' the things themselves, which are to be produced, are neglected."

To the class, already numerous, and always

increasing, who have in recent years received preparation for the work of independent research, the translation of the *Vergleichende Anatomie* will prove a very great boon, while of not less service to the older generation, many members of which have been disabled from reading the original. It is purely and simply a book for workers—at once a digest of a vast mass of material admirably arranged and set forth, and a guide through difficulties. No doubt, it will be treated also as a mine by the writers of simpler text-books, and since these must go to authority for many of their facts, the translation may be welcomed both by such writers and their expectant readers.

On the execution of the translation Messrs. Bower and Scott are to be unreservedly congratulated. It not only follows the original with fidelity, but it is lucidly and concisely written, and free from the faults of style so common to translations from German. Perhaps the section relating to the disposition of vascular bundles is the best of all, though it is precisely here that trouble must have occurred. As to the new terms provided, the best testimony I can bear is in the confession that numbers of them, at first reading, escaped me as new—some from their natural likeness to the originals, other from their manifestly fitting character. There may be some hesitation in accepting one or two of them, but, failing readiness to suggest better, silence will be most becoming.

It is to be hoped that one of the first effects of the book will be the doing away with certain archaic terms which still linger in use. These undoubtedly served well enough when education in the minute anatomy of plants finished with the inculcation of the striking fact, that "plants consist of two kinds of cells—some long, the others more or less round or square." With possession of undoubtedly the best text-book of the subject (which, I should say, is worthily "got up" in its English form by the Clarendon Press) one may safely indulge in hopeful anticipations as to the future of anatomical studies in this country. Eager students are not wanting and their studies have already been fruitful of result. Botany does not lag behind in the great advance of biological science that is taking place in our midst.

GEORGE MURRAY.

FRÖHNER'S "KRITISCHE ANALEKTEN."

AMONG the most important contributions to the criticism of Latin and Greek authors that have appeared of late may be ranked the *Kritische Analekten* of W. Fröhner, in the supplementary volume of *Philologus* for the present year. The writer has combined archaeological research with philological dexterity in a very masterly and (what is not usual) very interesting way. In ninety-five pages Fröhner discusses and corrects a large number of *cruces* in the less known classical authors, as well as various obscure points in Greek and Latin epigraphy. Among the more interesting authors reviewed may be mentioned Fronto (pp. 49–52), the *Historia Augusta* (pp. 29, 30), Pliny the Elder (15–20), Statius, Valerius Flaccus, Tertullian, the *Anthologia Graeca*, the *Anthologia Latina*, Kaibel's Collection of Greek Inscriptions, &c. Though small in compass, the little volume is worthy of the most careful and even repeated study. In many cases its author has had access to sources not available to others, and, throughout, research, in the best sense of the term,

advances *pari passu* with memory and philological acumen. It is difficult, where so much is good, to specialise particular points which seem to settle incontrovertibly passages that have been much fought over. One or two, however, may be mentioned. The palimpsest of Fronto (p. 28, Naber) has these words: "Jouem patrum ferunt cum res humanas a primordio conderet, ænum in medium uno ictu percussum in duas partis undique paris diffidisse." Fröhner reads *ouum*, and explains of the world-egg of the Orphic cosmogony. Equally ingenious is his explanation of the well-known difficulty in *Mart. v. 12*:—

"Uno cum digito uel hoc vel illo
Portet Stella meus decem puellas."

Martial is there comparing an acrobat, who supports seven or eight boys on his shoulders, with his rich patron Stella, who carries about on any single finger ten girls. Why *girls*? Fröhner, in opposition to Mr. King, ingeniously explains of the distinction between male and female gems; but the passages of Theophrastus and Pliny quoted to prove this have a value quite beyond the particular application. One of the happiest specimens of Fröhner's learning is the discussion on the Gnostic inscriptions, pp. 42-44, which may, we think, be henceforth regarded as quite cleared up. The criticism of Bahrens and Lucian Müller is severe, but (at least, in the passages of Luxorius under discussion) deserved. Has Fröhner noticed the single lines quoted from Luxorius in a *Philippus Glossary* discovered by me and published in the *Journal of Philology* (viii. p. 122), and from that by Bahrens in vol. iv. of his *Poetæ Latini Minores*, p. 440? I observe that in one of the emendations of the Christian poem directed against the revivers of pagan ceremonies in the fourth century A.D., I have anticipated by sixteen years Fröhner in reading *factos* for *facto*. The Greek inscription, No. 260 in Kaibel, has turned up at Marseilles (Fröhner, p. 23); from this it would seem that we must read in the second distich

ἔ τὸ πρὶν ἐν Χαλδίῳ, νῦν δ' εἰς Ἀχέρντα μολοῖσα,
Ἐκτερέμας τῶν πρὶν νυμφίδιον θαλάμῳ.

But this is only one of a great many corrections which will have to be made in that interesting volume. R. ELLIS.

OBITUARY.

IN many of the scientific circles of London the well-known form and genial presence of Mr. Alfred Tylor, who died on December 31, will be much missed. During the last thirty years he had contributed numerous papers to various scientific journals—especially to the *Philosophical Magazine*, the *Geological Magazine*, the *Journal of the Geological Society* and that of the Anthropological Institute. Among his principal papers are those relating to the flint-implement-bearing gravels of the Valley of the Somme, and to other quaternary deposits. It was he who first suggested the recognition of a "pluvial period" as necessary to explain some of the phenomena which perplex the student of pleistocene geology. Mr. Tylor, at the time of his death, was a member of the Council of the Anthropological Institute, and had contributed to that body several papers, including one "On the Origin of Numerals." His latest writings dealt with the subjects of Roman London and primitive metallurgy. Mr. Tylor died in the sixty-first year of his age, and his remains were interred last Tuesday in the Friends' Cemetery at Reigate.

We also note with regret the death of Mr. Alexander Murray, formerly director of the Geological Survey of Newfoundland, and author of a treatise on the geology of that island.

CORRESPONDENCE.

"THE EMPIRE OF THE HITTITES."

Preston Rectory, Wellington, Salop: Jan. 5, 1885.

IF Mr. Tyler and others interested in the Hittite question will carefully examine under a lens the two heads of the animal on the boss of Tarkondēmos (Tarriktimme), I think they will hesitate before pronouncing the head to be that of a goat. The figure at the back of the king in the seal-impression before me is more clearly delineated than that which is opposite to his face; but both figures must stand for the head of one and the same animal. Dr. Mordmann first of all decided for a goat's head, subsequently he thought the character stood for that of a horse. Mr. Sayce once thought it was a horse's head, now I believe he decides for the goat. Mr. Ball (*ACADEMY*, December 27) interprets, rightly I think, the symbol to be a horse's head. Mr. Tyler (*ACADEMY*, January 3) objects to the horse on account of the beard, and pronounces in consequence in favour of the goat. But, is this appendage the beard of the animal? To my eye it is extremely unlike a goat's beard, which is more or less pendent, while the appendage in question represents a stiff, semi-quadrangular body, with a bifid apex, attached at its base to the animal's cheek, and issuing from it at right angles. It is easier to say what the appendage is not than what it is. It seems to me to be part of a bridle or head-gear of a horse. The whole contour of the head I take to be a very fair representation of the head of a horse. The straight, elongated bony head, the large full eye, the prominent forehead, the well-marked cheek-bone, and the small pointed erect ears, are all well delineated in the head at the back of the king. The engraver has carried the outer line of the ears down to the forehead in front of the eye, with a projection which, perhaps, may be intended for the fore-lock. The Hittites were a horse-loving people. Prof. Sayce suggests that the country of Ermē, over which Tarkondēmos ruled, is in the neighbourhood of the Cilician range of mountains, called Arima by the classical geographers, near the river Kalykadnos, a district which, I may mention, was celebrated for its breed of horses. According to Herodotus (iii. 90), the Cilicians once used to pay a tribute of 360 white horses to Darius every year. It is possible that in the name of Tarriktimme or Tarkutimme there may be something involving the idea of horse-breaking or superiority in horses, as in the Greek ἵπποδαμος applied by Homer to a Trojan, and ἵπποκρατέω; but this is pure conjecture.

W. HOUGHTON.

SCIENCE NOTES.

IN the January number of the *Geological Magazine* Dr. H. Woodward publishes an interesting article on the gigantic dinosaurs which have been well-known for the last sixty years under the name of *Iguanodon*. After sketching the history of our knowledge of these fossils, he enlarges on the remarkable discoveries of *iguanodon* remains at the Bernissart colliery, between Mons and Tournai in Belgium. From some Wealden deposits, curiously occupying an old depression in the coal-measures, there was obtained a few years ago an extraordinary assemblage of fossils, including more than twenty specimens of *iguanodon*. From this collection two entire skeletons have been skillfully prepared by M. De Pauw, and are now exhibited in a huge glass-case erected in the courtyard of the Natural History Museum at Brussels. One of these specimens belongs to a new species, to which M. Boulenger, now of the British Museum, gave the name of *Iguanodon Bernissartensis*, while the other is referred to the old species *I. Mantelli*. These remains are

being carefully studied and described by M. L. Dollo, of the Brussels Museum, and have already thrown much light on the structure of the dinosaurian skeleton.

PHILOLOGY NOTES.

M. TERRIEN DE LA COUPERIE has completed his investigation into the history of the aboriginal tribes of China, and in the course of his studies has made some most important discoveries with reference to the ethnology and philology of Eastern Asia. He has succeeded in tracing many of the non-Chinese tribes from their earlier homes in Central and Eastern China to their present locations on the borders of Burmah. Careful research has enabled him to confirm by linguistic proofs those conclusions at which he, in the first instance, arrived by gathering up the fragmentary indications contained in the Chinese records.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, Dec. 19, 1884.)

PROF. SKEAT, President, in the Chair.—Mr. James Lecky read a paper on the phonetic theory of verse. He considered that to analyse English verse on a phonetic basis necessitated a departure from the conventional prosody at several points. The current orthography must for this purpose be replaced by a phonetic notation, providing signs for all the significant sounds, as well as for at least three degrees of stress and five of length. The pronunciation to be examined would be that associated naturally with the meaning, and not that of "Routine-scansion," i.e., the well-known artificial mode of reading, in which mechanical patterns in length and stress were substituted for the complicated, irregular ones of natural speech. The common misapplication of the terms "iamb," "trochee," &c., to relations of stress instead of to relations of quantity, would be given up, as it confused both the theory of ancient and of modern verse, and deprived us of suitable names for quantitative metres. The division of verse into feet by means of a vertical stroke, had, as usually employed, no bearing on quantity or stress and depended on no intelligible principle. The proposal now made was to begin the foot always with the strong syllable, in harmony with the prose notation adopted by Mr. Sweet and M. Paul Pierson. A weak initial syllable would be put before the stroke and called an "anacrusis." The foot then became identical with the "stress-group." The so-called "ascending" and "descending" metres were due to a misunderstanding of the distinction between the foot and the phrase; a weak syllable might begin a phrase, but could not begin a foot. The practice of Messrs. Melville Bell, Sweet, Evans, and Pierson in marking various degrees of stress in front of the syllable and not within it, was defended on the ground that the syllable as a unit of stress was indivisible. The structure of verse, discerned as such by the ear, depended on equality or proportion of time, marked off by pauses or by variations of stress. Time or quantity might be perceived in (1) sentences, (2) lines, (3) feet, or (4) syllables. The faintest approach to verse was found when successive sentences were of proportional length, as in verses and responses of a liturgy. Verse proper began when design in the length of lines was perceptible by the ear. The phonetic line was identical with the "breath-group," or with a constant fraction of the same. A higher type of verse arose from the division of the line into feet (stress-groups) of proportional length. This was the meaning of "rhythm." But the highest type of verse was caused by the division of the stress-group into pulses of equal length. The time occupied by a syllable might be a fraction or a multiple of the pulse. This was the meaning of "metre." It required some proportion of length to exist between successive syllables. Even this condition was sometimes realised in English verse, as shown by the fact that certain lines, though containing two syllables to the foot, sounded in ternary metre; while others, containing

three syllables to the foot, had a binary effect. Contrary, therefore, to former opinions, quantity in English did not depend solely on stress; and many metrical designs, though possible in the middle of a line, were impossible at the end. Variations of "metre" were produced (1) by altering the division and coalescence of pulses; (2) by altering the number of pulses into which the stress-group was divided (substitution of triplets); and (3) by joining the end of one foot to the beginning of the next under one syllable (syncope). Variations of "rhythm" were produced (1) by altering the phrasing from "basic" to anacrusis; (2) by altering the position of the caesura; (3) by altering the length of line; (4) by altering the number of stress-groups into which lines of the same length were divided; and (5) by the discord of rhythms (syncope). Notice had also to be taken of varieties of speed. Many apparent irregularities could, by these processes, be brought under rule. The usual statement that stress was indifferent in ancient prosody and quantity indifferent in modern was misleading. Stress recurring at irregular intervals of time would not give the sensation of equal feet. But in classical metre the ictus was probably artificial, displacing the natural prose stress, which latter did not appear to influence quantity. In English verse much variation of rhythm, metre, and speed was tolerated. Many compositions had only peculiarities of quality, such as alliteration (to mark the beginnings of stress-groups) and rime (to mark the ends of lines), but no regularity of length either in syllables, feet, lines, or sentences. This ambiguous species, between verse and prose, might be called *Recitative*, following a suggestion made by Mr. B. H. Hutton. Below this, again, was mere orthographic verse, which might depend on the number of syllables or of stress-groups. Neither of these conditions would suffice to give equality of length. This irregular composition was probably due to the imitation of older writers, whose works might have been rhythmical and metrical as pronounced two or three hundred years ago, and had only lost their quantitative form through the transformations of the spoken language since their time. Much so-called verse in French was of this disintegrated and archaistic type. What was called prose-poetry would differ from prose only as regards meaning, or also as regards style (diction, grammar), but not as regards phonetic form (quality, quantity, stress). In conclusion, it was suggested that no systems of theory were likely to influence the practice of versifiers; and that the only useful application of the science was to provide a simple literary notation for all the kinds of phonetic material employed in prosody.

GEOLOGISTS ASSOCIATION.—(Friday, Jan. 2.)

Dr. HENRY HICKS, the President, read a paper "On some Recent Views concerning the Geology of the North-west Highlands." He stated that as the *Proceedings* of the Association contained several papers dealing with the controversy concerning the rocks of the North-west Highlands of Scotland, he thought it advisable to call the attention of the members to views contained in an important article published in *Nature*, November 13, by the Director-General of the Geological Survey; and in a "Report on the Geology of the North-west of Sutherland," by Messrs. Peach and Horne, in the same number, which cannot fail either to change entirely the future character of the controversy, or bring it rapidly to a satisfactory issue. Because of the positions held by the chief disputants on the one side, the controversy had assumed, to a great extent, the appearance of being one between official surveyors and some amateurs who had been led to study the questions involved in it. The well-known and widely-accepted views, first put forward by Sir R. Murchison, that there were clear evidences in the North-west of Scotland of a "regular conformable passage from fossiliferous Silurian quartzites, shales, and limestones upwards into crystalline schists, which were supposed to be metamorphosed Silurian sediments," were fully adopted by the official surveyors, including Sir A. G. Ramsay and Prof. Geikie, and also by the late Prof. Harkness and others, who had examined the areas. Prof. Nicol, of Aberdeen, however, for many years stoutly

contested Sir R. Murchison's views, and maintained that they were based on erroneous observations. Unfortunately his views did not meet with much approval at the time. In the year 1878 Dr. Hicks reopened the controversy by calling attention to some sections examined by him in Ross-shire, which he maintained did not bear out the views of Sir R. Murchison. He also suggested a modified interpretation of the views of Prof. Nicol. Since then different areas in Ross and Sutherland have been examined by Mr. Hudleston, Prof. Bonney, Dr. Callaway, Prof. Lapworth, and Prof. Blake; and their conclusions showed that, though slight differences of opinion prevailed on some points, yet with regard to the main questions all were agreed as to there being no evidence in the areas examined by them to support the Murchisonian views of a conformable upward succession. Many other facts also of great importance were brought out in these enquiries. Dr. Hicks expressed gratification at the candid manner in which the whole question had been dealt with by the director-general and the surveyors in their recent report, and at their readiness in acknowledging that, after due examination in the course of surveying and mapping parts of the areas referred to, they had found the "evidence altogether overwhelming against the upward succession which Murchison believed to exist."

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Photographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—220, KENS, 115, Strand, near Waterloo-bridge.

SIXTEENTH EXHIBITION OF WORKS BY THE OLD MASTERS AT THE ROYAL ACADEMY.

(First Notice.)

THE ITALIAN SCHOOLS.

THE present exhibition contains no works by a fourteenth century Siennese artist. The catalogue does indeed assign an "Assumption" (251) to Duccio, but the picture is by some mediocre fifteenth century painter of the school. The little "Madonna" (210) on a gold ground is possibly a genuine work of Matteo da Siena, the hair of the virgin being treated in his style. School pictures of the same period are the "Madonna with Angels" (232) and the interesting fresco of S. Catherine of Siena enthroned (243) wrongly ascribed to Cosimo Roselli. The latter picture was clearly an altar-piece painted for the chapel of a convent of Dominican nuns, and it is much to be wished that its provenance should be put on record.

The early Florentine school is likewise but poorly represented. Four works by followers of Giotto are hung, but none of them are important. The little triptych of the "Virgin and Child with Saints" (224) has a certain decorative effect. The "Virgin and Child with Angels" (226) is ascribed to Jacopo di Casentino for no good reason, while two "Crucifixions" (229, 234) are, equally without foundation, accredited to Cennino Cennini. All three works can only be accepted as productions of the early Florentine school. The "Allegory" (254) ascribed to Signorelli, but certainly not by him, is more probably the work of Piero di Cosimo, recalling, as it does, not alone his manner of painting, but even more the peculiar class of subject he was fond of. The so-called "Procession" (220) is the journey of the Three Kings. It contains elements reminiscent both of Gentile da Fabriano and Fra Angelico, and thus stands close to Benozzo Gozzoli. It can hardly be by him, at however early a period, and is, therefore, probably the work of an immediate pupil of his. The "Madonna" (231) is a more learned, though less fresh, production by a pupil of the same master. The tempera painting of the "Coronation of the Virgin" (235), ascribed to Filippo Lippi, can be by no other hand than that of Botticelli. It was

painted during the youthful period of the artist, and in the face of Christ shows him strongly under the influence of Filippo. The picture was originally the lunette of some large altar-piece, and may have been painted (though we do not think so) in Lippi's studio to surmount a central panel by the master himself. The circular "Madonna" (244) is a picture of Botticelli's school, and possesses many attractive qualities, the sentiment of affection being sweetly expressed in the Virgin's face. From the immediate neighbourhood of Botticelli come the set of pilaster panels of saints (255, 256) ascribed to Filippino Lippi. Here, as in so many other instances, the chief value of the panels is lost, because no record is preserved as to the altar-piece of which they originally formed a part. The "Story of Jupiter and Calisto" (212) is the front panel of a *cassone*, certainly not by Filippo Lippi, but only a mediocre work of the school; its chief excellence is purely decorative. The little "Entombment" (217), ascribed to Andrea del Castagno, cannot be by him, for it shows the unmistakable traces of Botticelli's influence. It is really a heavy work by a poor artist of the end of the fifteenth century. A larger "Entombment" (255), ascribed to Francesco Bianchi, is an anonymous picture by a weak Florentine of the period. To Raffaellino del Garbo, a name in this case used rather to denote the style and period than to indicate a definite craftsman, the lovely little *tondo* of the "Virgin and Saints" (203) is ascribed. It is a perfect gem of colour, and is full of the tender sentiment which the better artists of the period never failed to infuse into their pictures, however small the scale; but I do not behold Raffaellino's hand in it. Domenico Ghirlandajo is accredited with a half-figure of "S. George" (208), which by rights belongs to one of his followers, perhaps Granacci. The "Virgin and Child" (225), called of Fra Bartolommeo, is the best of the Florentine pictures shown. It is graceful in composition, tender in sentiment, and very soft in tone. A close examination, however, throws doubts upon the immediate authorship of the Dominican, and we find ourselves led to think rather of his companion and fellow-worker Albertinelli, by whom I have little doubt the picture really was made. Four small panels (213), once forming parts of a predella, are ascribed to the same artist. Andrea del Sarto's name is affixed in the catalogue to a small and beautiful "Holy Family" (171). Certain parts of the picture, such as the head of the child, bear a strong resemblance to his authentic works, but the Virgin's head differs from the usual canon of an artist who seldom varied from his habitual types.

There is only one Umbrian picture—a "Madonna" (214)—ascribed to the school of Raphael. It does indeed contain certain Raphaellesque elements, but they are derived not from him directly, but from the sources whence those qualities came to him. The picture is not of a high order of individual merit, but cannot fail to possess something, at any rate, of the sweetness which pervaded the Umbrian school.

Passing to the north of Italy we are at once met by a really important work, the portrait inscribed, though not in contemporary characters, "Philippus Beroaldus" (209). It is a bust in profile, sharply outlined against a plain dark background. The face is modelled with much care by means of fine grey shadow, and resembles a low bas-relief. The hair is long and almost golden in colour, and is surmounted by a black cap. The finish of the whole is excellent, and the work is done in a style almost Flemish. Mr. Willett's panels (236-241, 245-250) are further examples of the same series as those shown last year. Together with many

more, they formed a frieze round the upper part of the walls of a small room in the Gonzaga Palace of San Martino, near Mantua. Each panel contains a bust portrait, usually in profile, and treated with a kind of humour; the background of each is a barrel-vaulted archway. The general opinion seems to be that they were painted either by Borgognone himself, or by some one very near him in point of style and date. Three anonymous pictures of the Milanese school remain to be noticed. The first is a "Holy Family" (173), given to Marco d'Oggione, but which it is safer to leave anonymous. It has a look of flatness all over, as though the final glazings had never been applied, or had been flayed off by some cleaning process. The picture, nevertheless, has many good and pleasing qualities. The "Madonna" (222) is a pleasant school-work of the same period. Bottinone (meaning Buttinone of Treviglio) is named as the painter of a very interesting and not unbeautiful "Madonna with Angels" (228), on what authority we cannot say. The picture, especially in the face of the Virgin, contains decided Milanese elements, but certain of the angels recall Florentine types. Pieces of glass or crystal are let into the panel as ornaments here and there, in an old-fashioned way. The work is, in fact, what the Italians would call a *pie*, and was produced by a man of no originality, but capable of assimilating from others. In that second-hand way he made what is certainly a pretty picture.

Another *cassone* panel, bearing representations of the "Triumphs of Love and Chastity" (218), is most unfortunately ascribed to that weak Giottist, Dello Delli. It is without question a Veronese picture, painted under the influence of Vittore Pisano, as anyone may see who will compare a figure prominent in the foreground of this panel with that of "S. George," by Pisano, in the National Gallery.

Francesco Francia, Lorenzo Costa's follower and the first great painter of Bologna, is well represented by the fine and finely-preserved picture of "S. Rook" (176), bearing the authentic signature "*Francia Aurifaber moceccii*." The figure of the saint is painted with much care. There is a want of genuineness, or, at any rate, of spontaneity, about his expression, and the landscape background is, as usual, hard and devoid of atmospheric effect; nevertheless, there is much sound work in this panel, and not a little promise of future development.

The Paduans are represented by a poor "Crucifixion" (223) of Mantegna's school, and by an excellent half-figure, "S. Catherine" (216), which is one of the most attractive pictures ever painted by Carlo Crivelli. The expression of the countenance is full of deep feeling, the forms are remarkably graceful, and what colour there is, besides the gold, combines with it into a perfect harmony of low tones. The picture is a masterpiece, and is one of the most precious examples of religious art in England.

We are thus led on by an easy sequence to the school of Murano, the parent school of Venice, to which Crivelli owed no small debt. One of its earliest important masters was Bartolommeo Vivarini. The "Death of the Virgin" (206) bears his signature and the date 1480 upon a scroll. It was painted during the decay of the artist's powers, and will not compare with his productions of only six years before. The Paduan element in it has been carried to an extreme, but with little real understanding of what it was that the best Paduan artists were striving for. A genuine and signed picture by Giovanni Mansueti, a pupil of Bellini, whose works are seldom met with out of Venice, is the "Holy Family" (207). It is painted in a soft and delicate manner, the influence of the master being especially visible in the old man's head. The Virgin and Child are distinctly Mantegnaesque. A gray tone pervades the whole, and

the tones of all the colours are low. Of other works of the same school, the "Madonna with two Saints" (211) is ascribed to Girolamo da Santa Croce. The little panel is not by that painter, though it is clearly an early work by some pupil of Bellini's closely allied to Cima. The faulty proportions of the figures and the design of the draperies, borrowed from various sources, betray an inexperienced hand. "The Adoration of the Magi" (227) is not by Catena, but was painted by some Germanising Venetian of little importance in the early years of the sixteenth century. To about the same epoch belong two very interesting panels, the "Fishermen at Evening" (205) and the "Battle Piece" (253). In the former the car of Diana is seen drawn across the water, while some fishermen are plying their craft in the shallow waters of the foreground. Here the influence of Giorgione is apparent. The colouring is very lovely, especially at the left end of the panel. A large representation of the "Raising of Lazarus" (165) is a moderately good example of Bonifazio's style. The influence of Palma can be plainly traced in the head of Christ. Titian is accredited with a very beautiful "Madonna" (158) belonging to the Marquis of Lothian. The Virgin's face is not altogether satisfactory, but has probably suffered from repainting. The landscape background, however, is of great beauty, quite in the manner of the great colourist. Two pictures are ascribed to Veronese, though not with equal probability. At a first glance we feel inclined to call "The Punishment of Actæon" a work of Tintoret's, but a closer examination shows that it can only have been painted by Veronese and under Tintoret's influence. Gorgeous draperies and sumptuous architecture are the usual subjects of Veronese's work, but here no such accessories are present. We are shown only a few nude female figures bathing. Actæon in the background has a stag's head in place of his own, and one of the nymphs attracts the attention of the dogs to the peculiar metamorphosis. The whole is a fine harmony of warm browns and sallow greens. The rapidly painted sky and trees perform their functions to perfection, whilst the almost mysterious play of light produces a pleasing effect of mystery. A moment's inspection of the "City of Venice in adoration before the Madonna" (168) is enough to show that Veronese had no hand in the painting of it. The proportions of the figures are all wrong. The picture is clearly the work of a follower. The best of the Venetian paintings exhibited comes last in point of date. It is one of Francesco Guardi's most successful smaller works, and represents the Piazza Colleone on the occasion of some great ceremonial (154). The statue of Colleone is in the foreground on the right, behind it is the church of SS. John and Paul, and right opposite the spectator is the Scuola di San Marco, into which a procession of high ecclesiastical and civil functionaries is entering by an outside staircase up to the first floor. The piazza is filled with an animated crowd, easily and naturally rendered in the facile manner of the artist.

There remains only one more Italian picture to be mentioned, the "Priest Singing" (180). The man is extraordinarily large and stout, and is depicted on a scale of more than life-size. His coarse face is painted with much power, and his huge enveloping red robes are massively rendered with heavy rich tones of colour and an imposing breadth of light and shade. His vellum music book is likewise skillfully handled, in a manner almost worthy of Rembrandt. The picture is, however, undoubtedly Italian, painted somewhere about the end of the sixteenth century, but by whom, and even in what school, I am as yet quite unable to pronounce.

W. M. CONWAY.

GAINSBOROUGH AT THE GROSVENOR.

THE Exhibition of Gainsborough's pictures, following that of the work of Sir Joshua Reynolds, naturally suggests a comparison between the two great English masters of the latter half of the last century. This has, however, been drawn too often to make the temptation to draw it here irresistible. Indeed, perhaps the temptation is rather the other way. It would be pleasant for once to forget, if possible, that there was ever such a painter as Sir Joshua, and to study and enjoy the character and charm of Gainsborough, without being disturbed by the shade of his great rival. But this is almost impossible; one is so absolutely the complement of the other, that like night and day, sun and moon, and almost, we might say, man and woman, their likeness and unlikeness, their distinctness and independence, form a bond which it is difficult to ignore. Strongly marked as their individualities are, the two seem to make one whole, which represents fully and fairly the art and society of their age.

No one who remembers the warm glow which was characteristic of the canvases which decorated the walls of the Grosvenor this time last year, can help being struck with the milder radiance which fills them to-day. The warmer creams and browns and reds which Sir Joshua deemed essential to the chromatic effect of a picture have given place to grays and greens and blues, warmed with tender yellows and buffs to a colour-heat seldom exceeding that of those coronas which, like ghosts of rainbows, hang round the moon on warm misty nights. Although the epithet cold would be false and unfair to Gainsborough's colouring, he distributed his warmth so that the prevailing tone of his pictures is a tender opalescence. This is not only true generally but particularly. Though few artists have ever rendered the warm penetrating glow of sunset with greater skill, the tone of such exquisite pictures as "The Harvest Waggon" and "The Cottage Door" is always subdued, and when he introduced a red coat, as in his naïve portrait group of Mr. and Mrs. Thomas Sandby, the colour is too strong to be thoroughly in harmony with its surroundings. The cheerfulness and freshness of this picture make it delightful; but if we seek in it for some passage which is characteristic of Gainsborough's genius as a colourist, we must look at neither the red coat nor the greens and browns of the trees which balance it, but at the pearly combinations of pink and gray and blue in the lady's fashionable dress. We may, therefore, regard Gainsborough as the moon to Sir Joshua's sun.

By similar analogy, we may speak of Gainsborough's art as feminine in comparison with the more masculine spirit of Sir Joshua; not that Gainsborough was effeminate any more than he was cold, but because his sympathy was ever towards the tender and gentle, rather than the robust and vigorous qualities of mankind. His ideal of a man was a gentleman, and his ideal of a gentleman was a man who was gentle. His range of sympathy and perception was not so wide as that of Sir Joshua, who could seize the character of his sitter, and depict it without regard to his own personal standard. It is the "disposition" rather than the character that Gainsborough sought to express, and this "disposition" he made conform to his own notions of what a disposition should be. Cheerful, amiable, refined and inclined to be sentimental, perhaps, is the character of English society of his period, according to Gainsborough; virtue rather than energy, intelligence rather than sagacity, good nature rather than wit, beam from his pleasant faces. He would expunge all traces of ill-temper from the face of a lady who from Mr. Stephens' account would appear to have been a vixen, and had no horror of the lackadaisical, if one may judge from his portrait of one of his daughters. In his likeness of Sir John Skynner,

we see an active intellect rather than judicial power, and in his Dr. Johnson the features are softened and paled down till all the force and ruggedness of the marvellous mask are lost. It is plain that Gainsborough had also predilections as to physical charms. Unconsciously no doubt his and had a bias to certain curves and even to certain features. A firmly marked and arched eyebrow, a nose somewhat long and aquiline, a mouth with thin upper and full under-lip, with the ends turned up and dimples in the corners, oval contours and speaking eyes, would evidently have been characteristics of his ideal woman if he had painted her. Many portrait painters seem to have such an ideal mould from which veracity plucks unwillingly the faces of his sitters.

But, though such an exhibition as this tends to show with greater clearness than usual the personal limitations of a painter, it also exhibits the full area of his powers; and to this more pleasant side of the subject it is time to turn. Regarded as a painter of portraits or of landscapes he is one of the greatest and most original of the English school. The contemporary of Reynolds and Wilson, he kept clear of both, and became great by means of his fidelity to his innate genius. He is the undoubted founder of the English school of landscape. While Wilson based his art on Claude and Italian scenery, Gainsborough found a more congenial source of inspiration in Dutch art and the scenery of England. In many charming little early works here, we may find traces of the study of Berchem (58) and Ruysdael (perhaps of Rembrandt), and Wilson (24), who was his senior; but all his later and greater works were his own, giving us glimpses of the scenery and climate of England such as no painter had ever given before. And they are all imbued with a spirit of romantic rusticity, a little sophisticated perhaps, but none the less English and his own, which was to live through Morland and Collins, and many others, down to the present time. In the grand massing of clouds and foliage, and in bold illumination—or, in other words, in scenic design—he was an originator in whose steps both Constable and Turner may be said to have trod to some extent, while his sea-pieces, though they may remind one of the Dutch school, show observation and inspiration of his own. In liquid silveriness both of water and air, the large "View at the Mouth of the Thames" lent by Sir R. P. Beauchamp, is a masterpiece; and the light lap of the water in Mrs. Clarke Kennedy's "Seaside Landscape" (137) is only one of the many merits of this charming composition. A third fine coast scene is that belonging to the Duke of Westminster (152). Although "The Harvest Waggon" (33), lent by Lord Tweedmouth, is said to have been Gainsborough's favourite painting, and is enlivened by its admirable figures, it is surpassed in some qualities by the same owner's "Landscape, with Figures and Cattle," which seems to us at once a reminiscence of Both, and a prophecy of Turner. Of the small pieces of this class, Mr. R. K. Hodgson's "River Scene with Cattle" (180) is the most solid and luminous. Part at least of this composition was repeated by Gainsborough in a picture exhibited at Burlington House last year or the year before. The motives of his landscapes were often repeated by Gainsborough. The grand "Cottage Door" belonging to the Duke of Westminster (98) is more or less like numbers 212, 192, and 45. Altogether, perhaps, there has never before been such an opportunity of studying Gainsborough's development as a landscape painter; and it is a pity that there are none of his sketches here in pencil and chalk, which are inimitable in their way.

Gainsborough's love of nature extended itself to his portraits. Their most essential characteristic is their simplicity. When he attempted to pose his figure, as in the portrait of Colonel St. Leger (23), lent by the Queen, he was not

always successful. He preferred a naturally easy to an artificially dignified attitude, as we see in his portrait of Lord Mulgrave (181), lent by Mr. Bingham Mildmay; and it was seldom that he was so successful in a dramatic pose as in his portrait of Garrick (7) now in the possession of the Town Council of Stratford-upon-Avon. But, on the other hand, with what instinctive pleasure he seized upon the graces of purely natural gesture, the charms of accidental grouping, too simple to be noticed as beautiful by the ordinary observer! With what an air of gallantry "Parson Bate" sets forth for a walk in the country with his stick and dog! This fine picture (171) belongs to Mr. J. Oxley Parker. As simply grouped are the painter's two fine daughters (91) in a picture lent by Mr. S. Whitbread, and the two figures in Lord Donnington's picture of "The Countess of Sussex and Lady Barbara Yelverton," in which we see the mother's sweet face echoed in that of her daughter (35)!

Despite the absence of some famous pictures, it cannot be said that Gainsborough is not worthily represented here. In "The Blue Boy," or that celebrated version of the subject which belongs to the Duke of Westminster (62), he is at his best. We see his characteristic colouring carried to perfection, and his natural sense of elegance and distinction stimulated to unusual excellence by rivalry with Vandyck. This picture would hold its own in a gallery of masterpieces of portraits gathered from all countries. His divination of what is gracious and exquisite in woman is shown in many pictures. For charm of colour and general sweetness nothing exceeds Mrs. Frances Susanna Basset, born Cope, afterwards "Lady de Dunstanville," (59) which is lent by Mr. G. L. Basset, and "Lady Sheffield" (47) "Mr. Fitzherbert" (10) "Georgiana (the famous) Duchess of Devonshire" (145) "Lady Margaret Lindsay" (160) are a few of many portraits of beauties which charm by sweetness of "disposition" quite as much as by beauty or mere technical dexterity. Other ladies who have no supreme physical attraction, as the first "Countess of Spencer" (168) and "Mrs. Heberden," (179) delight us scarcely less; and we are captivated even by such a plain old lady as "Mrs. Walker" (39). This power of interesting us in the personality of his sitters, a power possessed by Rembrandt perhaps more than any other artist, is shown in several portraits of men, and in none more than in Mr. J. W. Noble's portrait of "William Jones" (111), a good-natured old gentleman of whom we should like some more information than is given by the note in the catalogue. The fact that he was great uncle of the late Miss Warre, of Hestercombe Park, Taunton, scarcely satisfies the human sympathy excited by the kind old features.

Not that we are not grateful to Mr. F. G. Stephens for the many interesting notes with which he has illustrated the catalogue. They will add much to the intelligent appreciation of the collection by the ordinary visitor, and if revised with the necessary care, will form a record of permanent value to the student. To the catalogue we must refer our readers for an account of Gainsborough's transparencies, some beautiful specimens of which are exhibited by Mr. G. W. Reid, and for a record of the numerous beautiful and interesting pictures which we have not been able to include in the scope of the present article.

COSMO MONKHOUSE.

THE CATON INSCRIPTION.

MR. ROBERT MOWAT, of Paris, the editor of the *Bulletin épigraphique*, has favoured us with what seems to be a plausible suggestion respecting the interpretation of the Roman inscription referred to in the following paragraph from

Mr. W. Thompson Watkin's *Roman Lancashire*, p. 182:—

"In 1802 there was found, after a high flood, in the bed of a little stream called the Artle Beck (which coming from the south falls into the river Lune), near Caton, about four miles east-north-east, in a straight line from Lancaster, a very fine milliarium of Hadrian. It is a cylindrical column about seven feet high, nearly four feet in circumference, and is now preserved in Mr. Gregson's grounds at Caton.

IMP · CAES
TR · HADRIA
AVG · P · M · T · P
COS · III · P · P

X · M · P · III

The only difficulty in this is in the last line, where the form before the M is puzzling. Were the stone similar to others of its class it should have here given us the Roman name of Lancaster."

Mr. Mowat assents to the remark contained in the last sentence of this quotation, observing that the distance of three Roman miles seems to be measured from the old wall at Lancaster. His suggestion is that the reversed X stands for *Castris* (*Kastris*), "from the camp." We are unable to agree in Mr. Mowat's conclusion that the Roman station at Lancaster had no other name than *Castra*; but it is in every way likely that in its own immediate neighbourhood a Roman station or town would more frequently be mentioned under the designation of *Castra* (or possibly *Castrum*) than under its proper name. That this was often the case appears evident from the fact that the Anglo-Saxons borrowed the word "*ceaster*" to denote a Roman town; and it is worth noting, as a possible relic of older usage, that both *Eboracum* and *Deva* are sometimes spoken of in the Saxon Chronicle simply as *Ceaster*, without the usual prefixes. *Deva*, indeed, still retains this shortened name in the form *Chester*. It does not appear that any exact precedent occurs for the use of the reversed X as a symbol of *castra*; but it is in accordance with general epigraphic analogies, and yields in this instance so appropriate a sense that there seems to be strong ground for accepting the interpretation as correct. Mr. Mowat's expansion and translation of the whole inscription are as follows:—*Imp(eratori) Caes(ari) Tr(aiano) Hadria(no) Aug(usto), p(ontifici) m(aximo), t(ribunicia) p(otestate), co(n)s(uli) tertium, p(atr) p(atricae). K(astris) m(illia) p(assuum) tria.* "To the Emperor Caesar Trajan Hadrian Augustus, high pontiff, invested with the tribunicial power, consul for the third time, Father of the Country. From the Camp, three miles." Mr. Mowat observes that the titles here ascribed to the Emperor Hadrian refer the date of the inscription to the time comprised between the years 121 and 123 of our era.

CORRESPONDENCE.

"THE LIFE OF HABLOT BROWNE."

Highgate: Jan. 7, 1885.

My attention has been drawn to two letters referring to my *Life of "Phiz,"* the first of which purports to correct certain unimportant dates and statements in that work, and the second letter corrects the first.

I have only to say that I obtained my information from the present head of the artist's family and others (as fully explained in the Preface to the book), and this was printed only after his revision of the statements in type.

D. C. THOMSON.

NOTES ON ART AND ARCHAEOLOGY.

THE excavations undertaken at Sunium by the German Archaeological Institute have been rewarded with results of considerable import-

ance. The ground-plan of the temple of Athene has been fully ascertained. It appears that the longer side of the building had thirteen columns, not twelve, as is indicated in the plan given by Blouet in the *Expédition de Morée*. The frieze, portions of which had been discovered and copied by travellers at various times, has now, it is believed, been entirely recovered, though the sculptures are unfortunately not in a good state of preservation. It has also been ascertained that the marble temple, which dates from the Periclean age, was built over an earlier edifice of calcareous tufa, and followed the same general plan, though the older building was somewhat smaller.

FROM the *New York Commercial Advertiser* of December 6 we learn that Mr. W. Hamilton Gibson, the well-known artist, has discovered at Sandy Hook, Conn., a painting which he confidently believes to be an original Claude Lorraine. The picture, which is on panel, was rendered wholly invisible by an accumulation of dirt and a thick coat of gummy varnish. The removal of this covering brought to view a landscape resembling in character the subjects of many of Claude's well-known works, and including two pools of water, a stone bridge over a stream, a view of distant mountains, and two figures—a shepherd in a blue blouse, and a woman with a red garment about her shoulders and a basket on her head. On the back of the panel was the signature "Claud Lorrain," with the monogram C.L. beneath. Mr. Gibson admits that the precise subject is not to be found in the *Liber Veritatis*; but he maintains that the work presents marked resemblances to many of Claude's unquestioned productions, and that its merits are such as to forbid its being ascribed to any inferior hand. If Mr. Gibson's discovery should prove genuine, there can be no doubt of its extraordinary importance.

THE *édition de luxe* of *Romeo and Juliet*, illustrated with photogravures from original drawings by Mr. Frank Dicksee, which was published in October last by Messrs. Cassell & Co., is already becoming scarce, and the publishers now give notice that in accordance with the right which they reserved to themselves they have increased the price from £3 10s. to £5 5s.

THE forthcoming volumes of the "Bibliothèque Internationale de l'Art" are *Les Musées d'Allemagne*, by M. Emile Michel; *Ghiberti et son Ecole*, by Mr. Charles Perkins; and *Histoire de la Miniature byzantine*, by M. Kondakoff.

THE *Courrier de l'Art* publishes a letter from M. J. A. Durighello relating to the discovery at Sidon of some prehistoric remains, including eight flint spear-heads and seven flint axes, with several skulls and fragments of bones. The objects were found at a depth of eleven metres.

THE bound volume of *Little Folks* (Cassell) reached us too late to be noticed among "Gift-Books"; but it is fairly entitled to a mention here, if only because of the unusual excellence of the colour printing in the frontispiece. The other full-page illustrations in various tints are also creditable. But, of course, the chief attraction lies in the letterpress, which we have found to supply a fresh zest to youthful palates surfeited with richer luxuries.

THE STAGE.

It would be difficult to say anything novel about the single pantomime which draws London; but it had better just be recorded that "Whittington" is the title and subject of Mr. Harris's gigantic production at Drury Lane, that Miss Fanny Leslie is its principal actress, Mr. Campbell and Mr. Nichols its principal actors, that a lady

who goes by the name of *Aenea* shows herself a mistress of graceful motion, and that many dancers—children and grown women—add to the interest of the spectacle and to the organised bustle of the stage. "Whittington," whether we like it or no, is indeed a triumph for the manager whose lavish enterprise has established at the theatre a tradition of success. We have not ourselves seen the pantomime, but this is how all the world speaks of it.

INSTEAD of seeing the pantomime, we went again the other evening to the nobler spectacle of "Hamlet." In this performance at the Princess's, the taste and the material wealth bestowed on the production would alone have ensured some measure of popularity; but we prefer to find in the extremely able manner in which the piece is acted the real reason for its continued attractiveness. The performance was criticised in some detail in these columns soon after it was first given, and there is not very much to add to what was then said. It may, however, fairly be reported that the run of the piece has thus far aided instead of diminished the effectiveness of the performance. Mr. Wilson Barrett is even more satisfactory than when he—equipped with weeks of rehearsal, and, doubtless, years of study—he first essayed the character of Hamlet. He now feels—and, perhaps, it is not too much to say that his performance shows—the advantage of contact with many successive audiences. Miss Eastlake has made yet more remarkable advance as Ophelia, for in her case there was greater room for progress. Even at the very first the lady had purged herself of mannerisms, which in her later performances of poetic melodrama had begun to beset her. She was pleasant in the earlier scenes; touching in the mad scenes. But she has now gained in power, and, judging from the fashion in which she enacted, the other evening, the most trying portions of a never very grateful part, Miss Eastlake must now find herself in the very fullest possession of her means. It is quite worth saying to those who have seen the Princess's "Hamlet" once, that, if they see it again, they will find it has gained in acceptableness. It is, as a whole, a performance for which the playgoer may be grateful.

MUSIC.

RECENT MUSICAL PUBLICATIONS.

Cantate Domino and Deus Misereatur. By G. F. Cobb. (Novello.) The author not only gives us a setting of two canticles, but also an interesting Preface, in which he discusses the question of "unison" writing in church composition. It is quite evident from the tone of his remarks, and from the simple and tuneful character of his vocal music, that in publishing these pieces he hopes to contribute something that may be of practical use to the Church's service of song. He wishes congregations to take a direct share in choral worship, and, in the majority of cases, this can only be done satisfactorily by the adoption of unison form; for Mr. Cobb says very truly "the organisation of anything like satisfactory part-singing can only be undertaken in very exceptional cases." The organ parts of the two canticles are written with taste and judgment. Of the two we prefer the second. Page 8 is very effective, but the second passage for "boys" commences too much *à la* Mendelssohn. In an Appendix Mr. Cobb gives some passages in four-part vocal harmony to be substituted when desirable.

WE have likewise three English Ballads by the same composer, published by Reid Bros., London. The melodies of all three are simple and pleasing. In the first "Ah! County Guy, the hour is nigh," the accompaniment is cleverly developed from the subject of the Hour Chimes of Great St. Mary's, Cambridge. The second, a nautical ditty, "A wet sheet and

a flowing sea," is built upon a long pedal note. The third, "She is not fair to outward view," has an accompaniment which is more in organ than pianoforte style.

The Maiden and the Sea. By W. Mason. (Wood.) A plainly written, but by no means ineffective, ballad.

The Three Roses and Hope and Love. By H. Logé. (Brighton: J. & W. Chester.) Two light and rather graceful songs. In the first the accompaniment begins well, but gets thick and less interesting towards the close.

The Healing of Blind Bartimæus. Anthem by F. H. Burstall. (Novello.) The music is restless, and the short snatches of melody are not striking. The choral parts are the best; and there are passages in the closing movement which seem to show that the composer is capable of better things.

The Child Jesus. By Karl Hahn. (J. F. Schipper & Co.) The opening of this "carol of praise" reminds one a little of the second scene in "Tannhäuser," while the middle section has a very Mendelssohnian swing about it. There are one or two nice phrases in the song; but, after all, the most attractive part is the frontispiece.

New Series of Christmas Carols. Words by Mrs. Hernaman. Music by A. Redhead. (Griffith, Farran, & Co.) This series is specially intended for children, but some of the melodies contain uncomfortable intervals, and the accompaniments do not show a very practised hand. Of the ten, the last four are the most successful.

The Musical Circle. Vol. V. (H. Vickers.) This volume, published at a shilling, contains certainly a great deal for the money. There is rather a mixed collection of songs, pianoforte solos, and dance music. Why introduce Chopin's "Funeral March" with alterations and additions, and simplifications, which rob it of all charm? Schumann's "Abendlied" is given as a pianoforte solo, but without the composer's name. It would have been better to have given it and left out Chopin's name to the former piece.

MUSIC NOTES.

THE first Monday Popular Concert of the new year was well attended. The only attraction was Signor Piatti's new sonata, which, of course, drew many violoncello players, professional and amateur. Before Christmas it was announced as a sonata for violoncello (obligato) and pianoforte, but now as one for the two instruments: the pianoforte plays but a very secondary part in it. The four movements of the work are clear as to form, and there are many passages which show off to the best advantage Signor Piatti's brilliant talents as an executant; but in the themes and development there is nothing specially novel or important. The eminent player received quite an ovation at the close. He was carefully accompanied by Mme. Haas, a pianiste not new to these concerts. Her solo was Bach's organ Prelude and Fugue in A minor, arranged for pianoforte by Dr. Liszt. The choice was scarcely a wise one. The lady did not do full credit to herself, and the selection was scarcely worthy of a classical programme. Both the Prelude and the Fugue were played in a very neat and praiseworthy manner; but such difficult transcriptions demand a performer of exceptional force and individuality. Mme. Haas was encored, but her rendering of Chopin's Nocturne, op. 9, No. 1, was not satisfactory. Miss Carlotta Elliot sang with great taste songs by Franz, Godard, and Gounod. The quartets were Beethoven in C minor, op. 18, No. 4, and Haydn in D minor, op. 42.

AUTOTYPE.

AUTOTYPE BOOK ILLUSTRATIONS

(SAWYER'S COLLOTYPE)

are printed direct on the paper with suitable margins any size up to Demy, 22 inches by 17 inches. This process is noted for its excellence in

- Copies of Ancient Manuscripts;
- Copies of Coins, Seals, Medallions;
- Copies of Pen-and-Ink Sketches;
- Copies of all Subjects of which a Photograph can be taken;

and is largely employed by the Trustees of the British Museum, the Palaeographical, Numismatical, Antiquarian, and other Learned Societies, and by the Leading Publishers.

"The Autotype Printing Process, or that which we have first briefly described, affords many advantages for certain purposes of Book Illustrations, the chief among these being absolute fidelity, and, as compared with any kind of engraving, considerable economy in the preparation of small editions. A photograph or other portrait, a photograph of any object, an etching or other monochrome drawing can be copied precisely, the drawing as it is left the hand of the original artist, without the possibility of any inaccuracy from the work of intermediate persons."—*Times*, April 17th, 1873

LITERATURE.

Italy: from the Fall of Napoleon I. in 1815 to the Death of Victor Emmanuel in 1878. By John Webb Probyn. (Cassell.)

THE want supplied by this book is one which must have been felt by many for the last fourteen years. When the struggles and vicissitudes of half a century had at last achieved the liberation and union of Italy, it became desirable to have a connected survey of the sequence of causes that led up to the event. It is too soon to have a history of this period in the completest sense, but not too soon to have the facts told consecutively, and with the due proportion which is almost sure to be impaired in an impression of current affairs gathered from newspapers. Mr. Probyn's book is a clear, straightforward, well-written narrative of less than four hundred pages, "a concise account of the chief causes and events which have transformed Italy from a divided into a united country." He does not claim to have had access to any unpublished documents, but his "reading or consultation" of the sixteen books enumerated at the end of his Preface has been supplemented by "personal knowledge of Italian affairs" acquired by residing the greater part of each year in Italy and among Italians from 1859 to 1867, and again in 1870-71.

To us, now, the victorious conclusion seems a certainty from the first; it was far otherwise to those who watched or shared the struggle through its earlier and longer part. We may count the Neapolitan revolution of 1820 as the beginning of the movement for Italian freedom which triumphed finally in 1870. Between these dates lies exactly half a century; yet in 1850, when three-fifths of that period had passed, it required very unusual faith or very unusual sagacity not to think the cause hopelessly ruined.

The division of the country into small states, while on the one hand it makes the narrative somewhat desultory, on the other hand adds a dramatic element in the gradual converging of their different paths toward the common goal, and also affords much variety of study to the political observer. The kingdoms of Naples and Piedmont are, of course, the extremes of contrast. Naples served to show the worst of what Italy was, Piedmont to show the best promise of what she might be. As to Naples, it would have seemed incredible beforehand that one throne would be able to exhibit in succession four such dastardly tyrants as Ferdinand I., Francis I., Ferdinand II., and Francis II. Through forty years of tyranny broken by revolts they punctually perform their allotted part in but slightly varying routine. In 1820 the people rise, Ferdinand I. grants a constitution in all haste, and takes the oath

to it, adding of his own accord: "Omnipotent God, who with infinite penetration lookest into the heart and into the future, if I lie, or if one day I should be faithless to my oath, do thou at this instant annihilate me." In 1821 the Austrians have been invoked, the king is a despot again, and condemning hundreds to death and banishment for the crime of having kept the oath he broke. In 1848 the people have again risen, and Ferdinand II., passionately demanding the red cockade, "for it is the colour of the heart," swears another oath:

"In the dread name of the most Holy Omnipotent God, one and triune, to whom alone it is given to read the depths of the heart, and whom alone we invoke as Judge of the purity of our intentions, and of the frank loyalty with which we have decided to enter on this new path of political order, having heard with mature examination our Council of State, we have resolved to proclaim, and now proclaim irrevocably as sanctioned by us, the following constitution."

Before the year is out he has earned his name of "Bomba" by his murderous victory over his own town of Messina, and obtained Austrian absolution from his oath. The result is thus described by the very moderate and conservative historian Luigi Farini, quoted by Mr. Probyn:—

"Naples was the prey of furious rage; whoever was known for his love of Italy and fidelity to the constitution—ministers, senators, deputies, magistrates, priests—were either obliged to find refuge on board foreign ships from the snares of spies, and so seek safety in exile, or, afflicted with every kind of moral and physical evil, were thrown into prisons with murderers; whoever was irksome to the infamous swarm of spies and false witnesses who headed the police, was the object of accusation and inquisition; some were calumniated from private revenge, and some for gold; there was no guarantee for civic right, no legal check, no share in the Government, nothing but insolent tyranny."

A cheering contrast to all this is found in the annals of Piedmont. A large part of the book is naturally given to that home of struggling constitutional liberty, the political centre round which the fragments of hopes shattered elsewhere gathered and grew. Mr. Probyn takes a thoroughly English delight in celebrating the virtues and success of this most constitutional state and its last king. And certainly when Parliamentary institutions are blamed for inefficiency, it is worth while to remember that no state could have shown, considering the circumstances, more steadiness, energy, and tenacity, than the Piedmontese. What vacillation there was, was mostly personal to the kings. The most painful period was that immediately after the accession of Charles Albert in 1831, when the king's inclination to inaction, or even reaction, was so marked as to incur the positive hostility of the party of *Italia Giovine*, whose single-minded enthusiasm could not tolerate hesitation. Charles Albert seems to have been a puzzle to himself. "He more than once said, 'Is it not true that I am an incomprehensible man?'" Yet even during that period the internal administration of Piedmont was in many ways good, as well as the organisation of the army, and all improvement of Piedmontese resources was to the

future benefit of all Italy. And considering the great odds in Austria's favour, some hesitation in taking the field against her was excusable.

One attractive feature in a history of the Italian *Risorgimento* is its production of notable men. Mr. Probyn's book is of course not on a scale to give room for biographic portraiture, but the part played by individuals is for the most part clearly marked. Of the four men, however, on whom the corners of the fabric of Italian unity might be said to rest—Cavour, Victor Emmanuel, Garibaldi, and Mazzini—the two former receive, perhaps inevitably, a good deal more mention than the two latter, especially the last. Garibaldi's achievements are well though very briefly told, and due tribute paid to his devoted heroism. As to Mazzini, with all his uncompromising tenacity, he was so strangely self-effacing that it is hardly unexpected to find his name appear but seldom in a narrative of the struggle of which he was the very soul. Once, indeed, his light could not be hidden, and that was when it shone on the Capitoline Hill. The story of the Roman Republic of 1849; of the deceptive promise of Pius IX.; of the treacherous and deadly action of the French government under Louis Bonaparte's presidency, and of its general Oudinot (not without indignant protest of a minority in the French Assembly, and of the French envoys, d'Harcourt and Lesseps); of the gallant defence of the city—19,000 half-trained men under Garibaldi holding a French army of 35,000 at bay for a month—all this is very briefly told in the eighth chapter. "So fell Rome," says Mr. Probyn,

"her soldiers fighting to the last extremity; her people vying with each other in maintaining the glorious but unequal struggle; her rulers firmly rejecting every dishonourable proposal, and as firmly declaring that Italians, and Italians only, had a right to decide what should or should not be the government under which they would live. Assuredly such men are rightly held to have deserved well of their country."

They did deserve well, and the defence of Rome, though hopeless, was by no means useless. It showed that even under the shade of the Vatican the new hope of liberty could make men; that Italy possessed an incomparable military leader for the war of liberation; and that the prophet of the creed of "Young Italy" was a man as far as possible remote from fierce fanaticism—a man wise, generous, and resolute, hating nothing but baseness, embodying his principles in such action as proved their claim to a loyalty more than personal.

For Victor Emmanuel Mr. Probyn has nothing but admiration. A complete estimate of that singular character, composite rather than complex, with its juxtaposition of strength and weakness, dignity and grotesqueness, must wait for some later historian. Cavour's personality also has materials for further analysis; but nothing can destroy the main grounds of the praise here lavished on him. No slight element of his fame is, as Mr. Probyn points out, that "there was one principle Cavour was determined to uphold at all costs, that of doing everything with and by the representatives of the nation. 'Any one can govern,' he said, 'by a state of siege.'"

What parted Mazzini from Cavour and his school of diplomatic emancipators was doubtless that to Mazzini the political seemed only a part of the moral emancipation to be achieved; he desired to arouse a ceaseless, self-sacrificing enthusiasm, which, when it triumphed (as it must at last), would leave the nation not only free, but heroic. *Dis aliter visum*; but there are surely occasions when one can fully sympathise with this distrust of diplomatic policy. Such an occasion is the armistice of Villafranca in 1859, when the French emperor, having patched his rotting throne by as much fighting as he thought safe, first betrayed Venice to his foe, and then stole Nice and Savoy from his friend.

Mr. Probyn seldom pauses to heighten the effect of facts either by descriptive amplification or by rhetoric; but he gives a vivid picture of the effect of Louis Napoleon's betrayal of Venice:—

"But if it be easy to understand the resentment so generally felt by the Italians, it is difficult to give an idea of the grief which filled the hearts of the Venetians. Their hope and joy had increased with each success of the allies. These feelings gave way to full assurance when from the top of the Campanile of St. Mark the masts of the allied fleets could be descried. Already the citizens began to count the days till they should be free. Already had they planned how the remains of their beloved and honoured Manin should be brought from the land of his exile and reverently laid within their own Venice, which he had served so faithfully and loved so well. . . . Suddenly Venice was confronted with the dread reality that she was to continue beneath the old, leaden, hated yoke. For the time no other feeling showed itself save that of dull, deep despair. To enter into a Venetian family in those days was like entering where death had struck down some member especially beloved."

The defence of Venice against the Austrians in 1849—as heroic as the defence of Rome, and more prolonged—is well told in the eighth chapter, and all honour paid to the leader. After the four names above given, that of Daniele Manin must rank next in the roll of the founders of Italian unity. Nor could there be a more signal instance than Venice to illustrate the old moral of Herodotus, and to show what virtues freedom can evoke from unpromising soil.

Mr. Probyn's estimates of men and things are never harsh, and sometimes rather optimistic. For instance, when he speaks of the cordial relations of Russia with Piedmont in 1856, he does not even hint that resentment against Austria may have influenced the Russian Foreign Office at least as much as disinterested sympathy with Piedmont. The progress of Italy since her liberation is surveyed in the last chapter in a genial spirit. Except excessive taxation for the maintenance of armaments, Mr. Probyn does not find any point in Italian affairs to disapprove. Assuredly Italy is not to be judged prematurely. The mighty wind which made the dry bones live has subsided; it remains to see how the life will last. But whatever other national deliverances there may be yet to achieve, none can evoke the peculiar interest with which Europe watched the country of Dante, of Columbus, of Buonarrotti, of Galileo shake off the inveterate grasp of political death.

ERNEST MYERS.

Swift's Prose Writings. Selected by Stanley Lane-Poole. "Parchment Library Series." (Kegan Paul, Trench, & Co.)

THIS is the age of extract. Our elegant and cultured era demands that its intellectual nourishment shall be supplied in such a form as to require no effort to assimilate. Accordingly there has arisen a large class of literary craftsmen whose trade it is to condense into small compass, for the benefit of lazy or busy readers, what is supposed to be the essence of the voluminous writings of our famous authors past and present. By-and-by, when all our writers have been submitted to this sort of Liebig-process, the aspirant to the reputation of literary connoisseurship will be able to dispense with the clumsy services of a library. A few judiciously purchased volumes of extract will furnish him with all that is necessary for him to know of his native literature; and he will be able to discourse with easy grace upon the particular excellencies of every author who has written a line worth extracting. The subject is one which naturally invites satirical treatment; and it must be admitted that this multiplication of facilities for the acquirement of second-hand and superficial knowledge is a symptom to be regarded with some degree of apprehension. However, as this is the spirit of our age, we must make the best of it; and after all, there is some comfort in living in a period which is so abundant in contrivances for economising labour. Unfortunately conditioned as we are, being all of us so busy writing books that we have little or no leisure to spare for reading any, we detect something "almost Providential" in the happy conjuncture that gives us the means of minimising this latter labour, and setting free our energies for the former.

Regarding the matter from this cheerful point of view, one takes up the present volume of selections from Swift with a mingled feeling of thankfulness and resignation. It was a pleasant surprise to find the name of Mr. Stanley Lane-Poole associated with this task, and an examination of the manner in which he has accomplished it gives one reason to be grateful that it fell into hands so apt. With our fondness for Lyres, Treasuries, Encheiridions, and other heterogeneous casquet-gemmery, we are in some danger of letting drop out of fashion among us the man of one book. It is not implied that the present selector is only a man of one book; but he has—though originally "upon compulsion" as he informs us—made Swift his own. He has this prime qualification—that he and his author are firm friends. Still, even to one so qualified for honest editing, the task of putting Swift into the pot of extract was one of peculiar difficulty. To attempt an adequate representation of the range and power of such a genius within such a compass was, indeed, to attempt the impossible; for Swift is none of your Wordsworths, whose spirit submits mildly to be squeezed into a pint-pot. Much of his work, moreover, can be so reduced only upon the usual sham-sample-system, which resembles the clipping of patches from a picture. The apologetic tone which pervades part of Mr. Lane-Poole's Preface betrays his consciousness of this impossibility. No doubt a certain confidence in an ignorant British public encouraged him to persevere. In spite

of the double service which he claims for a volume of selections, this volume is rather for those who do not, than for those who do, know Swift. The selections are such as every student of Swift knows intimately in their own place; and, where the passages are fragmentary, such a reader may feel a just sense of injury. But to murmur at this would imply a most unfair demand that Mr. Lane-Poole should gratuitously pass between the devil and the deep sea. What he has done is to "provide the unadventurous reader with the easiest way to learn a little of an author he feels he ought to know" by letting Swift speak for himself in the best and most varied exercise of his power, and by speaking for him in a delightful Preface. A judicious modicum of notes is added for the benefit of the "unadventurous reader." The "unadventurous reader" whom this volume fails to allure into a deeper acquaintance with one of the very greatest figures in English history—the English genius who stands without rival in the long succession from Milton down to Burns—must be consigned to the doom of Ephraim, and left alone to his idols.

Something such was worth attempting for the sake of Swift, even though the result might only be partially satisfactory. The charge against the popular acquaintance with Swift is not so much that he is unknown as that he is known falsely. His reputation is of a peculiar kind—a reputation consisting in a name that is universally popular and a character that is universally misappreciated. Since Thackeray played the Calvinistic divine in a lecture which Mr. Lane-Poole distinguishes by an infinitely too charitable epithet when he calls it "slight," and held up before assemblies looking up with foolish faces of wonder that horned monster of his labelled "Swift," the name has been to the general, if not *anathema maranatha*, at least a byword and a shaking of the head. It is one of Minerva's caprices that the writer who endeavours to give a true portrait of Swift should be condemned to appear as the defender of a hopeless paradox, because the critic whose humour it was to smear his brethren with his own tarry stick of snobbery has chosen as the object of his attack the person of one whose manhood is to his as Ossa to a wart.

"All my endeavours to distinguish myself were only for want of a great title and fortune, that I might be used like a lord by those who have an opinion of my parts: whether right or wrong is no great matter. And so the reputation of wit and great learning does the office of a blue riband and a coach and six."

The man who could listen to these bitter words—words that re-awaken the sad self-mocking voice of Hamlet to the courtier, "Sir, I lack advancement"—and was able, with a more than German sagacity, to discover in them the tones of a sneak and a bravo, had better have held his tongue.

Swift needs no apologist; he needs only to be known as he is. In this respect Mr. Lane-Poole's volume, excellent though it be, perhaps shows us too much of the writer and too little of the man. It is possible to distinguish. We are grown such a literary people in these days of peddling critiques that we commonly let our authors melt out of human shape into mere literary phenomena. Surely it is time we were done with critical bogues

that are only ghosts of men, and got ready to take a grip of our authors by the living hand. Not that Mr. Lane-Poole is the victim of such scholasticism; but one is inclined to think that his volume would have been a happier success as an introduction to Swift if he had kept more consistently in view the presentation of Swift's personality. For in that lies the magnetic power; the writings are only the metal that conveys it. His Preface might have been more on that line, and the range of selection might have been widened. One would gladly have foregone the "Proposal for Improving the English Tongue," a paper in which there is small living interest, for the sake of a few passages from the *Journal*. Their interest would not have been "literary," but they would have thrown a different light on all the rest. No writer ever revealed less of his heart than Swift, but that is reason why it should be known that few writers have so much of heart to show. Mr. Lane-Poole has given us Swift's passionate scorn and sincerity, the prophetic fervour that "denounces with the burden of Moab," the *mens indignatio* with which he reads the world in pieces, and his laughter that seems to issue in gusts of flame from a nether region. But this is not enough. There is also the passionate pathos and burning fever of heart which he never exposed. Only from the *Journal* do we see of what depths of tenderness this man was capable, and in this we see what it is that turns his laugh into a sob, that makes the words break from him, as in the *Modest Proposal*, like cries of agony, and gives his life the pity and the terror of Lear enacted and suffered in bitterest earnest.

Swift turning over the leaves of the *Journal* to Stella, and Carlyle turning the leaves of his wife's diary, are two companion pictures singularly striking. The parallel might be curiously extended to a multitude of minor details of their lives. It is still more significant when we compare the genius of the greatest humorist of the eighteenth century with that of the greatest humorist of the nineteenth. Mr. Lane-Poole has called Swift the Carlyle of his age, and, in spite of differences, the interest in these two is radically one. Apart from their community of temper, their imperious pride, impatience of contradiction, abnormal self-consciousness of merit, contempt for the multitude, fitful misanthropy, there is also an essential identity in their point of view. The one to whom his age was as "the very dregs of time" might have written an earlier version of the other's *Letter-Day Pamphlets*, and in the *Clothes-Philosophy* of *Serier* we seem to recognise the eye which had cast the same look of disillusion in the *Tale*. But to go deeper, their philosophy, if it need be so called, is the same. Carlyle, living later, was influenced by development, but it never materially affected his mental bias. With him, as with Swift, in creed as in conduct, the first and final word was individualism.

At a time when Carlyle's name is the gossip of all the circulating libraries, it may be hoped that Mr. Lane-Poole's volume will be a means of reviving an interest in his greater prototype, and, to those who require it, a corrective to the distorting influence of fresh popularity.

JAMES G. DOW.

NATIVE AMERICAN LEGENDS AND LITERATURE.

A Migration Legend of the Creek Indians. With a Linguistic, Historic, and Ethnographic Introduction. By Albert S. Gatschet. Vol. I. (Philadelphia.)

The Algonquin Legends of New England; or, Myths and Folk-lore of the Micmac, Passamaquoddy, and Penobscot Tribes. By Charles G. Leland. (Sampson Low.)

It may be heresy to say so, but this writer must confess that he has never been able to attach much importance to the so-called Kasihta migration legend of the Muskóki (Creek) Indians. The current statements regarding it flow rapidly from a few historic data to vague or unauthenticated reports, which soon run dry in the incoherent sands of mere conjecture. That it was verbally delivered by Chikilli, "Emperor" of the Upper and Lower Creeks, during the National Convention held in 1785, at Savannah, in the presence of James Oglethorpe, Governor of the Carolinas, may be taken for granted. It also seems established that a contemporary English translation, written in red and black letters on a buffalo hide, was handed over to the British authorities, sent to England, and in the same year translated into German. This German version, which Mr. Gatschet regards as "an authentic and comparatively accurate rendering of the original," is embodied in von Beck's *Diarium von seiner Reise nach Georgien im Jahr 1735*, and is apparently the source of the present Creek text. But on this point the statements of the "Americanists" are perplexively obscure. In the *American Gazetteer* (London, 1762) the buffalo skin is stated to have been framed and "hung up in the Georgia Office in Westminster." But, after diligent research, the late Mr. N. Trübner failed to discover this document, and of the present Creek text all we know is that it is a "re-translation," presumably from an English version of the German, by Judge G. W. Stidham, of Indian territory.

Two versions were made by this writer, one into Creek, dealt with in the volume before us, the other into Hitchiti, his mother-tongue, which is reserved for the second volume, the two forming Nos. IV. and V. of Dr. Brinton's "Library of Aboriginal American Literature." In the text little can be discovered to support the learned editor's statement that "it is of a comparatively remote age, exceedingly instructive for ethnography and for the development of religious ideas" (Preface). From the account above given of its pedigree, it will be seen that there can be no question of antiquity, and an examination of the contents will soon satisfy the reader that its ethnological interest is of the slightest. The somewhat abrupt introduction: "At a certain time the earth opened in the West, where its mouth is. The earth opened and the Cussitaws [Upper Creeks] came out of its mouth and settled near by. But the earth became angry and ate up their children," might possibly point to some western volcanic region subject to earthquakes as the cradle of the Muskóki race. Farther on a great mountain is met, which thunders and emits a fierce fire blazing upwards, so far confirming the hypothesis. But then they are said to move "further West," and although they later go

"toward the rising sun," the editor is probably right in concluding that the Kasihta legend is rather opposed to the theory of a Creek migration across the Mississippi from west to east. If such a movement ever took place, it must have been at far too remote an epoch to find an echo in this comparatively modern production.

Its unimportant character would seem to be tacitly admitted by Mr. Gatschet himself, who relegates it to the end of the volume, which is mainly devoted to a comprehensive treatise on the interesting group of Southern nations sometimes collectively known as Apalachians. The value of this section of the work cannot be overrated. It will greatly increase the reputation of Mr. Gatschet, already well known for his extensive labours in the wide field of American anthropology, and must long remain a standard work of reference for the native races of the Gulf States. The origin, obscure affinities, early history, tribal divisions, social usages, and especially the linguistic relations of these peoples, are treated in a masterly manner. Unfortunately, the linguistic map which was to accompany this volume could not be got ready in time; but it is promised for the next, the appearance of which may shortly be expected.

Little space remains to speak of Mr. Leland's book, which must be regarded as a valuable contribution to North-American folk-lore. It embodies a considerable number of myths and legends recently collected by the author and some friends among the north-eastern group of Algonquin tribes still surviving in Maine and New Brunswick, and collectively known as Wabanaki or "Easterns." In pre-Columbian times these Micmac, Penobscot, and Passamaquoddy tribes appear to have come in contact not only with the Eskimo, who formerly reached far to the south of the St. Lawrence, but also with the early Norse settlers in the New World. Subsequently many of them were subjected to Christian influences, and the Micmacs are still mostly Roman Catholics. Hence it is not surprising to find their national myths largely affected, occasionally even profoundly modified, by Shamanistic, Scandinavian, and Biblical reminiscences.

"Around Glooskap, who is by far the grandest and most Aryan-like character ever evolved from a savage mind, and who is more congenial to a reader of Shakespeare and Rabelais than any deity ever imagined out of Europe, there are found strange giants; some literal Jötuns of stone and ice, sorcerers who became giants, like Glooskap, at will; the terrible Chenoo, a human being with an icy-stone heart, who has sunk to a cannibal and ghoul; all the weird monsters and horrors of the Eskimo mythology, witches and demons, inherited from the terribly black sorcery which preceded Shamanism, and compared to which the latter was like an advanced religion; and all the minor mythology of dwarfs and fairies. Therefore the Wabanaki mythology is, as regards spirit and meaning, utterly and entirely unlike anything else that is American. And, though many of its incidents or tales are the same as those of the Chippewas or other tribes, we still feel that there is an incredible difference in the spirit" (p. 3).

We see at once that the interest of this remarkable folk-lore is rather historical and psychological than strictly ethnical—historical

as implying long and intimate association with Norse and Eskimo peoples, psychological as showing the capacity of the native American mind to grasp and appropriate the very spirit of the Scandinavian sagas. At the same time these texts must be read with some degree of caution. They do not appear to be altogether "angriffsfrei"; and although the editor has, on the whole, adhered to his promise rather to "collect and preserve" than to "cook" the raw material, nevertheless, some of it seems to have here and there been subjected to the "cooking" process. Thus, in the story of the "Three Strong Men," the woman is described as slaying a demon Bear "with a vigorous blow strengthened by hate and famishing desire of freedom and a better human life." The "desire of a better human life" is a very fine sentiment, but it is assuredly Mr. Leland's rather than that of any actor in old Norse, Eskimo, or Indian mythology. However, there is not much of this false colouring, and the editor has earned the hearty thanks of all "folk-lorists" for rescuing from oblivion this curious mass of North American legendary materials.

A. H. KEANE.

A Politician in Trouble about his Soul. By Auberon Herbert. (Chapman & Hall.)

THE searchings of heart of Mr. Angus Bramston, M.P., are somewhat long-drawn out, so that it is to be feared a good many readers of the *Fortnightly Review* may have failed to reach those chapters which form the last third of the present volume, and embody the writer's own serious opinions. It is one of the cases in which the writer has himself to thank if he is not read to the end, while, at the same time, the reader who ventures to form an opinion, after laying the book aside in the middle, certainly has not the means of forming a fair one. There are, in fact, three elements of note in the 300 pages of dialogue, and the literary defect of the volume is only that the relation between the three is not brought out dramatically—a criticism which applies to nearly all modern attempts at discussion by dialogue.

The first element is negative. From a number of diatribes by various speakers, the matter of which would be amusing if there were not quite so much of it, we learn that Mr. Auberon Herbert distrusts and disapproves of the policy and principles of the present Administration, and any possible or probable successor to it; and his disapprobation is so profound and complete that he cannot believe any but a very young and innocent recruit to be sincere in following leaders who follow nothing but the winds of popular favour or caprice. The writer seems to labour under an impression, which surely any volume of political memoirs—from Lord Malmesbury backwards—would dispel, that the game of politics was taken more seriously by the players before the attitude of the democracy had begun to count among the chances to be calculated. He is eloquent upon the unreality of political phrases, and the conclusion, put into the mouth of the most honest talker, that "we are all of us *farceurs*," finds a confirmation, which Mr. Auberon Herbert perhaps hardly intends to give, in the fact that all this part of the dialogue seems to be

written by a *farceur* of the same breed, who believes nothing and aspires after nothing, except the triumph of posing as a little wiser than everybody else. This sort of academic *persiflage* is, the reader feels, unworthy of a politician with a soul or a conscience exercised about his soul's salvation; and, except in occasional allusions to the wisdom of a rather mythological workman called Markham, the dialogue contains no hints at the existence of those realities of life which the *farceurs* of the political world are justly condemned for treating as empty words.

But as the diatribes proceed and multiply we find that the writer and his various mouth-pieces are not inspired solely by a disinterested scepticism, such as finds congenial food in analysing the development of Mr. Gladstone's mind—they are moved also by at least one practical, political opinion; and the want of principle laid to the charge of modern Liberals appears to consist mainly in their agreeing to act as if they were not as entirely convinced as the author assumes they must be, and as he himself is, of the truth of this particular opinion. It is curious that a politician seriously and candidly concerned about his own soul should think, or rather feel, for the feeling is not justified by argument, that the one thing now-a-days necessary for political salvation is legislatively to let alone the existing distribution of property. At an early stage in the discussion, Holmshill, a candid country gentleman—who is not at all sure that it would not be for the greatest happiness of the greatest number if his estate were cut up into allotments—enquires ingenuously, "But what would you have done?" "I can tell you what I would *not* have done" is the answer, which, beaten out thin, fills the next 200 pages. And the sum and substance of the charges against the Liberalism which receives its education from Mr. Gladstone is that the writer does not believe that either Mr. Gladstone or his followers can be sincere in thinking that the country has anything to gain by legislation which begins or encourages the fatal process of tampering with the sacred rights of property.

So far, Mr. Herbert might as well have been writing in *Blackwood* as in the *Fortnightly Review*, and there is nothing very new or original in his criticisms, which skim the surface in admirable illustration of the political unreality he wishes to satirise. But at last we find with relief that he has only been guilty of the venial literary error of the novelist who succeeds in hiding his mystery so well that the reader has to be informed of its existence and the clue to it at the same time. Mr. Herbert is not the scornful sceptic he has led us to believe; he has a master and a creed: he believes in Mr. Herbert Spencer's philosophy and in the politics of those much-maligned "friends of humanity" who pass most of their lives in Continental gaols because they call themselves Anarchists, and are seldom out of gaol long enough to explain to the general reader what they mean by the term. Mr. Auberon Herbert has not, indeed, the consistency of his opinions; but the root of the matter is in him, and, as he is not wanting in courage, he will, doubtless, end by recognising his true allies. "One of the greatest truths that we have to learn," says the oracle Markham, "however unwilling we

may still be to do so, is that no man amongst us, good or bad, is fit to possess power over his fellow men," and what is true of individuals is equally true of classes, and no less true of majorities than of minorities. This doctrine is the cornerstone of the Anarchist creed; the one inalienable natural right of man is to do as he pleases, subject to the condition of not interfering with the co-equal rights of others. Any government which aims at securing the universal exercise of this right *ipso facto* infringes it, for the government must consist of men who have, and can have, no right to set up as ruler and judge over their fellows. The real Anarchist is an enthusiast who believes that the more innocent of the functions now discharged by civilised governments would become unnecessary when the demoralising influence of government was removed—that robbery and murder would go out with policemen and executioners. Our author has less faith, and would have government undertake "the defence of life and property," though he admits that on his principles such governmental action is indefensible "on true moral grounds." All use of force is non-moral; "but in the world as it is, those who use force must be repelled—and effectively repelled—by force"—which is the very ground on which Anarchists reluctantly sanction the provisional use of dynamite and daggers. But Mr. Herbert has not the persecuted Anarchist's excuse for this inconsistency. The non-moral government which he invites us to accept, and moreover support by voluntary contributions ("All taxes must be voluntary," said Markham), has for its sole function to punish murder and assault, and maintain the existing "rights of property." "But," he proceeds, "if government undertakes in any way the task of arranging and distributing property, it at once enters on the force-relation" (p. 256). This is good Anarchism, and, consistently applied, the doctrine would make the payment of rent as voluntary as the payment of taxes. In the happy land of anarchy it would be left to the tenant's good feeling to express in cash his sense of the services rendered to society in his person by the landlord; but we cannot feel sure that this result is what the author means to arrive at. Is the legislature to enforce contracts under the plea of defending the rights of property? Is not that trying to make men virtuous by Act of Parliament? Why should not a man be allowed to break his word if he pleases as well as to overwork his babies in uninspected factories, or let them graduate for the gallows in the gutter, in high-minded protest against the policy of Education Acts? Practically and logically, it is impossible to draw the line anywhere between the two incompatible ideals of absolute anarchy and good government. If Mr. Spencer, Mr. Herbert, and the Anarchists are right, the latter is a contradiction in terms, and we must leave people to their own devices in the matter of paying debts and fulfilling contracts, as well as in regard to other at least equally stringent moral obligations. Mr. Spencer and Mr. Herbert have shown that, prejudice apart, there is really something to be said in favour of lawlessness, and it is quite arguable that contracts would be concluded on terms more generally equitable to both parties if their fulfilment were left to the goodwill and

pleasure of both. But the opponents of over-government, who are not prepared to accept this amount of anarchy, have forfeited their right to denounce the consistent enthusiasts who yet dream of a government which shall do enough, and not too much, of the right thing, and even moralise the "force-relation," by invoking it only to promote the conditions under which moral relations may establish themselves and subsist. EDITH SIMCOX.

Gundrada de Warrenne, Wife of William de Warrenne of Domesday, the First Earl of Surrey. A Critical Examination of the Received Stories of her Parentage, with Proofs that she was neither the Daughter nor the Step-daughter of King William the Conqueror. By R. E. Chester Waters. (Privately Printed.)

THAT a paper on this subject from Mr. Chester Waters must be an important contribution to the controversy that has so long raged around the question is a fact that may be taken for granted. Till recently the theories as to Gundrada's parentage were, as is pretty generally known, three in number: there was Dugdale's view, based on the positive statement of Ordericus, that she was a sister of Gherbod, the Fleming, Earl of Chester; there was the view of Palgrave, Lappenberg, and others, based on the evidences of Lewes Priory, that she was a daughter of William the Conqueror, by his Queen, Matilda of Flanders; and there was the view advanced by Stapleton, and accepted by the leading authorities on the period, including Mr. Chester Waters himself (p. 10), that she was the daughter of Matilda, not by her marriage with the Conqueror, but by a previous alliance, and that both versions could thus be reconciled, Gherbod being born of the same union. It was apparently in 1875 that Mr. Chester Waters, in reading through the letters of St. Anselm, was struck by the fact of his prohibiting a projected marriage between a natural daughter of Henry I. and Gundrada's son, William de Warrenne (II.), "on the ground that the intended husband and wife were related to each other, in the fourth generation on one side, and in the sixth generation on the other." From the fact of the marriage being prohibited on this ground, he argued, justly enough, that the nearer relationship between them, which would have been involved by their both being grandchildren of Queen Matilda, could not have existed. He, consequently, denied that Gundrada could have been Matilda's daughter by the Conqueror or by anyone else.

In 1878-9, it may be remembered, a discussion took place on this subject in the *Academy*, between Prof. Freeman and Mr. Chester Waters; and Mr. Rule's theory having been subsequently advanced in the spring of 1883, Mr. Chester Waters summed up his views in a paper read at the Lewes meeting of the Archaeological Institute (August 1883) and since published in the *Journal*. The present brochure is a final exposition of the views thus set forth.

Prof. Freeman, having committed himself to the statements (*Norm. Conq.*, iii. 86-7) that the *Duces* of her epitaph were "of course" the Counts of Flanders, and that

"there is no doubt" as to Gundrada being a daughter of Matilda, naturally, though fruitlessly, opposed a discovery so fatal to his assertions. In taking his stand on St. Anselm's letter, the only directly contradictory evidence which had to be encountered and disposed of by Mr. Waters was that of the Lewes Charters. These he discusses *seriatim* with that scholarly ability which, notwithstanding the disadvantages he labours under in being debarred from access to originals, has always characterised Mr. Waters's works. He has, it must be admitted, been singularly successful in criticising and shaking the authority of this hitherto undisputed evidence. At the same time, he truly observes that, until the Clugny Charters have been examined the question cannot be considered as finally set at rest. But it may be well to point out that, while disposing of the charters on which Mr. Freeman so confidently relies, he upholds, in the course of his argument, as supported by "incontrovertible evidence," a statement of Ordericus rejected by Dr. Stubbs (*Const. Hist.*, i. 360-1), to whom this little treatise is dedicated in somewhat imposing terms.

So far, Mr. Waters has proved his case. But it might be wished that he had not stopped there, and that he had traced to its origin the mythical story that has so long and universally been accepted. If he could enlighten us how the legend arose that Gundrada was a daughter of Matilda, he would solve the other half of the problem and make his work complete; but even then there is more to be done than to disprove and account for this legend. There remains an entirely different story—the positive assertion of Ordericus that she was sister to Gherbod the Fleming. It would appear from the Dedication that Mr. Waters accepts this statement unreservedly. Yet though he insists (p. 22) that Gundrada cannot possibly have been descended from the Dukes of Flanders, he does not say so of Gherbod, her brother, and would, indeed, almost seem to suggest that he was (p. 1). Doubtless there is no contradiction, but the matter is not quite clear.

Mr. Waters hazards the original suggestion—which he supports with much ingenuity—that Gundrada may have been "Stürps Ducum," as a descendant of the Dukes of *Burgundy*. Should this prove to be the case, it should be remembered that the suggestion was his.

Mr. Rule's theory is severely handled, and the opportunity thus afforded is seized by Mr. Waters for criticising, none too strongly, the shortcomings of the Rolls system. It is greatly to be wished that the observations of one so well qualified to make them may not be without fruit. As a small, but not unimportant, matter, it will be observed with pleasure by scholars that Mr. Waters has at length followed Mr. Freeman's excellent example, and substituted such forms as "Meulan" for the barbarous and unmeaning "Mallent." J. H. ROUND.

NEW NOVELS.

The Witch's Head. By H. Rider Haggard. In 3 vols. (Hurst & Blackett.)

Out of Eden. By Dora Russell. In 3 vols. (White.)

Double Dealing. By Gertrude Southam. In 3 vols. (White.)

At Home in the Transvaal. By Mrs. Carey-Hobson. In 2 vols. (Sonnenschein.)

Lal. By W. A. Hammond. (New York: Appleton.)

John Rantoul. By H. L. Nelson. (Boston, U.S.: Osgood; London: Trübner.)

A Daughter of Our Time, and Other Stories. By I. Gilchrist. (Maxwell.)

THAT Mr. Rider Haggard has very considerable powers as a novelist was evident from his rather extravagant book *Dawn*; and it is still more evident from *The Witch's Head*, which only requires a rather more distinct and original portraying of character, with some slight improvements in style, to make it a really first-rate book, and which, as it is, is far above the average. The title may make those who remember how liberally Mr. Haggard dealt out the supernatural in *Dawn* imagine that there is more of the same kind in the new book than there really is. The "head" is a mummy, with beautiful hair and bright crystal eyes, which is fished out of a churchyard cliff on the East Coast (Dunwich, one inclines to say, though that is not Mr. Haggard's name for it) and installed in an old-fashioned manor-house near. Mr. Cardus, an eccentric lawyer, with a Dickens-inspired determination to ruin sundry ancient enemies, maintains two orphan children (whose mother was an old love of his) and a nephew of his own, who is also an orphan. Their love affairs, and those of Florence and Eva Ceswick—local beauties of long descent and small means—form the chief subject of the book, which has, however, abundance of incident to eke out its love-making. Ernest Kershaw, besides having an honest taste for kissing young ladies, is a tall man of his hands. He kills a cousin in a duel (a capital duel) on Dieppe sands, flies to South Africa, and does good fighting in the Zulu War, finishing up prosperous, but blind, about twenty years hence. Jeremy Jones, the other hero, though not, like Ernest, brilliant and beautiful, is even a taller man of his hands, and has a Homeric fight with a Dutchman, where victory inclines to the side to which, alas! it has not inclined lately. What with the supernatural witch's head, and the love-making, and the fighting, and a tragedy of the first class towards the end, and some very fair dialogue, and a most pathetic and charming Zulu named Mazooku, there is much to be said for the book. In Florence Ceswick the author has not quite achieved a perfect study of character, but he has made a good attempt at it; and Jeremy Jones is wholly delightful.

Miss Dora Russell has more than once given good promise of being Miss Braddon's heiress—a position to be regarded with some respect now that Mr. Lang has coupled the author of *Lady Audley's Secret* with Gaboriau and that Mr. Yates has published one of the most good-humoured and humorous (the two words are unluckily not identical in sense) epistles of satire by an author on herself that the biography of authors contains. But Miss Russell will deserve to be cut out of the will if she brings about the catastrophes of many more stories so clumsily as she has done in *Out of Eden*. The book begins very fairly, if

not very well: ill-tempered old lady with cause for wrath against her deceased husband, unprincipled youthful heir with property much at his mother's disposal, heroine with noble gifts but an unholy passion for revenge and a longing for rank and wealth, and so forth. To speak more exactly, it begins also with a suicide, and that is, in the particular *genre*, pretty well too. That a virtuous lover whom Flo Chester the heroine jilts for the worthless Sir Harry should turn out to be very much Sir Harry's better in all senses is quite permissible. But the final scenes—in which not only does the virtuous young man turn out to be somebody else, but Sir Harry turns out to be somebody else too, so that the virtuous young man is enabled, by dint of yet another accident, to marry the lady of his love according to the forms and decencies for that case made and provided, instead of running away with her, and thereby indulging in incestuous adultery, as he had seriously and she momentarily purposed—are rather unpleasant and wildly improbable. The revolution and discovery business has its uses, but also its abuses, and this particular abuse is not only a rather inartistic, but a very stale, one.

If novelists will, after ample warning, write books in the present tense, they must be prepared for, and will please be good enough to take, the consequences. To read three volumes in this absurd form is impossible, and we do not pretend to have read *Double Dealing* through. We have, however, made numerous and courageous dips into it, and we can say that for anyone who is hardened to this pet abomination of modern lady-novelists it will probably be a good enough book of the kind. It is curious how many minor peculiarities the present tense seems to carry with it. *Double Dealing* is very like its sisters; but some of those sisters are more attractive than others, and it seems to belong to the more attractive class.

At Home in the Transvaal is one of those stories the good intentions of which, not being accompanied by any specially bad performance, disarm the critic who is not wholly bent on using his ferula. Mrs. Carey-Hobson has political views on South Africa, but those views do not colour her work unduly. To some extent her book is a fresh illustration of the constantly applied (and, it must be said, constantly applicable) motto of the idle and industrious apprentice. John Ford and Edward Graham are suddenly deprived of their "livelode" (as the Paston Letters would give it) by the failure of a bank in England, and they seek Natal and the diamond fields. John goes to the bad, and Edward to the good; but John has an excellent wife, who cannot be allowed to go to the bad, and Mrs. Carey-Hobson devotes the greater part of her book to the task of providing this wife or widow with something better than John. The novel has plenty of incident, an acquaintance with facts which saves it from the charge of being commonplace, and a general flavour which makes it unnecessary to dwell on its shortcomings of detail.

American novels are much with us; it would be aggressive to say that they are too much, though a character in *The Witch's Head* does venture to pronounce something "as dull as an American novel." But there

can be no harm in saying that if they were all like *Lal* there would be very little fault to find with them, and certainly no one could call them dull. Mr. Hammond has chosen a scene of Colorado life ten years ago, which is quite as wild and unfamiliar as any of Mr. Bret Harte's, and almost as patriotically dramatic as any of Judge Tourgée's. With the epicene school of American novelists he has hardly anything in common. He has not Mr. Bret Harte's poetry or his faculty of vivid presentment; but he is free from the fault of pseudo-Dickensian pathos which mars the admirable work of the novelist of California. He is less of the race and lineage of Rembrandt than the author of *A Fool's Errand*, but then he does not push politics so near to the boring point. The fortunes of Mr. John Tyscovus, Polish count and American citizen; of Mr. Jim Bosler, murderer, kidnapper, and consumer of whiskey (specially bad whiskey) in too large quantities; of *Lal*, daughter of Jim Bosler, or, at least, supposed daughter; of Dr. Willis, man of science, with a craze on the capabilities of women; of his very delightful daughter, Theodora, whose proficiency in dissecting and evolutionist experiment does not prevent her from being a credit to her sex and to Mr. Hammond; and of several other persons, are told here with a combination of vivacity and good taste which deserves recognition. Not every day or every week does the critic of novels come across a book which he reads, not because he ought to read it, but because he chooses to do so; and the days and the weeks of this happy fate are certainly not most common in the case of American novels. We, *si quid id est*, have read *Lal* with a pleasure quite different from that which the critic feels who can say, "What a good boy am I to have read this book at all!" But British recalcitrance must be allowed to exert itself in one instance. The Polish hero, after a partially successful fight with Mr. Abe Wilkins, citizen of Colorado, is cleaned out ("gone through" appears to be Colorado for this) by the wily Wilkins. But Wilkins repents, restores, and is proposed by Dr. Willis as a guardian of the very treasures he has previously looted. This astonishes the guileless Pole very much, and he exclaims, "To think of employing as a keeper of a house the man who robbed it is certainly a most original idea, and one that only the brain of an American could have evolved!" Yet the proverb about setting a thief to catch a thief was hardly, we think, of American invention. Was it, Mr. Tyscovus? Was it, Mr. Hammond?

John Rantoul, which also comes to us across the salt sea waves, is a book considerably inferior to *Lal*, though not destitute of merit. The best part of it is the study of the scenery and character of the north-eastern coast of the United States, and the second here and second heroine—a young man called Scolly and a young woman called Agnes Linthicomb or Mary Pickering—are rather agreeable. When Scolly informs Agnes that he loves her, she replies, "I am very glad to hear you say so," which seems to us an excellent reply as well as an original. There are also some fair touches of satire in the novel. But the hero, John Rantoul, conceives a philandering kind of passion for a married woman, which they

neither have the morality to choke down nor the pluck to carry out frankly. Now we do not like lovemaking after the fashion of M. Octave Feuillet. There is everything to be said for Imogen and perhaps there is something to be said for Messalina; but the sickly kind of "would but dare-not" passion entertained by the hero and heroine of *John Rantoul* has, we think, nothing to say for itself.

Miss Gilchrist's volume of stories, being printed in large type and in very widely-spaced lines, can be read with ease in a jogging train with a bad light. We can say nothing else that is good of it, and it is not necessary to say anything very evil.

GEORGE SAINTSBURY.

MORE LUTHER LITERATURE.

Bibliotheca Lutherana. Eine Sammlung von Autotypen Luthers, etc. Nach den Originalen aufgenommen und bearbeitet von dem Antiquariat der C. H. Beck'schen Buchhandlung in Nördlingen.

Ungedruckte Predigten D. Martin Luthers im Jahre 1530 auf der Coburg gehalten. Herausgegeben von Dr. Georg Buchwald. (Zwickau: Gebrüder Thost.)

Dr. Martin Luthers Vorlesung über das Buch der Richter. Herausgegeben von Dr. Georg Buchwald. (Leipzig: Julius Drescher's Verlag.)

Johann Heigerlin (genannt Faber), Bischof von Wien. Von Dr. Adalbert Horawitz. (Wien: Carl Gerold's Sohn.)

THE mass of literature, if it may be so called, which the recent Luther commemoration has called forth continues still to receive additions. A bibliography of the entire range of Reformation writings would be of extreme value, although the task of compilation would involve very considerable labour. The bibliography attached to Köstlin's Life of Luther contains only the works of that reformer himself, and even in this narrower field is neither very complete nor very satisfactory. This want has been to some extent supplied by two or three enterprising German booksellers, who have issued catalogues of their very extensive collections of Reformation works. These catalogues are of considerable value, although their compilers have rigidly confined themselves to books in their own collections; taken together, they form an almost complete bibliography. The catalogue of C. H. Beck is extremely rich in works written by or upon Luther; for rare books relating to the Reformation, it can scarcely compete with those recently published by Weigel in Leipzig and Rosenthal in Munich.

The unpublished sermons of Dr. Martin Luther with which Herr Buchwald has favoured us are from some MS. volumes at Zwickau. These volumes contain a very considerable number of hitherto unpublished sermons from the years 1528-46. The editor prints those delivered at Coburg during the famous Diet at Augsburg, and promises the rest in due course. One or two form a strange mixture of Latin and German, and all are in the strong folk style characteristic of the Reformer.

"Gott gebe es zurne Turocke, Bapst, keyser, sunde, tod teuffel vnd helle, vnd dasu alles vngluck. . . . Also kan ein Christe inn Jahr leybe vnd Lebens troezen vnd sich troezen, vnd mich der Bapst gleich drumb inn bann thet, das man mihr weder essen noch trincken sol geben. So spricht mein Christus: wolan so mus ich ihm kuchen bestellenn."

There are the usual arguments against the Pope and his followers:—"Omnes homines extra Christum sunt Daemonio obseci"; but the Roman party is obviously "extra Christum,"

ergo, it is possessed of the Devil. These sermons settle a few not very important dates of Luther's doings during the Diet, and give some information as to his view of its proceedings. On the whole, however, they add nothing of any value to our knowledge of Luther or the Reformation. They only increase our astonishment at the endless capacity for production inherent in the preacher of Wittenberg.

The lecture upon the Book of Judges is another contribution from the *Anecdota Lutherana* in the Zwickau Ratschulbibliothek. Its chief value, perhaps, consists in the summary in Dr. Buchwald's introduction of the *Anecdota* which are to be found in this library. Prof. Köstlin, in a short preface, dates the lecture about 1515-16, when Luther was director of the studies of the Augustinians at Wittenberg. As for the contents of the lecture itself there is very little to be learnt from them. Luther is still in what the Evangelicals would term "the bonds of superstition." He is still a monk lecturing to monks. If he lays some stress on the corruptions of the Church, he is merely doing what innumerable teachers of the period were doing also, and often in truer and nobler language. His method of exegesis is thoroughly mediæval, and if the investigation were worth the trouble, we have no doubt the sources of his interpretation might easily be discovered; probably we should not have to seek further than Nicholas de Lyra. There is no sign that the lecturer has any knowledge of the original Hebrew. He takes the text of the Vulgate and expounds it generally in an allegorical fashion. Thus Judah is described as the *dux belli, scilicet prædicator*! Characteristic is the hatred expressed for the philosophy of Aristotle, which Luther never in his life appears to have distinguished from the mass of mediæval commentary. He compares the threescore and ten kings, who were deprived of their thumbs and toes, to those "prelati ac rectores," who are rendered incapable by preferring to the truths of Scripture the *fantasmata Aristotelica*. Elsewhere he speaks of the *superfinitates Aristotelicæ* and the *maledicta figmenta Aristotelica*. We have here the germs of that hatred of rationalism which led Luther in later years to term Reason the *Erzhure und Teufels Bräut*. Interesting is a reference to Antichrist (p. 30); Achsah riding on an ass represents *Predicatio*.

"*Prædicatio autem debet fieri in asino humiliato non in pompa mundana et gloria sua; non gloriam suam, sed Dei quærat, ne inducatur in laqueum Antichristi. . . . Unde non dicitur, quod in equo, animali superbo, sed in asino sederit.*"

A few years later Luther, following an idea of Hns, published a remarkable set of woodcuts in which *Prædicatio* and *Antichristus* were replaced on the ass and horse by Christ and the Pope respectively. Curiously characteristic of Luther's learning as compared with that of a man like Conrad Muth are the assertions that: *totus mundus exceptis Judæis paucis adorabat daemonia*, or that *Juno autem sine dubitatione ab illis Astarte vocatur*. Occasionally we have valuable touches of the man of the folk in the introduction of German folk-proverbs. In one instance, in referring to *statuta et humane traditiones*, the lecturer sinks to a folk-coarseness which is characteristic of the man, but certainly not of mediæval exegesis. On the whole, we are very doubtful whether this *prædictio in librum Judicum*, any more than the Coburg sermons, was worth publishing.

The last book on our list is a reprint from the *Proceedings* of the philosophico-historical section of the Imperial Academy of Sciences in Vienna, and forms a valuable monograph on the life and works of Faber previous to the Regensburg Convention of 1524. It is high time that the excellent book of Dr. Weidemann on Eck was

followed by monographs on the other Catholic leaders of the Reformation period. We might even suggest that a *Corpus Catholicorum* would be a suitable companion to that long series of volumes known as the *Corpus Reformatorum*; at least, it would be of immense assistance to every impartial historian.

Dr. Horawitz is no hero-worshipper, and so, perhaps, the better historian; yet it is unfortunate that he should have entered upon his work in the spirit expressed in the following lines:—

"Sympathie ist es nicht, die mich zu einer eingehenden und wahrlich wenig erquickenden Beschäftigung mit Leben und Wirken dieses Mannes führte. Doch man begegnet ihm überall, seine Thätigkeit ist so gross und einflussreich, die Anschauungen über ihn so diametral entgegengesetzt, der Stoff noch so wenig bekannt und bearbeitet, dass Alles dies zusammengenommen einen mächtigen Reiz ausübte und ich mich endlich in eine Arbeit festrannte, die nicht zu den erfrischendsten gehört."

On the whole the biographer has been fairly impartial, and the reader of his book will arise with a far truer impression of Faber than he has probably obtained from the current Protestant conception, based upon Luther's coarse, "der Ertz Narr Johans Schmid von Costnitz . . . hochbertht hurentreiber und Eselkopf." To call your opponents knaves and fools was a favourite habit of the Reformers, and unfortunately a good deal of the mud that was thrown stuck. We wonder, for example, when any writer will arise bold enough to free Thomas Murner, one of the greatest folk-writers of Germany, from the dirt with which Lutheranism has bespattered him!

With regard to the writings of Faber, they are unlikely to interest the modern reader. They show a wide range of reading in the patristic and scholastic fields. His method of argument is precisely that of Eck. Given a question of dogma, decrees of councils and citations from the fathers and scholastics are brought forth in endless array to settle the point. It is the customary mediæval method of appeal to authority. To such form of argument Luther and his friends replied that it was merely the "word of man," and in opposition to it was placed the "word of God." "Totus enim Faber nihil est nisi Patres, Patres, Patres, Concilia, Concilia, Concilia, quæ fabula jam dudum mihi surdo, etiam a nostris Lipsensibus Theologis, imo asinis deriditur," writes Luther.

But when we come to examine Luther's appeal to Scripture as the final authority, we find it equally unsatisfactory. Its inner contradictions can only be reconciled by treating it from the historical standpoint. Even as experience has taught the world, a basis can be found for the wildest theories in Scripture. Who shall settle what interpretation shall be put upon it? When other persons began to suggest that they did not find Luther's doctrine in accordance with the "word of God," Luther bluntly told them that he would not allow the angels, much less men, to judge it: "Wer meine Lehre nicht annimmt, der nicht müge selig werden. Denn sie ist Gottes und nicht mein; darumb ist mein Gericht auch Gottes, und nicht mein." After some such statement as this he would open the floodgates of his wrath upon all opposition.

If dogma is to be supported by argument at all, one is compelled to confess that Faber's method is the more rational; there is greater unanimity to be found among the fathers and scholastics than in Scripture interpreted according to each man's individual inspiration.

We have entered upon this comparative justification of Faber's method, because readers of Dr. Horawitz's book may receive the impression that Faber's writings are purposeless strings of patristic citation. Of Faber's early life we have little information, but, as Vicar of

Constanz, we find him developing a most useful and widespread activity, striving to introduce a reform of the Dominican order in the spirit of Erasmus, eager for the spread of humanistic learning, and calling sharply to account both lay and clerical defaulters throughout the district under his charge. An idle tale as to his conduct as a confessor, which appears in a letter from an unknown person to Ulrich Zwingli, should hardly have been accepted as true by the biographer. Its contents show that it was the production of a writer wishing to please the Swiss Reformer by blackening his opponent's character. It was in all probability written at the time when Zwingli and Faber were opposed at the Zürich Disputation. On weighing all the information we have concerning that disputation, we shrewdly suspect Faber was as superior to Zwingli in dialectic as Eck to Luther. Faber's own account of what took place, written to correct the partisan version of Hegenwald—"ist nicht zu läugnen frisch und kräftig . . . auch—trotz aller Einnengung oft ungehöriger Gelehrsamkeit—von populärer Färbung und packender Kraft." It is not improbable that Zwingli was smarting under the logic of the man whom Luther termed an "Ertznarr," when the anonymous writer favoured him with his strange tale. It is exactly on a par with some of the absurd accusations which appeared in a pamphlet "*Das gyrenrupffen*," wherein seven wise men, citizens of Zürich, combined to defend Zwingli against the Vicar of Constanz.

The time will never come when the writings of Faber or Eck will be read with the same interest as those of Luther; as a rule they are decorous and dull, but they do not abound in that coarse abuse of all opponents, which is termed rugged strength in Luther, while it would be characterised as the weakness of the mob-orator in modern polemic. We thank Dr. Horawitz for his account of Faber, although it be not sympathetic, and trust that he may some day find the opportunity, however "spröde und ungeniessbar der Stoff" may be, to expand his monograph into a full account of the life and works of this "Ertznarr."

KARL PEARSON.

NOTES AND NEWS.

MR. ALEXANDER DEL MAR, formerly director of the Bureau of Statistics of the United States, whose *History of the Precious Metals* was published in 1880, has in the press a work on *The History of Money from the Earliest Times to the Middle Ages*, upon which he has been occupied for many years past. It will shortly be published by Messrs. Bell & Sons.

MR. T. FISHER UNWIN is about to publish a treatise on *The Art of War in the Middle Ages*, which obtained the Lothian prize at Oxford last year. The author is Mr. C. W. C. Oman, Fellow of All Souls' College. Mr. Blackwell is the Oxford publisher.

MR. GOSSE's edition of Gray, which has just been issued by Messrs. Macmillan & Co., will be published in America by Messrs. A. C. Armstrong & Son, of New York.

MESSRS. CHATTO & WINDUS will publish early next month, in 3 vols., Mr. T. Hall Caine's novel, *The Shadow of a Crime*, which is now appearing in a provincial newspaper. The story deals principally with Cumbrian rustic life and character. The period to which it refers is the beginning of the reign of Charles II., and one of the leading incidents depends on that singular provision of English law known as *peine forte et dure*.

MESSRS. CASSELL & Co. have made an arrangement with Mr. William Westall, author of *Red Ryvington*, *Larry Lohengrin*, &c., for the publication of a cheap edition of his novels.

MESSRS. HURST & BLACKETT have in the press the two following novels:—*In and Out of Fashion*, by Richard Davis Perry, and *Lester's Secret*, by Mary Cecil Hay, each in 3 vols.

A WORK entitled *On Reflective Self-Consciousness*, by Mrs. Percy Fitzgerald, will shortly be ready for the press. It is a sequel to the *Philosophy of Self-Consciousness* by the same author.

MR. W. COPELAND BORLASE, M.P., commences a "History of the Family of Taillefer, alias Borlase, of Borlas Frank Taillefer, in the County of Cornwall," in the January number of the *Genealogist*. This article is embellished with several fine heraldic coats, reproduced in facsimile by Mr. Griggs, of Peckham. The titles of other contributions in this number are:—"Marvodia," by Dr. Munk; "The Boroughbridge Roll of Arms"; "The Stewart Genealogy and Oliver Cromwell's 'Royal Descent,'" by Walter Ewe; "Walter Fitz-Gilbert, ancestor of the Dukes of Hamilton," by T. Bain; "Extracts from the Registers of Finmere, co. Oxon, and Gouthurst, co. Somerset"; "Some Wills in the Public Record Office"; "Calendarium Genealogicum"; "The Visitation of Berkshire in 1566"; "Notes on the Families of Carmichael, Horde, and Roberts"; and "Dukes, Earls, and Maormars." The exhaustive "New Peerage," by "G. E. C.," which includes all the extinct and dormant, as well as extant, peerages, already extends to 140 pages, and letter A is not yet exhausted. This will sufficiently indicate the importance of this laborious undertaking.

THE announcement that has been made by several Paris journals, of a shortly forthcoming new work by M. Richepin, is authoritatively stated to be without foundation.

MESSRS. J. & R. MAXWELL announce the approaching issue of *The Queen of the Moor*, in three volumes, by Frederic Adye, a work dealing with prison and country life on Dartmoor in the early part of this century; *Current Repentance*, a novel treating of Anglo-Indian life, the anonymous writer of which is an official high in the Indian Service; *Boulderstone*, by William Sime, author of *King Capital*; *The Dawn of Day*, by the author of *Thy Name is Truth*, which is said "to fulfil the brilliant promise of this writer's first work." The same firm are also issuing *The Pierced Heart*, by the late Capt. Mayne Reid, a work never before published in book-form; also a cheap edition of E. Spender's *Restored*, and another of the cheap series of Rita's novels—*Like Dian's Kiss*.

TRINITY COLLEGE, Dublin, is about to start a new paper with the title, *The Dublin University Review*. The first number will appear on February 1, and the issue will be bi-monthly, except during the long vacation. The paper will contain literary articles, as well as university news, of every description, and will be owned by a limited liability company.

WE note that in *Le Livre* for this month Mr. Hamerton's *Paris* and Mr. Gomme's *Gentleman's Magazine Library* are mentioned as American publications. With the growing custom of simultaneous issue of books in England and in the United States, it is difficult to see how foreign bibliographers are to avoid making this kind of mistake. What is less excusable is that the *Livre* misquotes the title of Mr. Gomme's series of volumes, and mistakes its character, describing it as a classified index, in two volumes, to the *Gentleman's Magazine* from 1731 to 1868.

SOME further light is likely to be thrown on the Blavatsky Correspondence in a pamphlet by Mme. E. Coulombe, which is announced for immediate publication. This lady was associated with Mme. Blavatsky from 1872 to

1884, and in this work reveals what she heard and saw of Mme. Blavatsky and the Theosophists with whom she came in contact in India and elsewhere. The pamphlet will be published by Mr. Elliot Stock.

Margaretha Menkes is the title of a new novel, by Hermann Friedrichs, which is announced to appear at the end of this month.

THE *Expositor* for February will contain the first of a series of articles on the Epistles of St. Paul, by Professor Godet, giving the writer's views on the Second Advent and the Man of Sin. A third edition of the January number will be published next week. Messrs. A. D. F. Randolph, of New York, will publish an American edition of the *Expositor*.

THE "Félibrige" section of the *Revue Lyonnaise* comes to an end with the December number. M. Paul Mariéton, who has been the editor of this section, has started a new periodical called the *Revue Félibréenne*, which will continue to render to Provençal and Southern French literature the services which have hitherto been rendered in the *Revue Lyonnaise*. M. Mariéton gives a long list of eminent writers on Romance literature and philology who have promised their collaboration. One of the most distinguished of them, however, M. Paul Meyer, states that the use of his name is unauthorised.

WITH reference to the old German New Year rhymes communicated by the Countess E. Martinengo Cesaresco in the ACADEMY of December 27, Dr. Reinhold Köhler, of Weimar, writes to us to say that the verses were composed by the Nuremberg poet, Hans Rosenblut, who lived in the middle of the fifteenth century, and that they have been published entire in Oskar Schade's article entitled "Klopfan: ein Beitrag zur Geschichte der Neujahrfeier," in *Weimarisches Jahrbuch für deutsche Sprache, Literatur und Kunst*, vol. ii., Hanover, 1855. The "Guten Morgen" at the end of Countess E. Martinengo Cesaresco's version does not belong to the original.

M. DUPONT, formerly president of the Société des Antiquaires de Normandie, has in the press a work on the history of the Cotentin and the adjacent islands.

MR. J. A. PICTON will deliver a course of six lectures on "Oligarchy and Democracy" at the South Place Institute, Finsbury, on January 21 and the five following Wednesday evenings.

THE *Magazin für die Literatur des In- und Auslandes* continues to be unfortunate when it meddles with the English language. Many of our readers will be acquainted with Victor Schaffel's charming German song—referring, we believe, to Heinrich von Ofterdingen—which has the refrain, "Der Heini von Steier ist wieder im Land." The *Magazin* of January 10 publishes an "English" translation of this poem, by Johanna Baltz, from which we quote the following specimen:—

"To finches and swallows tells sweet nightingale:
'The song of a violin fills woodland and vale!
Ye twitt'ners, ye singers, now silence your cant—
Hark, Heini von Steier returned to his land!'"

"Shoemaker is waving his furcap in glee:
'The merciful heaven forgets never me!
Now shoes will be costly, soleleather gets scant—
Hark, Heini von Steier returned to his land!'"

A TRANSLATION.

QUATRAINS FROM 'OMAR KHAYYÁM.

I.—*Death*.

I dashed my clay-cup on the stone hard-by:
The reckless frolic raised my heart on high:
Then saw a shard with momentary voice:
"As thou have I been; thou shalt be as I."

Annihilation makes me not to fear:
In truth it seems more sweet than lingering here:
My life was sent me as a loan unsought:
When pay-day comes I'll pay without a tear.

Has God made profit from my coming? Nay.
His glory gains not when I go away.
Mine ear has never heard from mortal man
This coming and this going, why are they?

I'd not have come, had this been left to me:
Nor would I go, to go if I were free:
Oh! best of all, upon this lonely earth
Neither to come nor go—yes, not to be!

Oh! that there were some place where men could
rest,
Some end to look for in this lonely quest,
Some hope that in a hundred thousand years
Our dust might blossom on the Mother's breast!

Alas for me! the Book of Youth is read:
The fresh glad Spring is now December dead:
That bird of joy whose name was Youth is
flown:
Ay me, I know not how he came or fled! *

II.—*God*.

Thou art the Opener, open Thou the door:
Thou art the Teacher, teach my soul to soar:
No human masters hold me by the hand:
They pass away—Thou biddest evermore.

I cannot reach the Road to join with Thee:
I cannot bear one breath apart from Thee:
I dare not tell this grief to any man:
Ah hard! ah strange! ah longing sweet for Thee!

III.—*Conduct*.

In school and cloister, mosque and fane, one lies
Adread of Hell, or dreams of Paradise;
But none that know the secrets of the Lord
Have sown their hearts with suchlike phantasies.

Ah, strive again no human heart to wring:
Let no one feel thine anger burn or sting:
Wouldst thou be lapt in long-enduring joy,
Know how to suffer: cause no suffering.

While sinew, veiu and bone together blend,
Outside the path of Doom we cannot wend.
Bow not thy neck, though Rustam be thy foe:
Be bound to none, though Hâtim be thy friend.

IV.—*Consolation*.

This is the time for roses and repose
Beside the stream that by the meadow goes:
A friend or two, a sweetheart like a rose,
With wine, and none to heed how Mulas prose.

Come, bring that Ruby in yon crystal bowl,
That brother true of every open soul:
Thou knowest overwell this life of ours
Is wind that hurries by—O bring the bowl!

With loving lip to lip the bowl I drain,
To learn how long my soul must here remain,
And lip to lip it whispers, "While you live,
Drink, for, once gone, you come not back again." †

Sweet airs are blowing on the rose of May:
Sweet eyes are shining down the garden gay:
Aught sweet of dead Yestreen you cannot
say—

No more of it—so sweet is this To-day!

When Death uproots my life-plant, ear and
grain,
And flings them forth to moulder on the plain,
If men shall make a wine-jug of my clay,
And brim with wine, 'twill leap to life again.

This jar was once a lover like to me,
Lost in delight of wooing one like thee;
And, lo! the handle here upon the neck
Was once the arm that held her neck in fee.

Your love-nets hold my hair-forsaken head:
Therefore my lips in warming wine are red:
Repentance born of Reason you have wrecked,
And Time has torn the robe that Patience made.

"Les morts ne boivent plus dedans la sépulture."

MAGAZINES AND REVIEWS.

THE new volume of *The Antiquary* begins with a fair promise. Mr. W. Carew Hazlitt has given us a very good paper on Venice in early days with the ill-chosen title of "Venice before the Stones." Mr. Gomme's paper on the "Folk-Moot at Westminster" is well timed in more respects than one. Most cultured people will feel an interest in the general subject, and at present the more men's minds can be directed to the historic interest of Westminster and the duty that lies upon us of preserving all its historical memorials, the better it will be for those who come after us. The article on John Evelyn's connection with Wotton is poor and thin, but this is made up for by Mr. Round's exceedingly learned paper on the "Leicester Inquests of 1253." Among the correspondence is a letter from Mr. Peacock protesting against the suggestion that the duplicate books in the British Museum should be disposed of.

THE January number of the *Theologische Tijdschrift* opens with a clear and progressive article by the Leyden church-historian, L. W. E. Rauwenhoff, in which great objection is taken to the new favourite expression—universalistic or world-religions. Dr. Matthes gives the first part of an inquiry into the significance and origin of the Book of Job, in view of recent attempts to bring that book very far down in the series of prophecies. Among the reviews and notices, we specially remark that of Kautzsch's *Grammar of Biblical Aramaic*, by Prof. de Goeje. The article chiefly consists of the reviewer's marginal notes on his copy of the book. Like our own reviewer, he mentions Duval's article in the *Jewish Revue*, but opposes its results by a reference to Sachau in the *Zeitschrift der deutschen morgenländischen Gesellschaft* and to H. D. M. Müller in the *Oesterreichische Monatsschrift für den Orient*, April 15, 1884. The want of passives is not to be regarded as characteristic of the Aramaic dialects. De Goeje agrees, we observe, with Oppert against Kautzsch that "Aramaic" in Exa iv. 7, Dan. ii. 4, is a notice of the fact that an Aramaic passage begins at this point. Dr. Oort, in noticing Riehman's *Dictionary of Biblical Antiquity*, objects *in toto* to the conception of a "Bible-dictionary."

AN account of the eleven principal Archive in Spain by Diaz Perez appears in the *Revista Contemporánea* of December 15. Besides the great collections at Simancas, Madrid, Seville, and Alcalá de Henares, that of Barcelona contains 3,759,314 documents, while Palma, Majorca, is richest of all in the artistic beauty of its MSS. The reforms advocated are the removal of the Archives of Simancas to Henares, the collection of those scattered in Estremadura to Merida, and the appointment of capable librarians not liable to removal on every change of party government. A review of Laguna's *Flora Forestal Española*, by Jordana, speaks highly of the work, and notices other recent botanical publications in Spain. In the last number we remark an interesting but, perhaps, too detailed memoir on the Mendozas, by Becerro de Bengoa, showing how much Spain and Spanish literature owe to this and other families of Basque Alava. Narciso Pagés writes against the view of the continuation of the Roman Municipium throughout Visigothic times. Martin Minguez prints various documents of the first quarter of the twelfth century relating to the Monastery of Iraque in Navarre. Gonzalez Janer has some deserved strictures on postal defects and dishonesty in Spain; and, with, perhaps, less reason, an anonymous writer is equally severe on the substitution of the bronze coinage in place of copper.

CORRESPONDENCE.

DISCOVERY OF A ST. ALBANS BOOK.

Wadham College, Oxon.

The history of the first English presses, and of their early typographical productions, has always been a subject of great interest both to the antiquary and the bibliographer; but to no press is more mystery attached than to that situated at St. Albans, and worked by the unknown schoolmaster, at the time when Caxton was spreading the productions of the first English press over the country.

To the extreme rarity of the volumes from the St. Albans press we must ascribe the poverty of bibliographical detail concerning them. Herbert's edition of Ames' *Typographical Antiquities*, to which we first look for information, gives but the scantiest details, although it contains the only facsimile of the type used throughout this volume, namely, the smallest of the three types used at St. Albans. Dibdin, in his enlarged but unfinished edition of Ames, does not treat of the provincial presses. From this press there issued in the fifteenth century eight works, of which two are in English and the rest in Latin. Of the former, doubtless the best known is the *Book of Hunting and Hawking*, ascribed to Dame Juliana Berners, and brought recently into notice by the facsimile edited by W. Blades, Esq.; and the rarity of the original may be gathered from the fact that the sum of £630 was, within the last few years, paid for a copy by Mr. Quaritch.

It will no doubt interest many of your readers to hear that a copy of the *Antonii Andreae Quaestiones super Logica* (which is almost the rarest of the St. Albans books, and of which up to now only one copy has been known, discovered by Mr. Bradshaw at Cambridge) has recently been discovered at Oxford.

During my work at the fifteenth century books in the library of Wadham College, I found a fine and perfect copy of this book in a

seventeenth century binding, and considering how little is known about it, a full and careful collation cannot fail to be of use.

Collation.—328 leaves.

a—z (omitting j, v, w), 2. 9. Z., est, am,
A—O (omitting J, L) all in eights.
a1 is the only blank leaf.

Typographical Particulars.

There is no title-page. The lines, which are not always spaced out, form a page measuring about 3½ x 5½ in., and there are thirty-two in a page. Signatures are used in the first half of each section, but there are no catchwords, nor are the leaves numbered.

The text ends on the recto of the 328th leaf with the following words:—

"Explicit scripti Antonii in sua logica venetis correctum."

The volume contains the following five treatises:—

"Super librum Porphyrii, super librum praedicamentorum Aristotelis, super 6 principia, super primum librum periermenias, super librum divisionum boetii."

The signatures of the first two gatherings are very incorrectly printed, and it is to be noticed that no capital L was used in the signatures (being, in fact, entirely absent from the book), whence probably arose the mistake in Mr. Blades's introduction to the book of St. Albans, where—in the tabular collation of this book—he gives the number of leaves at 335 printed, counting a gathering too much.

The water-mark throughout is a variety of the bull's head. ED. GORDON DUFF.

Cambridge: Jan. 8, 1885.

Mr. Duff has kindly allowed me to read his note about the *Antonius Andreae* at Wadham College before sending it on to the ACADEMY.

The existence of the book remained unnoticed, so far as I know, until September, 1861, when I lighted upon a copy in exploring the library of Jesus College in this University. It is in its original English binding; but it unfortunately wants the outer half-sheet of the first quire, the blank leaf 1 and the printed leaf 8.

An excellent photolithograph of leaf 275a (sig. G 3) appeared in the *Annales du Bibliophile Belge et Hollandais* (no. 8, p. 149, Bruxelles, Juin, 1865), at the end of an article headed "Un Inconnu anglais inconnu," by M. Ch. Ruelens, of the Bibliothèque Royale. M. Alph. Willems had recently presented to the Brussels library a fragment of thirteen leaves, rescued from a book-cover, and M. Campbell, of the Hague, had recognised it as St. Albans type; but the book was, naturally enough, not identified. On reading the article I wrote at once to M. Ruelens, who published a translation of my letter to him in the August number of the *Annales*; and I was able to tell him that the thirteen leaves of his fragment were D 1, D 3, D 6, E 4, E 5, F 2, F 5, F 7, G 1, G 3, G 6, H 2, and H 7, of the *Antonius Andreae*.

Some years afterwards Mr. R. L. Bensly discovered another copy in the old library at Norwich; and, happening to spend a few hours there in 1880, I went to the museum to examine the book with my own eyes. I found that it was in the original binding, closely resembling that of the Jesus College copy, and also that it was happily quite perfect. A few months ago Dr. T. W. Bensly kindly brought the Norwich copy with him to Cambridge, and I was able to examine and collate it at leisure.

I am sorry to find that the Wadham College copy wants the whole quire signed L (leaves 305—312). It is certainly to be found in both the copies I have seen. The book actually consists of 336 leaves in forty-two quires. The apparently incorrect printing of the signatures at the beginning, noticed by Mr. Duff, is really a matter of particular interest. This is not the

place to enter into technical details of typography; but it is lawful to mention that this book displays the first attempt, on the part of the St. Alban's schoolmaster, to print a quarto book by whole sheets, instead of by half-sheets, as he had done in his previous books. It may safely be assigned to the date 1481-82, by which I mean that it is later than the books bearing the printed date 1481. When these things come to be studied methodically, all such phenomena will have a plain meaning for the trained student, where the ordinary bibliographer would pass them over in silence, or treat them as perhaps careless mistakes. It is not too much to say that every one of the early St. Alban's books shows clear characteristics, by which its sequence in connection with its fellows may be traced and laid down with accuracy and with confidence. It is very encouraging to see the work that is at last being done in this field at Oxford by Mr. Madan, and others following (*longo intervallo*) in his footsteps. It may be looked upon as certain that, as soon as the College libraries there come to be explored with any intelligence, the search will be rewarded, as in the cases of Mr. Madan and Mr. Duff, by the discovery of volume after volume which will throw light upon the history of printing, and so, indirectly, upon the history of literature, in England.

HENRY BRADSHAW.

AN UNPUBLISHED LETTER OF THOMAS HOBBS.
London: Jan. 7, 1885.

In the volume of Additional MSS., No. 28,927, in the British Museum, there is an interesting letter written by Hobbes when he was eighty-nine years of age to the Duke of Ormonde, Lord-Lieutenant of Ireland, together with a curious proposition in cyclometry. The handwriting is very clear and firm. The following is the letter, now printed for the first time:—

"My Lord,—The enclosed is a Demonstration of what proportion the Circumference of a Circle hath to its Semidiameter: This is briefe and clear, and the Diagramme not overcharged with lines. You may if you please show it also to Mr. Tollett, who is a very ingenious man; and I should not doubt of his approbation, but that he is too well satisfied with the absurd Principles of Dr. Wallis, and takes his Method for Algebra, though it hath nothing in it of Algebra but the Symboles, whereby he hath false both in his Arithmetica Infinitorum and his Mechaniques into greater absurdities than ever proceeded from any mad men in Bedlam. Howsoever, shew it him; but I pray you let no body publish it as his owne, out of a hope that the masters of the Presse will keepe it from being published as mine.

"I have written in Latin above sixty propositions of Cyclometry (whereof this is the first) and in Parchment, to be published (when the envy of my Adversaries ceasing by my Death or by their owne) by some friend or other that loves the Sciences. But I have past my Bounds. I meant no more but to send you the inclosed, and wish your Lordship and your noble company a good passage over the Sea, and a safe Arrivall at Dublin.—I am, my honoured Lord, your Lordships most humble servant,

"THOMAS HOBBS.

"Chatsworth, August 14th, 1677."

Hobbes has expressed his opinion of Dr. Wallis very freely in various passages throughout his writings. This is the proposition which he sent to the Duke of Ormonde. There is no figure in the original paper, but it can easily be constructed:—

"To find a straight line equal to half a quarter of a Circle.

"CONSTRUCTION.

"Make a square ABOD. Divide the sides in halves at E, F, G, H, and draw the Diagonals AO and BD. The lines will all meet in the Center of the Square at L. Describe the Quad-

rantal arc BD, cutting the line EG in K and the Diagonal AO in L. So shall BK be a third part of the whole arc BD, and consequently two-thirds of BL, which is but halfe the arc BD: Therefore, the arc BK is to the arc KL as two to one. Divide now the halfe Diagonal IO into equal parts at M, and draw BM, cutting EG in O.

"I say the straight line BM is equal to the arc BL, because IB and IO are equal, and IM is halfe IO, the line BI is to the line IM as two to one. And because the angle BIM is divided in the midst by the line GI, which cuts BM in O. The line BO is to the line OM as two to one, that is to say, as the arc BK to the arc KL. Lastly, because (you know) the side BC is greater than the arc BL, and the arc BL greater than BI, a straight line drawne from B and equal to the arc BL, will reach the line IC somewhere. But it cannot reach it in any other point so as not to outreach it but in M. For in no point else can the line GI divide it into the proportion of two to one.

"And if on BN you make an arc to cut the Chord BL produced in I you have LI, the difference between the Chord and the Arc. From whence it follows that the square of halfe a quarter of the Circle is equal to ten squares of a quarter of the Semidiameter. For MN is equal to NC and BN equal to three quarters of the Semidiameter, and the square of BN is Nine, the square of MN One, and (by Euclid i., 47) the square of BM Ten."

This result is, of course, arrived at by a series of fallacious statements, starting with the first that is made. The proposition, if it had been correct, would have been one of the most important in geometry; and it is interesting to find that Hobbes considered that the ratio could be exactly expressed between the circumference and the radius of a circle, a ratio which we now know can be found only approximately.

GEORGE A. AITKEN.

"CUSTOM AND MYTH."

48 Banbury Road, Oxford: Jan. 7, 1885.

I have not the slightest wish to interfere between Mr. Andrew Lang and the orthodox mythologists; but I would allude briefly to Dr. Isaac Taylor's words as to Woden in his letter in your issue of January 4, when he asks:—"Or, to go to the Teutonic mythology, does any one doubt that Odin is the wind, and Thor the thunder?" My impulse would have been just as confidently to ask—Does any one still think that Odin is the wind? I can account for that impulse, and I find it is the result of having read Vigfusson and Powell's *Corpus Poeticum Boreale*; more especially vol. i., pp. ciii., civ., where Dr. Vigfusson, after giving a brief summary of Woden's perilous adventures in quest of wisdom, speaks as follows:—"The very name 'Woden,' tells the same tale, being, we hold, an appellative akin to the Latin *uates*, 'a prophetic singer or bard.' Compare O. Norse *vǫðr*, 'inspiration,' to which is appended the following note—"The phonetic change is analogous to that in *māter mōdar*; *t, d* following Verner's Law." The second volume, pp. 458-463, summarises the utterances of Norse literature about Woden: thus at p. 459, one reads that "In the pre-wicking days he is the God of the Heaven, nay, the Heaven itself, 'Earth's love and lord,' Ouranos," and at p. 460, that

"Among the first in order, taking Woden's several aspects one by one, is that of the *Heaven*, 'husband of Earth, father of Gods and Men'; by that primal wedlock he acquires the titles, 'Blessed Father, Sire (so we take Gault). To him, as the Heaven, belongs the myth which explains why the sky has only one eye, by the tale that there were two, but that one was pledged to the 'Giant of the Abyss' [Bokk-mimi] for a draught of the deep well of wisdom. . . . As the *God of Wisdom*, Woden is hymned in early poems, the 'Sage of the Powers, the Counsellor of the Gods,' &c.

Thus, it is certain that to one who is *facile princeps* among the Norse scholars of the present day, Woden does not appear to have been the

wind, or a wind-god of any kind; and it is not beneath notice, that a thinker like Thomas Carlyle could not quite accept the wind and movement idea so long ago as 1840: see his first lecture on Heroes.

I take this opportunity of turning to a question directed to me in the ACADEMY for September 27 by Mr. Alfred Nutt, as to whether I regarded the equation of the Irish Fionn and Oisín with the Welsh Guion and Tal-iesin as philologically defensible. To the former I should say, certainly not—the natural equivalent of Fionn (later spelling Fionn) is Welsh Gwyn, "white"; but I do not wish to be understood to say that I identify the Fionn of Goidelic legend with our Welsh Gwyn or Gwynn, as I am in doubt on that point. But as to Oisín and Tal-iesin, it has often occurred to me to compare the supposed history of the one with that of the other, and always with the result of being strongly impressed with the belief that they ought to be one person; but I must confess that the equation of Oisín with (Tal-)iesin is open to objections. There are, however, other possible ways of putting it. Suppose, for instance, the forms Telesesin or Telesin (Guest's *Mabinogion*, ii. pp. 206, 379) were more correct than the ordinary one, there would be no difficulty in equating -sesin with Irish Oisín; or suppose the first *i* in *Taliesin*, which is a semi-vowel, to stand for an older *g*, and we divided *Tal-iesin*, the same remark would apply to the latter part, but there would be left to be explained the other part, representing a syllable *talg*, which is not familiar in Celtic. So I could return no decided answer to the second part of Mr. Nutt's question.

J. RHYS.

Owens College, Manchester: Jan. 13, 1885.

Mr. A. Lang seems to me in his letter of last week to have drawn an inference from the names of the demes and *yénn* which is open to doubt. He says:—

"In Attica we find many demes also named after vegetables, and it appears to be thought probable that many of the demes were styled from the *yévos* previously settled there. If this be so, there must have been *yénn* named from plants in Attica."

Now it is true that some demes were named (as the *Etymol. Magnum* s.v. *Ἐλεείν* has it) ἀπὸ τῶν ἐν αὐτοῖς φυτῶν, e.g. the deme φηγοῦς near Marathon was probably named so from φηγός. It is likewise true that many were named after *yénn* (*Etymol. Magnum* ibid., ἀπὸ τῶν οἰκιστῶν ἀνδρῶν ἢ γυναικῶν, where Sylburg reads οἰκιστῶν). In the newly-discovered fragments of Aristotle, Πολιτ. Ἀθην., there is unfortunately a gap in the papyrus: [προσ]ῆ[γ]όρευσε δὲ τῶν [δῆμων τοὺς μὲν ἀπὸ τῶ]ν τῶν τοὺς δ' ἀπὸ τῶν [οἰκιστῶν] Blass, γένων Landwehr]; but we have no evidence that names of demes like φηγοῦς had ever been names of *yénn*. The names of *yénn* are either patronymic (cf. Boeckh, *C.I.G.*, vol. ii., p. 650a: "hae gentes—habebant gentis auctorem ut plurimum fabulosum")—e.g., Βουρδῶναι, cf. Harp. s.v. Βούρτης—or are taken from priestly functions—e.g. Βουζύβαι, cf. Hesych. s.v. Βουζύβης—or handicrafts—e.g., Αλγυρότομοι, Δαστοῖ, Φριδόφυχοι, &c. Moreover, it is scarcely accurate to speak of the Ioxidae—colonists in Caria who took their name from their leader Ioxus—as "an Athenian *yévos*." HERMANN HAGER.

"BEZONIAN."

London: Jan. 10, 1885.

Prof. Skeat appears to have overlooked the military aspect of the quotation: "Under which king, Bezonian?" (2 Hen. IV. v. 3); it is a question of enlisting recruits.

In this sense Antonini's Italian Dictionary gives us, "*Bisagno*, soldato giovane (Lat.: tiro)," i.e., a raw recruit. Similarly in Spanish, "*bisacho*,

undisciplined, unbroken, a novice." Mr. Justice Shallow was not a needy mendicant, but he was "raw," in his own figure of speech, as regards the new king. A. HALL.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 19. 4 p.m. Asiatic: "The Study of the South Indian Vernaculars," by the Rev. Dr. G. U. Pope.
8 p.m. Royal Academy: "Vandyke," by Prof. J. E. Hodgson.
8 p.m. Society of Arts: Cantor Lecture, "Climate and its Relation to Health," by Dr. G. V. Poore.
8 p.m. Victoria Institute.
TUESDAY, Jan. 20. 3 p.m. Royal Institution: "Colonial Animals," by Prof. Moseley.
7 p.m. Society of Architects.
7.45 p.m. Statistical.
8 p.m. Civil Engineers: "A Comparison of British and Metric Measures for Engineering Purposes," by Mr. A. Hamilton-Smythe.
8.30 p.m. Zoological: "The Coxal Glands of *Myale*," by Mr. C. Pelesner; "The Myology of *Chironomus* species," by Mr. E. J. Sidebotham; "A New Species of Frog from Asia Minor," by Mr. G. A. Boulenger; "Five New Species of the Genus *Batrachoseps* from the Levant," by Dr. O. Boettger.
WEDNESDAY, Jan. 21. 8 p.m. South Place Institute, Finsbury: "Oligarchy and Democracy," by Mr. J. A. Pictou.
8 p.m. Society of Arts: "Labour and Wages in the United States," by Mr. D. Pidgeon.
THURSDAY, Jan. 22. 8 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
8 p.m. Royal Academy: "The Dutch School," by Prof. J. E. Hodgson.
8 p.m. Society of Arts: Howard Lecture, "The Conversion of Heat into Useful Work," by Mr. W. Anderson.
8.30 p.m. Antiquaries.
FRIDAY, Jan. 23. 8 p.m. Philological: "A Dictionary Evening," by Dr. J. A. H. Murray.
8 p.m. Society of Arts: "The Agricultural Resources of India," by Mr. E. C. Buck.
8 p.m. Quekett Microscopical Club: Papers by Dr. W. B. Carpenter and Mr. F. Parsons.
9 p.m. Royal Institution: "Fauna of the Sea-Shores," by Prof. Moseley.
SATURDAY, Jan. 24. 3 p.m. Royal Institution: "Greek Sculpture," by Dr. Waldstein.
3 p.m. Physical: "On a Mode of exhibiting the Spectra of certain Substances by burning them in an Atmosphere of Oxygen," by Mr. E. Clemen-shaw; "On a Theory concerning the Molecular Architecture of Solids, illustrated by Experiments on the Loss of Energy of a Wire vibrating torsionally," by Mr. Herbert Tomlinson.

SCIENCE.

Studies, Literary and Historical, in the Odes of Horace. By A. W. Verrall. (Macmillan.)

THIS volume contains seven essays:—(1) entitled "Melpomene," on the reasons why Horace chose the Muse of Tragedy as representing the genius of his lyrics; (2) on "Murena"; (3) on the historical poems and the arrangement of the three books; (4) on "Lamia"; (5) on the words *quam Tyberis lœvit* in 2 Od. 3; (6) "Venus and Myrtale," on the erotic poems; and (7) "Euterpe," on questions of metre.

Mr. Verrall propounds so many novelties, that it will be impossible to discuss more in the pages of the ACADEMY than the most important of his hypotheses on the first three books of the Odes. And these seem to be his theories of their chronology, and of their relation to the conspiracy of Murena. The poems in question were, Mr. Verrall thinks, written between 40 and 19 B.C., thus covering a space of twenty years. The second Ode of the first book expresses "hopes and fears of the time between the overthrow of the regicides and that of Sextus Pompeius" (period 40–36 B.C.). This is the oldest poem to which any definite date can be assigned, the latest being the third Ode of the same book, which, in Mr. Verrall's opinion, alludes to Vergil's journey to Greece in 19 B.C.

In the reference to political ambition

(*cortat tergeminis tollere honoribus*) in the first Ode, Mr. Verrall reads an allusion to the electioneering tumults of 21–19 B.C.; but the point on which he lays most stress—indeed, it might almost be called the text of the whole volume—is the conspiracy and death of Varro Murena, which he supposes to have been often in Horace's mind, and to have lent a tragic colouring to some of the best poems in the collection. His theory, briefly stated, is as follows.

L. Licinius Murena was the representative, and probably the son, of L. Licinius Murena, consul in 62, who was afterwards (Mr. Verrall should have said previously) defended by Cicero. He is not to be identified with Aulus Terentius Varro Murena, consul for a short time in 23 B.C.; but, as his *cognomina* were Varro Murena, we must suppose that he was in some way connected with the great M. Terentius Varro, whose wealth he probably inherited. Dio is probably right in dating Murena's unfortunate conspiracy to 22 B.C. The Licinius addressed by Horace in 2 Od. 10 (*rectius vives, Licini*) is, as the modern commentators assume, the Murena in question; and he is again mentioned in 1 Sat. 5, 38 (*Murena praebeo domum*) and in 3 Od. 19 (*da puer auguris Murenas*). This ode refers to a banquet given by Murena at Reate (hence *Paelignis frigoribus*) at the villa he had inherited from M. Varro. Murena has just been made augur; and the *nova luna* toasted by the revellers is the crescent to be worn on his senatorial shoe. This decoration has been brought down to Reate by his friends, and is the *pretium* or consideration for which they get their jar of Chian wine (*quo Chium pretio cadum Mercemur*). The subject is continued in a more serious strain in 2 Od. 18, where Attalus means M. Terentius Varro, and his *ignotus heros* is Murena. The words *novas pergunt interioris lunas* are intended to warn Murena of the moral perishability of senatorial decorations. Just in the same spirit Horace tells Quinctius Hirpinus (2 Od. 11) that the moon does not always wear the same ruddy countenance (*non semper uno luna rubens nitet Vultu*). Three odes were written after the conspiracy, and contain allusions to its discovery: 8 Od. 24, where *moritis laqueis* gives a hint of the execution; 3 Od. 4, where the Titans are the conspirators, and Apollo is Tiberius; and 3 Od. 29 (*Tyrrhena regum progenies*), which is an address of sympathy to Maecenas on the subject.

Before discussing the new interpretation of *nova luna*, and the identification of Attalus with Varro, one must ask for time to recover one's breath. Meanwhile it is possible to consider the whole matter in its wider aspects.

I cannot agree with Mr. Verrall in regard either of his *terminus a quo* or his *terminus ad quem*. The second Ode of the first book seems to me, as I said years ago in an essay on the *Ancient Lives of Vergil*, to be best dated to 33 or 32 B.C. This will explain its most important allusions: the reference to the threatening attitude of the Parthians (*non sinas Medos equitare inultos*), and the reference to Caesar Octavianus as the rising hope of the nation. The inundation of the Tiber need trouble us no more than a flood of the Isis at the present day; it might have occurred in any year. With regard to

Vergil's voyage to Greece (1 Od. 3), there seems to be no necessity to identify that with the journey of 19 B.C. recorded by Suetonius. May not Vergil have gone to Greece more than once? Indeed, as I have argued elsewhere, the prelude to the third Georgic reads as if he had actually returned from Greece just before writing it.

We are left then to the conspiracy of Murena: a very difficult subject. One piece of supposed evidence, must, it seems, be eliminated. The assumption that the Licinius of 2 Od. 10 was a Licinius Murena is a mere assumption. True, the inferior MSS. inscribe the Ode *Ad Licinium Murenam*, but the best copies leave out *Murenam*, while the *scholia* make Licinius either Licinius Valgus, or Licinius Crassus. The only probable allusions to Murena in Horace are then, *Murena praebeo domum*, and *da puer auguris Murenas*; of his conspiracy there is not a word.

Nor, even had there been, can I see that the question of chronology would have been thereby affected. Die, it is true, puts the conspiracy in 22 B.C.; but it is most probable that Velleius* regarded it as taking place in 23, for he dates the death of Marcellus by it, and Marcellus died in the autumn of 23. Now, the *Fasti Consulares* mention, as consul for a short time at the beginning of 23, A. Terentius Varro Murena. The Latin historians, Velleius, Suetonius and Tacitus, call the conspirator Varro Murena, Varro, or simply Murena, never Licinius Murena. Mommsen therefore (and not unnaturally) identifies the A. Terentius Varro Murena of the *Fasti* with the Varro Murena of Suetonius, and supplements the inscription with the words *in magistratu mortuus est*, words which Mr. Verrall strangely uses to prove that this Varro was not the conspirator.

Taking all this together with the fact that Murena's sister, the wife of Maecenas, was a Terentia, I incline to believe that the conspirator was a Terentius Varro, not (as Dio says) a Licinius. The *cognomen* Murena he may have adopted for any reason. M. Terentius Varro Lucullus seems to have called himself so because he was cousin to the great Lucius Lucullus.

There seems to me, then, no evidence to be derived from the tragical story of Murena as to the chronology of the first three books of the Odes. 23 B.C. has usually been assumed to be the approximate date of their publication. Are there any other considerations which may assist us to a conclusion?

In the first book of the Epistles, Horace speaks of himself as tired of writing poetry, and as too old for it (*non eadem est aetas, non mens*). Now the latest date assignable to any of the Epistles of this book is 19 B.C. Would it be natural for Horace to speak as he does in the first Epistle had he been writing most excellent poetry up to that very year? But put four years between the Odes and the Epistles, and all becomes plain.

Again, Suetonius, speaking of the fourth book of the Odes in relation to the first three, says that it was written *ex longo intervallo*. The fourth book of the Odes was published in 15 or 14 B.C. Supposing the first three books to have been published in 19, the phrase *ex longo intervallo* would be rather exaggerated;

not so, if they had been published eight years before.

I have endeavoured to indicate the main grounds on which I dissent from Mr. Verrall's two propositions—that the first three books of the Odes fall between 40 and 19 B.C., and that the later poems are coloured by allusions to Murena's conspiracy. There is, of course, a great number of details the discussion of which would be necessary before the question was exhausted; but there is no space here for such a disquisition, and I can assure Mr. Verrall that all minor points had been conscientiously considered before this article was written.

There are many other interesting points raised by Mr. Verrall which might well be debated in the pages of a philological magazine, but which cannot, for want of space, be discussed in these columns. Nor would a reviewer be justified in taking leave of the book without noticing the talent and ingenuity of its author, which render his essays interesting and suggestive throughout, whatever may be thought of the soundness of his conclusions.

H. NETTLESHIP.

OBITUARY.

DR. EVAN BUCHANAN BAXTER, professor of *materia medica* at King's College, London, died on Wednesday, January 14, at the age of forty. He was born in Russia, of Scotch parentage on both sides, and was brought up in that country during the early years of his life. About 1860 he entered the classical department of King's College, whence he gained a scholarship at Lincoln College, Oxford. Recalled to Russia to nurse his father through a long illness, he never went back to Oxford; but about 1864 rejoined King's College as a medical student. In 1869 he took the degree of M.B. at the University of London with first-class honours, a scholarship, and a gold medal. As resident medical tutor, house physician, and afterwards professor, he was always closely associated with King's College and its hospital. He was also at one time physician at the Evelina Hospital for children, and latterly at the Royal Free Hospital, where he took great interest in the medical school for women. Of a life devoted to his profession nothing need be said here; but we must record that he was a regular contributor to the ACADEMY, in whose columns he wrote for some years a series of "Physiological Notes." It is not, however, as a doctor, or even as a man of science, that he will be best remembered. His early education was of the widest character, as regards languages as well as books; and he always retained a keen interest in literature, in speculation, and in practical affairs. In religion he was a Positivist. What he was as a man is known to a large circle of friends, who were drawn to him by the combined strength and tenderness of his character, more than by his intellectual attainments. Even on medical matters Dr. Baxter published comparatively little. We may mention a translation of a German work for the Sydenham Society, a report on antiseptics for the Local Government Board, several papers in the *Practitioner*, and the address that he delivered one year at the opening of the King's College medical school. His last illness—a complicated form of phthisis—was long and painful. He leaves a widow, but no children.

CORRESPONDENCE.

KAUTZSCH'S "GRAMMATIK DES BIBLISCH-ARAMÄISCHEN."

Hampstead: Jan. 13, 1885.

A friend informs me that in a review of Prof.

Kautzsch's *Grammatik des Biblisch-Aramäischen*, which appeared last month in the ACADEMY, the reviewer expressed a hope that an English translation would shortly appear.

I am at present engaged on such a translation, under the authority of Prof. Kautzsch himself, who has promised me many additions and corrections for the English edition. I hope to bring out the book early this year; but publishers seem scared by the amount of Hebrew type, and by the small print of the German edition.

THOMAS STENHOUSE.

THE ORIGINAL MEANING OF MĀTRĪ, "MOTHER," BHRĀTRĪ, "BROTHER," AND SVASRĪ, "SISTER."

Oxford: Jan. 10, 1885.

Mr. Dwijender Nath Tagore, in an essay on "Prititva, or the Nature of Love," published in the *Tattvabodhini-patrikā*, has examined the etymology of the words *mātrī*, *bhrātrī*, and *svasrī*. As the results at which he arrived differ from those which I published in my *Lectures on the Science of Language*, he is anxious to have his paper submitted to the consideration of Oriental scholars in Europe. Mr. Dwijender Nath Tagore is a young student, it seems; and though his method will hardly satisfy the requirements of European scholarship, he may become a useful worker in time. At all events, as a first sign that the Science of Language is gaining a hearing among the followers of Pāṇini, some extracts from his paper may be of interest:—

"There is some difference of opinion between ourselves and Māhātma Max Müller about the meaning of the word *Mātrī*. Max Müller says that the meaning of the word *Mātrī* is *Maker* (*nirmātrī*); we say that its meaning is *measurer* (*parimātrī*). How is *Mātrī* measurer? She, the mother, portions out food to husband, sons, daughters, and other members of the family. See the agreement in meaning between the words *portioning out* and *meting out*. Mark also the agreement in meaning between *mete*, to measure, and *parimān*, and the agreement in sound between *mete* and *mātrī*. All this favours our opinion. After this, mark the customs of our country: the five Pāṇḍavas could have shared between themselves any articles of food procured by them, leaving a portion for their mother; but they did not do this, because it was contrary to custom. If we consider custom, we find it is the task of the mother to portion out food in due measure. Max Müller says that in former times it was the duty of the daughter to milk the cow, for which reason the daughter's name was *Duhitā*. To support, to protect from enemies, to procure wealth (cows, &c.), were the duties of the father, for which reason his name was *pitā*, i.e. *pātā*. *Duhitā* and *pitā*, these two names indicate household work, as founded on custom. We maintain, therefore, that the word *mātrī* also indicates a household duty. It does not indicate any such natural occurrence as the birth of children. To indicate such natural occurrences there are such names as *ganaka*, *ganani*, for father and mother; *sutā*, *natā*, for daughter."

My answer is that *mātrī*, besides meaning mother, actually occurs in Sanskrit with the meaning of maker, but not of distributor. It is a word which Indian grammarians call *yangikārūḍha*, i.e., having both a conventional and an etymological meaning (see *paribhāṣātī* Pāṇ. iv., 1. 10. *Mātrī*, not meaning mother, but meaning maker, and actually governing an accusative, occurs *Rig-veda*, viii., 42, 4, *sā mātā pūrvyām padām*, "he the maker of the old place." It is extremely curious that *mātā*, when it is used in its etymological meaning or governs an accusative, throws the accent on the radical syllable *mātā*, while *mātrī*, "mother," has the accent on the last syllable, as in Greek in its oblique cases.

"Prof. Max Müller says that the primary meaning of *bhrātrī* is one who bears a burden, but we say it is *bhāgin*, or sharer—sharer in happiness and in

affliction, sharer in adversity and in prosperity, and sharer in paternal property. The affinity of *bhāga* with *bhrātrī* may at first sight seem to be forced; but a comparison of the equivalents of the word *bhāga* in some of the allied languages will make the affinity of *bhāga* with *bhrātrī* sufficiently clear. The word *bhrātrī* is derived from the root *bhrāg*, which signifies to diffuse light. In English there are such expressions as "the sun breaks forth," "daybreak." Here we have the complete affinity of the word *bhrāg* with the word break, both in sound and meaning. On the other hand, we see that the words fragment and fraction signify portions and divisions. It is clear that the word *frater*, which is the Latin for *bhrātrī*, belongs to the class of words specified above. As there is an agreement in sound between the words *bhrāg* and *bhrātrī*, there is also an agreement of sound between the words *fragment*, *fraction*, *frater*. Hence there cannot be the smallest doubt that the primary meaning of the word *bhrātrī* is sharer or partner—sharer of food, of worldly concerns, of joy and sorrow; brother is the sharer of all these, and hence *bhrātrī*.

"The word *svasrī* means sister. Prof. Max Müller says that the word *svasrī* is derived from *su* + *as*. The word *as* means breath, existence, and life. From this the Professor concludes that the primary meaning of *svasrī* is comforter; but we think otherwise. Brothers and sisters dwell for a time in the home of their father, but the sister goes away to another house when married. The meaning of the root *as* is to go away. The sister goes away from among us, hence *svasrī*. This interpretation receives support from the well-known maxim of the Roman Law, which speaks of the woman as at once the beginning and end of her family—"Mulier est caput et finis suae familiae." The Sanskrit *svasrī* is Latin *soror*. There is affinity between Bengali *sorā* or moving away, and Latin *soror*. The meaning of the root *as* is Bengali *sorā* or moving away; hence *svasrī* may be construed to mean one who moves away from her own people. Or it may mean *svatā* *saratī* *svasar*, i.e., one who moves away of her own accord. All the words convey domestic relations, convey a practical, not a sentimental, signification. It is, therefore, unreasonable that such should be the case with all except *svasrī*, especially as the function of comforting does not belong exclusively to the sister. The meaning given by Prof. Max Müller seems to me to be based on mere conjecture, for, firstly, no Sanskrit word signifying domestic relation has a prefix, and it is not very probable, therefore, that the word *svasrī* should have a prefix *su*; secondly, the words *su* + *as* would mean either good soul, or to remain well, and how can these be made to signify a comforter, or one who comforts? A meaning so far-fetched does not seem to tally with the simple thought of the plain and simple people of the old times."

I do not wish to discuss the etymologies of *bhrātrī* and *svasrī*, which Mr. Dwijender Nath Tagore here proposes. The first, from *bhrāg*, is impossible phonetically, the second extremely problematical. The etymologies which I suggested for *bhrātrī* and *svasrī*, were given as tentative only, but they satisfy all phonetic requirements. The similarity between *bhrātrī*, "brother," and *bhartrī*, "husband," would probably be used now as a survival of communal or tribal marriage, and *bhartrī*, "husband," would be derived from *bhar*, *ferre*, in the sense of carrying off. As to *svasrī*, Mr. Dwijender Nath Tagore has not considered the very old compound *su-asti*, "well-being," Greek *εὖαστίς*, the mother of the ubiquitous *Svastika*. With all this, Mr. Dwijender Nath Tagore may in time do some useful work, and I heartily say: "Svasti te astu."

F. MAX MÜLLER.

"THE EMPIRE OF THE HITTITES."

London: Jan. 10, 1885.

The opinion of the Rev. W. Houghton, expressed in this day's ACADEMY, that the horse is represented on the seal of Tarkutimma, is entitled to respectful consideration. I am unable, however, on a renewed examination of

the seal, to change the opinion I formerly expressed, that the animal intended is the goat. (1) It seems to me certain that the heads before and behind the king represent the same animal. That in front of the king cannot be the horse. (2) The appendage beneath the head cannot be part of a horse's trappings, as will be seen if both heads are taken into account. That, as the representation of a beard, it should be somewhat conventional is not surprising. (3) If the goat be intended, analogies to *tar* or *tarku*, more or less close, may be found, and have been suggested, from other languages; but I am not aware of similar evidence with regard to the horse. The question, on the whole, must be decided by the balance of probabilities.

THOMAS TYLER.

SCIENCE NOTES.

MR. A. O. FORBES, the well-known traveller in the Malay Archipelago, is about to set out for New Guinea under the auspices of the Royal Geographical Society and the British Association. He has received a special recommendation from the Colonial Office to the High Commissioner, who will further him in his intention to ascend by the Doura River (so far as is possible by boat), and then strike direct for the Owen Stanley range, which Mr. Forbes specially wishes to explore. It is scarcely necessary to say that Mr. Forbes will give particular attention to the fauna and flora of that region. Though these societies have generously aided Mr. Forbes, a considerable share of the expenses will have to be borne by himself, unless his enterprise secures the assistance of those who so anxiously wish to see this district opened up.

DR. J. A. FLEMING is about to give, in University College, a course of lectures on Modern Applications of Electricity in the Arts. The lectures will be interspersed with practical demonstrations.

MR. C. E. DE RANCE has recently brought before the Manchester Geological Society some interesting notes on the occurrence of saline waters in the coal-measures. From time to time brine-springs are tapped in collieries, and it is evident that should such springs be common they must render the rocks of this series almost useless as a source of water-supply for drinking purposes.

PHILOLOGY NOTES.

WE have received a little handbook entitled *German Pronunciation: Practice and Theory*, by Wilhelm Viëtor (Heilbronn: Henninger; London: Trübner), which will be found very instructive by students who have paid some little attention to phonetics. To others, the notation used, though not really very difficult, may, perhaps, be rather unattractive. Prof. Viëtor takes as his standard of German pronunciation that adopted on the stage, and states very convincingly the reasons in support of this selection. The exposition of the pronunciation occupies one hundred pages, and there follow twenty-three pages consisting of passages from German authors, with a transliteration into the author's phonetic spelling on the opposite page. Many valuable hints are given with regard to the subtler characteristics which distinguish the German from the English system of sounds. The proof-sheets have been revised by Mr. W. B. Evans, so that the book may be relied upon as free from the ludicrous misapprehensions regarding English sounds which have disfigured some recent works by German writers on the subject.

Correction.—In Mr. Robinson Ellis's article on Frohner's "Kritische Analekten" in the ACADEMY

of last week, the Greek couplet quoted should read as follows:—

ἔ τὸ πρὶν ἐν Χαλδίοις, νῦν δ' εἰς Ἀχέρντα μολοῦσα,
Ἐστερόμαν τῶν πρὶν νυμφιδίων θαλάμῳ.

In the same article, p. 31, l. 9, the word *aenum* should be *aenum*.

MEETINGS OF SOCIETIES.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Jan. 9.)

MR. A. J. G. BARCLAY, President, in the Chair.—Prof. Chrystal read a paper on the problem, "To construct the minimum circle enclosing *n* given points on a plane"; Dr. Thomas Muir discussed "The equation connecting the mutual distances of four points on a plane"; and Mr. J. S. Mackay gave two notes on a theorem and a problem in geometry which had previously been brought before the society.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Anniversary Meeting, Tuesday, Jan. 13.)

DR. SAMUEL BIRCH, President, in the Chair.—The secretary presented the report for the year 1884. It was stated that the number of members had increased from 662, reported last anniversary, to 683. The papers read during the year had been of unusual interest, and large additions had been made to the library. The statements of receipts and expenditure showed a balance of £59 17s. 3d. carried forward to 1885. The officers and council were then elected for the current year.—Mr. Theo. G. Pinches read a paper entitled—"The Early Babylonian King-Lists," in continuation of former papers on the same subject. He showed reasons for supposing that a mythical king named Sargon probably figured in legend before the date of the historic Sargon of Agade, who ascended the throne about 3800 B.C. Passages were quoted from the inscriptions in support of this view, and the fact that the ideograph denoting divinity is prefixed to the name of the historical Sargon was considered by Mr. Pinches to indicate that he was named after some half-deified personage.

FINE ART.

THE ART MAGAZINES.

MR. WALTER ARMSTRONG in *The Portfolio* does justice to the fine qualities of George Morland in his best days, and the etching by Mr. C. O. Murray of the "Interior of a Stable," after the beautiful picture in the National Gallery, is a worthy rendering of one of his best works. Pretty little engravings after others of his pictures adorn the article. Mr. Joseph Pennell's etching and other illustrations to Miss Julia Cartwright's article on Canterbury are also excellent in their way—an incisive and Japanese way rather, caring more for black and white than light and shade; but still an expressive and masterly way.

PROF. SIDNEY COLVIN contributes to the *Magazine of Art* for January a note on J. Downman, A.R.A., one of the lesser portraitists of the latter end of the last century, now little known. A coloured facsimile of a profile of Lady Maria Waldegrave testifies to the accomplishment of the artist. A very fine portrait of M. Coquelin in "Le Joueur," after the picture by Jean Béraud, illustrates the editor's vigorous panegyric of the famous French actor. Of the remaining articles, Mr. Harry Barnet's account of Mr. W. J. Linton's books on wood-engraving is the best worth reading, though the papers by Miss Mabel and Miss Mary Robinson are interesting and well written.

L'Art commences vigorously its second year as a fortnightly magazine. With the first number is given a supplement of twelve pages, and it contains some admirable facsimiles of drawings by the late Bastien Lepage, notably one of a fine portrait of himself. The first

article, though occupied with other matters, is named after a very clever young Alsatian artist M. Ringel, and is illustrated by engravings which testify to his remarkable talent as a sculptor and a draughtsman. The etching is by M. Emile Buland, after Velasquez's celebrated portrait of Pope Innocent X. in the Doria-Pamphili Gallery.

THE article of the most immediate interest in the current number of the *Gazette des Beaux Arts* is that in which M. Alfred Darcel describes the most precious objects of the Basilevsky collection and the brilliant society of collectors and connoisseurs who were wont to meet at the gallery in the Rue Blanche. M. Darcel finds some consolation for the transfer of the collection to St. Petersburg in the fact that it will remain intact instead of being scattered to the four winds by the hammer of the auctioneer. The charming ceiling painted by M. Baudry for the château of the Duc d'Aumale at Chantilly forms the subject of a héliogravure and a note by M. Arthur Baignères. From the researches of M. Sandonnini, reported by M. Anatole de Montaiglon in another article, it would appear that Jean Goujon died at Bologna between 1564 and 1568, instead of in the Massacre of St. Bartholomew, as tradition has hitherto asserted.

CLAUDE MICHEL (called Clodion), the French sculptor of the latter half of the last century, principally known by his charming terra-cotta statuettes and decorative work, is the subject of an illustrated article in the *Revue des Arts Décoratifs*, composed of extracts from a magnificent work by M. Thirion, called *Les Adam et Clodion*, about to be published by M. Quantin. Among the engravings *hors texte* is a héliogravure of two pieces of Sèvres remarkable for the manner in which the quality of the china is rendered. One scarcely needs to be told that the *pâte* is *tendre*.

"DIE HOLZARCHITEKTUR BRAUNSCHWEIGS," by Carl Lachner, is another of those interesting studies of the old wooden buildings of Germany which occasionally appear in the *Zeitschrift für Bildende Kunst*. To the *Kunstgewerbeblatt* contained in the same number (December, 1884) the editor of this section (Arthur Pabst) contributes an article (well illustrated) on Chinese glass. The etching is by Fr. Böttcher after a picture of a flood on the Neckar by Gust. Schönleber.

OF two American art magazines, *The Art Amateur* and *The Studio*, we have received several numbers. The former continues its vigorous and useful existence. An interesting and profusely illustrated article on Mr. Walter Crane has recently appeared in its pages. *The Studio* has commenced a new series, and contains many good papers of original and outspoken criticism. The limits of the talents of Mr. Elihu Vedder are well discussed in the part for the fortnight ending December 6, 1884.

THE OLD MASTERS AT THE ROYAL ACADEMY.

(Second Notice.)

THE FLEMISH, DUTCH, AND GERMAN SCHOOLS.

ENGLAND is very poorly off for pictures of the Cologne School. In former exhibitions we have been shown a few late fifteenth and early sixteenth century works of the kind which found their way into this country under greater names. The "Marriage of the Virgin" (215) is attributed to Jan van Eyck, and we probably have to thank the false attribution for a sight of the picture. It is really a work by a master of the school of the Lower Rhine, and was painted either at Cologne, or somewhere in the neighbourhood, during the last decade of the fifteenth century. The artist, though not

the so-called "Master of the Lyversberg Passion," was closely allied to him, and, like him, experienced the influence of Thierry Bouts, the town-painter of Louvain. This influence is unmistakable in some of the heads and in the types of some prominent figures. The landscape background is as bad as Cologne painters seldom failed to make it. On the other hand, the expression of emotion is good, and the visitor will do well to notice the figure of Joachim, in the background, leaving the temple in astounded disappointment, with his dog hastening along behind him. Two wings of an altar piece, bearing representations of St. Christopher (219) and St. Catherine (221), are charming works by a still later artist, Bartholomæus de Braya, one of whose technical characteristics was the use of yellow in place of the customary gold for jewellery. The portrait of the kneeling donor is excellent.

For the absence of any example of the fifteenth-century Flemish School, the superb "Adoration of the Magi" (230) from Castle Howard, makes ample compensation. It is the master-piece of the early period of Jennin Gossaert, called Mabuse. He was one of the last artists of the old school and one of the first of the new. Imbued in his early years with the traditions of the painters of Bruges, and faithfully following the lines that his predecessors had laid down, he painted this picture in the full vigour of his early manhood, about the year 1606. In spirit, however, it belongs to the preceding century, and had Roger van der Weyden lived to behold it, he would have found in it little that was foreign to his own aims and principles. The event is taking place under the shadow of a ruined Romanesque palace, into the walls of which, here and there, some piece of Renaissance sculpture is introduced. Not only the kings and their companies come forward to adore, but the angelic representatives of the heavenly host fly up from all sides like flocking birds and hover over the head of the wondrous babe, just as they do in the "Nativity" by Hugo van der Goes at Florence. In these angels, in the faces of the foreground figures, in the pattern of draperies, and in the technique of the work, the influence of Roger is supreme: it is only in certain figures, painted in a half light a little way behind, that the forward tendencies of the day are apparent. Two or three years after this picture was finished Mabuse went to Italy, and there the whole aim and method of his art received a new direction. On his return to the North he painted a series of fine portraits, manifesting a wider knowledge of humanity; but an ideal picture such as this never came again and never could have come from beneath his brush. The visitor should inspect this work long and closely, noticing the way in which the stuffs and objects of goldsmith's work are painted. The crown round Gaspar's crimson hat, which lies upon the ground, is a perfect marvel of dexterous craftsmanship. Hair, with its glossy texture and supple flow, was never so delicately rendered except by Dürer, and we can hardly avoid the conclusion that, had Mabuse been saved from the baneful influence of Italy, he might have been in his maturity a worthy rival of the great artist of Nuremberg. The little "Magdalen reading" (202) is probably a genuine work by Jan Mostaert, a contemporary of Mabuse. To Bernard van Orley, of Brussels, the striking "Portrait of a Lady" (153) is ascribed. It is a bright representation of a pleasant personality, characteristic, not alone in the face, but still more in the rheumatic hands. The surface of the skin is unnaturally soft, like velvet; but the picture is good as a whole, and probably correctly ascribed.

The Dublin National Gallery lends two interesting German portraits. The half-length of "Anthony Hundertpfund" (176) is by

Wolfgang Hauber, a little-known artist, who here shows himself a careful imitator of Dürer. The picture is a sound piece of work well worthy of attention. Hans Asper is the painter of the portrait of "Margaret Knoblauchin" (174). He is sometimes erroneously called a pupil of Holbein, with whom he had no immediate connexion. He was a sound and thorough workman, with a good feeling for colour, the Holbeinesque elements in his style being due to the period in which he lived. The background of lake and mountain seems rather reminiscent of Lucerne than Zurich, where the painter lived.

Antonie de Moor is named as the author of a naïve picture of "Two Children" (161). "The Castle-Howard Portrait of Mary Tudor" (178) is his best work here exhibited. It does not convey the queen's character with the same vividness as the Madrid portrait (reproduced by the Arundel Society), or as the later picture belonging to Trinity College, Cambridge. It is nevertheless a good likeness, taken in a happier hour than either of the others, and possessing greater pictorial charms than they in the treatment of stuffs and jewellery. The same artist is named as painter of the "Portrait of the Duke of Alva" (185), and, though the attribution is possibly correct, some doubts have been cast upon the identity of the sitter. The portraits of the "Duke and Duchess of Norfolk" (184, 187) were originally painted on a single panel. It is unfortunate that they have not only been severed but distributed to two different owners, and, by a further misfortune, during their brief period of renewed proximity they have not been hung side by side. They are signed pictures by Lucas de Heere. The duchess is painted in a perfunctory manner, but the duke's presence is finely rendered.

Three important Rubens come from Blenheim, and cannot fail to attract attention. The best beyond question is the "Portrait of Anne of Austria" (147). The catalogue aptly quotes M^{me.} de Motteville's description of the queen, which every visitor may compare with the painting for himself. The comparison will serve to show how dextrous a courtier Rubens was. It would scarcely be possible to devise an arrangement of colour and pose more calculated to set off to advantage the hands and arms of which all Europe knew the fame. The "Venus and Adonis" (146) is by no means a wholly satisfactory work. The composition is better than Rubens sometimes made it, the head of Venus is certainly lovely, and the little Cupid is a pretty child, but the chord of colour is unpleasant and the form of Adonis is far from noble. The picture was presented by the Emperor to the great Duke of Marlborough. "Lot and his Family leaving Sodom" (148) was a present from the City of Antwerp. It cannot be accepted as much more than a work from the painter's studio. The two old heads are strongly painted by the artist himself, and all of the figures are animated, but the composition is poor and the colour unpleasant. A small panel (78) bears two full-length sketches of St. Peter and St. Paul, standing each under an archway. They look like designs for architectural decoration. There is in them a majesty of form and a strength of character that recall Dürer's famous panels at Munich.

Van Dyck is represented by four pictures, the finest being the "Duchess of Buckingham and her three Children" from Blenheim (145). It was painted a few years after the duke's assassination, and so he does not appear in it, but is represented by his portrait hanging in the background. The countenance of the duchess is wanting in moral fibre, but the children, and especially the red-robed boy, are charming, and the costumes are beautifully painted. The "Portrait of Strafford" (188) is not so good as some others we have seen, whilst the

"Charles I." (183), though of a striking design, is only a studio picture.

Van Goyen, who may almost be considered the founder of the Dutch landscape school of the seventeenth century, has been better represented in previous years. Of his three pictures now shown all contain a river flowing across the foreground with a ferry-boat plying upon it, the sky being filled with misty, mounting cumuli. The "River Scene with Castle" (118) is certainly the best, and is a harmonious piece of low-toned colouring. The "View of a Castle" (73) is less definite in touch, whilst the "Ferry End" (72) possesses little charm except in the animated and well-grouped figures. Van Goyen's pupil, Solomon Ruysdael, is more than usually well represented, the "River Scene" (83) being the very quintessence of whatever is charming in Dutch landscape. Its tone has been injured by cleaning, but few pictures in the room better repay a close examination. Solomon Ruysdael preferred to look along, rather than across, a river or canal. His aim was to depict a far reaching vista, and he was wont to attain this by casting his foreground into shadow and bringing a full illumination to bear upon the distance. The cloud-drift, which all his skies bear along, is in keeping with the spirit of the landscapes beneath. He, like his master, was fond of ferry-boats, fishermen, and water-side labourers of every kind. The "River Scene" (152) is a similar picture to the preceding; another "River Scene" (181) is more broadly treated. Four pictures are ascribed to Jacob Ruysdael. In the "Squally Weather" (79) the breaking water is vigorously rendered, though the tones of the picture are dull. The "Sea View" (85) is unattractive. The "Landscape" (91) shows a pretty contrast between still and rapid waters; but the "Woodland Pool" (103) is far the best, the quiet lake and rough moorland around being beautifully rendered under an evening sky.

Jan Steen, the prolific pupil, though hardly follower, of Van Goyen, is rightly named as the painter of no less than seven pictures shown. "Grace before Meat" (111) is the earliest of them. It is full of bad sentiment, the canting boy in the background with his upturned face and eyes being the very incarnation of hypocrisy. "Blowing Hot and Cold" (124) shows us a peasant family at supper, treated in the artist's peculiar vein; an aged satyr looks in at the door, and over his shoulder is seen a glimpse of the sunset glow. The "Triotrac Players" (106) has the usual unpleasant tone of general colour, but the buxom figure of a woman in the foreground is as fine a piece of painting as the artist ever did. Two three-quarter length portraits by Cornelius Jansen van Ceulen are well preserved and fine examples of a little-known painter's work. The husband's picture is far the best; his pose and expression are excellent, and his eyes are marvellously bright and piercing. The portrait of an old lady (105) is a genuine Franz Hals of the year 1635. Every part is completely characteristic, and the visitor will do well to compare the hands here with those in Jansen's neighbouring picture. There is a decision in the swiftness of the master's brush which few artists have approached. The "Fiddler" (94), dated 1630 and signed with a monogram Hals is not known to have used, is scarcely good enough for him. The faces are excellent, brimming over with fun; the gestures are natural, and the drawing of certain parts is good, but the man at the back of the picture, the man who conceived it and gave it form, can hardly have been Franz Hals. The little "Conversation Piece" (136) by Dirk Hals contains charming passages of colour; the extraordinary length of the men's legs almost suggests that the painter was aiming at some

satirical end. A weak three-quarter length portrait of a man (96) is, perhaps, correctly ascribed to Bartholomew van der Helst. The face is brightly caught, but the painter manifests slight penetration into his subject's character.

"Tobit and the Angel" (135) bears the great name of Rembrandt. The subject was treated by him more than once, the Louvre picture being the best known example. In this painting the general lines of the composition and the division of the lights are like Rembrandt, and the face of Tobit is certainly intended for a portrait of the master. Except, however, in the kneeling old man in the foreground, the workmanship is not worthy of the master himself, and the faces are throughout wanting in that depth of expression which he never failed to infuse into them. The "Author writing" (82), by Solomon Koning, shows the influence Rembrandt, at the age of twenty-eight, had already brought to bear upon his contemporaries. The catalogue calls it "A Merchant," but the volumes on the table are books of learning, and the aged gentleman is by no means writing in a ledger. A niche in the background contains a skull, a crucifix, and an hour glass. Gerard Dow's "Physician" (76) is an excellent piece of painting. The charm of it does not lie in the figures of doctor and patient but in the beautifully chosen and arranged accessories—celestial globe, pestle and mortar, brass bleeding pan, volume of manuscript, sealed document, candlestick, bottle, skull, tapestry curtain, and all the rest. The light is superbly handled. "An old Lady meditating over her Bible" (137) is a fair specimen of what was possible to Gerbrandt van den Eeckhout. The picture is Rembrandtesque, but how much below the power of Rembrandt!

Gerard Terburg's "Lady at her Toilet" (121) is only not quite so good as the "Letter" we saw last year. The lady's skirt, the tablecloth, and the costume of the page, are as fine examples of what can be done with paint as we need ever expect to find. The little maid's face, in the half light, is excellently modelled. The Queen's Metzu, "Le Corset Bleu" (109) forms a good pendant to the preceding. Metzu did not equal Terburg except in the handling of blue, and there he surpassed him, as a comparison of these two pictures proves. The lady's figure is the subject here, but the man's is more characteristic of Metzu. The combination of colours lacks harmony. Jan Ochtervelt's "Joyful Tidings" (84) shows an unsuccessful attempt to imitate Terburg in his treatment of texture. The seated figure of a man is the best part of the picture, but even it is not satisfactory. In his laughter there is little mirth.

Albert Cuyp and Aart van der Neer, co-pupils with Cuyp's father, are both numerously represented. The best of the Cuyps is likewise the smallest; it is the "River Scene" (114). The sky is busy with hurrying clouds, and the river lively with sailing boats. The hour chosen is in the middle of the day. Golden floods of evening light fill the other three pictures, the "Landscape with Cows" (93) being especially radiant. The leader of the kine, of course, stands in profile projected against the bright background. The scene is full of peace, the milking hour has come and the cows are waiting in a meadow close by a pretty hamlet. Trees and cottages are bathed in gold and the far-away wind-mill shares the spoil. The "Landscape" (101) is a conventional and unpleasing work. Two of Aart van der Neer's pictures (80 and 86) are moonlight pieces, two (116, 127) represent fires by night, and one depicts a skating scene (126); they are all of the usual types. A large dark-toned "Woodland Scene" (89) is ascribed to the artist, though perhaps wrongly. Much the

best of the seven is the "River Scene in Guelderland" (108), with a foreground of swampy meadow and a town by a river bank behind, fading into blue mist, beyond which come blue hills, rolling away into the distance under the rolling clouds. We have seen better Van de Capelle's than the "Calm" (117), in which, however, the boats are well grouped and the sky is soft and full of atmosphere. William van der Velde's "Mouth of a River" (141) is a more animated work, the effect of which lies in the skilful treatment of greys.

Paul Potter's "Sportsmen," lent by the Queen, is a well-known and very good little picture. The texture of the white horse's coat is skilfully given. The detailed painting of foliage is a return to the style of the fifteenth century. Perhaps the cleverest part of the whole is the painting of the man seated in the shadow by the inn door. The "Camp Scene" (129) is the only picture by Wouwermans shown this year. It is a poor example of the artist. The little "Crowning with Thorns" (132) by Adam Elsheimer appears to be founded upon an Italian original. Two small signed panels by Adrian van Ostade are pleasing specimens of his work. The "Lawyer" (134) is the best of them. His easy and natural posture, and his intentness upon the work in hand, are cleverly portrayed, whilst the painting of accessories bears comparison with the work of G. Dow in the same room. There are no very good Tenierses this year. Parts of the "Peasants playing at Bowls" (112) are better than the rest, but the whole is unpleasant in colour. The "Man lighting a Pipe" is a less pretentious but pleasanter picture. The "Cottage Door" (97) by Cornelius Dusart is better in design than execution. Jan van der Heyde's "View in a Town" (123) ought to be easily recognisable by anyone acquainted with the bye-ways of Holland. It is a good picture of its kind. The "Day's Work" (126), a table piled with the contents of a game bag, is in Jan Weenix's usual style. The "Hard Bargain" (90) is a more masculine work, and, though in the shadows always painted with the same dirty black and thus quite wanting in transparency and warmth of colour, it is remarkable for a boldness of handling and a grasp of character that we cannot but admire. The picture is signed in the upper left hand corner, "a 1650, Giō Batā Weenix f.," and is therefore the work of the father of the Jan Weenix who painted the preceding picture. The visitor must not omit to notice the little "Sandy Road" (142), correctly ascribed to Adriaen Brouwer, who was Adriaen van Ostade's co-pupil in the studio of Franz Hals. Its style is what Mr. Ruskin would call "blot-tesque," but it is a fine little painting nevertheless, and possesses something of the force of Hals himself.

W. M. CONWAY.

MR. J. D. LINTON'S DRAWINGS.

THE Fine Art Society has for the last two or three weeks had on view a collection of pictures and drawings by Mr. J. D. Linton, President of the Royal Institute of Painters in Water-Colour. The pictures include only the largest contributions which the Royal Academy and the Grosvenor Gallery have received from his brush—that is, they include the series of five paintings representing some main incidents in the life of an imaginary soldier of the Sixteenth Century. Very memorable they are, and it is hardly to be supposed that Mr. Linton will be required to do many like them before the honours of the Academy are bestowed upon him. But his water-colour drawings even now surpass in merit his oil paintings, and of these there is fortunately a very rich display. Many of the best have been seen at the Institute when it was in its old quarters in Pall Mall;

but then, in the old days in Pall Mall, the Institute—though it drew the amateur—did not draw the town. The subjects of the water-colour drawings are very various; but, unless our memory fails us, landscape only once enters into them, and then—the landscape is artificial landscape—it is the landscape of a Renaissance Garden. Modern dress has been painted by Mr. Linton when he could not escape from modern life—as in "Before the Ball" and "After the Ball"—but clearly the outward aspects of modern life have never fascinated him as they have fascinated Mr. E. J. Gregory. The splendour of raiment in which he so greatly delights is discovered most fully in the century he affects, and that is the seventeenth century. But though Mr. Linton delights in splendid raiment, it would be a mistake to suppose that he is dependent upon it for the whole attractiveness of his work. So eminent a master of draughtmanship, and an artist too with a sense of character and comedy, would, even without the aid of beautiful garment and texture, have known how to make his mark. One or two of the most admirable drawings he has executed are not in the Exhibition, among them the really dramatic as well as picturesque "Emigrés," and the eminently picturesque "Scene from *Peveril of the Peak*." But there is here quite enough whereby to judge Mr. Linton's work. It is the opinion of some among his most competent critics that he is best in his single figures, and this is in the main true, for, at the least, he is nowhere finer than in his "Varney." Varney, moreover, though a single figure without action, or with the least possible amount of action, in the drawing, is dramatic because in its execution Mr. Linton has had a given character to realise. But it is not its quiet dramatic consistency that gives it its chief charm. It is its singular pictorial completeness. Despite its obviously high finish, it is as much like a Velasquez as a water-colour can be. Inspired more visibly by the best figure painters of Holland—by Terburg and Metsu—though with a touch of Venetian inspiration in it too, is such a drawing as that to which Mr. Linton has given the name of "Day Dreams." They are the day dreams of an eminently practical young woman, a large, warm coloured blonde, of noble mould, who, arrayed in sunny green and amber, folds her ample hands and bare arms in front of her, and meditates in leisurely fashion. A more really poetical side of Mr. Linton's art is shown in his exquisite drawing of "Love the Conqueror," wherein various figures whom Love has either lightly or profoundly touched, sit or lounge in a summer garden. For refinement in the type of humanity presented, and for a chastened grace of line, this drawing still holds its own, we think, among the best that have come from the artist's hand; though it has, of later years, been excelled, perhaps, in the imitative reproduction of texture, in pure vigour of presentation, and in the splendours of colour. No one should miss the opportunity of seeing this collection of drawings.

OBITUARY.

MR. SAMUEL HUGGINS, a writer on architecture, died on Saturday, January 10, at his residence near Chester. He was born in 1811, and was for many years a constant writer in the *Builder*. He published a volume entitled *The Course and Current of Architecture*, and a *Chart of Architecture*, in which the history and development of the styles were set forth under the similitude of a stream. He was an active co-worker with Mr. William Morris in the protection of ancient buildings, and claimed (with some show of reason) to have been before Mr. Ruskin in warning the public of the mischief of "restoration." His last years were

devoted to a scheme and design for the new cathedral at Liverpool. He wrote much and often on this subject in the *Liverpool Mercury*, and has left behind him a complete set of designs for a Protestant cathedral in the Romanesque style. These designs we have seen, and can say that they are truly solemn and impressive. The Cathedral Committee would do well to inspect them. Mr. Huggins's brother was the well-known animal painter, William Huggins, whose lions Landseer is said to have preferred to his own.

EGYPT EXPLORATION FUND.

M. NAVILLE writes under date January 4 that he would begin work at Khataneh the day following. This mound is about five and a half miles N.N.E. of Fakos, and was selected by Mr. Petrie last season as peculiarly promising. He found there no sign of Greek or Roman occupation, the surface of the mound yielding objects of the XXVth to the XXXth Dynasties. A broken sphinx of the XIIIth Dynasty or of the Hyksos age, more probably the latter, indicated the presence of remains of remote antiquity.

While organising his work M. Naville has had opportunities of examining various sites, and it is certain that he is already in possession of a new fact of the first importance for the determination of the Biblical Geography of Egypt.

Mr. Petrie is steadily working at the temenos at Nebireh, and may soon be able to tell us whether Naucratis was founded under Amasis, or much earlier. No famous site of antiquity needs more that the contradictions of the classical writers should be cleared up by its own evidence.

REGINALD STUART POOLE,

Hon. Sec. Egypt Exploration Fund.

CORRESPONDENCE.

TRACES OF A ROMAN FIRE BRIGADE AT CHESTER.

Liverpool: Jan. 12, 1885.

Many years since there was discovered at Chester a leaden stamp bearing an inscription, which has generally been read as

7 OL. AVG
VIG.

It has been engraved in vol. iii. of the Chester Archaeological Society's *Transactions*, and is given by Prof. Hübner in *C. I. L.* vii., No. 1268. The present Curator of the Chester Museum, Mr. Shrubsole, has, however, found that the last letter is g (not o), which gives the abbreviation VIG. This, I think, refers to the *Vigiles* or Roman firemen.

From the *Notitia* we know that a *numerus* of *Vigiles* were stationed at *Concangium* (Greta Bridge in Yorkshire), and this is the only place, except Alt Ofen, at which they are named elsewhere than in the city of Rome. From inscriptions we know that the Emperor Caracalla was a great patron of these firemen, also that a number of centurions of the force were natives of Pannonia, in which Alt Ofen is situated.

The presence of Caracalla at Chester, as I have recently pointed out in a paper read in that city, and the occurrence of the first *ala* of the Pannonians in an inscription found in its neighbourhood, seem to point to the fact that, after his visit to *Deva*, at least, a force of *Vigiles* existed.

I consider the inscription as relating to the century of *Claudius Augustalis* of the *Vigiles*. The name *Augustalis* as a cognomen occurs upon Roman pottery found in London; and a *Julius Augustalis* is named in an inscription found in Cumberland. Possibly AVG may be the abbreviation of *Augustini*.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

THE MS. of the concluding volume of the *Life of Raphael*, by Messrs. Crowe and Cavalcaselle, will be in the printer's hands in the course of this month.

M. BOUGUEREAU has been elected president of the Académie des Beaux-Arts for 1885. This is a double honour, as the president of the Académie des Beaux-Arts will this year occupy the chair of the Institut.

MR. PETTIE is putting the finishing touches to a portrait of Mr. Bret Harte. The picture will form one of Mr. Pettie's exhibits at the next Royal Academy exhibition.

MR. WILLIAM BEMROSE, author of "A Biographical Notice of Wright of Derby," is engaged upon a more important "Life" of this artist, which will contain a quantity of correspondence, and a copy of Wright's memorandum book, in which he noted his pictures, the persons to whom they were sold, and the prices charged, besides other interesting material. Mr. Seymour Haden has contributed two etchings from pictures by Wright, and several others will be reproduced by photogravure and wood-engraving. Mr. Cosmo Monkhouse will write the Preface. Mr. Bemrose is anxious that his list of the present owners of Wright's pictures should be as perfect as possible, and would, therefore, be glad to receive communication on this subject from those who possess them. Any other information respecting the life or works of the artist will be gratefully received and acknowledged. Letters should be addressed to Mr. Bemrose at Elmhurst, Lonsdale Place, Derby.

THE late M. Alfred Goupil has left to the Louvre his beautiful bust of St. John the Baptist, by Donatello.

ON Christmas Eve the Cercle Artistique of Brussels opened to the public their second exhibition of this winter, consisting of a few landscape paintings by Henry Arden, some spirited water-colour sketches by Maurice Hagmann, and, more interesting than either, a series of fifty charming etchings by A. M. Lynen—illustrating the first of Charles De Coster's *Légendes Flamandes*, *Les Frères de la Bonne Trogne*, and including a vignette portrait of De Coster. The artist has seized with appreciative vigour the rich humour of De Coster's Rabelaisian narrative, and his spirited "point" depicts its weighty incidents with a wealth of fanciful allusion and artistic interpretation.

L'ESSOR, the parent society of the Vingtistes (XX), opened a small exhibition of paintings on January 10, consisting mostly of the works of very young men, many of whom give fair promise for the future. L. Frédéric's clever studies of peasant women are vigorously drawn; Albert Dillen shows all the substantial qualities that go to make an excellent artist. Among a number of weak, misty landscapes Joseph François' two delightful bits of autumn woodland are distinguished by charming colour and sentiment. The well-known artist Léon Herbo, a fine draughtsman and colourist, contributes seven portraits, and his Pompadour lady is the only pretty woman on the walls of the exhibition. A charming full-length of the artist's beautiful little daughter emphasises the sympathy widely felt for her accidental death but a few weeks ago. Georgette Meunier's flowers and Van Gelder's *genre* and canine portraits well sustain the reputation of the artists.

THE competition of designs for the national memorial to Garibaldi at Rome has resulted in favour of Signor Emilio Gallori, to whom the execution of the monument will be entrusted.

MUSIC.

THE POPULAR CONCERTS.

BEETHOVEN's Septet, of course, attracted a full house last Saturday afternoon at St. James's Hall. Besides this the programme contained but little of special interest. An Allemande, Courante, Sarabande and Gigue, for violin solo were interpreted by M. Straus with fine tone and taste. Mdlle. Zimmermann displayed her skill in some of Henselt's *Etudes*, while Mr. Santley contributed three songs—two by Maude White and a remarkably fine, but little known, one by Schumann, entitled "Belteshazzar" (op. 57). We hope the scanty applause bestowed on this interesting composition will not deter the vocalist from soon giving it again. The programme concluded with a Mozart pianoforte trio.

Mdme. Essipoff was pianiste on Monday evening (January 12). Some years ago, when this lady first visited London, her charming touch and graceful style of playing were the subjects of general admiration. But her touch has become hard, and though she still shows grace, there is mixed with it much affectation and exaggeration. Her rendering of Mendelssohn's Prelude in E minor (op. 35, no. 1) was noisy: the melody was knocked out of the piano instead of being sung, and the broken chords were not clearly brought out. Why was not the Prelude followed by the Fugue? In Chopin's D flat Nocturne Mdme. Essipoff proved that she could play lightly; but then the tone was thin, and her reading of this lovely piece at times decidedly unpoetical. The notes added to these two pieces were unnecessary: Mendelssohn and Chopin knew when they wanted octaves in the bass, and when single notes. In Godard's showy Mazurka, which she next played, she was heard at her best, but the piece ought not to be included in a classical programme. It is a light, brilliant but commonplace drawing-room *morceau*, and the same can be said of the encore played by Mdme. Essipoff. The performer is not so much to blame as the director: the former naturally chooses what appears most affective, but the latter ought to see that the pianoforte solos are thoroughly in keeping with the concerted music given at these concerts. Last week we had Bach arranged by Liszt, and next Saturday we are threatened with an *Etude de concert* by Thalberg.

In the second part of the programme Rubinstein's early pianoforte trio in G minor was performed by Mmes. Essipoff, Norman-Néruda, and Sig. Piatti—or perhaps, judging from the effect produced on us, we might say, performed by the first lady and accompanied by the two other artists named. The composition is by no means a strong one, and it would require all the skill and charm of Rubinstein's playing to impart any interest to it. The concert concluded with Chopin's "Introduction et Polonaise Brillante" for pianoforte and violoncello.

Mrs. Hutchinson sang M. V. White's clever song "Ye Cupids, droop each little head," and had to repeat the last verse. In the second part she gave "Nymphs and Shepherds," by Purcell, a song of which we spoke lately, and she received much applause. We often find fault with the programme book, and, we think, with reason. If the public pay sixpence for the book they are surely entitled to correct information. This week Purcell is said to have been found qualified for the situation of organist at Westminster Abbey at the age of eighteen, in 1676, but it was not until 1680 that the clever young musician became possessed of this distinguished musical position. And again: why continue to tell us Chopin's Polish songs have been numbered op. 47? The opus number is 74.

J. S. SHEDLOCK.

SATURDAY, JANUARY 24, 1885.

No. 664, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Works of Thomas Gray in Prose and Verse.
Edited by Edmund Gosse. (Macmillan.)

To the debt under which Mr. Gosse has already laid all lovers of literature by his admirable life of Gray, he has now further added by issuing the first complete edition of the poet's works. The amount of new matter he has been allowed to recover is, indeed, not very large: in verse there are a few humorous pieces, an epitaph on a child, and some translations from Propertius and Dante; in prose there is the "Journal in France." But it is not in these new discoveries so much as in the careful editing of what is already familiar, in collecting the letters from the various volumes in which they were scattered, in comparing them where possible with the MSS., in detecting and exposing the additions and suppressions of Mason's insufferable vanity, that Mr. Gosse has chiefly obliged the world of letters. Thanks to the indefatigable conscientiousness of his last editor, we have now in a convenient shape all, or nearly all, Gray's writings that time has spared.

The interest of Gray's poetry is a different kind of interest from that of his letters. Everybody who understands what a letter should be must be a reader of Gray's letters; but his poetry, with the exception of the "Elegy," which is an expression of the common heart, and so of universal appeal, exists mainly for professed students. Its interest is largely the interest of its place at the meeting-point of the Augustan and Romantic schools. On the one hand, it retains the notion of poetry as a happy combination of words, and is often very much afraid, as Mr. Arnold says, "to speak out"; on the other hand, there are some of the first signs in it of that revived love of nature and interest in things outside the charmed circle of the town which are soon to inspire Cowper and Wordsworth. Perhaps Gray is at his modernest in the "Ode on Vicissitude," and in that impromptu couplet which Norton Nicholls preserved—

"There pipes the woodlark, and the song-thrush there
Scatters his loose notes in the waste of air"—

if not most modern of all in that final quatrain of the Elegy which Gray's feeling for unity expunged, but which we cannot spare—

"There scatter'd oft, the earliest of the year,
By Hands unseen, are show'rs of violets found:
The red-breast loves to build and warble there,
And little footsteps lightly print the ground."

Gray is smitten by the new love of nature, but he is not, like Thomson, a descriptive poet. He thought description out of place as the main subject of a poem, and so he could bring himself to cancel lines like these. In

the Ode on Walpole's cat, and the Elegy, we have two more distinguishing elements of the new poetry—the love of animals and sympathy with the lives of the poor; and the "Bard," and the translations from the Norse and Welsh are due directly to the "loose numbers wildly sweet" of Ossian and the early ballads.

It is, however, in the Pindaric Odes, which so disquieted Gray's contemporaries, to whom they were not "vocal," that we have the most unmistakable break with the classical tradition. They bear witness to his study of the older poets, of Spenser, whom he was in the habit of reading as a grace, and of Shakspeare. Of the latter he says, "Every word in him is a picture" (vol. ii., p. 109), and what these Odes principally represent is Gray's endeavour to write in "pictures," and not as "your Addisons and Rowes" were in the habit of writing. In other words, the Odes represent the revival of imagination. They do not escape the dangers of such an attempt at such a time; the "pictures" have a tendency to become allegories, and there is enough of what Mr. Swinburne calls "fanfaronade and falsetto," but they are at least ominous of the good time coming, and the "Progress of Poesy" certainly contains passages which must live.

Gray's ambition as a poet may be gathered from two criticisms in his letters. The first is on Collins, whom he credits with "a fine fancy modelled upon the antique, a *bad ear*, great variety of words and images, with no choice at all" (vol. ii., p. 160). The other comes in a letter to Mason about his "Caractacus," "extreme conciseness of expression, yet pure, perspicuous and musical, is one of the grand beauties of lyric poetry. This I have always aimed at and could never attain." From the older poets he would have borrowed something of the "pomp and prodigality" of their imagination, but the expression was to be in picked phrase; and in versification, although he adopted new metres, his instrument was still the file. He had no taste for the verse cast at a jet, and so he could accuse Collins of having a bad ear.

After all it is the second and third volumes of this edition which will be the most thumbed. However people may differ in their estimate of Gray as a poet, as a man he is secure of our affection, so soon as we get to know him, and any one may know him who will read his letters. Here, surely, there is no want of speaking out. Indeed, there are few literary men of so attractive a nature as Gray. Perhaps he is the most lovable of all except Charles Lamb, and with Lamb, despite many obvious differences, he has many points in common. They were both solitary creatures, living a recluse life in the world, but not of it, their best friends among the dead; they were both exquisite critics and no mean writers of poetry; they were both a prey to melancholy or rather, as Gray says, to "leucocholy"; they had both a delicate and delightful humour; they were both the very soul of gentle goodness. And so it comes about that their letters, in which they live to us, are among the few external good things which are necessary to happiness.

The charm of a letter of Gray's lies partly in this interest of his character, and partly in the perfect felicity with which everything is

said. There is nothing slovenly or far-fetched or makeshift; even in the shortest and apparently most hasty note his touch is perfectly sure and his taste faultless. Here is such a hurried one as might now be written upon a postcard; it is rather too long for a telegram:—

"DEAR MASON,—Of all loves come to Cambridge out of hand, for here is Mr. Delaval and a charming set of glasses that sing like nightingales; and we have concerts every other night, and shall stay here this month or two; and a vast deal of good company, and a whale in pickle just come from Ipswich; and the man will not die, and Mr. Wood is gone to Chatsworth; and there is nobody but you and Tom and the curled dog; and do not talk of the charge, for we will have a subscription; besides we know you always come when you have a mind.—T. G."

Beforehand it would not seem probable that the letters of a man whose days went "round and round like the blind horse in the mill," "swinging from chapel or hall home and from home to chapel or hall," could have much that was fascinating about them. Occasionally, indeed, he goes a journey—the grand tour with Walpole, or to the Highlands, or to see his friend Wharton at Old Park, or to Stoke, and then we get lively enough descriptions. But these are episodes. The main topics of his everyday correspondence are his melancholy, his indolence or poverty, Mason's poetry, Cambridge and church news, politics, criticism of current literature, his "dab of musick and prints," gothic, hyacinths, and the weather. Occasionally, only occasionally, he allows himself to slip out a little town gossip, "as a decayed gentlewoman would a piece of right meeklin or a little quantity of run tea, but this only now and then, not to make a practice of it." Most of his subjects are familiar and light enough in themselves; it is his manner of treating them that constitutes their charm. "Tis pity the world should lose so rare a thing as a good writer."

Mr. Gosse has crowned his tribute to the memory of Gray by an index which has the air of being exhaustive. H. C. BEECHING.

The Wish to Believe: a Discussion concerning the Temper of Mind in which a Reasonable Man should undertake Religious Inquiry. By Wilfrid Ward. (Kegan Paul, Trench, & Co.)

"THE gods said, once upon a time, let us make man, and make him in our image. Since then, mankind has said, let us make God, and make Him in our image." This remark, made by a speaker in one of Goethe's dialogues on art, occurred to me very forcibly a couple of years ago, while listening to a sermon preached to Protestants by a certain English Monsignore, equally famous in reality and in fiction; the gist of which sermon was simply that independent inquiry and judgment is our solemn duty in all matters religious; and it recurs to me, even more vividly—this somewhat irreverent parable—on closing Mr. Wilfrid Ward's dialogues "Concerning the Temper of Mind in which a Reasonable Man should undertake Religious Inquiry." These conversations purport to have taken place mainly during a visit to a

certain famous Catholic public school in England, between two enlightened and able priests, named respectively Ashley and Walton, and a person called Darlington, an equally enlightened, but, I am bound to say, not equally able, individual of the sort vaguely denominated Agnostic, the subject under discussion being whether the "wish to believe" is more conducive, or the contrary, to the attaining of rational certainty concerning the relations of God and man. Mr. Wilfrid Ward is evidently a most just and candid man, and the two priests who are his spokesmen are even more just and candid than he. But human frailty is such—more especially as exemplified in religious controversy—that no amount of justice and candour can get the better of it; the fact being, perhaps, that a difference of views in such matters depends in reality much less upon the mere reasoning faculties than upon certain congenital differences of character, intensified by early surroundings, and by unconsciously prejudiced self-training.

Hence it is that Mr. Ward has not merely palmed off, if not on the reader, at least upon himself, a tissue of arguments which are mere sophisms; but he has practised, again more upon himself, I should think, than upon the reader, an involuntary deception in his representation of the man entrusted with the part of arguing against the two priests that a "wish to believe" is more likely to lead to error than to truth. Perhaps it is impossible that a writer of similar dialogues should ever succeed in worthily representing the opinions which he desires to overthrow, whatever the subject under debate and whatever the attitude of the author. But one can see reasons, in the very character of a firm believer, in the character more especially of Mr. Ward as manifested through the medium of the two priests, for such an impossibility of conceiving and representing hostile views being more than usually strong. Father Ashley and Father Walton are Mr. Ward's conceptions of the high-minded Catholic; and as Mr. Ward appears to be a high-minded Catholic himself, there is every chance of these conceptions being correct. But Darlington is similarly the sceptic such as he would exist in the mind not merely of Mr. Ward, but of Ashley and Walton; and the sceptic as conceived by the high-minded Catholic is a creature neither typical nor individually real.

Darlington, to begin with, manifests an incipient admiration, at all events, a total absence of aversion, for the Catholic institutions of modern England, which is as false as would be an incipient tendency towards Calvinist theories and ritual on the part of Father Ashley or Father Walton. A man's emotional and aesthetic nature must be considerably biassed towards Catholicism before the Catholic service can appeal to him as it does to Darlington. He can have little of the absolute belief that Catholicism is intellectually false and morally enervating to the modern mind, if the service in a dead language, the hymns to the Virgin, the half hour of mechanical meditation, nay, the very sense of dealing with men bound by vows which they may either regret or elude—if all these things, with their train of painful social and historical associations, do not make him somewhat impatient of arguments tending to prove that in such things lies spiritual salvation.

Such a man without opinions, and with conditions rather favourable than unfavourable to traditional religion, is certainly not the man who could really tackle the arguments of Father Walton. If, on the other hand, his mind were as absolutely unconcerned with religious questions as is the mind of one born blind with ideas of form and colour, he would not argue on the subject at all; ten minutes of Father Walton would bore him to extinction, and he would consider the bearing of the "wish to believe" a subject of controversy for amiable lunatics. Above all, such a man would not be what the world at large understands by an Agnostic: he would not be a man persuaded of the impossibility of knowledge beyond certain positive limits; he would simply be a man persuaded neither of the possibility nor of the impossibility of anything; in fact, a man of straw. Indeed, it is curiously illustrative of what I have said concerning the difficulty of one party conceiving the nature of the other, and especially of the infinitely greater difficulty of men accustomed to bow to authority and indulge in mysticism in conceiving the nature of men accustomed to refer everything to their own very unmystical standards, to note how little the opponents of so-called Agnosticism appear to understand the fact that rejection of their views has not a mere negative, but a positive reason; how little they seem to guess that theories are excluded by the disbeliever not merely because they cannot be proved, but because the disbeliever has satisfactorily persuaded himself of the reverse.

Thus much for the fundamental sophistry (if I may give this name to a most unconscious and involuntary deceit) of placing an Agnostic who is merely a nullity with some slight emotional hankerings after Catholicism, in the position of opponent of a very much persuaded and very completely trained recent convert to the church of Rome; since, although Darlington is not actually shown to us as the converted infidel, his arguments, at all events, are displayed scattered in considerable confusion by the vigorous dialectic of Father Walton.

Now for the argument itself. This argument may be described as the dovetailing of two propositions which are really separate, but are made to appear as connected. The "wish to believe," such as it exists with reference to religious matters, is compared with the wish for an explanation of phenomena on the part of a man of science. We are given to understand that it is a mere incentive to unbiassed inquiry. But this is a false parallel; since the "wish to believe" is no mere desire for abstract truth, but an emotional yearning, not to obtain truth as such, but to establish as true certain theories which are consonant with the emotional condition of the individual. Discovery of scientific truth is doubtless furthered by earnest striving to verify a preconceived idea; a deductive explanation has occurred and the mind wishes to find the inductive proofs of that deduction—a process which, leading to a great number of wrong explanations, will eventually lead also to the right one. But in religious matters the thing sought to be proved is not a logical explanation requiring an inductive verification, but the realisation of certain emotional wishes, such as those for a beneficent divinity, an

after life, a scheme of reward and punishment; and, while the very fact of a certain deductive explanation having occurred in connexion with certain phenomena gives a chance in scientific matters that this deduction may be the correct explanation, the mere emotional desire for one solution rather than another of the great final problems implies, in matters religious, merely the existence of such an emotional desire, which desire, being compounded of a great number of vicarious desires, which may nearly always be traced to some earthly origin, by no means necessitates the existence of a corresponding object, as is so frequently argued by writers on this subject, any more than the desire to have again any object which we have lost implies a possibility of that object ever being got back. We miss what we have had, and we desire what we miss. To consider therefore this "wish to believe" (without which religious certainty appears, in Mr. Ward's opinion, to be impossible) as the mere equivalent of that interest in a subject without which no inquiry can properly be made, is simply nonsense; and to obtain for this "wish to believe" the credit, given to the mere anxiety for correct information, of making men more likely to suspend their judgment and examine evidence, is, as I have said, the mere arbitrary connecting of two propositions which do not really stand in any logical relation. The wish to *know* is one thing, the wish to *believe* is another: the latter presupposes a foregone conclusion, of which the former is perfectly innocent.

"I conclude, then, by saying that it is no exception to my principles, but only their legitimate outcome, to say that the wish to believe, which I have explained as the reasonable and indispensable stimulus and assistance in discovery of truths in the matter, is the wish to believe in something nobler, giving wider knowledge, giving also a knowledge which completes the half arguments which had suggested our search, which elevates us in the sphere of being, and not knowledge which would show that all our aspirations were meaningless, and which is only a knowledge of the hopeless darkness which is our lot."

These words are put in the mouth of Father Walton by Mr. Ward. A sceptic would have put them in the mouth of Darlington. They are the sceptic's triumphant argument against the supposition that the "wish to believe" is conducive to the attainment of unprejudiced and logical certainty.

Mankind, in its various stages of growth, has made itself, in the words of Goethe, various divinities in its own image, and these images differ as much as the Easter Island idol which graces the outside of the British Museum differs from the gods of Phidias lodged within that edifice. Religious argument has had to take up the weapons of sceptical argument. The Monsignore who preached the duty of individual inquiry had made for himself, or for his congregation, a divinity closely resembling, in its divine requirements, the great God Humanity of Positivists. The Catholicism of Mr. Ward is more like the Atheism of Prof. Clifford in its arguments than it is like the Catholicism of Bernard of Clairvaux; for while St. Bernard could find nothing more horrible to hurl at the head of Abélard than the accusation that he refused to consider religious problems as "specula et

ænigmata" and insisted upon looking them in the face—"facie ad faciem omnia"—Mr. Ward mildly remarks that "religion must, if attainable, be a process of individual investigation and discovery." *Tempora mutantur*, certainly, and arguments get strangely altered in the process. Perhaps, if Mr. Ward would admit into his company an Agnostic less indifferent to all religious problems, and less patient of Father Walton's logic, than the dispassionate Mr. Darlington, he might hear the remark that there was, in the days of Bernard of Clairvaux, when men saw things "per specula et ænigmata," considerably more not only of the wish to believe, but of the possibility of believing, than in the days when an apostle of Catholicism admits that "religion must, if attainable, be a process of individual investigation and discovery."

VERNON LEE.

The True Story of Mazeppa—The Son of Peter the Great—A Change of Reign. By Viscount E. Melchior de Vogüé. Translated from the French by James Millington. (Field & Tuer.)

THIS work, which is devoted principally to the study of an unfortunate episode in Russian history—the career of Alexis, Peter's son—is a most interesting and brightly written contribution to our knowledge of Russia in the seventeenth century. Viscount de Vogüé never allows the interest of his readers to flag. Endowed with a lively imagination, he conjures up a series of pictures which flash in quick succession on the intellectual retina of the student until his critical faculty is deadened by admiration for the liveliness and elegance of the style. Possessors of this brilliant power of literary fascination are, however, frequently dangerous guides; but, on the whole, we do not find that M. de Vogüé's brilliancy has been attained by any sacrifice of accuracy. In the story of Mazeppa, indeed, the author is even guarded and judicial. To the average Englishman the mention of Mazeppa conjures up before his imagination a horse, a naked body lying on it, Astley's circus, and Byron's poem. The average Russian, on the other hand, is reminded of Pushkin's beautiful romantic legend—of the old Cossack chief, enamoured of his god-daughter, whom he is forbidden by the laws of his adopted country to marry, who returns his passion, and elopes with him. The terrible tragedy which follows, in which her father dies under the executioner's axe, is one of Pushkin's masterpieces. Neither the one nor the other thinks of Mazeppa the statesman, the haughty exile, the crafty diplomatist, and, at last, the traitor and deserter.

Mazeppa was one of those great and chivalrous characters whom, with all their faults, it is difficult not to admire. Neither Byron nor Pushkin has accurately represented him. His wonderful ride, strapped naked on a horse's back, across the wild steppes had, indeed, a foundation in fact, but a very slender one; and his elopement with his god-daughter has been equally embellished. It is as the Polish exile who knew how to rule the wild hearts of the lawless Cossacks that Mazeppa ought to be admired; as the wily diplomatist who threw in his lot with Charles XII.

in the hope of establishing an independent Cossack kingdom. This dream of his life he did not succeed in realising. His opponent was too powerful and too well favoured by circumstances for such a scheme to succeed. But it was a statesmanlike and wise conception. Mazeppa fully foresaw that the Cossacks must become absorbed by that tremendous northern avalanche which was gathering in size as it rolled its course through the centuries. Had his Cossack subjects but seen the matter with his eyes, history might have taken a different turn. Viscount de Vogüé is, however, a true worshipper at the shrine of Peter the Great, and cannot sympathise with any one who refused to submit to his iron will. He regards Mazeppa's treason as the great mistake of his life, and considers the Cossacks to have profited by becoming Russian subjects. We cannot bring ourselves to admit that the lot of the Russian peasant was at any time enviable, and doubt very much whether the feudal Cossack régime was not more favourable to personal liberty than the Imperial government.

Our author's absolute admiration for Peter becomes painfully evident in the history of poor Alexis. The education, treatment, and murder of this unfortunate prince is, indeed, one of the deepest stains on Peter's reign, and one that admits of very little apology. When it is remembered that this poor youth's mother was banished from his father's side and confined to a convent, where he was not allowed to see her; that his eyes had continually before them the example of riotous living set him by his father; that his education was practically neglected until suddenly it struck Peter one day that his heir to the throne should receive some instruction, and he imported from Germany a tutor, who was quite unequal to the laborious task imposed on him;—when these circumstances are borne in mind, the conduct of Alexis becomes, perhaps, not pardonable, but, at least, fully comprehensible. Until he became old enough to engage his father's attention, he was left to the care of self-seeking priests, whose interest it was to teach him habits of intemperance and dissipation—to ruin his intellect, so that they might acquire an ascendancy over him. In this they, unfortunately, succeeded only too well, and their influence continued till his death. Until Alexis reached man's estate Peter neglected him entirely, and Alexis would have been grateful had he continued so to do. But Peter was determined to make a man of his son at a period when all the manliness had been already taken out of him. Alexis hated war, and his delicate and shattered constitution was unable to bear the fatigues of a soldier's life. The sea he had a superstitious dread of, and he trembled when his father forced him to accompany him on a voyage. Otherwise he was a harmless youth, demanding nothing better than to be left alone. But this Peter would not do. Seeing he could not put him to any uses in the state, he married him, against his will, to a plain, but amiable German princess. The princess was terrified at the thought of having to live among barbarians; the prince was equally terrified at having to espouse an unbelieving foreigner. It is needless to say that this union was an unhappy one; but during the lifetime of his wife Alexis was

preserved from the persecutions of his father. As soon as she died they recommenced. Timorous by disposition, unable to change his nature, Alexis at last, after having resigned all claim to the succession, fled from Russia. The story of his flight and his concealment, and of the cunning methods employed in finding and bringing him back, is very well told. He returned, a sham trial took place, he was incarcerated, and then foully murdered. A man must be indeed a hero-worshipper to be able to find plausible excuses for such cruelty. Viscount de Vogüé urges that Peter feared lest all his reforms might be set aside by his tame and Russian-minded son. This, indeed, would have been an excuse for disinheriting his heir and appointing his grandson as his successor; it was none for murdering him. Besides, Peter had criminally neglected his duty to Alexis at a time when he was still impressionable, and when his character might have been moulded. But we do not think that Peter was the great man it was once the fashion to consider him. He was, perhaps, indispensable to clear away the forests of superstition and to make room for the advent of civilisation in Russia, but he was not what we are accustomed to regard as great. Our space does not permit us to speak of the concluding portion of this interesting book, which we hope may attain the popularity it deserves.

E. A. BRAYLEY HODGETTS.

TWO BOOKS OF REMINISCENCES.

Episodes of My Second Life. By Antonio Gallenga (L. Mariotti). In 2 vols. (Chapman & Hall.)

Leaves from the Life of a Special Correspondent. By John Augustus O'Shea. In 2 vols. (Ward & Downey.)

SERIOUS people who do not read novels—and some members of this once numerous class still survive—are wont to speak contemptuously of them as light literature. So far as a large portion of contemporary fiction is concerned, a much enduring reviewer will be the last man to say that the contempt is undeserved; but he, for his part, will take the liberty of contemning the contemporary novel not because it is light, but because it is heavy. For really light literature he will turn to such volumes as these of Mr. Gallenga and Mr. O'Shea, which, in spite of the fact that they never leave the solid ground of the actual, are from first to last as entertaining and exhilarating as they could possibly have been had their writers laid under tribute the boundless world of imagination. Part of the charm is doubtless due to the fact that both Mr. Gallenga and Mr. O'Shea have made themselves notable as roving journalists, for the life of a special correspondent must needs have a romance of its own; but, after all, the main attractiveness of a romance—even of a romance of real life—is given to it by the romancer; and in reading these volumes the best half of our pleasure comes not from the story itself, but from the telling of it.

The rather odd title of the first of these books is a little suggestive of spiritualism, occult science, or something of that kind, though its true explanation is comparatively commonplace. On August 15, 1836, writes

Mr. Gallenga, "I was born again"; but in this case we are to understand by the new birth not the spiritual or emotional transformation generally indicated by the phrase, but a mere change in the writer's surroundings, which, though doubtless important enough in its way, was after all a somewhat external thing. At the date just mentioned Mr. Gallenga was a young man of only twenty-five, but he had been, even at twenty, a conspirator, a state prisoner, a combatant, a fugitive, and then for five years an exile. This was the first life; the second life was begun on the day that he set sail for New York, and was transformed—without any dishonourable loss of national identity or patriotic sympathy—into a citizen of the world. Of his adventures during this period of enlargement and emancipation these volumes are a singularly pleasant and ingenuous record; and though they do not add to our store of knowledge any items of great or permanent value, they find an adequate reason of being in the fact that they wile away a few hours agreeably, and help us to be for a time "gay"—or, at any rate, cheerful—"without frivolity."

The first volume deals with Mr. Gallenga's experiences in America, and is, on the whole, more entertaining than the second, which deals partly with his life in England and partly with his adventures as newspaper correspondent in various parts of Europe. Indeed, we are inclined to say that the most intimately personal portions of this autobiography are decidedly the most readable; and it is certain that the only pages which present any temptation to "skipping" are those devoted to public affairs like the Italian entanglements of 1848, concerning which Mr. Gallenga has little to give us that is really new, and nothing that is very attractive, with the exception, perhaps, of his personal impressions of such notabilities as Cavour, Mazzini, and Prince Napoleon. The story of his life in the United States is, however, thoroughly enjoyable; and it is a long time since we have read anything more racy and realisable than his sketch of men, women, and things in Boston and Cambridge nearly half a century ago. Mr. Gallenga strikes one as being almost as unreserved as Rousseau; and though, unlike the hero of the *Confessions*, he has nothing to tell of which he has any reason to feel ashamed, he occasionally, with charming *naïveté*, takes his readers into his confidence in a way that would be almost impossible to the average Englishman. Of course, this adds very much to the charm of the book. We should not like to lose the really pathetic little story of how, when things seemed at their worst with the young and friendless teacher of languages, he applied for the sorely-needed dollars to the Catholic Archbishop at the Boston Oratory; but even this anecdote sinks into insignificance beside the rich story, told with delicious amplification of detail, of the manner in which Mr. Gallenga committed himself by kissing a wealthy and aristocratic New England young lady under the mistaken impression that she had accepted, or was on the point of accepting, his hand in marriage.

Apart, however, from piquant little details of this kind, we have a number of very pleasant and life-like sketches of various prominent figures in the world of American

politics and letters; and Mr. Gallenga's picture of the everyday life of the little university town in which his lot was cast has features of novelty which make it peculiarly fascinating. It is much to be feared that the American Cambridge is now a good deal more conventionalised and sophisticated than it was in the days when Sig. Mariotti, as the young Italian was then called, made its first acquaintance; but, if this be so, the record, in addition to its good literary qualities, has a certain historical value. After the American chapters, those devoted to the writer's English life seem comparatively lacking in brightness and vivacity; but, happily, Mr. Gallenga always stops short a long way on the higher side of dullness, and his two volumes of fact are, as we have said, decidedly more enjoyable than the majority of contemporary works of fiction.

To say of Mr. O'Shea what, in the preceding sentence, we have said of his brother journalist, would, indeed, be to damn with faint praise, for towards dullness Mr. O'Shea never turns his face. While the Italian is cheerful, the Irishman is effervescent. Through some 660 pages his high spirits never flag, and his readers must be singularly phlegmatic and insensitive if they do not become infected with his exuberant gaiety. It would be too much to expect of a writer in such a mood that he should adhere with prosaic doggedness to his nominal subject, and Mr. O'Shea has a great deal to tell us about many things which are altogether apart from his experiences as a special correspondent. Indeed, it is not until we are nearing the end of the first volume that we reach the story of his first engagement in that capacity; but then the earlier pages of the narrative are so full of interest and amusement that we forget what we ought to expect, and—save in print, where complaint looks discriminating—should not grumble if Mr. O'Shea had forgotten all about his title and gone on as he had begun. These introductory chapters, as we suppose they ought to be called, though in fact they are nothing of the kind, are devoted to the history of the writer's life in Paris, whither he had gone to study medicine, but where, feeling the lack of what in religion is called a vocation, he settled down into a delightfully easy-going Bohemian existence, and, as he himself puts it, "eked out subsistence by writing stories and news' letters." It has, we think, been once or twice remarked that a light purse and a light heart are not necessarily incompatible, and it is clear that the impecunious young Irishman managed to enjoy himself, and to "see life" in a much more interesting way than that generally indicated by the somewhat equivocal phrase. Among the occasional sojourners in the Parisian Bohemia were such not unknown countrymen of the writer as John Mitchel, James Stephens, the Fenian head-centre, and Edmond O'Donovan, destined to become a Bayard of special correspondents; while among its regular inhabitants were to be found such men as Gambetta, Rochefort, Pierre Bonaparte, and less tempestuous souls like the writer's artistic chum, George Loyes, whose signature "Montbard" is familiar enough to admirers of certain effective landscapes in the *Graphic* and *Illustrated London News*. Of all these we have pen-and-ink portraits or characteristic anecdotes, and in

the second volume we have similar glimpses of Bohemia in London where we are enabled to assist—in the ecclesiastical sense—at a hair-dressers' competition, a convivial meeting of prize-fighters, a Mormon prayer-meeting, a Cogers-hall debate, and the like. Here, again, are some capital anecdotes, but all the best are too long for quotation, and might, perhaps, lose some of their charm if presented in the trying nakedness of an extract.

As special correspondent Mr. O'Shea has always represented the *Standard*, and his first engagement was to be present at the trial of Pierre Bonaparte for the murder of the Parisian journalist, Victor Noir. It was in the stuffy court-house at Tours that Mr. O'Shea met Mr. Gallenga, whom he took for a fellow-countryman, and a Cork man to boot, and addressed him as such, not apparently gratifying thereby the representative of the *Times*. He admired the easy calmness with which the Italian performed his task; but the rival who really inspired him with awe was a man, "burly, florid, with smooth-lying, pitch-black hair," and a "broad, mobile, sympathetic countenance," who he knew instinctively could be none other than the Hercules of journalism—George Augustus Sala. Him the neophyte feared, but with no real reason for fear, as in the columns of his own journal, and in these volumes, Mr. O'Shea has shown himself a workman needing not to be ashamed. The stories of some of the earlier events in the Franco-Prussian War, and of the imprisonment in besieged Paris, are thoroughly well told, and numerous as have been the descriptions of the Ober-Ammergau Passion Play, Mr. O'Shea's, which was one of the earliest, is still one of the best. An anecdote of Lechner, a simple, kindly wood-carver, who in 1870 played the part of the Betrayer, is not without a touch of pathos. Lechner, it seemed, met with a good deal of annoyance from half-drunken peasants, who persisted in identifying him with the character he represented; but when the mistake was made by someone in a superior social grade, it was really more than he could bear. Mr. O'Shea writes,—

"He likewise made some complaint of a lank American artist, who had come to the photographic stall, and asked for a set of likenesses of the chief actors in the Passion Play. Among others, one was handed to him of Judas. 'I don't want that—not I,' he said; 'that man must be real mean to play the part so well.' When Lechner heard the story, he went into a corner, and burst into tears."

JAMES ASHCROFT NOBLE.

"Diocesan Histories." *Winchester*. By William Benham. (S.P.C.K.)

THE high standard reached by most of the previous volumes in this useful series has scarcely been maintained in the present instance. Mr. Benham is well known as a man of industry and ability, and we presume that, as a City rector, he is also a man of comparative leisure; but his book bears many traces of haste and negligence, and has too much the appearance of a work done "to order." We should have thought that there might have been found within the limits of the diocese an annalist who would have made its history a labour of love, and brought to

bear upon it an amount of local knowledge and special interest which can hardly be looked for in an outsider. Under those circumstances we should not be tantalised, as we now are, by being told that "the Episcopal Registers begin with Pontoise, in 1282, and are unbroken from that time," and yet finding not a single quotation made from these invaluable records. The truth is, Mr. Benham has been a little too content with second-hand authorities when original sources of information were open to him, and this must detract from the value of his book in the eyes of every historical student. The ordinary reader, however, will not be disappointed, for Mr. Benham writes in an easy and pleasant style, and in this respect has the advantage over Bishop Milner, to whose history he is very largely indebted for his facts, which sometimes are open to question.

The ecclesiastical history of Winchester goes back to the seventh century; but we take leave to doubt whether the cathedral erected by Kenwalk in the short space of two years was a vast and beautiful structure, and whether "the famous St. Benedict Biscop" had much to do with it. Abbot Biscop died in 690, and the consecration of Winchester Church took place more than forty years before, when he was not more than twenty years of age. His architectural experience, therefore, could not have been great. But of Kenwalk's Cathedral we really know next to nothing. The edifice which still commands our admiration is neither his work nor that of Bishop Athelwold, though the latter deserves something more than the curt observation with which Mr. Benham dismisses it. We gather from Wulfstan's epistle to Alphege—an authority overlooked by Mr. Benham—that it followed the basilican form and arrangement, and was—allowing for the writer's exaggeration—a building of considerable beauty and importance. It is, however, to Bishop Walkelin (1079-93) that we owe the foundation of what we know as Winchester Cathedral, and Mr. Benham justly describes his work as "a characteristic and most instructive specimen of the simplest and most severe style of Norman architecture." It was cruciform, with a massive tower at the intersection. "The nave extended westwards forty feet further than at present, and ended with two enormous towers. . . . The east end was a rounded apse flanked by two small towers, from the middle of which a small lady-chapel, also round-ended, projected eastwards." Of course, the original structure has undergone many alterations. The east end was rebuilt by Bishop Godfrey at the beginning of the thirteenth century. The west front and, to some extent, the nave were renovated by Bishop Edyngdon in 1366. William of Wykeham, at the close of his busy life, took in hand the completion of the work, transforming what had been Norman into Perpendicular with singular skill and great boldness, and thus substituting beauty for grandeur. The later history of the fabric is not given by Mr. Benham, but it must not be inferred from his silence that Winchester has been neglected by the modern restorer. Happily, it escaped the hands of Wyatt.

Of the prelates who have occupied the see, not a few have been men of mark. The position was always regarded as one of the highest

which an ecclesiastic could reach, for in dignity it ranked next to London, and in revenue was superior even to the Primacy. The saying that "though Canterbury is the highest rack, Winchester has the deepest manger" dates back, we are told, to the time of Bishop Edyngdon. The Ecclesiastical Commissioners, it is scarcely necessary to say, have long ago robbed the adage of its truth. Four Bishops of Winchester have been canonised, and two of these, Birinus and Swithun, are not wholly forgotten, though the memory of the latter is rather meteorological than aught else. No less than eleven have been Lord Chancellors, and amongst these are to be found William Gifford, who founded the first English Cistercian Monastery (at Waverley, in Surrey); Adam Orleton, a prelate more distinguished for statcraft than piety; Wykeham and Waynflete, whom Oxford can never forget; Cardinal Beaufort, on whom Shakspeare has conferred everlasting infamy; and Wolsey, whose connexion with the see was more nominal than real. Henry of Blois was, perhaps, rather a baron than a bishop; but it must not be forgotten that to him was due the foundation of St. Cross, the noble design of which has been again and again marred by the greed of its administrators. More real advantage to the State has flowed from another foundation—namely, Corpus Christi College, Oxford—which Richard Fox, a later bishop, established, and in which John Keble, whom the diocese may claim as its own, had his education. Mr. Benham styles Lancelot Andrewes "the greatest Bishop of Winchester since the Reformation," and it is certainly only among the latest occupants of the see that his rival can be found. Wilberforce was so long and so closely associated with Oxford that one is apt to forget his three years' connection with the see of Winchester; but it is in its present occupant that we find the combination of learning and piety which best recalls the Jacobean prelate.

Mr. Benham always writes with fairness, and we should be doing otherwise if we omitted to say that his little book contains much that is interesting and still more that is suggestive. CHARLES J. ROBINSON.

NEW NOVELS.

Madam. By Mrs. Oliphant. In 3 vols. (Longmans.)

The Talk of the Town. By James Payn. In 2 vols. (Smith, Elder, & Co.)

Although he was a Lord, and other Tales. By Mrs. Forrester. In 3 vols. (Hurst & Blackett.)

Ishabod: a Portrait. By Bertha Thomas. In 2 vols. (Fisher Unwin.)

Near Neighbours. By Frances Mary Peard. In 2 vols. (Bentley.)

In War Time. By S. Weir Mitchell, M.D. (Edinburgh: David Douglas.)

Weary Wealth. By Mrs. Herbert Lea. (Manchester: Brook & Chrystal.)

In Mrs. Oliphant's *Madam* the gloom of an otherwise sombre story is relieved by the very beautiful and tender affection which a daughter has for her stepmother. The whole burden of the narrative is different from

what we are accustomed to in the novels of this admirable writer; and although some readers might think the mystery is unduly prolonged, all must feel that it is handled with energy and literary skill. The death-bed fulminations of Mr. Trevanion against his wife are almost repulsive in their vehemence and coarseness, even if the popular notion that the secret in "Madam's" life was an unworthy one, and one dishonouring to herself, were true. But the charge against Mrs. Trevanion being utterly false, the grandeur and nobility of her character become all the more apparent. She sacrifices all that she has in a worldly sense, and, what is still worse, allows her name to be unjustly tarnished because of her affection for her children. Those children, in return, manifest little love for one who has made herself a martyr for them through a long series of years; and the only solace she finds is in the immovable affection of one who is not her own child—her step-daughter Rosalind. The contrast between the selfishness of the children and the unselfishness of the mother is sharply and powerfully drawn. Many of the incidents in the novel are fresh and striking, and though we feel as we read that there ought to be someone to come forward and unravel the knot, our interest never flags through the three volumes. The story emphasises the truth that a weight of secret sorrow is sometimes borne right through lives unsuspected of anguish and pain—a burden which, apparently, only death can remove. "The conviction that now is the moment to die," observes Mrs. Oliphant, "that death is the most natural, noble, even agreeable way of solving a great problem, and making the path clear not only for the individual most closely concerned, but for all around, is not unusual in life." Without agreeing with the novelist in this statement, we may acknowledge that she has certainly conceived here a set of circumstances which seem to demand death as their only end and outcome. How she finally deals with these tragic circumstances readers must discover for themselves.

There is no more entertaining living writer of fiction than Mr. Payn. The story before us, *The Talk of the Town*, is a case in point. It is not only clever, but alive with interest, freshness, and vivacity. While other authors have been writing themselves out, Mr. Payn has been growing better and better, and, notwithstanding the great amount of literary work he gets through, almost every one of his later novels is an advance upon its predecessor. He now takes up the story of the Ireland Shakspearean forgeries, and, with the aid of two or three admirably-drawn characters in addition to Ireland himself, or Erin as he is here called—the *fons et origo mali*—he weaves quite a delightful little romance. Necessarily restricted in the number and character of his incidents, and a literary forgery not furnishing of itself sufficient fascination, he gives us as a story within the story certain love-passages in the history of Margaret Slade. She is an altogether lovable and bewitching creature, for whom we feel much sympathy. Ireland, or rather Erin, wins her heart by the glamour of his supposed literary achievements and discoveries; but she lives to find that her god is only a god

of clay, and at the end of the romance she falls back upon the affection of Frank Dennis, who has been true to her through all, and most so at the time when she needed support. The portrait of old Erin, type of the unreasoning and quixotic antiquary, is very good, and almost the best thing in the work. Among several excellent scenes is one between Sheridan, Kemble, and the irascible antiquary, touching the production of *Fortigern*, the newly-discovered play, alleged to be by Shakspeare. There are also amusing glimpses of Pye, the Poet Laureate, Dr. Warton, Dr. Parr, Mrs. Jordan, and others. There are many capital hits in the novel, as when Mr. Payn, speaking of one Jervis, who was in his measure a real poet, says, "He was not a star, but he was a glow-worm. Most of us are but worms without the glow." It is this same Jervis who is made to say, during a religious discussion, that in Shakspeare's eyes there were no heretics "save those who disbelieved in good." Mr. Payn is not afraid of pricking what all must have at times felt to be shams. Referring to Samuel Erin, the fanatic in literature, he remarks, "In art he has many modern parallels—men who, having once convinced themselves that a painting is by Rubens or Titian, will see in it a hundred merits where there are not half-a-dozen, and even discover beauties in its spots and blemishes." Again, the author well says—

"Most of us are the slaves of authority, or what is supposed to be authority, in matters of opinion. In letters men are almost as much victims to a name as in art. The scholar, blind to the beauties of a modern poem, can perceive them in an ancient one, even where they do not exist. He cannot be persuaded that Aeschylus was capable of writing a dull play. The antiquary prefers a *torso* of two thousand years old to a full-length figure by Canova. This may not be good sense, but it is human nature."

We noticed two little misprints which it will be well to have corrected in the next edition. In vol. i., p. 179, Droeshout appears as Droeshart; and in vol. ii., p. 6, Clopton appears as Clapton. A word must be said in favour of Mr. Furniss's illustrations, which are spirited and graphic.

A large proportion of the tales in Mrs. Forrester's three volumes are concerned with fast people and members of the aristocracy who reflect no credit upon their order. Those who are calling for the destruction of the House of Lords might find here some good weapons ready to their hands, whether intentionally provided or not. The author furnishes several striking examples of imbecility and wickedness among our "illustrious" dukes and belted earls. Many of the women, too, do not appear to be much better. Some of these stories hover round, if they do not actually centre in, *risqué* incidents and situations. But we are bound to admit that Mrs. Forrester is a very entertaining writer, and there is really not a dull sketch in the whole of these volumes. The title-story is perhaps as favourable a specimen of the writer's powers as any. It relates how a misogynist young lord goes to a country house to escape the machinations of the fair sex in London. Nora, a very pretty country maiden in this house, has been warned that she is not to

attempt her blandishments upon his lordship, who is sick of the whole sex. By going to the opposite extreme, and quizzing his lordship unmercifully, he is brought to book at once, and falls desperately in love with the charming Nora. Of course, all ends happily. Another sketch shows how a girl lost a ducal lover through the wretch who invented photography, and there are numerous other novelettes equally amusing. "A Terrible Story" is a very different sketch from those bound up with it. It is very well written, and records the most tragic incidents—incidents which might well have formed the groundwork of a novel in themselves, though they would have required considerable relief against their horrific gloom and sadness. Mrs. Forrester's spirit is strangely cynical, and she ruthlessly lays bare the seamy side of aristocratic life. But her philosophy sounds its deepest note of pessimism when she comes to deal with our own miserable male sex. One had no idea we were such worthless beings until, through the medium of her *dramatis personae*, she lifted the veil upon our shortcomings. English husbands, here is one little passage which should make you blush, if you have any shame left in you:—

"Husbands, as I have remarked, do not, as a rule, place chairs for their wives. The wife generally comes in first (we were in a hotel), finds herself a seat, and the husband flings himself down at such a distance that she cannot address him without raising her voice, upon which he says 'what?' or looks as if it was very bad form to speak at all in public. I have been given to observing the manners and customs of this class of persons; it is to that I owe my freedom. Nothing, for instance, strikes me more than to see a couple 'whom God has joined together' cross a road in each other's company. The husband stalks over first, without looking to the right or the left; if the wife of his bosom is not knocked down and run over it will certainly not be owing to any assistance or attention rendered her by him. Is it shyness? It always seems to me as if a man wanted to be thought *au mieux* with every other woman, and *au pire*, if there is such an expression, with his wife."

There is evidently opportunity for a book on Etiquette after Marriage. By the way, does Mrs. Forrester hold strong views with regard to the new dignity conferred upon the Poet Laureate? His name twice appears in these volumes as "Mr." Tennyson.

There are fine things in Miss Thomas's story, but John Ichabod, its hero, is one of the most extraordinary and unpleasant beings who ever wore the semblance of humanity. The world, time, life, man, and nature are all out of joint with him, and compared with Ichabod and his jaundiced views of things, Schopenhauer is quite a cheerful being. As a child, Ichabod is not like other children. He dissects, stamps upon, and destroys his toys when he finds they are only shams; a few years more, and he tries euthanasia upon a pet lark; and when he has grown up strong and well, and his mother tells him how feeble and delicate he was in his childhood, he laments for her sake that she did not live in ancient times, for then he would have been exposed to perish in infancy, and she would have thereby been saved a good deal of bother and responsibility. Ichabod is, in fact, a man of great ability,

whose springs of life are poisoned at the source. He tries to inoculate others with the same virus, and pours contempt on everything an Englishman holds dear. The love of flowers, for instance, he looks upon as a national folly, not to say vice; while "the humane sentiment has become organic, till it amounts to a disease, and wants checking." He took the shine out of the flowers, the rainbow, the rivers, the mountains, and everything beautiful in nature. He also speaks treason of the fair sex: "Vanity first and the rest nowhere, is the key to that riddle—woman." His ideas, however, suffer a terrible *bouleversement*. He is assured by an old naturalist, who is full of an enthusiasm that is positively hateful to Ichabod, that "the heart is a clock that seldom goes wrong, the head often." Then the one pupil he thinks he has succeeded in making goes and marries Miss Ianthe Lee, a clever, beautiful, and charming girl; and altogether Ichabod has a very bad time of it while his gods are being shattered about his ears. There is but one thing left for such a man—to get out of the world as soon as he can, and Ichabod—whether intentionally or otherwise—dies of poison. Miss Thomas has drawn her chief character with striking individuality, and there are many parts of her story which are unquestionably clever.

Miss Peard writes an easy and graceful style, which gives real pleasure to the reader. Her story of *Near Neighbours* deals with life in the Netherlands, and it needs no expert to see that she is well acquainted both with Dutch scenery and Dutch people. Two or three characters are extremely well individualised; and no little mastery is shown in delineating the course of the love passion as it affects and moulds the female heart. There is a certain Professor, too, whose nature has been happily gauged and reflected in these pages. Altogether, the novel well sustains the reputation Miss Peard has already acquired as a quiet and charming writer, yet one also by no means destitute of reserve power. One chapter, showing how a reckless youth rushed to his death by his own mad act in a forest, is very graphic and vigorous.

In War Time is a very favourable specimen of the American novel. There are passages in it testifying both to the author's humour and his professional knowledge; but, more than this, the plot, such as it is, is a deeply-interesting one. The story is fixed in the period of the Civil War between the North and the South. Dr. Mitchell has a keen apprehension of the finer shades of feeling and character, and has also no little literary skill in giving expression to them.

The incidents in *Weary Wealth* turn upon an extraordinary will, by which an old maid left an enormous fortune to a young lady on the condition that the legatee should never marry. She, of course, falls in love. Her lover is prospectively rich, but he loses all, so the heiress will not further embarrass him by marrying him and bringing him nothing. In the end, the lovers, instead of losing two fortunes, come into two. A codicil is found which allows the heiress to marry, and the stepmother of the man, who had intercepted his fortune and estate, gets conveniently killed by the upsetting of a phaeton. This sketch

reveals no particular literary talent, and it is a little disturbing to find the author of "The Seasons" appear as Thompson. The Thomsons have no dealings with the Thompons, and the writer should have minded her *p's* better.

G. BARNETT SMITH.

SOME VOLUMES OF VERSE.

Coemo De Medici, the False One, etc. By the Author of "Herman Waldegrave." (Kegan Paul, Trench, & Co.) The anonymous author has here added a tenth to the volumes of dramatic verse which he has published in fewer than ten years. He has thus put forth no fewer than thirteen tragedies, besides one or two "life dramas" and "dramatic sketches." So much work of the kind has not, perhaps, been done by any other living writer. The quality of the work involves a deeper problem than arithmetic can solve, and we would certainly hesitate to express an opinion of it as a whole. We have, however, conscientiously read some of the many tragedies by this author that have come to our hands, and can say that they exhibit a good deal of careful historical research, a distinct literary faculty, and some power of construction. Nothing that we have seen gives hint of the power to depict character, and certainly there is no knowledge of stage craft exhibited. These dramas, which have very little to do with the stage, so far, at least, as concerns its modern exigencies, are rather anomalous affairs; and only marked intellectual strength can quite justify their existence. "The Deformed," a sketch in the present volume, has no special strength of any sort, and is a rather bald reproduction of a subject that was finely treated by Byron. Nevertheless, so much literary ability as is shown in the main by this author should not go unrecognised.

Told in a Coble, and Other Poems. By Susan K. Phillips. (Leeds: J. S. Fletcher & Co.) Among the numberless volumes of thin and imitative minor contemporary verse, it is refreshing to meet with a little book like this, which is full of vigorous and spontaneous poetry. For the benefit of south and west country readers, it may be well to explain that a "coble" is, on the north-east coast, a small fishing smack; and the theme of the greater number of Miss Phillips' verses is indicated in the dedicatory lines addressed to Lady Mary Vyner.

"These rugged rhymes I pray you take,
Since in them I have striven to show
The hearts whose beatings best I know;
The lives, brave, simple, strong, and free,
Wrought out beside the northern sea;
And you, 'neath quiet inland skies,
So quick to help and sympathise,
Will keep their annals for their sake."

Here, however, Miss Phillips does herself injustice, for her rhymes are not in the least rugged, but always fluent and harmonious. She does not strive after metrical novelties, being quite content with familiar measures; but these are handled with never-failing facility and captivating freshness, and informed with the true lyrical spirit which carries us along rejoicingly. It is long since we have seen poems better of their kind than Miss Phillips' stories of the sea and shore. They are full of life and movement, and many of them are charged with very tender and quite unforced pathos. From these we cannot quote, but must mention the poems which give a title to the volume, "Spoken in haste," "Why they kept Holiday," "The Atalanta," "The Hawthorn," and "Our Dan," as being, with perhaps half-a-dozen others, specially characteristic. "Missing" is one of the very few pieces from which a brief quotation can be taken, and the

stanzas we select give a fair impression of Miss Phillips' average work:—

"Ah me! those weary midnights,
Hearing the breakers roar!
Starting from dreams of storm and death,
With beating pulses and catching breath,
To hear the white surf 'call' beneath,
Along the hollow shore.

"Never a flash down the wires,
Never a word from the East,
From the port she sailed for—how long ago!
Why, even a spar one would weep to know,
Tossed on the wild waves' ebb and flow,
Were something real at least.

"Missing, missing, and silence;
The great tides rise and fall;
The sea lies dimpling out in the light,
Or dances, all living gleaming white;
Day follows day, night rolls on night.
Missing, and that is all."

Among the lighter miscellaneous poems there is much pleasant and dainty work, "In the Mirror" being specially charming, while the few sonnets and *rondeaux* are admirable. Even at a time when verses are as plentiful as blackberries, a poet like Miss Phillips is certain of a welcome.

The Triumph of Time. By Ella Dietz. (E. W. Allen.) Miss Dietz's name was familiar in London two or three years ago as that of a young actress and public reader. Since then, the lady has spent some time in America in the pursuit of her profession, and the English public has heard but little of her. Shortly before leaving England, she published a mystical poem entitled *The Triumph of Love*, and it is as a sequel to that work that the present book is published. Like its predecessor, the new poem is chiefly remarkable for a somewhat vivid delineation of ascetic passion. It has a pathetic and obvious human interest, quite apart from its hidden intention. Indeed, we must frankly confess to some unwillingness to dig beneath the surface for the meaning of Miss Dietz's work. The physical problems that lie buried beneath a series of short poems, which tell the simple story of the triumph of time over love, need not be disturbed in their tomb. Setting aside the mystical pretensions of Miss Dietz's book, we find much to commend in its sweetness and simplicity, its directness and force. There is the ease of mastery in not a few of these poems. The writer knows what she can do, and does it without effort. Certain of the slighter pieces show that Miss Dietz has studied Goethe's lyrics and ballads to same purpose.

"Let those who will forget
Love's sacred ways;
Mine eyes with tears are wet
For love's lost days.

Mine eyes with tears are wet.
My heart is sad,
Let those who will forget
To make it glad."

There is a pure and tender womanliness in everything this book contains. There are a few ambitious poems in the volume—poems in which the simple human significance of a situation does not serve, and symbol is aimed after. Of these, the best is the sonnet headed, "Waters in the Desert." It does no injustice to Miss Christina Rossetti to say that, but for the cumbrousness of the tenth line, the following might almost be mistaken for her writing:—

"Long time I wandered in a barren land,
My stumbling feet beset by unknown ways,
The scorching sun blinding my weary gaze,
A brazen sky above a waste of sand,
No shelter from the torturing burning rays:
O God! I cried, end now my nights and days,
Smite me with death, yea, strike me where I stand.

And Thou did'st smite as Moses smote the
rock,
Not unto death, for forth there gushing flowed
A stream of life, and suddenly there glowed
Bright roses where had been an earthquake's
shock,
And grasses green appeared, and cattle
lowed,
And by a stream a shepherd fed his flock."

Bothwell: an Historical Drama. By John Watts de Peyster. (New York.) To contribute anything new and striking to the great mass of literature on the subject of Mary, Queen of Scots, would require exceptional literary capacity, and extraordinary historical knowledge. The two living writers who, both in quantity and worth of matter, have added most to this already overgrown literature are Mr. John Skelton and Mr. Swinburne; but Major-General de Peyster seems to be ignorant, both of the scholarly prose work of "Shirley" and of the striking and sustained poetic drama of the author of "Atalanta." Between the latter's "Bothwell," and that of General de Peyster, there is a gulf as great as that material one which divides the country of the one from that of the other. This, however, is stated only as a fact, and not as a comparative estimate, for it is only fair to say that the American writer's composition is written for stage representation preeminently, and secondarily for the historical student. General de Peyster is indubitably an earnest student of the exceptionally interesting period of which he writes, and his many notes are really valuable. He is an ardent admirer of Bothwell, of whose character he has given us a representation which is perhaps, in its entirety, hardly borne out by fact, but the general correctness of which it would be difficult to disprove. It is questionable if ever this historical drama could have any permanent success on the stage, though spectacularly it could be rendered very attractive. The finale is a simultaneous representation of the execution of Mary at Fotheringhay, and of Bothwell lying dead on the floor of his prison in Adlesborg Castle at Dragsholm in Denmark, and the drama ends with the following grotesque stage instruction:—"Curtain falls again to sad music, which gradually changes into a symphony, as it rises on the re-union of Mary and Bothwell in another sphere."

Clouds and Sunlight. By Duncan Macgregor. (Kegan Paul, Trench & Co.) What we recently said of another book, that without being essentially devotional, it is deeply imbued with religious fervour, is true of the present volume. The literary merit in this case is by no means inconsiderable, and where the author has something to say he says it with directness, simplicity, and occasional force. Like most of his fellow-singers in this generation, he is a passionate worshipper of eternal nature, and he has the advantage of singing a comparatively lucid poem of praise. It is not always easy to know what sort of landscape is described when poets depict it in language which shows that their thoughts are concerned far less with the scene than with themselves. The following has, at least, the merit of a meaning:—

"Wanted: Men.
Not systems fit and wise,
Not faiths with rigid eyes,
Not wealth in mountain piles,
Not power with gracious smiles,
Not even the potent pen;
Wanted: Men.

"Wanted: Deeds.
Not words of winning note,
Not thoughts from life remote,
Not fond religious airs,
Not sweetly languid prayers,
Not love of scent and creeds;
Wanted: Deeds.

"Men and Deeds.

Men that can dare and do;
Not longings for the new,
Not pratings of the old;
Good life and action bold—
These the occasion needs,
Men and Deeds."

Select Poems of Catullus. Translated by A. P. Howell, Fellow of St. John's College, Oxford. (Calcutta.) This little volume is the result of the "ample solitude and scanty leisure" of an Indian civil servant's life. It is not faultless, but we have seen worse work, both from Indian civilians and from versifiers of Catullus. Should the author translate any further, we hope he will apply to an English publisher.

Songs and Lyrics. By George Ambrose Dennison. (Putnam.) There is not a great deal in this volume, whether we regard the material body or the intellectual substance. But what there is of it is above the average of recent American verse. A poem to a cricket singing at night at Broadway shows some tenderness of feeling, and is all the better for avoiding the obvious didactic application. A symbolic poem "to a dying friend" has merit, and an address to the sea in the later manner of Mr. Swinburne is at least fluent. The verse, as a whole, has, however, no marked quality of its own, good or bad. The author undoubtedly has talent.

Dunbar. By Thistledown. (Edinburgh: Waddie & Co.) It sometimes requires courage to tackle the kind of poetic production known as the "closet drama," but we have read this tragedy without any sense of weariness. There is a crazed old woman in it who is burnt as a witch, and her madness is cleverly delineated. The other characters are commonplace enough. There is a reformed old rake, Lord Montgomerie; a young rake by no means reformed, Sir Thomas Ramsay; a venomous priest, Father Boniface; a superstitious primate, Cardinal Beaton, and a rationalist advocate, George Dunbar. The plot is meagre, and the construction exhibits no special knowledge of the stage. Nevertheless, the writing has vigour, and, by virtue of this quality, we read the tragedy, as we say, without weariness. It was only when we turned to the prefatory essay that we became tired of the author. This essay, if we read it aright, is a lament on the low ebb that dramatic literature has reached in the "most intellectual city in the world"—Edinburgh of course—in which only one original play is produced annually, and that a pantomime. Our young Scotch author—he must be young and as certainly Scotch—does his best "to stem the current of prejudice that clouds some minds in Scotland against the theatre." The curious confusion of metaphor here is, we fear, typical of the subsequent confusion of thought. Having proved beyond contempt of question that our Lord and his Apostles sanctioned the theatre because they never condemned it, our juvenile tragedian essays the rôle of Aristotle and formulates a fresh set of rules for the guidance of dramatic aspirants. We regret to say that we lack the space to discuss these newest critical canons. Our readers may judge of their quality by one extract:—"Criminals are neither agreeable nor natural characters, but are the mere accidentals of life, and should never have a place in any work pretending to literary grace."

Plantation Lays. By Belton O'Neill Townsend. (Columbia: Calvo.) This volume of verse is at once the most pretentious and the most preposterous that we have read for years—and that is saying a good deal where minor poetry is in question. It is dedicated to Mr. W. D. Howells in a rambling and nonsensical letter which charges him with the grave responsibility of saying that the author's

"destiny is literature." If so, all the worse for literature. The book comes to us with an absurd biography of the poet, who is represented as a writer of such excellence that he is likely to revive the ancient vigour of English poetry, which has latterly fallen on evil days in the hands of poetasters like Tennyson. We are gravely told that a certain "Dynamite Song" is "one of the sublimest and most thrilling poems in our language or any other." Here is a stanza of this meteoric effort:

"Oh! take the awful tyrant
Whom the Russians call the Czar,
With his knout, police, and army
And Siberian mines afar;
And take the wailing people,
Ever cowering in affright,—
And can you blame them turning
In despair to dynamite?"

Men of judgment and reputation ought surely to be careful how they say, even in the friendliness of private letters, that writers of this quality have literature as their "destiny."

NOTES AND NEWS.

SIR HENRY TAYLOR'S autobiography is announced as preparing for publication. It was begun about twenty years ago, and a few copies were printed about ten years since for private circulation among friends. The work was intended for posthumous production, but the author finds that the reasons for deferring its publication have ceased to exist.

THE Hibbert lecturer for this year will be Prof. Pfeiderer, of Berlin, and the subject will be "The Preaching of the Apostle Paul and its Influence on the Development of Christianity." The lectures are being translated into English by the Rev. J. Frederick Smith, of Mansfield, and will be published as a volume immediately after delivery. Prof. Rhys's Hibbert Lectures for 1886 are in preparation.

WE learn that Mrs. Emily Pfeiffer is revising the notes of her recent American tour, and will publish them, together with those of her visits to the East, under the title of *Fly-leaves from East and West*.

MESSRS. LONGMANS will publish shortly Vols. I. and II. of *Ireland under the Tudors*, with a succinct account of the Earlier History, compiled from the State papers and other authentic sources, by Mr. Richard Bagwell. Vol. III., completing the work, is in preparation.

MESSRS. W. H. ALLEN & Co. will shortly publish a work, entitled *Advance Australia*, by the Hon. Harold Finch Hatton, with a Map and sixteen Illustrations by Lady Evelyn Upton. The book will consist of an account of five years on a cattle station, and two years on the gold fields of Northern Queensland, with a full description of the mining and sugar industries, and a comparison of the relative advantages of cattle farming and sheep farming, together with a review of the natural resources, politics, and prospects of Queensland, New South Wales, and Victoria, and experiences of life in Sydney and Melbourne.

MESSRS. BELL & SONS are about to publish a supplement to the Rev. J. B. Mayor's *Guide to the Choice of Classical Books*, the object of which is to supply to schoolmasters and students a ready means of ascertaining what editions, whether English or foreign, of the whole or portions of the classical writers, are obtainable. Even the small annotated editions of single books now so much in vogue are given, and a valuable list of works in archaeology, history, philology, &c., &c., is appended under the head of "Helps to the Study of Classical Authors."

MESSRS. LONGMANS' announcements include *The Child's Garden of Poems*, by Mr. Robert

Louis Stevenson; *Horse and Man*, by the Rev. J. G. Wood; *Lives of Greek Statesmen*, by the Rev. Sir G. W. Cox; *Unspoken Sermons*, Second Series, by Dr. George Macdonald; and *A Highland Gathering*, by Mr. E. Lennox Peel.

MR. FISHER UNWIN announces for publication next week *The Chancellor of The Tyrol*, a novel in two volumes, translated from the German of Dr. Hermann Theodor von Schmid, the German patriot novelist.

MESSRS. W. SWAN SONNENSCHNEIN & Co. will issue, in the course of next week, cheap editions of two of Mrs. Leith Adams's (now Mrs. Laffan's) novels—*Geoffrey Stirling* and *Madelon Lemoine*.

A NEW volume by Helen Mathers, author of *Comin' thro' the Rye*, &c., will be published by Messrs. F. Warne & Co., early this month. The title is *Found Out*.

A FRENCH edition of *Great Porter Square*, by Mr. B. L. Farjeon, will be published immediately by Messrs. Hachette & Cie. of Paris; and arrangements are in progress for the publication of the story in Germany, Sweden, and Russia. The novel is now out of print here, having run through two three-volume editions in the course of two months.

A CHEAPER edition of Lord Malmesbury's *Memoirs of an ex-Minister* will shortly be published.

Notings on the Regal Coinage and Token Currency of Guildford in Surrey, by Mr. George C. Williamson, is announced by Mr. Elliot Stock.

A NEW novel by Miss Constance MacEwen, author of *Miss Beauchamp*: a Philistine, will be published early in February by Messrs. Ward & Downey. It will be entitled *Not Every Day*: a Love Octave.

DR. MARSHALL has in the press a second edition of *The Genealogist's Guide*, which will be ready in February. The work has been carefully revised, and references to the principal works on the peerage and baronetage, to Notes and Queries, and to many books omitted in the first edition, have been added, and current publications brought down to date. This new edition will contain nearly seven hundred pages of references to printed pedigrees, and may therefore be considered as nearly exhaustive as it is possible to render a book of the kind.

IN the February number of the *Antiquarian Magazine* will be given a full account of the Gilds of Newcastle-on-Tyne, by Mr. Cornelius Walford, including a large amount of valuable information bearing on the early history of the trade gilds of that border town. "A Fourteenth Century Library" will form the subject of a paper by Mr. J. H. Round.

IN an interesting article in the *Zeitschrift für Deutsche Philologie*, Dr. Gustav Kettner attempts to show that Schiller's poems, "Der Pilgrim" and "Die Sehnsucht," contain marked traces of acquaintance with Bunyan's *Pilgrim's Progress*. Bunyan's allegory was early translated into German, and was highly popular at one time among the German peasantry. There is thus no improbability in the supposition that the work may have been among the popular pietistic literature which, as is well known, formed a large part of Schiller's reading in his boyhood, and exercised considerable influence on the development of his genius.

THE large edition of Schmidt's *Shakespeare Lexicon*, printed in 1874, has been entirely sold out, and copies are already fetching an advanced price. It is true the editor is preparing a new edition; but to print the two volumes of 1,450 pages, double columns, will necessarily occupy several years.

A SECOND edition has been published of *St. Stephen's Saturnalia*, the winter number of *St. Stephen's Review*.

Monkeys, Apes, and Men, the third of a series of contributions to the Darwinian theory, by Edward Aveling, is now ready. It is published by the Progressive Publishing Co.

A BOOK entitled *Chronicles of the Customs* has been prepared by Mr. W. Douglas Chester, containing much curious matter respecting the early history of this branch of the Revenue, the former methods of collecting it, the tricks, frauds, and evasions to which it has been subjected, and the notable persons who have been connected with its collection.

MR. W. L. R. CATES's very useful and handy *Dictionary of General Biography* (Longmans) has reached its fourth edition. The *Supplement*, bringing down the information to December 1884, may be had separately. We do not find in it the name of Paul Lacroix; but there are very good, though brief, articles on Mark Pattison, Karl Hillebrand, and Henry Fawcett. We note that Mr. Thomson's *Life of "Phiz,"* and Mr. Arthur Miall's *Life of Edward Miall*, very recently reviewed in the ACADEMY, are duly mentioned in the respective articles.

WE have received the first (monthly) number of *The East Anglian*; or, Notes and Queries on Subjects connected with the Counties of Suffolk, Cambridge, Essex, and Norfolk. Edited by the Rev. C. H. Evelyn White. Among the contents may be mentioned a reproduction of Speede's Map of Ipswich in 1610; a short article on "Norfolk Bondsmen in Blood," by Mr. Walter Rye, who has furnished in illustration copies of three documents from records of the Duchy of Lancaster relating to the status of this class; and a paper by Mr. E. St. J. F. Moore on "Some Roman Remains recently discovered at Felixstowe."

MRS. GORDON BAILLIE's novel regarding Skye Crofters will be illustrated by Mr. H. M. Paget, one of the pictorial staff of *Harper's Monthly Magazine*.

THE forthcoming number of the *Scottish Review* will contain, in addition to other articles, the following papers:—"Correspondence of Sir Robert Murray," "Echoes of the Eighteenth Century," "Archbishop Hamilton's Catechism," "The Lennox," and "Patmos." The last is from the pen of the Marquis of Bute, who resided in the island for some time.

MR. KARL BLIND will contribute to the February number of *Time* an article on Dr. Schliemann's discovery at Tiryns, and the same number of the magazine will contain an account of "Mr. Fawcett at the Post Office," by Mr. A. G. Bowie himself of the Post Office.

MR. GEORGE JOHNSTONE STONEY, Vice-President of the Royal Dublin Society, will, on Friday evening, February 6, give a discourse at the Royal Institution on "How Thought presents itself among the Phenomena of Nature"; and on the following day (Saturday) he will give the first of three lectures upon "The Scale on which Nature works, and the Character of some of her Operations."

PADRE F. FITA has lately published tomo ii. of his *Estudios Historicos*. (Madrid: Fortanet.) It is a collection of articles contributed chiefly to the *Boletín* of the Royal Academy of History, on the Roman Remains at Almazara, the Synagogue of Cordova, the previously unedited historical and biographical tracts of Gil de Zamora, and other matters of interest in Spanish archaeology.

ORIGINAL VERSE.

TO A CHILD.

If youth were mine, and grace, and early joy
(And once I was not old, Denise, nor stern),
I'd ring your brow with wreaths you would not
spurn,

And share with you the kingship of the Boy.
Ah, that were grand, and you would not be coy!
What games we'd have, what brave new sports
we'd learn!

It might be so—it might, if Time would turn,
Or Love could build again what years destroy.
Now, now, dear heart, I see no way but this—
To trump your queen-card with my simple knave,
Or like a Plautine lord when luck's amiss,
Do-on the tunic—do off the laticlave:
Seal, if you will, the indenture with a kiss,
But, kiss or no kiss, I shall rest your slave.

E. C. LEFROY.

OBITUARY.

EDMOND ABOUT.

It is not easy to remember any French man of letters who, dying recently, has been the subject of so much writing in the English daily press as the late M. Edmond About. This may have been partly due to the fact that he was not unconnected with English journalism, and had many English friends; but it was probably due also to the fact that as a writer he enjoyed an extraordinary, it may seem harsh to say a disproportionate, popularity in England. The abundance of personal and somewhat gossiping details which has been given in various places makes it entirely superfluous to enter into any such details here. The etymological explanation of the name About which has been given is pretty plainly apocryphal; and, if M. About suffered in the schools of his youth, he probably did not suffer more than most French boys, who invariably seem to regard their schools with unmitigated horror. The author of *Le Roi des Montagnes*, who was born in 1828 at Dieuze, in the department of the Meurthe, was of what is called by biographers humble extraction, though his father had some means and was a magistrate. He owed to his industrious and brilliant school-course at the Lycée Charlemagne his entry into the Ecole Normale in 1848. M. Francisque Sarcey has lately told the story of the singularly brilliant group of *Normaliens* which that year and its immediate predecessors and successors produced. Very few of the members of this group pursued the even tenour of their way as *professeurs*, and M. About was one of the first to break loose. His sojourn, however, at the French Archaeological School of Athens, whither he went in 1851, proved of no small value to him in regard to other matters than archaeology. He returned to Paris in 1853, and threw himself into journalism and literature. In 1855 he produced two noteworthy books, *La Grèce contemporaine* and *Tolla*. Each made a great sensation, and each procured for the author notoriety of a somewhat mixed kind. The unfavourable estimate of modern Greece given in the first book excited against M. About vindictive feelings, which soon found very practical expression; and *Tolla* gave rise to charges of plagiarism, which were somewhat better founded than such charges usually are. It is undisputed that the book owes a very great deal to a forgotten novel, entitled *Vittoria Savorelli*; it is not quite so clear whether the author fully acknowledged this indebtedness before he was obliged to do so. A three act comedy—"Guillery" or "L'Effronté"—accepted at the Français was promptly damned, it is said, by an organised *cabale* of Greeks. But M. About was not in the least daunted, and, besides much miscellaneous journalism, contributed to the *Moniteur* in three years, 1856-1858, five novels or collections of

short tales, all of merit—*Les Mariages de Paris*, *Le Roi des Montagnes*, *Germaine*, *Les Echasses de Maître Pierre*, and *Trente et Quarante*. After this his best known works became for a time of a political or semi-political kind, the famous *Question Romaine* being purely political, and the *Lettres d'un Bon Jeune Homme* mainly so. His second great dramatic effort, accepted, but not produced, at the Français, was played in 1862 at the Odéon, under the title of "Gaetana." A dead set was made upon it, and it was withdrawn. Besides these works, and much journalism in the *Constitutionnel* and other papers, M. About produced in 1861 and 1862 three noteworthy novels, *L'Homme à l'Oreille cassée*, *Le Nez d'un Notaire*, and *Le Cas de M. Guérin*. In the last years of the Second Empire his chief works were *Madelon* (1863), *L'Infâme* (1867), and *Le Fellah*, a book on Egypt (1868). In the latter year he became a contributor to the *Gaulois*, and later to the *Soir*, in which his vivid and rather imaginative letters on the Franco-Prussian War appeared. The war over he founded the *Dix-neuvième Siècle*, which had a rapid rise and a somewhat slow but sure decline. His marriage, his arrest by the Prussians in 1872, the gossip about his relations with Napoleon III. and his cousin Prince Napoleon, and other matters of the kind, concern us little. He had only been elected to the Academy a short time before his death; a previous attempt in 1870 being unsuccessful, owing, perhaps, to extra-literary causes. His polemical journalism, especially during the presidency of Marshal MacMahon was effective; but all his work after 1870 was inferior in quality to his earlier productions, and was marred by a perpetual and wearisome anti-Germanism and by ungoverned reflections on a government which, whatever its faults might have been, he had himself supported.

It would be entirely uncritical to speak of Edmond About as of a great man of letters. He was an extremely amusing writer, abounding in fun, which, though always broad, was never gross. He had a vivid imagination, great fertility of literary resource, and a remarkable faculty of polemic of the lighter kind. Of the French books of the last five-and-twenty years there are few, if any, which give occasion to such honest and healthy laughter as *Le Roi des Montagnes* and *L'Homme à l'Oreille cassée*. He had the *bon gros rire* of the old fabulists, while he seldom condescended to the besetting sin of Frenchmen when they wish to be funny—the sin which, for instance, mars the otherwise delightful work of M. Armand Silvestre. But About was essentially a Philistine. He was a very witty, extremely cultivated, highly intelligent, good-hearted, good-humoured Philistine—a variety of the breed of which we have comparatively little experience in England, though even here one or two fine specimens of it may be found. His attitude both in politics and in religion was unsatisfactory, being the old bourgeois Voltairianism connected with no general theory. He had, moreover, a certain dash of literary vulgarity which is not necessarily connected with this Voltairian attitude; for Courier (who expressed it in the first quarter of the century as distinctly as About did in the third) is not vulgar. These defects, combined with his rapid and occasional fashion of production and with the inconstancy of his devotion to one literary style, made him rather a brilliant journalist than a man of letters. His early political work is already forgotten, and his later has made no corresponding mark, even of an ephemeral kind. His criticism, of which he himself is said to have thought highly, lacks range and judicial appreciation. Of his novels the two just named ought to live, but hardly any others.

GEORGE SAINTSBURY.

MAGAZINES AND REVIEWS.

IN the current number of *Mind*, Mr. Mercier completes his classification of the emotions. The whole essay is an able one, but seems rather to be interesting as a *tour de force*, showing how far a biological treatment of the complicated facts of mental life can be carried, than valuable as a solution of one of the most difficult of psychological problems. Such feelings as the aesthetic seem to have the least possible light thrown on them by any reference to "interactions between the organism and its environment." Possibly it is an error to suppose that the emotions of the human mind, with their endless gradations and interpenetrations, can be classified in the same way in which material bodies can be classified. But, whether successful in its main object or not, Mr. Mercier's essay is fresh and suggestive, and shows that the writer has gained a considerable facility in psychological analysis. Prof. James again plays the part of relieving the gravity of the journal by one of his bright and almost sportive papers. The matter is no less weighty than "The Function of Cognition," but the manner is of the lightest and airiest. Dr. James has a concrete pictorial way of dealing with the abstractions of philosophy which is very engaging. How far it is conducive to penetration and masterful grasp may, perhaps, be doubted. We confess that though we in a manner followed the present essay with interest to its close, we should be exceedingly sorry to have to define its exact aim. It is said at the beginning to be a psychological study, but this is somewhat belied by its title, and the drift of the argument does not tend to clear away the initial sense of confusion. Dr. J. H. Stirling completes the demonstration of his thesis "that Kant has not answered Hume." This time he deals much more with Kant than with Hume, and aims at exposing the inadequacy of the Königsberg thinker's critical method in dealing with the problem of causation. According to his critic, Kant failed to see that there must be something in the facts to determine the mind to superimpose on them the category of causation (rather than another, as that of reciprocity), that the necessity which we attribute to a causal sequence must in a sense be in the objective phenomena themselves. Prof. Calderwood, in a review of Green's *Ethics*, finds much to approve and even to admire; while, at the same time, he considers it incumbent on him to separate the tares of Hegelian speculation which mingle with, if they do not threaten to choke, what he recognises as the wheat of a genuine common-sense Scottish philosophy. The number closes with a second ethical article, called "Ethical Alternatives," from the pen of Mr. J. T. Punnett. The paper, which has considerable literary merit, is a plea for the progress-idea as against the happiness-idea. It is based on the assertion that the former is inspiring, and fitted to be a supreme motive power, while the latter is not. It hardly attempts to show that the one is better capable of giving practical guidance than the other; and possibly the essayist is generalising too hastily from his own way of feeling in maintaining that men are capable of being roused to a pitch of enthusiasm by the bare idea of co-operating with nature in her blind impulse towards a more complex life. Does not this imagination, when it succeeds in firing aspiration, owe much of its force to a vague pre-vision of the fuller happiness which must attend all sane human progress? However this be, the admirers of Mill, who are not an altogether extinct species as yet, would not accept Mr. Punnett's version of the emotional power inherent in the idea of human happiness. The enthusiasm which inspires every genuine philanthropist is surely a passion for making men less miserable and more happy than they are.

THE *Boletín* of the Real Academia de la Historia for December discusses the question of the trophies of the re-conquest of Buenos Ayres in 1806, and the genuineness of the flag restored to the Duke of Cambridge in 1882. Considerable doubt is thrown on Señor Lorca's story, and interesting particulars are given of the failures of Beresford and of Whitelock. C. Pujol has a continuation of his valuable articles on Iberian coins, with excellent illustrations. F. Codera signalises from coins the existence of a petty Moorish king at Tudela in the eleventh century, otherwise unknown. F. Fita returns to the description of the Synagogue of Cordova. He gives and translates the inscriptions in full, and prints various documents illustrating the condition of the Jews in that city. The number concludes with a copy of the sentence of a judaizing Canon and Treasurer of the Cathedral burnt at Cordova February 23, 1484.

THE CURRENT LITERATURE OF THE
MADRAS PRESIDENCY.

Coimbatore: Dec. 8, 1884.

A CATALOGUE of the books registered in Madras, containing nearly all the books printed in this presidency, is published in the Government *Gazette* for each quarter of the year. The catalogues for the first and second quarters of the present year have already appeared.

Three hundred and eighty-two books were registered during the half-year which these two catalogues cover. They are classified under thirteen heads, which may be arranged here in three groups, according to their relative numbers:—I., Religious Books, of which there are 185 with 324,540 copies; II., School Books, of which there are 102 with 258,140 copies; and III., other works, of which there are 95 with 94,587 copies. The third group contains 1 work under the heading of biography, 11 under the drama, 8 under fiction, 2 under history, 7 under language, 6 under law, 7 under medicine, 7 under miscellaneous, 33 under poetry, 3 under politics, and 10 under science. Those under biography, the drama, fiction, and poetry, making together 53 of the 95 books in this group, are for the most part of a semi-religious character, and thus add their measure to the preponderance of the religious books in the first group.

Regarding the languages in which these books are written, 124 are in Tamil, 66 in Telugu, 45 in Malayalam, 18 in Canarese, 1 in Tulu, 1 in Konkani, 2 in Uriya, and 3 in Hindustani, making together 260 in these vernacular languages; 40 are in English, 29 in Sanskrit, 17 in Arabic, and 1 in Persian; 33 are bilingual books, of which 25 unite English to some one of the vernaculars, and 8 unite Sanskrit to either Tamil or Telugu. The remaining two books are polyglots, one of them in Sanskrit, Telugu, Tamil, and English, the other in English, Tamil, and Sanskrit.

The average price of these books, put into English money, is 7½d. each; and the total price of a copy of each of them is £7 4s. 10½d. Two hundred and ninety of them have prices under tenpence each copy, and only 38 are twenty-pence and upwards. The total sale-value of the whole of the copies is £15,407 5s., representing about £30,000 a year.

Seventy-six of the 185 religious books belong to Hinduism; of which 35 with 32,440 copies belong to the Vaishnavas, 25 with 19,550 copies to the Saivas, and 16 with 14,300 copies to Vedantism and to subjects which are common to all Hindus. Sixty-three of them with 209,950 copies are Christian books; of which 58 with 205,950 copies belong to the Protestants, and 5 with 4,000 copies to the Roman Catholics. The Mohammedans have 44 books with 44,800 copies. The Brahma-samāj has 1 book with 500 copies. The Theosophists also

have 1 with 3,000 copies. The sale value of the Christian and the Mohammedan books is nearly equal, each of them being about £500; the sale-value of the Hindu books is four times greater than either of these, or £2,402.

Two hundred and fifty-eight of the books in these two catalogues, or close upon two-thirds of the whole, were published at 45 different presses at Madras, and the remaining 124 at 21 different presses at 14 stations in the Mofussil.

Assuming that these two quarters are fairly representative periods, and deducting the usual proportion of the sale-price for the sale-profits, the amount of capital employed in the production of this literature is about £17,000 a year; of which £3,477 represents the cost of the religious books, while the school books cost £6,829, and the rest of the books £5,101; the population of the presidency being 31,170,631.

The influence of book literature in this Presidency is thus seen to be in its infancy; perhaps it may be preferable to say that it extends over but a small part of the population. Respecting the direction of its influence, it appears from the relative proportions of these books, that Religion and Education occupy much the foremost place in the current thoughts of the people; and the numerous Hindu books appear to represent a strong conservative movement, either spontaneous or provoked, working by the side of the Christian propaganda and the foreign influence of occidental education.

CORRESPONDENCE.

LANE-POOLE'S "SELECTIONS FROM SWIFT."

Richmond: Jan. 18, 1885.

Allow me, in thanking you for the very
flattering notice of my *Selections from Swift*
which appears in the current ACADEMY, to
state that the somewhat impersonal nature of
the selections, of which Mr. Dow naturally
complains, will be corrected by the *Journals*
and *Letters of Swift*, which I am now editing
for the Parchment Library. The impossibility
of uniting an adequate representation of Swift's
literary characteristics, with a worthy picture
of himself, in a strictly limited number of pages,
was the sole cause of this divorce of the man
from the writer. The new volume, however,
will be essentially personal and biographical,
and I only hope it may satisfy your indulgent
and sympathetic critic as well as the present-
ment of Swift's literary character given in the
present selections.

STANLEY LANE-POOLE.

'OMAR KHAYYĀM.

Teheran: Dec. 24, 1884.

Miss Amelia B. Edwards, in her review of
the new edition of Fitzgerald's translation
of 'Omar Khayyām with Elihu Vedder's
drawings (ACADEMY, November 29, 1884) says
that the poet lived and died about eight
hundred years ago, and that the dates of
his birth and death are not exactly known.
The date of his birth is not exactly
known, but that of his death s. 'Omar left
the Nishāpūr College in 1042, corrected the
Calendar during Malik Shāh's reign (1072-92),
and died in 1124, over one hundred years of
age, at Nishāpūr, where his grave is still to be
seen. 'Omar and his two celebrated school-
fellows, the great minister of the Seljuqs,
Nizām el Mulk, and the founder of the Isma'ili
Dynasty (the Assassins), Hassan Sabāh, were,
as Nizām el Mulk says in his *Vasāyā*, quoted
by Khondemir, of about the same age, and
Nizām el Mulk was born in the year 1017. The
minister was killed by one of Hassan's followers
in the year 1092. Hassan died, shortly after
'Omar, in the year 1125.

A. HOUTUM-SCHINDLER.

THE HUNTING OF THE WREN.

Queen's College, Cork: Jan. 14, 1885.

A letter of mine last year started a long
correspondence, which brought together a great
many interesting notices of the custom of
hunting the wren. None of the writers, how-
ever, spoke of the practice as still in existence.
Being here in Cork on St. Stephen's Day
(December 26), I found that the custom was
kept up; and from an early hour, squads of
boys bearing a broomstick furnished at the
with a little bower of holly, inside which
the wren, whether genuine or spurious, was
concealed, appeared in all directions. On
arriving at each door they struck up a dis-
tinct ditty, the words of which I give in full,
as it contains at least one verse which has not
been published before. I had no difficulty in
getting materials for a careful collation, since,

as soon as it was known that there was a
foolish person ready to give *largesse* of coppers
to "wren-boys" for repeating their rhymes, I
was speedily besieged by all the bands in the
neighbourhood.

The version in use here is as follows:—

"The wren, the wren, as you may see,
Is guarded on the holy tree
With a bunch of ribbons by his side,
And sporting chaps to be his guide.
The wren, the wren, the king of all birds,
St. Stephen's Day was caught in the furze.
Though he is little his family is great,
So rise up, landlady, and give us a trate [treat].
Droleen, Droleen, where is your nest?
'Tis in the glen that I love best,
Under the holly and ivy tree,
Where all the birds come sing to me.
When Christmas comes, 'tis but a folly;
Therefore let us be most jolly.
I have a little box under my arm;
Two or three coppers would do it no harm."

Droleen=Irish *dreolín*, a wren, or rather
little wren. Whether the word originally
meant *King*, like so many of the names of the
wren, as pointed out by Prof. Newton, is a
question for Celtic scholars to determine.

To show with what vigour the custom
flourishes in Cork, I quote the following ex-
tract from this year's report of the Cork Society
for Prevention of Cruelty to Animals:—

"The practice of killing wrens and other small
birds, to put on 'wren bushes' (so called) on the
26th of December (St. Stephen's Day), has been
under the notice of your officers. They examined
forty of these bushes, and found dead birds on
twenty-two of them (sixteen sparrows and six
wrens). At a future time it is intended to take
this question up, and see what can be done to put
a stop to it."

However, I have good hopes that my expendi-
ture of coppers this year has given such a
stimulus to the young Cork ragamuffins, that
they will defy the myrmidons of the Humane
Society for many years to come, and keep up a
most ancient custom, which seems now to be
defunct everywhere else.

WILLIAM RIDGEWAY.

AN OLD EPITAPH.

Milan: Jan. 18, 1885.

The ACADEMY of August 23, 1884, contains
an inquiry by Prof. Max Müller respecting the
source of the identical thought contained in an
English epitaph of the thirteenth century, and
in a German epitaph composed two hundred
years later by Martin of Biberach. The epitaphs
published by Prof. Stephens in the ACADEMY
of November 22 will scarcely satisfy Prof. Max
Müller's curiosity, as they merely ring the
changes on the theme "As you are now so once
was I," which has no connexion with the
"three things" that chilled the mirth of Master
Martin and his English prototype. In Mr.
Thomas Wright's edition of the Latin poems
ascribed to Walter Map (p. 149) is printed a
composition which, like others of its class, en-
joyed great popularity in the Middle Ages, and
which ends with the following lines:—

"Quo post mortem transeat quisquis ignoratur,
Unde quidam sapiens ita de se satur:
Contremisco jugiter dum mens meditatur
'Quid sum et quo propero, quid mihi paratur?'
De morte dum cogito, contristor et ploro;
Unum est quod moriar, sed tempus ignoro;
Tertium quod nescio quorum jungar choro;
Sed ut suis merear jungi Deum oro."

Although the second quatrain is apparently
corrupt, it is evident that we have here
the three thoughts which troubled Master
Martin of Biberach. The "quidam sapiens"
referred to in the above extract is probably the
author of the following epigram, which I have

published in my *Carmina Medii Aevi* (Florence,
1884), p. 43:—

"Sunt tria quae vere faciunt me saepe dolere:
Est primum durum quod scio me morituro;
Est gemitus dando moriar quod nescio quando;
Posterior fletu, quod nescio quo remanebo."

Prof. Max Müller was therefore right in his
suspicion that the two epigrams were probably
derived from a Latin source.

I will conclude by quoting an epigram I
have somewhere met with, which is stated to
be "an English epitaph of the seventeenth
century." Although evidently derived from
those previously mentioned, it is in my opinion
superior to them in force and dignity:

"Quid eram, nescitis,
Quid sum, nescitis,
Ubi abii, nescitis.
Vale."

FRANCESCO NOVATI.

AN UNPUBLISHED LETTER OF THOMAS HOBBS.

University College, London: Jan. 20, 1885.

The letter given in last week's ACADEMY is
not without interest, and is, doubtless, a
genuine original; but, written in characters
so "clear and firm," it is certainly not from
Hobbes's own hand. Hobbes (as Aubrey
states) had ceased to write legibly some twelve
years before, having long suffered from shaking
palsy in the hands.

The demonstration annexed agrees sub-
stantially with the one published in the follow-
ing year (1678) at the end of the *Decameron*
Physiologicum—the last, and, at least, the
simplest of Hobbes's many desperate efforts to
square the circle. His amanuensis, however,
in writing out the proposition for the Duke of
Ormond, must have done the work with even
less care than Hobbes himself was in the way
of bestowing on such matters. There is evi-
dently something omitted at the beginning of
the last paragraph, and it is not easy to see
how any figure can be constructed in accordance
with the directions there given. The remainder
of the paragraph becomes intelligible by refer-
ence to the published figure (*English Works*, vii.,
178). G. CROOM ROBERTSON.

"BEZONIAN."

London: Jan. 20, 1885.

Mr. Hall's argument in favour of the ex-
planation of the word from the Italian *bisogno*,
Spanish *bisño*, raw soldier, recruit, seems quite
satisfactory. Moreover, the conversion of the
French *besoignant* into *bezonian*, in passing into
English, as supposed by Prof. Skeat, would not
have been in accordance with the usual course
of the language. I do not think that a single
instance of such a modification of the French
active participle could be produced. An ex-
ample of the very form *bisogno* is given by
Nares: "A base *bisogno*." It may be added
that this *bisogno* or *bisño* has nothing whatever
to do with Italian *bisogno*, French *besoin*, want,
need. The true origin is the French *béjaune*
(bee jaune), a novice, apprentice, inexperienced
person, a metaphor from the helplessness of a
young bird, so named from the yellow or light-
coloured beak being a conspicuous feature of
the nestling. For the same reason the French
blanc-bec is used in exactly the same sense with
béjaune. As neither Italian nor Spanish have
the sound of the French *j*, *bisogno* and *bisño*
were the nearest approach to the French
original that could be made in those languages.
I formerly gave the same explanation of the
word in the *Transactions* of the Philological
Society.

H. WEDGWOOD.

ODIN.

Settrington Rectory, York: Jan. 19, 1885.

I am much indebted to Prof. Rhys for having stated so clearly and forcibly the arguments for regarding Odin as the heaven rather than the wind, as it affords an opportunity of suggesting a new solution of a difficulty which must have perplexed all students of Teutonic mythology.

Among the Norsemen, at the earliest period of which we have any knowledge, Odin appears to be undoubtedly the heaven; at a later time, especially among the Saxons, Woden seems quite as clearly to be the wind. As the All-Father, receiving the slain heroes into his Valhalla; as the omniscient Seer, perceiving all earthly things with his one eye, which is manifestly the sun; and also as the husband of the earth; we are compelled to recognise Odhr, or Odin, as a personification of the heaven.

But as the restless wanderer over the face of earth; as the psychopompos or conductor of souls; as the fierce god of war, riding on his white cloud-steed, which bears him through the thick of battle, followed by wolves and ravens, and breathing the battle-fury into men; as the bringer of the rain with his flying cloud-mantle; as tearing through the forests, overthrowing the oaks and riding on the storm: what can he be but the wind, in turn furious or gentle? He is also the inventor of runes, just as Hermes, the Greek wind-god, was of letters, and, as we are reminded by the correspondence of our Wednesday with the French *Mercredi*, he was identified by the Romans as their *Mercurius*, to whom had been transferred the myths and attributes of the Greek Hermes, whose *petasus* reminds us of the broad hat and mantle of cloud in which the Teutonic deity is clad. Moreover, Odin, who is called *heklumadr*, the man with the cloak, is thereby identified with the wild huntsman, *Hakelberg* (*hakeldrend*, the cloak-bearer), of later Teutonic legend, who, in broad hat and mantle, preceded by Odin's croaking ravens and followed by the furious host, sweeps at midnight through the forest, his advent heralded by a sound like that soft sighing of the wind through the trees which precedes the storm, till at last he comes, mounted on his gray horse, rushing through the forest like a hurricane, in furious chase of a woman with white breasts, who is called the Bride of the Wind (*Windebraut*), and who can be no other than Frigg, the bride of Odin.

If the wild huntsman of the German forests is indeed Woden, as can hardly be denied, then Woden is unmistakably the storm-wind, quite as unmistakably as Odin, in the earlier legend, is the serene and all-seeing heaven.

Sir George Cox and Mr. Keary have endeavoured to explain the double character of Odin by the theory that the more active deity of the later mythology was evolved out of the passive deity of earlier times.

But there is, I venture to think, a simpler explanation, which is more in accordance with what we know to have happened in the case of other mythologies. Analogy would lead us to suppose that there may have been two deities—the Heaven and the Wind—distinct in origin and character, but bearing names of similar sound, who were revered by two neighbouring peoples. In such cases it frequently has happened that they have been identified, the attributes and legends of the one being transferred to the other. Thus the Phœnician sun-god, with his twelve zodiacal labours, becomes the Greek *Heraclēs*, whose legend was in turn transferred to the Roman *Hercules*, an Italic deity, totally distinct, but of similar name, who presided over enclosures. So also the *Atli* and *Gunnar* of the earlier form of the *Nibelungen* lay become, in the later version, the semi-historic *Etzel* or *Attila* and *Gundicar*.

Something of this kind I imagine may have

happened with the two Odins, or rather, let us say, with the Norse Odin and the Saxon Woden. Myths may be transferred without any confusion of the names, as in the case of *Hermes-Mercury* or of *Athena-Minerva*; but of course the case is stronger if it can be shown that a confusion of names may easily have arisen. This seems to be the case in the present instance. Prof. Rhys follows Fick in deriving the name of Odhin, the heaven-god who knows all things, from Old Norse *óðhr*, "inspired," which is connected with the Latin *vates* and the Sanskrit root *vat*, "to know." On the other, Woden or Odhin, the wind, the ceaseless wanderer, may be from Old Norse *vóðh*, *óðhr*, "to move," "to go," which is related to the Latin *vādere*, "to go," and the Sanskrit *vāta*, "the wind," from the root *va*, "to go."

We have two sets of mythological ideas so distinct that one can hardly have been developed out of the other, which may, however, easily have arisen from words of similar sound, but radically distinct, the confusion or combination of which makes it possible to account for the apparently discordant conception of Odin, the All-Father, the silent and omniscient Heaven, whose eye beholds all things upon earth, and Odin, the raging battle-god, the rushing wind, ever in motion, and who as the furious huntsman sweeps at night with his ravens through the forest. A confusion or combination of discordant myths, as in the parallel case of *Hercules* and *Heraclēs*, is, I venture to think, more probable than the evolution of the furious huntsman out of the tranquil heaven.

ISAAC TAYLOR.

"FINN" AND "GWYNN."

University College, Cardiff: Jan. 19, 1885.

Prof. Rhys, in his letter on *Custom and Myth* in the last number of the ACADEMY, has touched upon a question of considerable interest, viz., the relation between the Irish Finn and the Welsh Gwynn. Before reading Prof. Rhys's letter I had been accustomed to regard the identity of Finn and Gwynn as absolutely certain; but the expression of doubt on the part of so high an authority naturally modifies one's confidence. It had appeared to me that the Welsh and Irish genealogies made it tolerably clear that these two legendary names represent one and the same personage; and I still think that the correspondence between the two pedigrees, partial as it is, is something more than accidental.

O'Curry (*MS. Materials*, p. 304) gives us the pedigree of the Irish hero "on the unquestionable authority of the *Book of Leinster*," according to which, Finn was the son of Cumhall, son of Trenmor, son of Snaelt, son of Eltan, son of Baiseni, son of Nuada Necht. According to the Welsh authorities (equally "unquestionable," no doubt), Gwynn is the son of Nudd Hael, ap Senyllt, ap Cedig, ab Dyfnwal Hen, ab Ednyfed, ab Macsen Wledig. These two pedigrees, though differing considerably both in the names and in the order, present several points of contact. The Welsh Nudd Hael is the same as the Irish Nuada Necht; Senyllt is Snaelt (even though the Index to O'Curry's work says "rectius Snaelt"); and, bearing in mind the not uncommon interchange of the letters *b* and *m* in the two languages, we hardly need hesitate to identify Macsen with Baiseni. It is true that our Welsh Macsen Wledig is generally identified with the Roman *Maximus*; but this identification may be merely some late rationalist's attempt to connect a legendary character with a well-known historic personage. Examples of such a process are not altogether unknown in Welsh and Irish literature. At any rate, if Macsen be a name of Roman origin, it will represent, not *Maximus*, but the longer form,

Maximianus, by which the same person is also designated in some of the MSS.

Again, we have in the Welsh pedigree Dyfnwal Hen, without any *Domhnall* in the Irish corresponding to it. But I have read somewhere (in O'Curry, I think, but cannot now recover the reference) that the MacDonald claim Finn, or Fingal, among their ancestors hence it is probable that we have here another link of the chain connecting Finn and Gwynn.

In the lectures on the *Manners and Customs of the Ancient Irish*, ii., 53, O'Curry mentions "Finn King of Leinster, who at this very remote period [some years before the Incarnation] wrote a genealogical poem on his own ancestors, the Kings of Leinster, from his grandfather the Monarch Nuadha Necht up to Adam." From the way in which this royal poet is spoken of here, as well as from the separate entry in the Index (iii. 619), it looks as if the author regarded this Finn as a different person from the son of Cumhall; but the occurrence of Nuadha Necht in the ancestry identifies them. However, if "grandfather" is used in its strict sense, this pedigree differs from that in the "Book of Leinster." The copy of the poem to which O'Curry refers—the only one known to him—is in the Bodleian (Rawlinson, 502); and if Prof. Rhys will consult it he may find there some further light on the relation of Finn and Gwynn.

The personality of Gwynn ap Nudd in Welsh literature is rather vague; indeed, he is almost shadowy enough to justify an etymologist in summarily disposing of him by translation as "The White Son of the Mist." May this fact, together with his relegation to the realm of Faerie, be regarded as proof that he is an importation into Welsh tradition?

THOMAS POWELL.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Jan. 26, 8 p.m. Inventors' Institute.
8 p.m. Society of Arts: Cantor Lecture, "Climate, and its Relation to Health," by Dr. G. V. Poore.
8.30 p.m. Geographical: "Expedition to Mount Kilimanjaro and the Snow Mountains of Eastern Africa," by Mr. H. H. Johnston.
TUESDAY, Jan. 27, 3 p.m. Royal Institution: "Colonial Animals," by Prof. Moseley.
8 p.m. Society of Arts: "With the British Association to the Canadian North-West," by Mr. Stephen Bourne.
WEDNESDAY, Jan. 28, 8 p.m. Geological: "The Boundaries of Lincolnshire, their Geographical Range and Relative Age," by Mr. A. J. Jukes-Browne.
"Some New or imperfectly known Madreporaria from the Great Oolite of the Counties of Oxford, Gloucester, and Somerset," by Mr. R. F. Tones.
"The Geology of the Rio-Tinto Mines, with some general remarks on the Pyritic Region of the Sierra Morena," by Mr. J. H. Collins.
8 p.m. South Place Institute, Finsbury: "On Oligarchy and Democracy," by Mr. J. A. Picton.
8 p.m. Society of Arts: "The Influence of Civilisation upon Eyesight," by Dr. R. Brudenell Carter.
8 p.m. Literature: "The Art of Reading Papers before Societies," by the Rev. A. J. D'Oreey.
THURSDAY, Jan. 29, 3 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
8 p.m. Society of Arts: Howard Lecture, "The Conversion of Heat into Useful Work," by Mr. V. Anderson.
8.30 p.m. Antiquaries: "Vestments belonging to the Dean and Chapter of Carlisle," and "A Hoard of Silver Coins at Beaumont," by Mr. R. L. Ferguson.
FRIDAY, Jan. 30, 9 p.m. Royal Institution: "Living Composers for the Pianoforte," by Prof. Ernest Fauré.
SATURDAY, Jan. 31, 3 p.m. Royal Institution: "Greek Sculpture," by Dr. Waldstein.

SCIENCE.

Métrique Naturelle du Langage. Par PAUL PIÉRON. (Paris: Vieweg.)

THIS book deals with the interesting and disputed questions of accent and quantity in French. The author maintains that if scientific analysis of verse does not yet exist

the fault lies in the unphonetic mode of treatment hitherto followed by grammarians. "If they wish to know the quantity of a syllable," says M. Pierson,

"they take as guide, not the sensation of the ear, but only the memory of the eye. Their ears, for want of training, would lead them every day into the grossest blunders; and knowing this well, they prefer to keep within the literary tradition. So unnatural a state of things cannot endure for long. This habit of consulting the eye instead of the ear in a question purely of sound, results in a total loss of the perception of quantity, and a perversion of the art of poetry from its original intention. Beginning as song, it degenerates at last into print; and created at first to delight the hearer, it has finally to obey the requirements of the reader" (pp. 196-7).

In setting aside all unphonetic orthography the author eliminates one abundant source of error, and we must next see how he deals with the other difficulties of his task.

He goes on to argue that no theory of metre can be founded on conjectural or artificial pronunciation. This excludes both dead languages and foreign languages, and limits us to the known and familiar sounds of our native speech (pp. 139, 242). Yet the field of research remains wide enough, for, besides the pronunciation of every word taken separately, we have to analyse all the variations due to "position" in the natural connected sentence (p. 137). This aspect of French verse, M. Pierson thinks, has not yet received proper attention. Neither, indeed, has it in English, as our writers on prosody still cling to the notion that a loud syllable must always be long, although, as Mr. Sweet has shown, in some positions it is invariably short. A phonetic statement of the influence of quantity on modern verse seems to be required in this country no less than abroad.

From our author's refreshingly rational ideas of method we may turn with confidence to examine his results. In rejecting the dogma of grammarians that the accent in French words falls on the last phonetic syllable, he agrees with Moritz Rapp, Prof. Casel, and Mr. Sweet. As there is just now such controversy on this point, it will be worth while to quote a few sentences. "The true solution of the difficulty," says Mr. Sweet,

"probably is that the French accentuation is a period of transition; the tradition of the older end-stress still exists, but a general settling of stress has taken place. Out of this level monotony is slowly emerging the principle of fore-stress. The French themselves, of course, generally deny it absolutely, just as they deny their frequent *h*" (*Sound and Sense*, p. 58).

Compare now M. Pierson's statement. "The French language," he says, "is passing at present through a very interesting stage, and holds a position almost unique among the languages of Europe; for, while most of the latter have a fixed accent in each word, in French the accent of stress and the point of pitch may leave their normal position and fall on another syllable, according to the requirements of expression" (p. 140).

As regards pitch, he says:—

"The oxytone accent, though still existing in many cases, especially in the refined language, is losing ground every day; and we may even predict that at some period, still perhaps distant,

there will be nothing but paroxytones and proparoxytones, since these accentuations are now invading even exclamatory and interrogative phrases, while conclusive phrases are barytone already" (p. 245).

Again, as regards stress, he says:—

"In the popular language the last phonetic syllable of French words is oftener weak than strong. Yet, whatever may be its weakness, the last syllable is often strong in the dialect of good society, and bears the ictus when required by the punctuation of the phrase. But such a state of accentuation can evidently be no more than transitory. By-and-by the stress-accent will become fixed at the same time as the pitch-accent. Those who always take the lead in revolutions of language—the common people—have gone far on this road even now. It is to be hoped that the conservative instinct of the enlightened classes will delay, as long as possible, such a radical transformation of our tongue" (p. 249).

How the said classes are to set about so huge a task M. Pierson does not explain, but his evidence as to the present state of French accent is as clear as it is unbiased.

Equally unconventional is his theory of verse. Any succession of syllables, grouped into feet, each foot beginning with stress, produces metre; and the recurrence of stress at regular intervals of time produces rhythm. Thus, in his sense of the word, rhythm requires that each foot shall be equal as regards quantity. The number of syllables alone is no criterion, for a syllable, being of variable length, cannot serve as divisor (p. 226). Does French verse, then, differ from prose by any such regularity?

"We must have the courage to confess [answers M. Pierson] that French verse, when pronounced, not in the monotonous fashion customary in the schools, but with all the expression which the sense of the phrase demands, has no longer any determinate rhythm, and is not distinguished from the simple declamation of prose, except, perhaps, by the turn of style" (p. 227).

He goes on to maintain the superior value of this prose-poetry, in which he will hardly be supported by any one who appreciates rhythmical verse, even as it now exists in English.

These theories of metre are sufficiently wide and general, but, to follow and verify them properly, we should require a larger number of examples than M. Pierson gives. His attempt at phonetic spelling, too, is feeble, though, perhaps, no more so than might have been expected; as it is only in this country that strictly scientific notations have been constructed. Several pages, again, are devoted to a theory of melody and harmony, which, besides being irrelevant in a treatise on metre, appears to be founded on the arithmetical explanation of consonance, now superseded by the discoveries of Helmholtz. Fortunately, the rest of *Métrique Naturelle*, apart from this section, may be read as a complete work. In the preface from the pen of M. Gaston Paris, there is an interesting account of the studies which resulted in this treatise. In 1872 M. Pierson entered the Parisian *Ecole Pratique des Hautes Etudes*—a public institution for original research that seems to have no precise counterpart in England. The *école* is endowed by the Paris Municipality with a number of "travelling

scholarships"; and one of these being assigned to M. Pierson, he was enabled to proceed in 1875 to the University of Vienna. Here he devoted some time to antiquarian work in Romance literature; but soon turned his attention exclusively to living philology, the observation of spoken language, for which science he appears to have been specially fitted by his phonetic and musical talents. After returning to France, M. Pierson announced his discoveries in a letter to his former fellow-student at the *Ecole des Hautes Etudes*, M. A. Jarnik, who is now Professor of Romance Philology at the Tschech University of Prague, where another pupil of the same *école* holds a similar position at the German university. In 1878 M. Pierson was appointed Professor of French at Groningen; but, in the feeble state of his health, a southern climate was judged more suitable, and at the beginning of 1880 he was sent to Algiers to organise the library of the *Ecole Supérieure des Lettres et des Sciences*. He crossed the Mediterranean for the last time to pass the summer vacation at home, and died in the autumn of 1880. His treatise, for which he obtained his degree at Vienna, is now published by the Parisian *école* under the authority of the French Education Department.

What strikes us most in this short but active career is the favourable light it throws on the organisation of philology in France. We were, indeed, already prepared for this by the high style of antiquarian work done of late years by French scholars. But M. Pierson's researches were not antiquarian, and all the more honour is due to the authorities who appreciated and advanced him. It is not surprising that France is able to supply professors of Romance philology to foreign universities; but it would be surprising if anything similar should soon become possible in England. Yet at some future time we may be able to send teachers of English philology at least to the colonies, and to attract to this country many students of the history and science of our language who at present find their centre of instruction in Germany.

JAMES LECKY.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol. VII. No. 1. (Baltimore.) The first eighty-one pages out of the ninety-nine (why does this part close with a blank page?) which compose this number are taken up with papers which treat of very intimately connected subjects. Not only would the non-mathematical reader be puzzled by the numerous new expressions which would meet his eye, but a very fair mathematician, unless he had carefully read the previous volumes, would find some difficulty, on a cursory inspection, in explaining such terms as "perpetuants," "capitation," "decapitation," and many others. Prof. Cayley contributes four papers—viz., a memoir on seminvariants, certain tables of symmetric functions, non-unitary partition tables, and seminvariant tables. For such tables as these the form of this Journal is admirably adapted. It is pleasant to see how readily the veteran analyst acknowledges the important discoveries in this department which have been made by such rising, but yet junior, men as Capt. Macmahon and Mr. J. Hammond. The former of these gentlemen (whose very remarkable discovery that the theory of seminvariants is a part of

that of symmetric functions" is, in a measure, the cause of the first of the above-named papers having been written) has a paper on "Perpetuants," in which he carries on the theory from the point where Prof. Cayley had left it in papers we have previously noticed. Mr. Morgan Jenkins furnishes a note on Prof. Sylvester's "Constructive Theory of Partitions," and Mr. A. L. Daniels finishes his third note on Weierstrass's "Theory of Elliptic Functions." From the notices on the cover we see that Prof. Newcomb, who has succeeded Prof. Sylvester as editor-in-chief (Dr. Craig being still associate editor), is engaged in active teaching on the Johns Hopkins University staff.

Proceedings of the Edinburgh Mathematical Society. (Second Session, 1883-4.) At present the bulk of the *Proceedings* is not large; but this is not matter for surprise, as we believe the Society was formed for the interchange of mathematical ideas and methods *vivâ voce* rather than by the printing of papers. However, one would naturally expect that even at such gatherings some papers of mark would seem to deserve a more permanent record than the minute book would provide. The titles of the communications have, from time to time, appeared in our columns, and it is most likely that a paper whose title, or the abstract of whose contents, struck the eye of a reader favourably, will be found printed here. There are about fifteen papers, covering a fair amount of diversified ground, and to these are added the two Presidential Addresses. That by Prof. Tait, under the title "Listing's Topologie," has been printed in the *Philosophical Magazine* for January, 1884 (pp. 30-46); and that by Dr. Muir on "The Promotion of Research, with Special Reference to the Present State of the Scottish Universities and Secondary Schools," has been circulated privately. The papers and addresses will afford good fare for mathematical readers, the papers more especially for teachers.

Elementary Text-Book of Trigonometry. By R. H. Pinkerton. (Blackie.) This little work does not call for any lengthened notice. It is a very neatly got-up and carefully compiled "elementary text-book." It everywhere shows evidence of thoughtful arrangement, and is not by any means a *rechauffé* of previous works on the subject. Novelty is not to be expected, but clearness of arrangement and of exposition commend the work to students who are reading up for the Science and Art and similar Examinations. There is a good selection of exercises from papers set in the South Kensington, the Civil Service, and University Examinations.

First Lessons in Arithmetic by means of Brick-box and Square-ruled Slate, for the Use of Elementary School Teachers and for Home Use. By Ferdinand Schneyer. Part I., Number-Range 1-10. Translated from the Second Edition (1879), by W. P. Turnbull. (Bell.) There are fifty-two exercises, and they are calculated for a year of forty-eight weeks, at four half-hours a week. The author assures us that—

"the little work has originated, not in a miserable love of book-making, but in a conviction, founded on the experience of many years, that with the spread of Tillich's Brick-box (the one referred to on the title-page), a real service is done to the young."

For children who find arithmetic very difficult, the book seems well adapted. The training may appear tedious, but the result can hardly fail to be a correct and solid acquaintance with the fundamentals of the subject. The translator appears to have performed his work very successfully. There are five plates of figures for practice.

Scientific Romances. No. I. What is the Fourth Dimension? By C. H. Hinton. (Sonnenschein.) Of late years we have had the

subject of hyperspace brought to our notice by Helmholtz, Sylvester, Clifford, and others in serious articles, and more recently still it has attracted the attention of a larger public in the pages of that amusing brochure, *Flatland*. Though the present pamphlet of thirty-two pages is called a Romance, it is a very carefully and closely reasoned piece of writing, which we commend to the notice of any who have taken even the slightest interest in the matter of which it treats. In the space at our command we can hardly give a satisfactory analysis of it, and any extract *per se* would most likely be unintelligible.

Elements of the Differential and Integral Calculus. With examples and applications. By James M. Taylor. (Boston: Ginn, Heath, & Co.) This is another of the well-got-up and carefully compiled works on the Calculus with which American mathematicians are making us familiar. We have at hand four or five other books which seem to cover very nearly the same ground. Such a phenomenon could hardly occur here; but, we suppose, each University has its own special book. There is no need for detailed examination, seeing that there is no market in England for books of this kind, and it will be some time before Williamson's masterly treatises on the two branches are superseded.

"Many theorems are proved both by the method of rates and that of limits, and thus each is made to throw light upon the other. The chapter on differentiation is followed by one on direct integration and its more important applications."

This latter feature is one peculiar to the American books, and it strikes us as being a good one to get the student early familiarised with the easier parts of the "Integral." We need only further say that the book is a good elementary book, and written in an interesting style, so that we are disposed to think that the author may fairly expect that it will "awaken a lively interest in many readers, to whom a more abstract method of treatment would be distasteful."

SOME ARABIC BOOKS.

Das Matriarchat (Mutter-recht) bei den Alten Arabern. Von G. A. Wilken. (Leipzig: Schulze.) In this little pamphlet Prof. Wilken, teacher of ethnography at Leiden, develops the theory originally put forward by Prof. Robertson Smith in his paper on "Animal Worship and Animal Tribes among the Arabs and in the Old Testament," published in 1880 in the *Journal of Philology*, that a system of kinship through the mother alone, based on a polyandrous relation of the sexes, once existed among the tribes of the Arabian Peninsula. Starting from the traces of totemism to which attention was called by Prof. Robertson Smith, a form of family grouping which is generally found to imply exclusive descent by the mother, the author endeavours to show, from Strabo and Ammianus Marcellinus, that ancient testimony is in accord with this theory; that it is supported by the custom of *Mut'ah* or temporary marriage, which undoubtedly existed at the time of the Prophet, and respecting the abolition of which by him the Sunnis and Sh'is hold opposite views; that the great frequency of divorce, especially in certain conspicuous instances in which woman exercised the right, in the pre-Islamic age, is in favour of the theory; and that there is distinct evidence of regular polyandry in the traditions relating to marriage customs in the pagan period. Certain notices from Yâqût, Ibn Batûta, Hamilton, Petherick, and W. G. Palgrave are quoted to show that pre-Islamic customs in this respect survived long after Muhammad's time, and may be found even in the present day. To the tribes named after their mothers, specified on p. 40, may be added Tuhayyah (*Hamâsah*, at-Tibrîzi's

comm., p. 12), and probably Taghlib (*Taghlibu-bnatu Wâ'ilîn*, 'Amr b. Kulthûm, Aghânî IX. 184: Kâmil of al-Mubarrad, p. 129, l. 10). The book is a careful summary of the main facts bearing on the subject discussed; and if it is (as we think) premature to decide in favour of the hypothesis set forth by Prof. Wilken, it must be admitted that the scrupulous fairness with which the evidence is stated and examined by him contributes greatly towards a correct appreciation of the problem.

Skizzen und Vorarbeiten. Von J. Wellhausen. Erstes Heft. (Berlin: Reimer.) Under this title Prof. Wellhausen has strangely grouped together (1) a German version, enlarged and recast, of his well-known article on "Israel" in the *Encyclopædia Britannica*; and (2) an edition of that portion of the Leiden MS. of the *Dûwân of the Hu'sais* which was left unpublished by the late J. G. L. Kosegarten, when he issued his first volume in 1854. To the Arabic text of the latter, Prof. Wellhausen has appended a translation of the poems numbered 139-241; the remainder, Nos. 242-280, he has left unrendered, since they are post-Islamic. The portion of the *Dûwân* published by Kosegarten was translated by Pastor Rudolf Abicht, of Namalau, in 1879, so that for this interesting and probably unique collection of ancient Arabic poetry we now have, in these two renderings and the commentary which accompanies the original text, an excellent apparatus for study for which their authors deserve the warmest gratitude. Unfortunately, no MS. has yet been found of the first half of the *Dûwân*, of which the published portion is only the second. The last few years have, however, been fruitful in discoveries of old Arabian poetry. The author of the *Tâj-al-'Arûs*, writing in the middle of the last century, quotes frequently from this part, which contains the compositions of the celebrated poets Abû Du'âib and Abû Khirâsh; it may, therefore, fairly be hoped that we shall ere long find a complete MS. of the *Dûwân*, either in Egypt, Syria, or the libraries of al-Madinah. In an advertisement prefixed to the book, Prof. Wellhausen explains that the two parts of which it consists bear upon certain literary plans which he entertains, dealing with (1) the history of Israel, (2) ancient Arabian antiquities, and (3) the history of the Arabs down to the fall of the house of Umayyah. The first and second of these objects are served in the present volume by the two parts which it contains; the third will be dealt with in the next volume of the series, to be devoted to an attempt to characterise the parties which existed in the earliest days of al-Islâm. The author hopes in like manner to publish a *Heft* of the same size every year. "Dass Mitarbeiter ausgeschlossen sind, versteht sich nach allem Gesagten von selber."

WE have received *Al-Hamdânî's Geography of the Arabian Peninsula*, edited by D. H. Müller. (Leiden: Brill.) This volume, which contains the text only, according to the MSS. of Berlin, Constantinople, London, Paris, and Strassburg, is shortly to be followed by a second, containing an Introduction, Notes, and Indices. Our remarks on the book must necessarily be reserved until the second part appears. Meantime, it is sufficient to say that this work by the famous author of the *Ikkil* (†334 A.H.) is full of interesting matter, especially in relation to al-Yaman, and that it has been issued in a most convenient form—that of the Leiden edition of Tabarî—by the editor and publisher. Notwithstanding the number of MSS. which have been used for the edition, many lacunæ and unpointed names still appear in the text. The *corrigenda* noted in this volume will doubtless be largely supplemented when the second part is issued. Great pains seem to have been taken

with the poetical quotations. We have, however, noticed the following, which seem to require correction. On p. 138, l. 19, in the line from 'Antarah's *Mu'allagah*, for *sharibtu* read *sharibat*. On p. 161, l. 10, for *Najrân* read *Najrâni*. On p. 175, l. 16, for *ihladayat* read *ihladat* (this passage from an-Nâbighah does not appear in Ahlwardt's *Six Poets*). On p. 230, l. 11, for *Bâriq* read *Bâriqun*. The enigmatical name on p. 145, l. 23, is perhaps *Faifur-rîh*. Apparently a title has dropped out on p. 136, after l. 10. A good map, based on the indications of the text, would be a very acceptable addition to the contents of the second volume.

CORRESPONDENCE.

A LAW OF LATIN ACCENTUATION.

London: Jan. 10, 1885.

Latin often has *a* in root-syllables where from the analogy of other languages we should expect *e* (or *o*): thus we have *méyas* but *magnus*, *peléas* but *malus*, *téscapes* but *quattuor*. This is due, I would suggest, to the fact that in such words the accent—which is not marked in Latin, but can be recovered from the parallel forms in Greek or Sanskrit—fell not on, but after, the root-syllable: *magnús* and *mallús* were accented like Greek adjectives in *-ús* and *-ús*; *quattuór* like Sanskrit *catvāras*. So *apis* corresponds to *ἐπίς*, *favús* to *συφε* (*φίς*, *largús* to *ἐλ-δελεχús*) to *δολιχός*, *valgús* (from *vergo*) to *καβός*; *lactér* and *sactér* (cf., *ἐλκω* and *δπς* respectively) to Greek adjectives in *-ús*, *aptús* and *sactús* (beside *ἐπί* and *ἐνεγκέιν*) to Greek verbs in *-ús*. So *amó* (from *emó*, "take"), *paró* (*πορεῖν*), *vadór* (*ἔ-φθ-λος*), *flagró* and *petró* (beside *φλέγω* and *pelo*), remind us of Greek verbs in *-du*, as *caléo* (from a root *KED*, English *hot*), *habéo* (beside *hedera*), *manéo* (*μένω*), *paléo* (*πείλω*), *patéo* (*πείθω*) remind us of those in *-tu*; or *lucío* (*ἐλκω*), *parío* (*πορεῖν*), *quatio* (English *shed*), *sapío* (Anglo-Saxon *sefan*, "teach") of Sanskrit causatives in *yámi*. So in tri-syllables which accent the penultima: *angúilla* (*ἔγγελλος*), *arúndo* (English *besom*), *lacértus* (*λέχριος*), *apícior* (*ἀπείρος*), *tabérna* (*τάβηρα*, "put round"), *apícior* (*ἀπείρος*), *apícior* and *nanciscor* (see *aptus* above), *culéna* (Gothic *hinthan*, with *i* representing *e*), *salíva* (*serum*), it is the accent which causes the root-syllable to show *a* instead of *e* or *o*. So *óvis* gives *avílla*.

E. R. WHARTON.

SCIENCE NOTES.

Is the last part of the *Proceedings* of the Physical Society of Edinburgh there appears an elaborate paper "On the Harz Mountains," contributed by Mr. H. M. Cadell, of the Geological Survey of Scotland. The writer has personally examined a great part of the region under description, and has worked up the German literature of the subject with much care. It is curious to note that although the Harz is a region of the greatest interest to the miner and to the geologist, there have hitherto been very few scientific writings on the subject available to the English reader.

MR. W. F. KIRBY'S *Text-Book of Entomology*, which has been known to be in the press some time, will shortly be in the binder's hands. It will contain several hundred figures of European and exotic insects, and will be published by Messrs. W. Swan Sonnenschein & Co.

MESSRS. LONGMANS have in preparation a work on *The Rotifera*, or Wheel Animalcules, by Dr. C. T. Hudson and Mr. P. H. Gosse. It will be illustrated by thirty plates of coloured figures, drawn from life by the authors, and including almost all the known British species.

The book will also contain descriptions and figures of the more important foreign species.

THE first edition of *The Year-Book of Treatment*, a critical review for practitioners of medicine and surgery, which was published last week, has already been exhausted, and a second edition is now in the press.

THE second and concluding volume of Prof. Claus's *Elementary Text-Book of Zoology*, edited by Messrs. Sedgwick and Heathcote, and containing the section from the Mollusca to Man, is announced for publication by Messrs. W. Swan Sonnenschein & Co. for next week. It will contain 215 new woodcuts, making, with the previous volume, 706 cuts in all.

UNDER the title of "The Humours of the Sun," Mr. Ray Woods, of the Royal Cape Observatory, will contribute to *Cassell's Magazine* next month a paper descriptive of sun spots, with copies from photographs of the sun's surface, showing spots and mottling.

PHILOLOGY NOTES.

PROF. LEIST, in his *Græco-italische Rechtsgeschichte* (Jena, 1884), calls attention to the parallelism of some of the fundamental legal conceptions of the Greeks and Romans—e.g., *ἐνεχυρῶσις* = *pignoris captio*, *χεῖρας ἐφίηται* = *manus injectio*, *πρόκλησις* = *in ius vocatio*.

HOFFMANN'S polemic, *Prof. Sievers and the Principles of Linguistic Physiology*, is criticised severely in the *Literarisches Centralblatt* for January 17.

THE same number contains an appreciative notice of Gaston Paris's critical edition of the eleventh-century *Vie de Saint Alexis*. Students of the Romance languages will also welcome Dr. Hüntgen's edition of the Old-Provençal Boethius lay.

IN the domain of the Italian tongues Appel's little book, *De genere neutro intereunte in Lingua Latina* (Erlangen, 1883), seems an important contribution, not only to Latin, but to Romance philology. The new part of Pauli's *Altitalische Studien* contains papers by the editor on the Etruscan inscriptions of the museum at Leyden; an elaborate essay, by Schaefer, on the formation of the plural in Etruscan; and an ingenious suggestion by Danielssen that, in Latin, nouns in *-u*, like *cornu*, *genu*, and certain nouns in *-us*, such as *manus*, *sexus*, are really old forms of the dual.

THE second half of the second volume of the German translation of Pypin and Spasovič's history of the Slavonic literatures has just appeared in Leipzig. It treats of the Cecho-Slovaks and the Lusatian Serbs. The next volume, in which Pypin will deal with the Great-Russian literature, completes the work.

PROF. WRIGHT'S *Book of Kalilah and Dimnah* is favourably noticed in the *Revue Critique* for January 12 by M. Rubens Duval. M. Duval propounds many ingenious conjectural emendations of the unique Syriac text, and speaks in high terms of those due to Mr. Keith-Falconer, who is preparing an English translation. Another publication interesting to Semitists is Berger's *Nouvelles Inscriptions Nabatéennes de Média Saleh*.

GOING further east we have Truong-Vinh Ky's *Grammaire de la Langue annamite*, printed at Saigon; and, still further, we find from a review, by Prof. von der Gabelentz (*Literarisches Centralblatt*, January 10), of Lange's *Old Japanese Spring-Songs* (Berlin, 1884) that in these songs the syllables are not scanned (i.e., divided into metrical feet), but counted: 5, 7, 5 || 7, 7. This seems to have been the case with some of the Indo-European nations. Thus, according to Dr. Kuno Meyer, all the older Slavonic and

Lithuanian poetry merely tied down the "lines to a fixed number of syllables, irrespective of word-accent or any other law." So of the Old and Middle-Irish poets it may be said (as Zeuss, *G. O.* 935, says of the Indians): "satis habent parem syllabarum numerum veribus tribuisse," and this whether they wrote in Irish or in Latin.

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Jan. 13.)

PROF. FLOWER, President, in the Chair.—The President exhibited the photograph of a "tall" boy from Saigon. The child was about eight years old, and the appendage from six to eight inches long.—Dr. Garson exhibited, on behalf of Dr. Arthur Thomson, some composite photographs of skulls.—Mr. Oldfield Thomas read a paper on a collection of skulls from Banks, Mulgrave, and Dauan Islands, Torres Strait, recently received by the Natural History Museum from the Rev. S. McFarlane, who obtained them from a sacred skull-house on Jarvis Island. The skulls were shown to be of the most pronounced Melanesian types, being characterised by their elongated shape, heavy frowning brow ridges, low orbits, long, narrow palates, and exceeding prognathism. The various numerical indices showing these points were fully worked out and compared with those of the Fijians, Australians, and other allied races. A new index, the "Naso-Malar Index" was proposed to show the relative prominence of the central as compared with the lateral parts of the face, and the terms, *prosoptic*, *mesopic*, and *platyopic* were suggested for skulls or races showing various degrees of development in this respect. Full measurements of the thirty-eight adult skulls in the collection were given, and the averages both of the measurements and indices were worked out in detail.—The director read a paper by Mr. A. L. P. Cameron on "Some Tribes of New South Wales."

ROYAL MICROSCOPICAL SOCIETY.—(Wednesday, Jan. 14.)

REV. W. H. DALLINGER, President, in the Chair.—Mr. A. D. Michael read a paper on the "Life histories of some of the little known Tyroglyphidae." In 1873 Riley published a report on the ravages of the apple bark-louse (*Aspidiotus conchiformis*) and described an acarus which was supposed to destroy that pest, and which he thought might be the *Acarus malus* of Shimer. Riley only describes the female. Mr. Michael has found the acarus in England under the bark of reeds destroying the reeds, not feeding on any insect, and concludes that it is probably a feeder on various kinds of bark, not on animal life; he has traced the whole life history. The male (previously unknown) presents the exceptional features possessed by the male of *Tyroglyphus carpis*, discovered by Kramer in 1881, and the hypopial nymph has been figured by Canestrini and Panzago in 1877 under the name of "parasite of an Oribata," but without explanation. Mr. Michael finds in the life-history of this hypopus a confirmation of his views that the hypopial stage is not caused by exceptional adverse circumstances, as Mégnin supposes, but is an ordinary provision of nature to insure the distribution of the species, which it is intended to call *Tyroglyphus corticialis*. Mr. Michael also called attention to the prevalence of *Rhizoglyphus Robini* on Dutch bulbs imported into England in 1884 and to the destructive character of that species and the damage it did to hyacinth, dahlia, and ercharis bulbs, &c., and recommended that imported bulbs should be carefully examined.—Dr. Maddox read a paper on some unusual forms of lactic ferment (*Bacterium lactis*) of which he showed drawings and photo-micrographs. Some of the chains had the different joints increased largely in size in different parts of the chain in an irregular manner, whilst in others some joints had become more or less globular as well as very enlarged. Dr. Maddox inclined to consider the enlarged cells as the result of a generative effort (by which the organism can be tided over such conditions as would otherwise lead to its destruction) rather than as a degenerative state or return to a primary phase.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 15.)

MR. O. S. PERCEVAL, Treasurer, in the Chair.—Mr. J. C. Robinson exhibited two carved oak panels, one bearing the arms of Blount of Grendon, Herefordshire, nebuly of six or and sable, with three pellets in chief for a difference, impaling those of his wife, Botenham, the crest being a bull's head couped. The other has the arms of Wm. Blount, Lord Mountjoy, in 1593.—Major Cooper Cooper exhibited an urn and fibula found on Sheepwalk Hill, at Toddington, Bedfordshire.—Mr. Freshfield presented a facsimile of the Wansey Roll, a poem on the Symbols of the Passion, with drawings.—Mr. Perceval made some further remarks on the charters which were recently exhibited by Mr. Earwaker.

ROYAL HISTORICAL SOCIETY.—(Thursday, Jan. 15.)

MR. HYDE CLARKE, in the Chair.—Major-General Sir Frederic Goldsmid read a paper on the "Perplexities of Oriental History." Starting with the proposition that Oriental history, as told by Oriental historians, is for the majority of readers in Europe a study of little attraction, the lecturer proceeded to show the difficulties with which our own writers have to contend in presenting the same in a form suitable to a home public. His main illustration he found in the story of Timur and the Timurides. The Tartar conqueror is no more realised to us in outward appearance than in the inner man. Portraits, as handed down, are not to be relied on, and, if reliable, would give no indication of idiosyncrasy; while the received narratives of acts and exploits are conflicting, and not to be reconciled one with the other. After a glance at several of the many records of the life, or bearing upon the life, of Tamerlane, notice was taken of English stage representations in which he is the hero, such as the tragedies of Marlowe and Rowe, and the sensational melodrama of Monk Lewis. In this respect it was argued that "one practical result, of some value to the student of history, may be obtained from attention to the dramatic literature of a country. Each newly-produced play presumably illustrates the stage of knowledge attained on the particular subject it handles, at the period of its production." Examples were given of contradictory statements in Eastern annals, where reference is made to one and the same occurrence: the propriety was urged of describing, with minuteness, the character of native as well as European heroes; and the necessity was maintained of imparting to Oriental history the charm of style which has been so successfully applied to the narratives of Western states. The outcome of the whole argument was thus, in conclusion, expressed:—"If it be difficult to write Oriental history at all on the conflicting data supplied, it is yet more difficult to render that history suitable to the tastes of a home public. The only chance of success lies in a careful collation of all existing histories and acceptance of one which is the most likely and reasonable; to invest it, in its *de novo* relation, with the charm of attractive style; and to throw all necessarily long extracts, all contradictory statements in detail, all tedious genealogies and all seemingly pedantic etymologies, into an appendix which, if intolerable to the ordinary reader, will be invaluable to the scholar and bookworm."—A discussion followed, in which Mr. Tristram Ellis, Mr. J. Heywood, Mr. E. Delmar Morgan, and the Chairman took part.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromes and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. BRES, 115, Strand, near Waterloo-bridge.

The Ancient Coptic Churches of Egypt. By Alfred J. Butler. (Oxford: Clarendon Press.)

SOME knowledge of ancient Egypt is a part of the later education which most thinking people undertake for themselves, a smaller amount of knowledge of Muslim Egypt is a polite acquirement, but Chris-

tian Egypt is a subject until late years unknown. Yet to break off the life of a nation with the events of Nicaea or Chalcedon and to take it up again at the Arab conquest is to lose the links which make the modern Egyptians one people with the ancient, and to ignore the history of art at the very moment when the materials of a great future were being saved from the wreck of a greater past. It is of less moment that the peasant of to-day is the descendant of the serf of Cheops or of Rameses, than that the latest Coptic craftsman in wood is the heir of the skill of the age of the pyramids, that the Cairene house has every feature of the house of Memphis or Thebes, and not one feature more. The Coptic architect, working more freely than the craftsman, felt the influence of Rome and Byzantium; and when the Arab—as ignorant as any Shemite of formal art, yet as ardently loving it—claimed from his servants places of worship to rival those which adorned the great capitals of the world, there arose what we call Arab art, as we strangely term the style of the mosques. Thus it came to pass that the order of great monuments runs through the old Egyptian, the later Roman, the Byzantine modified, the Coptic, and the so-called Arab styles, the last, with its succession of changes, corresponding to the as strangely misnamed Gothic style, and even showing, in its latest efforts, the influence of the classical renaissance. And, as if to prevent all confusion, the great works of Coptic architects, whether of the Byzantine or the Coptic types, are all churches, and their art ceases to have the vitality that is proved by movement, at the time when the Arab gold drew away the most able men to work with the Greeks for the lavish masterful lords of Egypt—Turks, Arabs, Kurds, Circassians, and once more Turks, the first great building sovereign a Turkish prince with a Copt for his architect.

The religious and the domestic art are, however, not so different as they seem at first sight. The imaginative part, the general conception of the whole structure, differs; but therein lies not the strength of the art. It is in what, by a convenient use of terms, I would call the province of fancy, that the Copts have always excelled. The art of the mosques, as of the churches, is essentially decorative. Thus, in all their details they are one with the houses, and the same series of successive movements is to be traced in both. This is enough to show the priceless value to the architect of a thorough study of the Coptic churches, which answer the riddles which have been fruitlessly guessed by generations of *dilettanti* who have not taken the trouble to measure and draw for themselves.

The name Arab art, for which some would substitute the even more anti-Christian term Saracenic, has been one of the causes of a disaffection to a style which is the Oriental side of our Christian Gothic. People have turned their faces from the expression of a hostile and sensuous life, and refused to see its beauty, still more to immerse themselves in dreamy, half-lighted chambers, fit only for the life of the hareem. Because the art was used by Muslims, and by its flexibility was adapted to their wants and pleasures, it

does not follow that it arose at their bidding any more than that the Parthenon was the child of the classical renaissance. Coptic art is as sweet and tender in the monastery of the severest order planted in the Nitrian sands as in the most sumptuous palace of a Memlook Bey, more so than in the richest mosque of Cairo. It is no reflection of sensuous minds, but rather nature herself, transformed by the craftsman for the glory of God more than for man's pleasure; restful and subdued, as suits a sacred place; to the worshippers, a relief from the fierce sunlight without, and a harmony to lighten the solemn monotone of the services. If the colours of the sky, if the patterns which flowers and leaves weave together be sensuous, so is this art; but, if they are not, neither is it, to whatever base uses it has been applied, without ever losing a mastery which compels the unwilling praise of its enemies, and wins the true artist as by a talisman.

For the serious study of Coptic art, Mr. Butler has made what he modestly calls "a systematic beginning." His book is so in truth, and upon its foundation all later studies may safely rest. Criticism is needless, for the work has already been aided by Mr. Henry Middleton, and its only defects are in side issues of small moment, scarce worth considering here. In particular, the dates of all specimens of work, wood and ivory, may need careful revision; but this is admittedly a matter of no small difficulty. In Coptic art, as in literature, there has always been a tendency in Westerns to antedate, partly from confusion due to the use by the Copts of the era of Diocletian, three centuries later than ours. The antiquity of many of the churches is beyond question. Mr. Butler's beginning is a careful examination of the churches of Egyptian Babylon, Cairo, and the Natron Lakes. Of those in the Delta he has no record; and the remarkable series in Upper Egypt and the Eastern Desert he is forced to notice on the best evidence he could obtain. He has collected full information on the furniture and rite of the Copts; and this is the most complete, but the least interesting part of the book, except to the limited school of ecclesiologists, who may here lose themselves in a mirage, which, when its fancies melt, will leave them in a waste, with the walls of Chalcedon full in view barring their further progress.

But, if the Egyptian rite cannot carry us beyond the middle of the fifth century, the discipline is full of historic value. Its severity and its liberality alike savour of remote antiquity—the strict rule of the monastery and the easier rule of the nunnery. Here we have a link with the primitive institution of St. Pachomius, and through him with the old Egyptian usage which he so strangely introduced into Christianity. The link may not be complete; but it connects our days more completely than any other of its kind with primitive times, and it is well worth that careful study by the light of old Coptic documents which it is now only beginning to receive.

The most important group of Coptic churches is still sheltered by the walls of Egyptian Babylon, the Roman fortress of the capital when 'Amr and his Arabs sprang across the border, and won an easy victory

through that fatal dislike to their orthodox masters which made the Copts surrender to that harder rule which has kept them twelve centuries and a half trembling in the fortified convents lest the spoiler should rifle their churches and carry off their children. These days of servitude are, if ended, but lately ended, for in the remote solitude of the Natron Lakes Mr. Butler found on the sanctuary-screen of a church within the convent of St. Macarius "a paper covered with finely-written Arabic characters," which "proved to be a form of thanksgiving for the entry of the English army into Cairo in the year 1882" (i. p. 303), and no wonder, for the traveller learned from "the Copts" of the Nile valley how they "had been living in daily terror of death" (p. 292).

Egyptian Babylon has a special interest as a very early seat of Christianity; nor is the idea that St. Peter here wrote his first epistle wholly unsupported by the internal evidence of the document, slight as that evidence is. The fortress had never been carefully studied until Mr. Butler attempted a survey, not too soon, for in a later visit, made in the present year, he found that very characteristic features were being obliterated by the builder, rampant in his vile utilitarianism even here. It may be noted that good reason is shown for the identification of Strabo's fortress of the Babylonians with the ruins formerly known on a more southern site. In fact, the town of Babylon may well have had two forts, of which the southern was first the more important than the northern. The churches of the fortress which yet stands, the finest Roman structure in all Egypt, are minutely described, with a comparison of similar features in edifices in other parts of the world. There are good plans, but the general want of elevations or sections and interior views is a serious defect, especially to the reader unskilled in architectural terminology. A like attention is given to the scattered churches enclosed by the convent-walls of neighbouring settlements, those to the north of Babylon, the survivors of the once mighty city of Fustat, otherwise represented alone by the great mosque, which has grown from the little sanctuary of 'Amr, and by the suburban town, which the Europeans with astounding ignorance persist in calling Old Cairo, which is precisely as we should do if we renamed the City Old Westminster.

The monasteries of the Natron Valley are no less carefully described, and here the subject is enlivened by some interesting exterior views, though again one looks in vain for elevations or interiors. The features distinguishing the monastic churches from those of the conventual settlements are well brought out, and must be kept in mind by the student as of especial value. The importance of these churches in evidence is that they have suffered least at the hand of the natural enemy of art, the restorer, rather they have suffered alone from time and the decay of knowledge. Away from the influences of the moment, the secluded convents have been repaired, not restored, and, thanks to the strength they owe to the God-fearing honesty of their first builders, the work of repair has been rarely needed. The restoration of the conventual churches has been till lately well done with more detriment to the

history of art than to the beauty of the edifice. But, since Egyptian art has finally perished under the influence of Levantine vulgarity, the Copts have had to look to the miserable models of the modern Greeks; and even the cathedral church, El-Mu'allakah, the Suspended (so-called as hanging between two Roman bastions), has suffered sadly, in spite of better feeling than most English restorers have shown in their self-confident achievements at home.

This work is avowedly as complete as the author can make it. Some may regret the space given to pictures, yet their record is of value; and it seems likely that it will be found that Coptic art in this branch, stationary as it seems, was marked by movements, and in the age of Tzimisces felt, as at Constantinople, the first wave of the renaissance which reached the shores of Sicily and Italy three centuries later. The careful noting of splendid carvings and lattices makes one grieve for the want of illustrations of works of the first historical importance, which may any day be sold by private cupidity, in spite of the resolution of the poorer Copts as compared with the richer Muslims, or may in the present unguarded state of the convents fall a prey to a mob of fanatics.

Mr. Butler has begun a systematic essay. There are yet to be described the monasteries of St. Antony and St. Paul in the Eastern desert, of which St. Antony is alone now tenanted, and St. John of the Ladder, not the convent ladder, but the saint's, which is so forgotten as to have dropped out of the recent maps; also, the splendid White and Red Convents in Upper Egypt fired by the Memloks as they retired before the French in the War of Napoleon, yet still in part preserved, and of supreme historical interest, as supposed to date from the time of Helena; and, again, the convents of the Delta, notably the remote Sitte Gemyaneh in the desolate marsh-lands of the North, in the church of which, thirty-seven years ago, I witnessed, amid an enthusiastic crowd of Copts and Muslims, the annual miracle of saintly appearances within the great dome of the nave—a wonder which European curiosity has laboured in vain to explain, without, as far as I know, taking the trouble to enquire into the architecture and history of the building. Many more convents and churches remain to be described, notably those of Nubia, untouched since the overthrow of Christianity more than three centuries and a half ago.

Every Coptic church after the Roman period has certain common features, which it may be well here to note. Unlike a mosque, but like an Egyptian house, there is no outward architectural form. Wagon-vaulted roofs and a cluster of domes, frequently both, are all the features seen above the plain windowless walls. Either indifference to outward show, or a wise avoidance of it, or the desire to shut away the world—a world actively hostile—forbade the outward beauty which in other churches asks in the passer-by. But the more absolute the blank without the greater the surprise of splendour within—a splendour not of vast space, with columns rising to a misty vaulted roof, but of a series of chambers with galleries, adorned with pictures of rich colour, patterned marbles, and brilliant blue tiling, and shut off the one

from the other by screens of exquisite carving in ebony and ivory and tracery of turners' work, the dim light glorified by upper windows of stained glass so devised that their patterns shine like settings of precious stones, emeralds, jacinths, sards, and amethysts.

Most earnestly to be desired is a careful study of the structure and decoration of these churches. Every one should be copied in all the details of carving and turners' work, as well as in the architectural whole. We should then possess an unrivalled series of documents for the history of the development of art in the East in its best centre, wherefrom we might learn the grammar of a style, true in principles, great in resources, large like nature in flexibility. This should be done now. In ten years' time the subject will be a matter for regret and wonder—regret for a great opportunity thrown away for ever, wonder at the prodigious apathy of those who profess the love of art, but will make no sacrifice to prove their love. Our young architects are all enthusiasm; but who is to send them to Egypt? We are not ungenerous in working for ancient Egypt, and we are right; but why should any part of that land of buried treasures be left unexplored for lack of the liberality by which the Italy of the Renaissance makes us ashamed, as in our gratitude we refuse to know the private lives of such open-handed patrons of art as even Sigismondo di Malatesta?

So excellent a work as this, thorough, sincere, and with a gift of style that lights up the driest details, should surely make a sentiment into a passion, and change our mind from the sacrilegious theft of fragments to set up in museums to the better thought of going to the home of these beautiful works to learn all they have to tell us. An ancient church, which has stood up manfully against the storms of near thirteen centuries, and is now coming out of her hiding-place into the light of day, like the Ephesian sleepers clad in the garments of the past, and handling its coin, no longer current, might take courage if she saw that we moderns of the moderns had a reverent love for her sanctuaries, and visited them, not to stare and wonder, but to admire and learn. If the art of Cairo is to be studied, it must first be studied in the churches. If the Copts are to recover their rights, they can only do so by contact with the Westerns. A mission to put on record their art would be the best help we could give them, and for this cause alone it would repay the pitiful outlay. And to us, in knowledge and in hope, in the mastery of one language more, and the new and larger powers we should gain thereby, the winning would be a thousandfold greater.

REGINALD STUART POOLE.

CORRESPONDENCE.

THE ZOAN EXPLORATION FUND.

Mayfield, West Hill, Putney, S.W.: Jan. 20, 1885.

I see that already £600 have been subscribed towards the "Zoan" fund, and I doubt not the remaining £400 will soon follow. It seems puzzling that none of the great heads of the Church are among the subscribers. It must strike the outside world as a sign either of fear that the results may not prove to their liking, or of culpable lukewarmness. It would be well that such a reproach should be spared to the

Establishment; and if through your medium a new impulse could be given to this work, and the small funds already in hand be further recruited to the total of £500 by subscriptions from eminent churchmen and others, I should be very glad to share in them to the amount of £50. But we want the impulse and the stamp of the Church for the encouragement and support, on a large scale, of those Eastern explorations that bid fair to bring forth things for which none of us could be too grateful.

J. EDWARD PFEIFFER.

TRACES OF A ROMAN FIRE-BRIGADE AT CHESTER.

West Derby Road, Liverpool: Jan. 19, 1885.

Permit me to supply an omission in my letter on this subject which appeared in the ACADEMY of January 17.

I there stated that the only traces of firemen outside of the city of Rome were at Grotto Bridge and at Alt Ofen. I should have stated that this was the evidence of the *Notitia*. But, in addition to this, as my friend, the Rev. J. Hirst, has stated in a recent paper (*Archæol. Journal*, vol. xl., p. 230, and vol. xli., p. 162), inscriptions referring to the *Vigiles* have been found at Nîmes, in France, and at Ciria and Turuza, in Algeria. Suetonius, in his *Life of Claudius*, says that emperor established similar corps at Ostia and Pozzuoli near Naples. At a later period we also hear that Constantinople and Ravenna were provided by the Roman emperors with a corresponding force.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

We learn that *The English School of Painting*, by M. Chesneau, with Notes and Introduction by Prof. Ruskin, is now in an advanced state of preparation, and will be issued by Messrs. Cassell & Co. early next month. It forms a volume of "The Fine Art Library," edited by Mr. John Sparkes, Principal of the South Kensington Art Schools.

THE third edition of the late Sir Erasmus Wilson's excellent history, *The Egypt of the Past*, is to be edited and completed by Miss Amelia B. Edwards. Three-fourths of this new edition, greatly enlarged and improved, was already in type when the progress of the work was interrupted by the death of the lamented author.

THE Dean of Winchester has published an appeal for the restoration of the great screen of the cathedral, which was constructed by Cardinal Beaufort early in the fifteenth century. The screen, which is an example of the best type of Perpendicular work, originally contained twenty-two large statues, as well as thirty-four smaller ones. The subjects of the larger figures are known, and some of the heads are preserved in the cathedral. Of the subjects of the smaller figures no trace seems to remain. It is proposed to supply all these missing statues. Two pedestals and six canopies for the larger statues, and all the pedestals and canopies for the smaller ones, will also be required. The proposal further includes the removal of West's painting, "The Raising of Lazarus," and the ornamentation of the large space thus left bare; the restoring in stone of the portions of the tracery and the pinnacles which have been repaired in plaster; and the substitution of new doors for the present doors leading into the foretory.

MR. HEYWOOD HARDY lately has been employing his brush on bolder and more vigorous work. His "Solitude"—a lion in repose in the desert—recently on view in Messrs. Agnew's galleries, was an example of this kind. Mr. Hardy is now at work on a companion study, "A Boar Hunt." It depicts two hounds in full chase

after a wild boar. The composition is arranged after the manner of Snyders. The study is rich in colour. Blues and greys blend in pleasant harmonies throughout the sky, distance, and mid-distance; whilst the foreground is struck in with gradations of warm browns and rich ochres. There is much vigour in the action depicted—the race for life or death between the hounds and boar—and the picture, both in technique and composition, may be described as a *tour de force*—a rare and able piece of art work.

TO-DAY is appointed for the private view of the Exhibition of Eighteenth-Century French Engravings at the Fine Art Society. The prefatory notes on the French art of the period have been written by Mr. Wedmore.

AN effort is being made to secure Mr. Vedder's original crayon drawings, in illustration of the *Rubâ'iyât of Omar Khayyâm*, for the Metropolitan Museum, New York.

THE K. K. Antiken-Kabinet of Vienna has just received a valuable addition to its treasures in a statue of Artemis, found at Larnaka, which evidently belongs to the fourth century B.C. The work is in excellent preservation.

WE are informed that Miss J. E. Harrison's lectures to ladies on "Greek Art," at the British Museum, have been attended by a constantly-increasing audience. The committee of the museum at Leicester have invited Miss Harrison to give a similar course in connexion with that institution.

A COURSE of six lectures on "Egyptian Antiquities" will be given to ladies by Miss Helen Beloe at the British Museum, on Wednesday, February 11, and the five following Wednesdays. Each lecture will be illustrated by diagrams, and afterwards by a visit to the Egyptian Galleries, in order to examine the monuments of the respective periods. The object of this course will be to give such an outline of the history, religion, manners, and customs of Ancient Egypt as may be a guide to those previously unacquainted with the subject, both in their own reading and in their study of the Egyptian monuments in the Museum.

THE new number of the *Archæological Journal* contains the following papers:—"The Discoveries at Lanuvium," by Mr. R. P. Pullan; "The Percies in Scotland," by Mr. J. Bain; "Roman Antiquities from San," by Mr. W. M. Flinders Petrie; "Repton Priory, Derbyshire," by Mr. W. H. St. John Hope; "Civic Maces," by Mr. R. S. Ferguson; "On the difference of plan alleged to exist between churches of Austin canons and those of monks, and the frequency with which such churches were parochial," by the Rev. J. F. Hodgson.

THE special number of the *Revue des Arts Décoratifs*, devoted to the eighth exhibition of the Union Centrale, which was announced for publication on January 1, will not be ready till the end of the month. It will contain upwards of 400 pages, and sixteen engravings *hors texte*. The February number will be published as usual on the first of the month.

THE exhibition of the Society of Painter-Etchers for 1885 is to be held at the Dudley Gallery from May 25 to July 4. The days fixed for receiving works sent for exhibition are May 11, 12, and 13. All forms of engraving on metal which the artist may choose as a means of original expression are eligible for exhibition, but only original works will be accepted.

A new quarterly, to be called *The American Journal of Archaeology*, is shortly to be commenced at Baltimore. The editorial staff includes Prof. Charles Eliot Norton, Dr. A. L. Frothingham, Dr. A. Emerson, Prof. Allan Marquand, and Messrs. T. W. Ludlow, A. R. Marsh, and Chas. C. Perkins. Messrs. Trübner & Co. will be the London agents.

MUSIC.

THE POPULAR CONCERTS.

MDME. ESSIPOFF played again last Saturday afternoon, but the group of solos which she selected was ill-assorted. A Romance by Schumann was first announced, and we naturally expected one of the three from op. 28, but she played the second movement from F sharp minor sonata (op. 11). Next came some *airs de ballet* from Gluck's *Alceste*, arranged in the form of a caprice by M. Camille St. Saëns, which Mdme. Essipoff wisely curtailed. The piece is showy, but without plan or interest. The simple charm of Gluck's melodies is hidden by tawdry ornaments. The Thalberg *étude de concert* was cleverly interpreted, but such a piece is quite out of place at these concerts. Last Monday there was a Beethoven pianoforte sonata; "a" sonata is announced for to-day; and it is to be announced that, for the future, a line will be carefully drawn between classical and *bravura* music. We must thank Mdme. Essipoff for not accepting the encore. The public tried hard to obtain it, but the lady was firm. If other pianists would follow her example, encores would no longer be the fashion—at these concerts at any rate—and performer and public would both be gainers. The programme included Haydn's Quartet (op. 76, No. 3), with the well-known and much admired variations on "God preserve the Emperor," and Rubinstein's sonata in D for pianoforte and violoncello. Miss Ambler (Mrs. Brereton) sang songs by Schubert and Bach: her rendering of the former was weak, but she was fairly successful with the latter. Mdme. Norman-Néruda played Franz Rees's Prelude, Romance and Scherzo for violin.

On Monday evening, January 19, Mr. Max Pauer, son of the well-known teacher and writer, Mr. Ernst Pauer, was the pianist. Last season he gave two recitals at the Princes Hall, Piccadilly, and we then recognised him as a player of considerable technical ability, and possessed of something more than mechanical dexterity. For his *début* at the Popular Concerts he selected Beethoven's Sonata in A flat, (op. 110), an ambitious, but dangerous, choice. It demands calmness and perfect self-possession on the part of the performer; but Mr. Pauer, if we may judge from the rate at which he took the middle section of the second movement, and also the final fugue, was not in a state to do himself full justice. We must, however, praise his clear, neat, and intellectual playing. His reading of the first movement was somewhat cold, and in some places he dragged the time. He was much applauded, and for an encore performed Beethoven's clever, but eccentric, Rondo (op. 129): here again we noticed a tendency to hurry on the part of the performer. We have entered somewhat into detail; but Mr. Max Pauer deserves to be noticed, for in time he may take a high position among English pianists. The programme included three of Schumann's *Stücke im Volkston* (op. 102), Mozart's pianoforte Trio in C major, and Spohr's brilliant Quartet for strings in A (op. 93). Mdme. Maria di Lido sang some interesting songs by Tchaikowski, Lassen, and Goring Thomas; but her voice is not sympathetic, and her singing shows but little style.

J. S. SHEDLOCK.

MUSIC NOTES.

MR. E. DANNREUTHER announces another series of Musical Evenings on the following dates:—January 27, February 10 and 24, and March 10. The programmes are interesting. At the second concert we notice a first performance of Dr. C. H. H. Parry's Variations for piano on a theme in D minor, and at the third Liszt's *Concerto patetico* in E minor for two pianofortes.

SATURDAY, JANUARY 31, 1885.

No. 665, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Apollo and Marsyas, and other Poems. By Eugene Lee-Hamilton. (Elliot Stock.)

THE three volumes of Mr. Lee-Hamilton's verse which preceded *Apollo and Marsyas* have enabled those who studied them to form a definite conception of his ability, and have placed him in the rank of poets from whom we expect much in the future. His most salient quality seems to be a power of identifying himself through the imagination with abnormal personalities, exposed to the pressure of unusual circumstance and extraordinary temptation. His method of working is not formally dramatic. He does not exhibit the men and women of his fancy through dialogue in action. But having absorbed their nature into his own, having rather felt than analysed their motives, he makes them tell their own tale, or tells it for them in narrative that has the force of autobiography. The reality of his studies of character not unfrequently amount to revelation. He compels the reader to see what he has seen in mental vision, and in securing his effects he is aided by a vivid faculty of picture-painting. This faculty of painting a picture, or of suggesting a picture to the mind, is always potent in his work; most eminently so when it is employed in creating the environment of some dark psychological tragedy. As a fine example of its simple strength I may cite the "Letter addressed to Miss Mary Robinson" from his volume *The New Medusa*. It is still more remarkable in a poem called "The Raft," or in the ballad of the "Death of the Duchess Isabella." The power of dramatic insight, combined with pictorial realisation, which I have defined, has its corresponding defect. It betrays Mr. Lee-Hamilton into partiality for the horrible, the well-nigh impossible, the fantastically weird. His imagination seems to delight in realising states of mind and caprices of the fancy which lie outside healthy human experience. The fascinating romance which gives its name to *The New Medusa* may be mentioned as an illustration. Sometimes, too, the poet dwells on subjects which are, in naked prose, so poignant as to be susceptible of no adequate poetic treatment by his method of descriptive art. Such is the ballad of "The Sack of Prato" from the volume I have quoted. Such, too, was the acutely painful study of the anatomist bent on vivisectioning a man, called "A Rival of Fallopius," from a preceding volume. In this style Mr. Lee-Hamilton had Poe for master; but Poe's dry handling of similar themes lent itself more agreeably to literature which aims at being ghastly or uncanny without producing the repulsion that is inseparable from a quasi-subjective revelation of cruelty and madness.

Technically, Mr. Lee-Hamilton commands a wide and picturesque vocabulary, and is not without considerable power over both rhyme and metre. His language is always direct, spontaneous, and unstrained; but, in diction and versification alike, he is apt, when not working under severe restraints of form, to be somewhat more careless than befits a poet in the present age of English literature. His effects suffer sometimes also, in my opinion, from a want of reserve, an inattention to the necessity of compression.

Apollo and Marsyas takes its name from the Greek legend of the rivalry between the satyr and the Olympian deity. Marsyas, for Mr. Lee-Hamilton, symbolises all that is remote, wild, pain-compelling, and orgiastic in the music of the world. Apollo represents its pure, defined, and chastened melodies. Marsyas commands the mystic minor keys; Apollo the majestic major. To Marsyas belongs the thrilling Phrygian, to Apollo the bracing Dorian mood. Of his personal susceptibility to the influence of Marsyas Mr. Lee-Hamilton makes no secret; and, in the lyrical contention which he has written for these rival powers, he puts far better poetry into the mouth of the satyr than that which he has invented for the god. Still, he adds, in justice to his own art—

"And yet I love the light, nor am I one
Bred in the darkness of Cimmerian caves,
Who shrinks with blinking eyelids from the sun
When with the dawn he leaps on laughing waves.

"And though what here I offer echoes less
Apollo's lyre than Marsyas' reedy fife,
Whose fitful wailing in the wilderness
Sounds through the chinks and crannies of my life,

"Apollo's name is sweet, and I were loth
To let the name of Marsyas stand alone
Engraven on this book, while I can own
Allegiance to both lords and love them both."

Marsyas, however, claims the principal honours of this volume; and those qualities of the author's poetic power which I have attempted to describe are once more luminously here exhibited. "Sister Mary of the Plague," to begin with, presents one of those dark mysteries of impossible psychological experience which Mr. Hamilton loves to render real by the intensity of his dramatic sympathy and by the incisive force of his picture-painting. Sister Mary is a nurse in a Belgian hospital, assiduous in her duties and venerated by the people. Yet her patients, in spite of her best care, are apt to die of slow exhaustion. We soon perceive that all is not right, nay, that there is something terribly wrong about her. The real power of the poem consists in this, that Sister Mary herself awakes with agony to the consciousness that she is a vampire, one who had died in the plague, and had arisen to protract a hideous existence by draining the life-blood of the living. This motive would be, I think, too repulsive for poetic treatment but for the tragic moral situation thus created. The vampire is herself the victim of a destiny which she abhors. In this way her story becomes an allegory of those psychological conditions which are known as moral insanity, where the sufferer of some abnormal appetite is terror-stricken in his lucid intervals by what his morbid impulses have forced him to enact. It may be added that a somewhat

similar allegory of the tormented conscience is attempted in "Ipsissimus." In "Abraham Carew" Mr. Lee-Hamilton depicts a religious fanatic, who thinks that God has required of him the sacrifice of his only and dearly-beloved daughter. He pleads his cause at the bar, frankly admits that he is the murderer of his child, but expects acquittal in the certitude that he has obeyed the will of the Almighty. The precision and simplicity of this short piece render it in my judgment one of the best of the poems inspired by Marsyas. It is more successful in conception and firmer in execution than "The Wonder of the World," which describes a conscience awakened into fretful self-reproach by the memory of an ignoble act performed under strong temptation in very peculiar circumstances. Of the poems in this book inspired by Apollo, I will only mention the spirited ballad on Drouet's night-ride to Varennes, called "Hunting the King," before I draw attention to twenty-one sonnets which end the volume. Each of these presents some point of artistic felicity or of personal interest. While handling the sonnet Mr. Hamilton does not lose the spontaneity of diction and fearlessness of imagery which are marked merits of his style. But he profits by the compression forced upon him by stricter form. Since several of the sonnets have appeared in the ACADEMY, I will only quote one, the first, called "Idle Charon":—

"The shores of Styx are lone for evermore,
And not one shadowy form upon the steep
Looms through the dusk, far as the eye can sweep,
To call the ferry over as of yore;
But tintless rushes all about the shore
Have hemmed the old boat in, where, locked in sleep,
Hoar-bearded Charon lies; while pale weeds creep
With tightening grasp all round the unused oar.
For in the world of life strange rumours run
That now the Soul departs not with the breath,
But that the Body and the Soul are one;
And in the loved one's mouth now, after death,
The widow puts no obol, nor the son,
To pay the ferry in the world beneath."

In conclusion, I venture to express a hope that Mr. Lee-Hamilton will in future pay his vows with greater assiduity to Apollo. Marsyas has controlled him long, and not in my opinion without some injury to an artist so finely capable of hearing and reproducing the world's ampler music.

JOHN ADDINGTON SYMONDS.

Illustrations of the History of Mediaeval Thought in the Departments of Theology and Ecclesiastical Politics. By Reginald Lane Poole. (Williams & Norgate.)

THIS volume is the result of two years' study in Germany by one who held a travelling scholarship from the Hibbert trustees. It is a worthy fruit of two years' labour, not only for its intrinsic merits, but also for the signs which it shows of careful workmanship and of diligent search for the best methods of research. The defect of the book is that it reads too much like a series of essays written for an academic prize. Its unity of subject comes solely from the unity of the writer's studies, not from any inherent principle of choice. Mr. Poole has written a series of essays on the thought of the Middle Ages up

to the period of the rise of Scholasticism. It was quite natural that he should pause at that point, for the labour would be enormous to continue his work further along the entire line of theological speculation. But Mr. Poole has selected one part of his subject for further investigation. With John of Salisbury he drops philosophy; but he pursues the course of political speculation to the time of Wyclif. Mr. Poole's reason for this is clear, and is honourable to him. He is engaged in editing, for the Wyclif Society, the important treatises *De Dominio Divino* and *De Dominio Civili*. He wished to fit himself for his task by a survey of preceding theories. It were much to be wished that we had a similar guarantee in the case of all editors that they had been at the necessary trouble to fit themselves for their task.

It will be seen that Mr. Poole's volume is somewhat of the nature of a note-book. But all that it contains is clearly thought out and is the result of independent labour. Probably the literary presentation of Mr. Poole's researches suffers from too closely following German models. We may admire the thoroughness and care of a German writer, while we wish at the same time that he would sweep up his chips and not leave them strewn about his pages. Occasionally Mr. Poole's erudition becomes cumbrous, though generally he has succeeded in checking himself in time, and has gathered his fragments into appendices, which are much to be praised as examples of careful criticism of details.

Mr. Poole has not, of course, attempted to write a consecutive history of mediæval thought. He has selected writers who showed the greatest independence and originality. For this reason his book may be commended to a large circle of general readers as well as to students. Many will be surprised to find the ferment of thought which went on during the Middle Ages. Perhaps there is no more valuable lesson to be learned from history than the identity of man's aspirations and endeavours in almost every age. The forms of thought differ, the substance is much the same. The Middle Ages conceived Christendom as united under one church and one empire. But this theory did not in politics check the formation of nationalities or curb the aggressions of aspiring princes. Similarly in religion it did not reduce all thought to uniformity or establish an unbending system of dogma. Pope and emperor were alike supreme in theory. In practice a strong pope or a strong emperor exercised a good deal of influence. But where either pope or emperor was felt to be useless or mischievous he was disregarded or denounced. There have been few things said about religion or politics in modern times to which remarkable parallels might not be found in the literature of the Middle Ages. The chief difference between mediæval and modern times lies in this: in the Middle Ages those who were dissatisfied with the universal system under which they lived strove to amend it according to their own ideas; in modern times those who are dissatisfied with the partial system under which they live step outside and attack it.

The great merit of Mr. Poole's book is that he estimates justly and soberly the general tendency of the intellectual life of the Middle

Ages. He deals mainly with the more original and independent thinkers of the time; but he never exaggerates the importance of their opinions, or distorts them into accordance with modern ideas. The three to whom he has devoted most attention—John the Scot, Peter Abailard, and John of Salisbury—are prominent examples of the boldness and largeness of mediæval speculation. For Abailard especially (we adopt the author's form of the name) Mr. Poole feels a genuine enthusiasm. He is the only man whose character has impressed him, and whom he has attempted to realise. He is, moreover, careful of his fame, and collects passages which show that Abailard was recognised by his contemporaries as "the servant of Christ, and verily Christ's philosopher." Indeed, opinions might be condemned by councils; but in the Middle Ages, as at the present day, it was not authoritative condemnation that destroyed opinions, but their own inadequacy or want of fitness to the needs of the time. Original minds found followers on intellectual grounds. They found more followers because their aims were high and noble, because they denounced abuses and pleaded for reform.

There is not much that is decidedly new in Mr. Poole's volume. Its excellence lies in its scholarly method and its scholarly tone. It is a real comfort to read an English work on the thought of the Middle Ages that is not conceived in a spirit of lofty intellectual superiority. There is, however, one part of Mr. Poole's work which is new and valuable, though at present we have to take Mr. Poole's conclusions on trust. This is the abstract which he gives of the political theories of Wyclif. The theses that "Lordship is founded on grace" and that "God ought to obey the Devil" are already familiar to us, but their practical application is obscure. Mr. Poole finds in Wyclif's theory of the absolute lordship of God an assertion of the right of the individual. All were equal before God; priests and laymen alike depended on Him. God's lordship was universal; only those who rendered Him due service were true vassals. Taking this as Wyclif's central idea, the rest of his theory can easily be deduced. God's grant was to his Church, the holy spouse of Christ; but in this ideal Church the wicked are outward members as well as the righteous. The wicked thereof share in God's grant; but their title is not good, because they do not render service. The moral conception of the nothingness of sin is carried into the actual world. The sinner is nothing, and, therefore, can possess nothing. The lordship of God recognises only the righteous. Civil lordship had its origin in man's sin, and, therefore, can have no absolute character. Wyclif is so convinced of the infirmity of all human institutions that he does not care to discuss forms of government or determine which is best. He thinks that government by a single ruler is best, because it is strongest to restrain excesses. But all civil lords are God's stewards, and are lords only by reason of service. They are servants not only of God, but also of their fellow-men.

In all this it is clear that Wyclif is striving to find a spiritual principle on which to build up the individual soul in dependence solely on God. The righteous man who trusted in God was lord of the whole universe. Like

St. Paul, he possessed all things, not necessarily, or even principally, in this life, but as his right now and his secure enjoyment hereafter. From this it follows that, as there are many righteous, and each has a claim to all things, all things ought to be in common. But this is an ideal conception, expressing merely the ultimate tendency of a transcendental theory. It has long been a doubtful question how far Wyclif's teaching was a cause of the rising of 1381. Mr. Poole's compendium of his views entirely acquits him of any revolutionary tendency. The system which Wyclif was setting forward was an ideal system relating to the spiritual nature of man. The righteous possessed all things by virtue of his obedience to God as the Supreme Lord of the universe. Such was the eternal order of the universe. But the existing constitution of human society, imperfect though it was, had the divine sanction. The use of forcible means to readjust the world was far from Wyclif's view of righteousness—it was in itself utterly sinful. Communism was the law of heaven, and so far as earth resembled heaven, so far and no farther it tended to be earthly law as well.

So Wyclif's paradox, "God ought to obey the Devil," asserted in the actual world the recognition of established authority, however unworthy might be the person who exercised it. Really, Wyclif strove to set up as against the ingrained impurity of temporal lordship a sense of the worthiness of spiritual authority. When he proposed that the pope should lay aside his temporal power it was not because he wished to attack the papacy, but because he wished to provide a worthy sphere for its activity. Human laws were to him the consequence of man's fallen nature. Wyclif aimed at setting up as supreme the law of the Gospel. He pointed out how the Church might free itself from the trammels of worldly business and become the means of introducing the divine order into earthly affairs.

Such seems to have been Wyclif's aim in the earlier period of his teaching, the period when he was mainly a moral reformer. Events drove him into hostility to the papacy, and he turned to criticism of the doctrine of the Church. It is not wonderful that his theory of lordship should have prepared the way for a rapid advance in his opinions. It undermined the ground on which the hierarchy rested; it asserted as its primary inference the immediate dependence of the individual on God, and on God only. It is true that the individual Christian existed only in union with the Church; but that Church was the congregation of all faithful men, in which clergy and laity were alike before God. This conception of religious individualism is put by Mr. Poole as the chief principle of Wyclif's doctrine of lordship. He admits, however, that his conclusion is only tentative. If it be well grounded, it will show that Wyclif was not a great political thinker. Indeed, the very difficulty in understanding the application of his principles goes far to prove that. His writings have all the faults of their time. Every proposition is proved at length by arguments which are often verbal or frivolous. It is hard to disentangle the main argument from a maze of logical corollaries which arise at every point. It is the religious and moral, rather than the intellectual, side of Wyclif which attracts us. Mr. Poole's exposition of his

theory of lordship shows that he was lacking in political insight. But it tends to put him in a higher position than before as a religious teacher; for he set up an ideal conception of a spiritual order of the world, which each man might lay hold of for himself by recognising his direct dependence upon God.

M. CREIGHTON.

Memorials of James Hogg, the Ettrick Shepherd. Edited by his daughter, Mrs. Garden, with Preface by Professor Veitch. (Gardner.)

HERE we have one of the rarest and most welcome of books—a biography that errs on the side of modesty, and is, therefore, to be cordially appreciated rather than minutely criticised. Not that Mrs. Garden's *Memorials*—as she prefers to style her volume—of her father, the Ettrick Shepherd, can be said to rank among the great "Lives" of English literature. James Hogg was neither a great nor a gloriously bad man. He was a compound of shrewdness and sensibility, of the prosaic Arcadia of cow-keeping and sheep-tending and the eerie cloudland of fairies and brownies, rendered vocal and ambitious by the example of Burns and the encouragement of Scott, but still more by his own stout heart and the legends of the enchanted Border, which were his earliest mental sustenance. He had, in the course of his sixty-five years, no remarkable adventures, or even very interesting misfortunes. He committed blunders, and suffered from the blunders of others. He was pecuniarily successful neither in farming nor in literature; but, like Burns, he had a heart above all troubles. Though to the last swimming in the sea of struggle, with his head only half above water, he was always equal to a good song, a good day's sport, and the giving of good and kindly advice. He must have been a rather matter-of-fact, as he certainly was a testy, lover, for we find him naïvely writing to the woman he married—she was about twenty years younger than himself—"I have very much need of you just now, for my house-keeper, a valuable honest woman, refuses to stay." But Hogg was an attached husband and an indulgent father; and, as Mrs. Hogg seems to have managed him on the sensible plan adopted by the Marchioness after she became Mrs. Richard Swiveller, his married life was happy, although he "left his affairs in confusion" at his death. "A gey sensible man, for a' the nonsense he wrat," was the verdict passed on him by Tibbie Shiel, the queen of Scotch inn-keepers, whom he helped to a living and to immortality, and it will be the verdict of those who read Mrs. Garden's book. But it is impossible to make a Samuel Johnson, much less a Byronic Lara, of "a gey sensible man," immersed in personal struggle from the beginning to the end of his chapter, in spite of his writing "The Queen's Wake," associating with Sir Walter Scott and Professor Wilson, and dealing swashing blows in *Blackwood*. Mrs. Garden very wisely makes no attempt to exaggerate her father's excellences of heart or of head, or to conceal his weaknesses, such as these were. She has told a very simple story in the simplest and, therefore, the best of

styles. Her biography might have been fuller could she have recovered the materials placed at the disposal of John Wilson for the Life he did not write. One could have wished too to see the letters from Byron to Hogg that somebody had the impudence to steal, but not the courage to publish. Nevertheless this picture of Hogg is by far the best and most reliable that has yet been painted, and no better is needed.

The story of James Hogg's life does not flow so readily off the tongue as does that of Burns's. Yet the main facts of his career—his birth in 1770, his death in 1835, his early sheep-life and self-education as a shepherd boy, his luckless attempts at sheep-farming, his plucky fight for a position in the literary world of Edinburgh, his publication of "The Queen's Wake," his difficulties in Eltrive and Mount Benger, his recognition by the literary society of London a short time before he died—are tolerably well known. The most that Mrs. Garden does—but it was worth doing—is to elucidate this old story with hitherto unpublished letters, the most enjoyable of which are from her own father and mother. The one little fact of much consequence that she makes known for the first time is that Hogg, when in Edinburgh seeking a livelihood, seems to have tried, not only editing and versification, but to get some business as a land-agent. Prof. Veitch indicates the service Mrs. Garden has rendered to her father in his Preface, which is very cordial, and contains sound criticism, but which, since the best of it was published before, has a flavour akin to that of cold tea. She has—warmly, perhaps, but effectually—vindicated Hogg from the charges made against him by Lockhart; and she has drawn a very different picture of him from Wilson's "Shepherd" in that very Earthly Paradise of "how-towdies" and toddy, the *Noctes Ambrosianae*. The Ettrick Shepherd was a hearty host and a convivialist, but nothing more or worse. He was a simple, self-confident egotist, no doubt, and told Scott that he was the King of Mountain and Fairyland, and that it was a superior kingdom to that of Chivalry. But Lockhart made far too much of Hogg's blunders in etiquette, and wrote of them in the style of a retainer rather than of a son-in-law. When Hogg laughingly described his meeting with Wordsworth as a "meeting of the poets," and Wordsworth turned his heel upon "the fellow," he only proved that his vanity was greater and more offensive than Hogg's. Even if Hogg did sprawl on Scott's sofas, and address Lady Scott as "Charlotte," the offence was but the *gaucherie* of the child of nature, who, when he hears his father call his mother by her Christian name, follows suit. Let us hope we shall hear no more of these petty controversies.

The Ettrick Shepherd corresponded with Scott, Lockhart, Southey, Allan Cunningham, William Howitt, Mrs. S. C. Hall, Henry Glassford Bell, and various others of his contemporaries, and several letters from them are here published for the first time. There is not one that is not interesting, and they show how the true character of the man was understood by his friends. As many of them are, however, to a large extent of the nature of friendly advice to Hogg, it is hardly possible to give other than too lengthy quotations from them. It may be noted that in one of

his letters Southey predicts immortality for his "Roderick," that Robert Montgomery states his belief that he was persecuted by a host of reviewers, and that the father of Mr. John Ruskin describes to his friend of Mount Benger his anxiety about the future of his son, who had taken at the age of fourteen to writing verses by the hundred, in imitation chiefly of Scott. In 1815 Mr. John Murray writes to Hogg thus:

"Could you not write a poetical epistle, a lively one, to Lady Byron, congratulating her on her marriage?—she is a good mathematician, writes poetry, understands French, Italian, Latin, and Greek—and tell her that as she has prevented Lord B. from fulfilling his promise to you, she is bound to insist upon its execution; and to add a poem of her own to it, by way of interest. She is a most delightful creature, and possesses excellent temper [*sic*] and a most inordinate share of good sense."

Mrs. Garden republishes some unfamiliar, if not forgotten, poems by her father. Of these it may, at least, be said that they are not unworthy of the author of "Kilmeny" and "When the Kye come hame."

WILLIAM WALLACE.

The Chevalier D'Eon de Beaumont: Minister Plenipotentiary from France to Great Britain in 1763. By Capt. J. Buchan Telfer. (Longmans.)

THE graver interest of the Chevalier's political career has been obscured by the factitious notoriety which has attached to the controversy about his sex. While congratulating Capt. Telfer on his successful industry and research, we could wish that he had dissociated himself still more entirely from the gaping curiosity of eighteenth century marvel-mongers. Would it not have been better to divide the book into three parts? First, a solid history of the diplomatic transactions in which D'Eon took part; then a monograph on his singular change of status, apart from its political causes, and viewed in relation to the social manners and sentiments of the period; and lastly—a task to which Capt. Telfer and indeed none but a philosopher would, perhaps, be adequate—a biographical and psychological study of a personality so unusual and interesting. For it is not too much to say that if D'Eon had not so profoundly distrusted autobiography (his arguments, indeed, are modest and noble), he would have left pages not altogether unworthy of Cardan and De Retz.

First let us dismiss this pretended mystery, uninteresting save for the obscure policy which suggested it. D'Eon was born in 1728; it was not till 1766 that rumours as to his sex arose, and not till 1777, after the close of his public career, that, by order of the French court, he assumed the female status, which he retained till his death in 1810. We can accept none of the arguments for his previous female disguise. His early life is a blank; the tradition of his dedication to the Virgin by his mother, and his girl's costume from his fourth to his seventh year, is clearly an afterthought. Even admitting, which we do not, the truth of his mission to Elizabeth in 1755, the story of his thus gaining access to her intimacy rests mainly on the gossip—or, as we suspect,

the diplomatic intrigues—of the Princess Dashkoff in 1766. There remains only the strange autograph letter of Louis XV., dated the same day as the letters of recall, and printed by Boutaric. In it he warns D'Eon (as usual) of the designs of his own ministers, orders him to hide himself and the king's secret papers, assuming female disguise, in which he *has already served the king usefully*. This letter, pronounced a forgery by De Broglie on somewhat dubious grounds, is consistent with facts, but after all it proves little.

Our own version of the evidence, materially differing from the author's, amounts briefly to this. D'Eon was a man of singular energy and manly spirit, of strictest propriety and reputation, but of an abnormally cold temperament. At some period—possibly in Russia, or even in England—he may have assumed disguise in the king's service. Rumours of this, joined to his reticent behaviour in a dissolute society, gave colour to Madame Dashkoff's story. These suspicions were seized on by De Guérchy's friends, and the French ministry, and even Louis XV. himself, seem to have been half convinced. D'Eon, at first resenting these insults, at last found that his best chance of outwitting Beaumarchais and blackmailing Vergennes lay in acquiescing for the time in the imposture. Surely this is not improbable! After long negotiations, the solemn treaty, seven pages long, was signed, the secret papers given up, the price settled, and D'Eon consented to assume the female dress, which he wore at first reluctantly, but, in his old age and exile felt it imprudent to cast off. No adequate explanation has been offered for the infliction of this strange penance. We should venture to ascribe it to mixed and confused motives. Beaumarchais certainly, Louis XVI. probably, Vergennes possibly (though when first mooted the project his words are, "si M. D'Eon voulait se travestir") came to believe the story. Various motives would then co-operate—regard for propriety, anxiety to put down the blood feud between D'Eon and the young De Guérchy, to extinguish the restless career of the Chevalier, and neutralise the memory of his former insubordination, still more, we would suggest, to cast an air of suspicious melodrama over the story of the secret correspondence of Louis XV., which was to be buried in oblivion, and, lastly (as Lacretelle, Taylor and Voltaire among others thought), some motives connected with other intrigues, of which nothing is known. Capt. Telfer's suggestion as to the further papers retained till 1792, though valuable, requires stronger proof. We have said enough to dwarf this famous dispute to its true insignificance, and need only add, that it was mainly the rough manly life and manners, and the indignant silence of the Chevalier, which caused such profound wondering and curiosity about the new Jeanne d'Arc.

Turning to the earlier and more valuable part of the book, the reader will own that its graphic and well-connected narrative does more than supplement the researches of the Duc de Broglie. In fact it corrects them. If M. de Broglie in his honourable zeal for the reputation of the brothers De Broglie, has too hastily treated D'Eon as a low adventurer, Capt. Telfer, in his loyalty to his

hero, has vindicated—perhaps too amply—his claims to distinction. His tone (with a few exceptions which it would be ungracious to carp at) appears sufficiently dignified and judicious. Not having enjoyed the peculiar privileges of Gaillardet, Boutaric, and De Broglie in searching the French archives, he is perfectly justified in relying on their extracts. Nor does he seem to have consulted the many MSS. at D'Eon's birthplace, Tonnerre. On the other hand the large collections of the British Museum and of Mr. Christie have been thoroughly sifted by him, the latter, we suppose, for the first time. Both probably formed the bulk of the papers left behind by the Chevalier at his death. So far as we can gather from the numerous footnotes, this new material is mainly personal and biographical.

C. G. L. A. A. T. D'Eon de Beaumont was of a noble Burgundian family (was it not rather *noblesse de la robe*?), as his baptismal certificate shows. Educated at the College Mazarin, admitted to the Bar of Paris, a Doctor of Civil and Canon Law, relative of Archbishop Beaumont, and *protégé* of the Prince de Conti, he passed about 1655 into the secret service of Louis XV. In spite of our author's plausible arguments we can admit no more than the possibility of D'Eon's Russian Mission in that year. He may, indeed, have accompanied Douglas; if so, we think he must have been included in his immediate expulsion. Here is no space for this discussion, which turns largely on conflicting dates, but we cannot refrain from a decided opinion. At all events in 1756 Douglas appears again at the court of Elizabeth with D'Eon as secretary, combining with Woronzoff and Esterhazy (the Treaty of Versailles had just been signed) to detach the Empress from the English and Prussian interests. After a secret mission to Paris in 1757, D'Eon remained as secretary to the new embassy, first under De l'Hôpital and then under Breteuil.

In view of the curious secret despatches and instructions, and of the remarkable, if not very momentous, diplomatic success of the French mission, it would be idle to dismiss D'Eon, with Catherine's sneer, as a mere *galopin politique*. It was his curious lot to take part in the negotiations at the opening and the close of the Seven Years' War, as well as (in 1761) to share in the fighting and win his Cross of St. Louis as aide-de-camp to the Maréchal de Broglie, and his brother the Count, who was the chief instrument of Louis' secret policy. His loyalty to the De Broglies and to the king was fatal. Involved in the quarrel between the marshal and Soubise, he incurred the wrath of M^{me}. de Pompadour, and so of the Foreign Minister, the Duc de Praslin. Sent to England with Nivernois (who, like Choiseul, remained his friend to the last), he probably knew more than the contracting parties of the secrets of the Peace—for that there were secrets we cannot but maintain, absurd as were the exaggerated charges of the Opposition. His career in England is too familiar to most readers to need comment; but they will welcome this full connected narrative, which brings together the various points of interest one is constantly meeting, not least the singular cases and precedents of international

and common law and of police to which his troubled fortunes gave rise.

Nor can we discuss at all—for to do so cursorily would be injustice—the new light which is here shed upon the plots of Louis XV., at which all readers of the "Secret du Roi" have been startled. The spectacle of a despot, with a taste and some talent for intrigue, amusing his leisure with foreign affairs, and, by the help of three or four confederates, thwarting the policy of his own envoys at the great Courts, while dreading detection by his mistresses and ministers, is unique in history. More than that, it is not only important in its bearing upon the diplomatic history of the period, but of profound didactic importance to the political philosopher in estimating the nature and the responsibility of those hereditary governors from whom the French people afterwards withdrew their mandate. In these secret missions the Chevalier was, if not the leading, the most active agent. The most important and the most compromising of them all—the preparation (before the signatures of the Treaty of Peace were well dry) of the plan of an invasion of England—was confided entirely to his care; and, while persecuted and disgraced by the French Government, he remained till the king's death in his confidence and secret service. His proud, passionate, instinctive fidelity condoned all royal ingratitude; but half-crazed by indignation against De Guérchy and his other enemies, he made the Crown buy the silence it was too mean to reward. This volume is a handsome and generous tribute to a memory not unworthy of it. It will tend to rescue from an unmerited martyrdom of ridicule and obloquy, a man of strong and enlightened piety, of pure and blameless morals, of acute and grave mind, of jealous and delicate honour, a man of many faults, of violent and angry passions, implacable and resentful, degraded perforce by the work he had to do, but doing that work and meeting the dangers of it with manly fortitude and philosophy, a man whose restless impulse was inspired by a spirit to us well-nigh lost—that of loyalty.

E. PURCELL.

Grimm's Household Tales. With the Author's Notes. Translated from the German and Edited by Margaret Hunt. With an Introduction by Andrew Lang. In 2 Vols. (Bell.)

Mrs. HUNT has rendered a valuable service to English students of folk-lore by this translation of Jacob and Wilhelm Grimm's *Kinder- und Hausmärchen*. The many previous translators have regarded the work rather as a mere children's book than as a collection of documents for scientific study. The tales, as hitherto presented to English readers, have, therefore, suffered changes and mutilations which materially impair their value; and the instructive notes added by the authors to the earlier editions have been till now accessible only in their original language. Mrs. Hunt's aim has been to give a faithful version of the entire work as it was written, without any other change than the occasional softening of some unessential coarseness of expression. The translation reads very well, and in the few passages which I have compared with the original it appears satisfactory in point of

accuracy. To the notes Mrs. Hunt has made some additions, several of which are of considerable value.

Mr. Lang's Introduction is not, as may perhaps be supposed, a mere re-hash of what he has previously published on the origin of mythology. On the contrary, it seems to me to contain a much more cautious and intelligible statement of the author's theories than can be found either in *Custom and Myth*, or in the article "Mythology," in the *Encyclopædia Britannica*. The opinions and arguments of opponents seem, on the whole, to be presented with more accuracy, and the style shows much less of the undesirable quality which a very friendly critic of *Custom and Myth* has indicated by saying that it is often difficult to determine whether Mr. Lang is serious or joking. As Mrs. Hunt's translation calls for little remark, I may be permitted to devote this article principally to a discussion of the theories set forth in the Introduction.

I will begin by admitting what probably Mr. Lang will regard as his main contention—namely, that we must expect to find in the myths of civilised peoples, as Mr. Tylor has taught us to find in their customs and institutions, considerable survivals of a pre-historic condition which has its best accessible illustration in the state of things existing among modern savages. I further admit that the wider comparison of myths, on which Mr. Lang insists, has shown cause for discrediting in many details the theories of mythical interpretation which have been founded on an exclusive study of the Aryan mythology. On the basis of these admissions I propose to examine the soundness of Mr. Lang's system, and the justice of its claim to supersede what is known as the "orthodox" theory.

Mr. Lang maintains that a large proportion of the incidents composing, for instance, the Greek or the Vedic mythologies are derived from stories which in the savage period were told of nameless "somebodies," and were afterwards worked up into the fabulous histories of gods and heroes. The motives which actuated the inventors of these primeval stories were much the same as those which actuate the modern novelist—the desire to astonish or interest, and the desire to inculcate certain moral lessons. And the process by which the stories were framed was equally identical in character with that adopted in modern fiction—the selection and combination of such incidents as had happened, or were thought likely to happen, in everyday life. While these primeval stories of nameless somebodies have on the one hand been developed into mythological systems, they have on the other hand come down through different channels in something like their original shape, and still survive in the household tales of European popular tradition. The theory that household tales are degraded divine myths Mr. Lang rejects on the whole, though allowing that it may be true in a small and uncertain proportion of instances. This is not a complete, but, I trust, as far as it goes a correct statement of Mr. Lang's explanation of the origin of mythology, and of the relation between it and household tales.

Now the doctrine of the "nameless somebody" is evidently a mere hypothesis which no direct evidence can prove or disprove. Its

claim to acceptance must consist solely in its abstract probability. But if we assume with Mr. Lang that certain stories originated in the infancy of the human race, it is natural to suppose that they would be produced by the process involving the smallest expenditure of mental effort. It seems to me that it would require a greater effort to invent a story concerning a "nameless somebody" than to imagine some known and named person as going through a series of adventures consistent with, and suggested by, his general character. We escape this difficulty if we suppose that the heroes of primeval romance were either real men who had become famous through their actual exploits, or else divine beings—the creations of nature-mythology. Of course, when an adventure had once been narrated respecting one known person it could easily be transferred afterwards to another known person, and ultimately (if the incident were interesting enough to be remembered for its own sake) to a "nameless somebody." On this view the stories of "nameless somebodies" represent, not as Mr. Lang says, the primeval germ of mythology, but (so far as they have anything to do with mythology at all) the last stage of its decay.

When Mr. Lang asserts that the household tales of modern Europe contain but few instances of degraded divine myths, it is natural to ask what has become of the mass of religious mythology which once occupied so large a space in the imagination of the inhabitants of at least the greater part of Europe. If it be true that stories of pre-historic human life have survived from an inconceivably remote past down to our own times, it is strange indeed that the divine myths, which in comparatively recent periods were deeply imprinted on men's minds by religious reverence, should have vanished and left no trace. Analogy would lead us to expect that when the old gods ceased to be believed in, their wonderful adventures would continue to be related of saints or other historical personages, or possibly of "nameless somebodies." That this process has actually been gone through, has in many cases been clearly proved by Grimm in his *Deutsche Mythologie*; and it is only reasonable to suppose that the same thing has frequently happened where decisive evidence is wanting. The search for myths disguised in household tales, however, is confessedly a study which requires the utmost caution; and Mr. Lang's collection of parallel stories from widely distant countries, where historical connexion is out of the question, supplies a wholesome corrective against hasty speculations in this direction.

But Mr. Lang does not, of course, maintain that all mythology is made up of primeval romances of human life. He admits the existence of genuine nature-myth. In this department, however, I think he attributes disproportionate importance to the ætiological class of myths—that is to say, to the myths which were consciously framed in answer to a distinct question as to the origin of some natural fact. Now such myths cannot have been originally told of a "nameless somebody." The personages introduced into the story are either gods—known by name—or at least beings already famous as possessing supernatural power. In other

words, the ætiological nature-myth is an unessential aftergrowth on a previously existing mythology. The really important nature-myths are those which arise from direct personification of natural objects. Mr. Lang, however, recognises the existence of this class only in a half-hearted and uncertain fashion. Zeus, for instance, is admitted to be the personified sky (unless, indeed, he was a pre-historic savage named Sky!); but the anthropomorphic history of Zeus is a conglomerate of incidents from floating stories about "nameless somebodies," totem gods, and so forth. It is here that Mr. Lang differs most widely from the "orthodox" mythologists, who maintain that the stories of gods and heroes consist to a large extent of parables of the recurring phenomena of nature. He fails to see, in what can be known or inferred as to the character of early human thought, any cause which could account for such parables being mistaken for true history.

Mr. Lang's attitude on this question is due to his ignoring the agency of language in the production of myth. He states, as two contradictory alternatives, the view that the personification of natural objects and powers is due to an instinctive tendency of the human mind, and the view that it proceeds from the influence of language. Mr. Lang, of course, accepts the former alternative. But are the two really contradictory? There would have been little thought in the world but for the impulse towards mutual communication, and the course of evolution of human thought has been largely influenced by the nature of the instrument by which thought had to be expressed. Even modern philosophers are sometimes guilty of mistaking distinctions of words for distinctions in fact. There was assuredly once a time when the movements of the sun could only be spoken of by using what we should call violent metaphors—by describing them, for instance, as the actions of a man. This habit of speech would inevitably lead to the belief that the Sun-man, of whom the visible sun was a disguise, had in his proper human form literally gone through such and such adventures. When, in the development of language, the sun ceased to be known by the old name, that name would still cling to the divine Sun-man, whose personality would gradually grow more and more detached from the physical sun, until, perhaps, any connection between the two was altogether forgotten. When this took place, the history of this divine man might be enlarged by romantic expansion, by incidents borrowed from other mythic stories, and from historical tradition. There is surely nothing paradoxical in this theory, nor in the further supposition that successive or simultaneous names for the sun may have given rise to the belief in a number of sun-men, each with his own name and separate history. Any other striking natural phenomenon might in the same way lead to the creation of several different mythic personages. There is here a *vera causa* for the rise of a large body of mythology; and I think it is difficult to study carefully any of the greater mythological systems without feeling convinced that this cause has actually been widely operative.

Mr. Lang's most effective argument against all this is that primitive man had much more interest in men and women than in sky and

sun and cloud; and that, therefore, he is more likely to have framed myths about the former than about the latter. But has not Mr. Lang himself told us that to the pre-historic mind sky and sun and cloud were men and women? If so, in addition to their interest as human beings, they had also the interest of super-human power which might at any moment be used for weal or woe, and that of a mysterious disguise that might at any moment be unexpectedly laid aside. It is quite likely that to a pre-historic man the Sky-man or the Sun-man was a person much more worth talking about than his next-wigwam-neighbour, or even his own heroic ancestor.

I must protest against the notion, common to Mr. Lang with some of his opponents, that the mythopoeic age belongs entirely to a time long anterior to history. It would be truer to say that the creation of myth never wholly ceases among any people until its logical culture is on a level with its poetic instinct towards imaginative sympathy with nature. Survivals from primitive savagery certainly do not explain the great bulk of the Aryan mythology. Such survivals, I have little doubt, do exist; but it should be remembered that many apparent instances of them may be (as Sir George Cox long ago recognised) simply cases in which Greeks and Hindus have borrowed from the "totem" or "fetish" cults of ruder nations whom they absorbed.

I have far exceeded my intended limits of space in pointing out what I think the defects of Mr. Lang's treatment of mythology. To speak of its merits is less necessary: Mr. Lang has the crowd on his side. But I should be sorry to leave unexpressed my conviction that his method is, within its proper limits, a sound and fruitful one. He has not refuted the philological theory of mythology; but he has corrected many erroneous applications of it, and has thrown important light on some departments of the subject which have been hitherto almost ignored.

HENRY BRADLEY.

The Teaching of the Twelve Apostles. Διδαχὴ τῶν δώδεκα Ἀποστόλων. A Translation with Notes, and Excursus (I.-IX.) illustrative of the "Teaching," and the Greek Text. By Canon Spence. (Nisbet.)

THIS edition of *The Teaching of the Apostles*, in its parchment cover and on antique paper, makes an attractive-looking volume. Canon Spence's translation is good; but there are a few points to which attention may be called. In chap. v. *φαρμακείαι* is translated "philtres"; should it not rather be "druggings"? In the same chapter *φθορεῖς πλάσματος Θεοῦ*, "corrupters of the image of God," should certainly be "corrupters of God's handiwork." In chap. ix. *διὰ Ἰησοῦ τοῦ παιδὸς σου* is twice rendered "through Jesus Thy Son." That the authorised version renders *παῖδα* by "son" in the Acts cannot be held to justify this translation. Canon Spence would have done better to follow the precedent of the Revised Version and given "servant." In chap. xi. *οὐ μενεῖ δὲ ἡμέραν μίαν*, "he shall not stay more than one day." This is apparently the meaning, but it is an impossible rendering of the text as it stands. We must either, with Hilgenfeld, omit the *οὐ*, or, with

Harnack, interpolate *εἰ μή*. In the same chapter *πάντα προφήτην . . . οὐ πειράσεται*, "every prophet . . . ye shall not try," should, of course, be "any prophet." In chap. xvi. *ἐκπετάσεται*, "a soaring forth"; should it not rather be "a spreading out," as of wings? Canon Spence understands it of the living, who are to be caught up to meet the Lord in the air; but I should fancy it rather refers to the wings of the angels of doom, and that the New Testament parallel is to be sought in Matt. xxiv. 31, rather than in 1 Thess. iv. 13-17.

Let us now see how Canon Spence deals with the one or two difficulties of the piece. *Πᾶς δὲ προφήτης . . . ποιῶν εἰς μυστήριον κοσμικὸν ἐκκλησίας* (chap. xi.), where Harnack takes *ποιῶν* absolutely, translating "der in Hinblick auf das irdische Geheimniss der Kirche," Canon Spence translates "every prophet who summons assemblies for the purpose of showing an earthly mystery." This gives so good a sense that one wonders any other should have been suggested; but the objection probably is the use of *ἐκκλησίας* in a sense which it has almost lost in the New Testament, and that the arrangement of the words is too artificial for the rude style of the writer. By the "earthly mystery" Canon Spence understands, with Bryennios, a symbolic action, like Ezekiel's laying siege to the tile, and by *ἀρχαῖοι προφῆται* the prophets of the Old Testament. This, in spite of Harnack, must surely be right. Even if the Teaching was written in the second quarter of the second century, if the author was acquainted with the Old Testament at all, he could hardly mean by "the ancient prophets" any but those of the older dispensation. At any rate, we may remember that the prophets of the primitive Church sometimes used symbolic actions, as is clear from the example of Agabus.

In the same chapter, immediately above, is the other chief difficulty. *Καὶ πᾶς προφήτης ὁρίζων τράπεζαν ἐν πνεύματι, κ.τ.λ.* This Canon Spence translates, "And no prophet who in the Spirit orders a love-feast eats himself of it." Probably this is substantially the meaning, though for love-feast should be substituted a more general expression, such as a dinner, *i.e.*, for the poor. If the prophet's chief object is to get a dinner for himself, then he is a false prophet. In chap. xvi. *ἐν αὐτοῦ τοῦ καθάρματος* is translated "under the very curse"; but, in the note, it is explained that the "very curse" is Jesus himself, who is here so-called "in terrible irony." This is probably the true meaning; but, if so, we ought to read not "under," but "by the very curse."

Canon Spence's notes are generally excellent. It is, however, no harm to point out that the word Trinity does not, of course, occur in the text, though Canon Spence writes as if it did. The Excursus in this volume are an able, though far from exhaustive, treatment of the several points of interest raised by this treatise. They are too short to be in all respects satisfying, and are not to be compared to the elaborate essay of Harnack. One of the most important features of the original work, it is well known, is the position assigned to the apostolate, the apostles being represented as men in active employment, travelling from place to place, and

from one of whom a visit might any day be expected. Now from this circumstance one of two inferences inevitably follows: either that the apostolate continued some way into the second century, or that the Teaching belongs to the first. Of those inferences Harnack draws the former, and Canon Spence the latter; but which of the two is right I doubt if there are any means of deciding. Canon Spence thinks that he sees signs that the apostolate was an office which was fast passing away. Now this, I submit, is just what we do not see. At the same time, it may be admitted, there is nothing in the Teaching, assuming its early date, inconsistent with the common view that all apostles must have been witnesses of the Resurrection. That the apostles of our treatise claimed, indeed, to have received their commission from Christ in person (it might be by supernatural means, as in the case of Paul) need not, from any point of view, be questioned; but to make them necessarily contemporaneous with the original twelve, would not this require a higher antiquity for the Teaching than even Canon Spence would ascribe to it? Canon Spence also lays stress on the position of the episcopate. Bishops and deacons are mentioned as if they were almost on a par, and they both alike hold their office by the election of the people. "Early in the second century," says Canon Spence, "the genuine epistles of Ignatius [but which are they?] testify with ample fulness to the rise of the episcopal power." Probably the first quarter of the second century is precisely the period of church history of which we are most ignorant; and, notwithstanding the assertion, quoted from Bishop Lightfoot, that "early in the second century the episcopal office was firmly and widely established," I cannot think this argument conclusive. There are some strong reasons for believing that the Teaching may belong to the first century, but the evidence cannot be pronounced conclusive; and, considering the darkness which still hangs over the post-apostolic age, the safest, if not the most satisfactory, course is to hold one's judgment in suspense.

ROBERT B. DRUMMOND.

Les Polynésiens: Leur origine, leurs migrations, leur langage. Par le Dr. A. Lesson. Ouvrage redigé d'après le Manuscrit de l'auteur par Ludovic Martinet. Tome IV. (Paris: Leroux.)

THE former volumes of this work, which appeared at intervals, were noticed in the ACADEMY, first on May 29, 1880, and at greater length on February 24, 1883. The present and concluding volume consists for the most part—besides some appendices, mainly translated from English writers, on the natural history and mythology of New Zealand—of a *résumé* of the theory which the entire work is intended to prove—*viz.*, that the Polynesian race, instead of having migrated, as is commonly supposed, at a comparatively recent date, to New Zealand, originated there, and spread thence over the Pacific, and even to the continents of America, Asia, and Africa.

The chief defects of the work from a critical point of view, such as the wearisome amount of repetition, besides the dependence on

authorities now out of date, and the apparent want of relevance in much of the reasoning, have been already pointed out in these columns, as quoted above; but it must be added that the work shows abundant signs of labour and research, and, thanks to an adequate index, much varied information bearing on the subject is made available.

As regards the origin of the Polynesian race, every solution of the problem is beset with difficulties. The race is scattered over a wide area, with a resemblance between its branches, in language, customs, and appearance, so close as to point to a comparatively recent separation from the parent stem; yet no clear connexion can be traced with any continental race, or language, or locality; and, as Dr. Lesson points out, the Polynesians are only found in the Pacific, to the east of a line drawn from New Zealand to Hawaii. Perhaps this is the strongest argument for his New Zealand theory; but it is only a negative one. He points to the affinities thought by recent observers to connect the Polynesians with the Dayaks and Bataks of the Indian Archipelago, and the Stiengs of Cambodia, as a proof that the migrations of the former extended even into Asia; but the opposite conclusion might be equally deduced. The occurrence, again, of Polynesian settlements on the eastern side of several Melanesian islands, some of them admittedly recent, may be accounted for otherwise than by supposing it to show, against all the tradition, that the current of the early migration ran westwards. The author detects the presence of the race not only in Madagascar, but on the continent of Africa; but surely it is easier to suppose that such a migration proceeded from a centre in the Archipelago or neighbouring mainland of South-east Asia than from New Zealand, even with the help of an intervening Lemuria. And the greater resemblance—which he admits—of the Malagasy to the Samoan than to the Maori language would then be natural enough, both Samoan and Malagasy being derived from the same Asiatic source. His assertion that the Maori is the primitive Polynesian speech does not seem to rest on any substantial grounds. This may also, perhaps, be said of other linguistic arguments in the book. Some curious verbal coincidences are quoted between the Polynesian and the Carib and old Egyptian; but what is the value of a resemblance between certain Polynesian and African words when the meanings of the words are different? The author returns in this volume to the traditions of the Maoris on the northern island, relating their migrations from "Hawahiki," which he is convinced is none other than the middle island of New Zealand, and the primeval home of the race. These traditions would support the author's view much more effectually if he could prove that any of them which contain distinctively New Zealand references occur in the other Polynesian groups. They evidently relate to migrations undertaken at different epochs. Dr. Lesson says it is possible to distinguish between the earlier traditions and the more recent; it seems very doubtful, however, whether the Maoris themselves can draw any such distinction. Some of the voyages appear to be short, and very probably from the neighbouring southern island. This

would explain the allusions to high mountains, and snow and lakes; but, to take only a few points among many, legends which describe great lizards—i.e., crocodiles, or the importation from "Hawahiki" of the dog and of the cultivated taro (*Allocaasia macrorrhiza*)—seem to point to a very different origin.

COUTTS TROTTER.

BOOKS OF TRAVEL.

The Diary of a Civilian's Wife in India, 1877-82. By Mrs. Robert Moss King. With numerous Illustrations. In 2 vols. (Bentley.) This book, which at once arrests attention by the graceful ornament on its plain white binding, contains just what its title purports. It is a narrative of ordinary life in the plains of Hindustan, varied by frequent trips to the hills, which have now become as customary with Anglo-Indians as the autumnal sojourn at the seaside to English children. The period happens to cover not the first years, but the last years, of the writer's exile in the East, so that we are saved all that elaborate explanation of common things which the newcomer imagines must be interesting to others because they are strange to himself. Mrs. King writes as one already possessed of the needful experience to understand what was going on around her; and she publishes—if she did not originally write—for those who are previously acquainted with the trivialities of Indian life. Ill-natured gossip and profound views on politics are alike absent from her pages. But she does not decline to enliven them with picturesque details, nor to express her own views on passing events with unusual independence. Though it would be absurd to compare her with the great lady travellers of our generation, yet she may be quoted as another example of the rule that women make keener observers than men, and that their literary style is less self-conscious. The descriptions and comments scattered through the book deserve more space than we can afford to give. Here are a few points that we have found novel. While "on tour" with her husband, they met the superintendent of police, whose duty it was to inspect certain Rajput villages accused of female infanticide. In such cases, whenever the proportion of girls is found to fall below a certain limit, a punitive force is quartered in the village, and the inhabitants are subjected to various disagreeable regulations. The only result, according to the superintendent of police, is that they have now taken to killing the boys so as to bring about the due proportion in another way. Again, while paying a visit to Jaipur, in Rajputana, Mrs. King writes:—

"This afternoon we went to the public gardens, which are most beautifully kept up, the turf surpassing in extent and greenness any I have seen in India. Some *fête* was going on, and a brighter, gayer, happier scene there could not be. There were crowds of natives, men and women in quite equal proportions, which is not common. Most of them were in gala dress, the women's *chadors* being red, pink, green or yellow, and the effect was most brilliant. Every one was doing what seemed to him good—groups of women clustered on the grass like flower clumps, singing gaily some merry shrill chant; children, some gaily dressed, others nearly naked, all playing together and rolling down a grassy bank; men and children crowding the merry-go-round, all bright and joyous-looking, and as orderly and well-behaved as the most aristocratic crowd could be. It was a scene never witnessed in the public gardens under English rule."

The sketches by the author, reproduced by some mechanical process more pleasing than usual, add to the attractiveness of a book which we

cannot commend too highly for its brightness and its simplicity.

Sketches in Spain from Nature, Art, and Life. By John Lomas. (Edinburgh: Black.) This is far the best book of tourist travel in Spain which we have read for many a day. The author has taken pains to study and to inform himself on the subject of which he writes, and this is just what the average tourist writer neglects to do. There is here little or no hasty jotting down of impressions formed from a single visit. Nearly every building or work of art described has been carefully examined and paused over until really understood. In fact, were it equally illustrated, this smaller volume might almost take the place of Street's noble tome on Gothic Architecture in Spain; any slight deficiency in technical knowledge is compensated by a greater catholicity of taste. Mr. Lomas does not reserve his commendations for a favourite style only, but can appreciate really good and artistic work under whatever form. The sketches of nature promised on the title are not obtrusive or too elaborate attempts at word-painting, but always show a reserve of power, and give such indications only as enable the reader's imagination to realise the scene. Except, perhaps, in the North-west, the writer hardly goes beyond the beaten track; it is the pains and trouble taken rightly to understand and describe familiar objects which give the book its value. Among chapters which tell of the less frequented spots, we may mark out as especially good those on Segovia and Tarragona. Readers will be grateful to our author for noting down the words and music of the *Seizes* of Seville. These religious dances, however, are not confined to Seville. In many places in the North, from Bilbao to the frontiers of Catalonia, men still dance gravely before the Host; and we have conversed with those, not much past middle age, who remember it in spots where it is now discontinued. Larramendi, the Jesuit (1756), has a chapter in defence of these religious dances of the North. The author's remarks on church music are discriminating, and make us regret that he seems to have had no opportunity of judging the merits of the masses of Doyague, almost the only master whom Spaniards claim as equal to foreign composers in that style. There are some symptoms of fatigue towards the conclusion of the work; the words (p. 400), "one gets heartily sick of the very thought of church or convent," come like a thunder-clap upon the enthusiastic reader. With the remonstrance to the ordinary British tourist in the Preface we heartily concur, but we are not equally at one with the strictures which follow. Here and elsewhere are marks of undue contempt for modern Spanish literature. The chief statesmen of Spain lament as bitterly as does our author the want of a true electoral body, and feel how impossible all real constitutional government is without it. A perusal of Colmeiro's lately published *Cortés of Leon and Castile* shows that the movement of the Comuñeros was no "misguided patriotism." Full justice cannot be done to Moorish architecture without a knowledge of Cairene as well as of Spanish masterpieces. The likeness of some of the Catalan churches to our Anglo-Norman architecture may be accounted for by an identical origin from the school of Lombardy, the fatherland of Lanfranc and of Anselm. Lombardo-Gothic is a term applied to the political institutions of Catalonia, and may serve for her architecture also. We doubt the Moorish origin of the work in the early Asturian Church; the date seems rather to point to the Romanesque churches of Southern and Central France as the true prototype. These misconceptions, if indeed they are such, do not detract from the merit of the work as a whole. It is one which every lover of art, and especially of

architecture, should take as a companion in a tour in Spain.

Nine Years in Nipon. By Henry Faulds. (Gardner.) Mr. Faulds, as surgeon of the Tsukiji Hospital at Tokio, has passed nine years in Japan, and has, therefore, some reason to believe that his experience of that country may be interesting to English readers. Although he has nothing very new to tell us, and has no great literary gifts, he has managed to fill nearly three hundred pages with matter which is generally amusing and never dull. Though not a great traveller, he made a pilgrimage to Fiji, a trip to Nikko, and paid a visit to Nagasaki and Tokio, and his record of these journeys is full of agreeable incident and anecdote, and his observations on the inhabitants, the animals, and the vegetation, are worth reading. In other chapters he touches lightly upon the education, the art, and the philosophy of Japan, and those which conclude the book are devoted to the manners and customs and the author's own opinions upon the country and its prospects. We are glad to have his testimony to the widespread improvement of the morality and intellectual condition of the people. On the whole, the book is one for which we may be thankful in a moderate way, but it scarcely excites our anticipations for that further work on the religious and moral systems of Japan for which he appears to have gathered material.

East by West: a Journey in the Recess. By Henry W. Lucy. In 2 vols. (Bentley). Our author has, we believe, won his reputation in journalism by descriptive sketches of parliamentary life. We mention this as explaining the word "Recess" in his secondary title, which may be taken to mean the period between August and February. In these few months he circumnavigated the globe from "East to West," running across the United States, spending some time in Japan, stopping at Hong Kong, Singapore, and Ceylon, and visiting the chief cities of Northern India. Some portion of his experiences of travel have already seen the light in the *Daily News*, where somehow they seemed more appropriate than in their present form of two substantial volumes. For it must be admitted that Mr. Lucy has not anything very novel to tell. The *grand tour* of the northern hemisphere is as common now as was the *grand tour* of Europe in the last century. Nothing new remains to be said about the "S." roads of New York, the Chinese question in California, the *jinrikisha* of Japan, the towers of silence at Bombay, and the Suez Canal. The triteness of the subject can only be redeemed by the acuteness of the observer, or by the fluency of his style. And here we must do Mr. Lucy the justice of saying that he has produced a book which any one may read with pleasure, and which leaves as its most permanent impression on the mind a favourable opinion of the author.

La Patrie hongroise: Souvenirs personnels. Par M^{me}. Adam (Juliette Lamber.) Paris: Nouvelle Revue. This handsome volume of more than three hundred pages contains the *impressions de voyage* of a fortnight spent in Hungary. The method by which so short a visit is made to yield so much printed matter is simple enough. M^{me}. Adam's literary reputation and her well-known hostility to Germany procured her a large circle of Hungarian friends and admirers. With one exception they all appear to have belonged to the parties of the Opposition. Their conversations in the railway carriage and at the breakfast table are reported at full length. Their statements are accepted without criticism, and reproduced without a hint that there is another side to the shield. The feminine malice with which she paints those who did not take part in the ovation she received is amusing. The Prime Minister, M. Tisza, reminds her of *un petit instituteur*

allemand. Although she does not descend to the level of M. Tissot, her book is marked by a like striving after effect. The gypsies who take part in anti-semitic riots do so from a love of their country. A vulgar malefactor is depicted as a modern Robin Hood. Of the extraordinary devotion of the peasants to their magnates she will quote two instances out of a thousand that have been told her. In one word, the authoress of *La Patrie hongroise* is an agreeable writer, but a most unsafe guide.

NOTES AND NEWS.

MR. FRANCIS T. PALGRAVE, to whom we owe not only *The Golden Treasury* but also selections in the same series from Shakspeare's Lyrics and from Herrick, is now preparing a selection from Tennyson, with notes. One of the chief objects of the notes (which will be studiously brief) is to assign to the poems their original motive, which was in many cases a suggestion from various friends of the poet.

A CHEAP edition, being the sixth, of Mr. R. Bosworth Smith's *Life of Lord Laurence* will be published on February 10. It will contain an appendix of some thirty pages dealing with the controversy as to the character of Hodson of Hodson's Horse which was excited by the publication of certain statements in the first edition. Among other documents here printed for the first time is a minute of Lord Dalhousie upon the finding of the Court of Inquiry into Hodson's conduct when in command of the Guides in 1855, together with a long letter from Gen. Crawford Chamberlain, now the sole survivor of those who sat on that Court. There are also letters from the late Sir George Lawrence, Sir Henry Daly (who commanded the regiment after Hodson's death), Sir Neville Chamberlain, and Sir Henry Norman. Some of the disclosures in these letters are startling enough; but their publication has been, in a measure, forced upon Mr. Bosworth Smith by the indiscriminate defence of Hodson by his friends. His widow, we may here mention, died last autumn. A Hindustani translation of the *Life of Lord Laurence* has recently appeared at Allahabad.

MESSRS. W. H. ALLEN will publish shortly a History of Hindustan by Mr. H. G. Keene, C.S.I., late of the Bengal Civil Service. The term "Hindustan" is taken in its strict sense as limited to Northern India—the country, in short, where Hindi is the vernacular language. The work begins—where all history necessarily begins in India—with the conquest by the Mahommedans in the tenth century, and will form a sort of introductory supplement to the author's book on *The Fall of the Mughal Empire*.

WE have pleasure in stating that our esteemed contributor, the Rev. Isaac Taylor, Rector of Settrington, has been appointed by the Archbishop Canon and Prebendary of York.

SOME delay has taken place in the printing of Mr. H. T. Wharton's promised book on Sappho, which has already been announced in the ACADEMY; but subscribers may expect to receive their copies some time in March. Meanwhile advantage has been taken of the delay to add some new features to the work, without augmenting its price. There will be a bibliography of Sappho, as complete as the author can make it; and a frontispiece, consisting of a medallion head of Sappho, after Mr. Alma Tadema's famous picture, now in America. This has been specially engraved by Mr. John Cother Webb, a pupil of the late Thomas Landseer; and the painter has said of it, after seeing a proof—"You have given the face the exact expression I meant to give it in my picture." Encouraged by the reception his

circular has met with, in America as well as in England, Mr. Wharton proposes to issue twenty-five large-paper copies, with artist's proofs of the frontispiece printed before letters, at the price of one guinea each. The book will be printed at the Chiswick Press, and issued to subscribers only. Mr. Wharton's address is 39 St. George's Road, Kilburn.

MR. PERCY THORNTON'S *Harrow School and its Surroundings*, which was announced some time since, will be issued by Messrs. W. H. Allen & Co. early next month.

THE Hon. D. A. Bingham, author of *The Marriages of the Bonapartes*, has made final arrangements with Messrs. Chapman & Hall for the publication of a work on the Archives of the Bastille.

MR. W. S. ELLIS has in preparation a book entitled *The Parks and Forests of Sussex, Ancient and Modern*, which will describe about one hundred and fifty parks and forests, as well as the castles, manor houses, and mansions connected with them; dealing with the subject from historical, antiquarian, and descriptive points of view, and giving biographical notices of some of the former owners of the properties referred to. An introductory chapter treats of parks and forests in general, and in conclusion a chapter is added on "Lewes and the South-downs." An appendix gives the list of landowners in the county, owning 1,000 acres and upwards, taken from the Parliamentary returns of 1875.

UNDER the title of the *Adelphi and its Site* Mr. Wheatley is about to publish, through Mr. Elliot Stock, a reprint of his articles, which appeared in the *Antiquary*, in a separate form. The edition will be supplied to subscribers only and is limited to 350 copies.

DURING the coming week Messrs. Field & Tuer will issue a popular and illustrated edition of Mr. W. M. Flinders Petrie's *Pyramids and Temples of Gizeh*, which ran out of print almost immediately it appeared.

THE Clarendon Press will publish in a week or two Dr. Martineau's new work, *Types of Ethical Theory*. The author seeks the ultimate basis of morals in the constitution of the human mind. He first vindicates the psychological method, then develops it, and finally guards it against partial applications injurious to the autonomy of the conscience. He is thus led to pass under review the various theories relating to the basis of moral obligation and the origin of moral sentiments.

THE English Dialect Society's books for 1884 will shortly be ready for issue to the members. They will consist of the first part of a *Glossary of Cheshire Words*, by Mr. Robert Holland; *Upton-on-Severn Words and Phrases*, by the Rev. Canon Lawson; *Anglo-French Vowel Sounds*, a word list illustrating their correspondence with modern English, by Miss B. M. Skeat; and Part III. of *English Plant Names*, by Mr. James Britten and Mr. Robert Holland, completing the work.

IT is understood that the late Henry G. Bohn's collection of Art books, though comparatively few in number—said to be less than 800—forms a perfectly unique library of reference, and in many languages. We hear that it includes splendidly bound folio editions of engravings from the great masters in almost every known European gallery. Mr. Bohn's general private library—a substantial but by no means extensive one considering his colossal dealings with books—is not likely to be sold. It may not be generally known that he lent nearly 1,400 volumes to the Crystal Palace Exhibition some years ago, and lost them all in the fire there.

THE Rev. M. G. Watkins, Barnoldby-le-Beck Rectory, is, we hear, about to publish, through Mr. Elliot Stock, a little work on *The Worthies of Lincolnshire*.

MR. DAVID GLASGOW, Vice-president of the British Horological Institute, has been engaged in the preparation of a work on *Watch and Clock Making*, which will shortly be published by Messrs. Cassell & Co., forming a new volume of their *Manuals of Technology*, edited by Prof. Ayrton and Dr. Wormell.

UNDER the title of "Russian Secret Agents in Afghanistan," Mr. Charles Marvin will contribute an article to the ensuing number of the *Army and Navy Magazine*, describing recent intrigues at Herat and Cabul, based on Russian sources.

MESSRS. TILLOTSON AND SON, of the *Bolton Journal*, who are the originators of the practice of publishing novels by eminent writers simultaneously in a number of newspapers in England, the United States, and in the colonies, announce that they intend shortly to publish, instead of a serial novel of the usual three-volume size, what they call an "Octave of Short Stories." The first of these tales, "A Rainy June," by "Ouida," will appear on Feb. 28th. The other seven writers of the "Octave" are Mr. William Black, Miss Brad-don, Miss Rhoda Broughton, Mr. Wilkie Collins, Mr. Thomas Hardy, Mr. Joseph Hatton, and Mrs. Oliphant.

MESSRS. CHARLES SCRIBNER'S SONS, of New York, announce that, beginning with the February number of their descriptive literary journal, *The Book Buyer*, they propose to enlarge its scope to cover every important book published in America, and a good many of those of foreign origin. While it will keep strictly in the line of descriptive notices, everything which it prints will be specially prepared for its columns and by competent hands.

FROM the *Guernsey Star* we learn that the Customs Department has given notice that the provisions of the Customs Consolidation Act, 1876, with regard to the prohibition of foreign editions of English books, will be strictly enforced in the Channel Islands. It appears that in Guernsey the importation and sale of the American and Tauchnitz reprints of works by English authors has until now been practically unrestricted.

DR. C. CASATI, who has just published a work in two volumes entitled *Nuovo rivelazioni sui fatti in Milano nel 1847-48*, is preparing for the press an edition of the unpublished letters of Pietro Borsieri, the prisoner of the Spielberg, together with letters addressed to him by several of his friends, among whom were Arrivabene, Berchet, Arconati, and Della Cisterna. The correspondence contains many particulars relating to the sufferings of these patriots in the Austrian prisons, and to the privations suffered by Borsieri and his companions in America. Dr. Casati will contribute a biographical sketch of Borsieri and notes in illustration of the letters.

AT the meeting of the Florence Accademia dei Lincei (department of historical sciences) on Jan. 18th, it was announced that no competitors having presented themselves for the prize offered by the Minister of Public Instruction for an essay on the Latin poetry published in Italy during the eleventh and twelfth centuries, the competition will remain open until April 30, 1888.

AT the meeting of the Clifton Shakspeare Society, on January 24, a paper was read on "The Comedy of Errors" and the 'Menæchmi' of Plautus," by Mr. J. W. Mills, who came to the conclusion that Shakspeare had neither read Plautus in the original nor in

translation. Ben Jonson had read the "Menæchmi," and from him Shakspeare doubtless learned the incidents of the play. Mr. Mills protested against the laboured efforts that had been made to establish for Shakspeare a claim to classical scholarship, as, for the expression of great and noble thoughts, a familiarity with dead languages was quite unnecessary to a mighty genius who had at his command a language of his own which, in the Elizabethan era, had become so vigorous, plastic, and harmonious. Mr. G. Munro Smith read a paper on "Adriana," vindicating her from the charge of shrewishness which has been so freely brought against her.

ORIGINAL VERSE.

WHITECHAPEL MOSAICS AND A SERMON.

I passed in drear unenviable thought
Down grim unlovely streets, and half amazed
I saw a crowd who on a picture gazed
Of coloured marble curiously enwrought.
Here Time went free, but ah! his hand was caught
By Death, who followed hard, his balance raised,
Wherein the deeds of men are all appraised,
Was Judgment close and ever closer brought.
Death! hold Time fast! the sorrowing thousands
cried,
Without thee Life were insupportable,
And with thee scales of Judgment, and the
sword
Thrice welcome. At the cry gates opened wide,
And through the doors I heard the Preacher tell
Of One more strong than Time—Love, Judge,
and Lord.

H. D. RAWNSLEY.

OBITUARY.

EDWARD ODYNIEC, the Polish poet and journalist, and friend of Mickiewicz, died in Warsaw on January 15. He was born in 1804, and was educated at the University of Wilna, where he was a member of the celebrated society of the Philareti. His period of poetic activity falls chiefly in the time of the romantic movement in Poland. His odes and occasional poems were printed in 1825-28, and many of them have been translated into German and Bohemian. His translations from Byron, Moore, and Walter Scott are greatly admired in Poland. He also published several dramas on historical subjects. Odyniec was editor, first of the *Kurier Wilanski*, and afterwards of the *Kurier Warszawski*, and was highly esteemed as a political writer. He was personally very popular in Warsaw, and his funeral was attended by many thousands of people.

DR. A. EMANUEL BIEDERMANN, Professor of Theology in the University of Zürich, died in that city on January 26. He was born at Winterthur in 1819, studied theology at Basel and Berlin 1837-41, and in 1843 was elected Pfarrer of Münchenstein in the Canton of Basel-land. In 1850 he was made Professor Extraordinarius of Theology in the University of Zürich, and in 1864 Professor Ordinarius of "Dogmatik." His *Christliche Dogmatik* (Zürich, 1864) is the best known of his theological writings. In connexion with Dr. Fries he founded in 1845 the Liberal ecclesiastical monthly, *Die Kirche der Gegenwart*, out of which the still extant *Zeitstimmen* was developed.

MAGAZINES AND REVIEWS.

THE main thing for which the January *Livre* deserves mentioning is an excellent full-page etching from H. Pille's drawing of "Don Quixote in his Library." One of the two independent articles is only a translation of Dr. Pascoe's *Atlantic Monthly* paper of last September on English magazines. The other, by

M. de Lescure, on Henry IV.'s love-letters, is a historico-social study of no great value, and not quite worthy of the periodical.

THE *Deutsche Rundschau* for February publishes an advance chapter from Herr Mommsen's forthcoming volume of his *History of Rome*. The chapter chosen deals with the history of Britain. It is needless to say that the sketch of the Roman Province is drawn with a firm hand. All that is known about Britain is brought together, and a mass of archaeological details is clothed with historic life. Herr Mommsen dwells especially on the fact that Britain was as completely Romanised as Gaul. It was not the Angles and Saxons who swept away the British tongue: the Roman idiom had long prevailed. We notice, however, that Herr Mommsen is ill-informed on one point. He writes:—"Wem in heutigen England, abgesehen von Wales und Cumberland, die alte Landessprache verschwunden ist." Cumberland has long ceased to talk Celtic. Herr Weber, under the title of "Indische Dorf-Idylle," gives an account of the Proverbs of Håla, and translates a number of them, which throw light on Indian village life in very early times. We notice with pleasure an article by Sir Roland Blenerhasset on "Ireland under Lord Spencer." It is not common for an English M.P. to be both able and willing to tell foreigners what is happening in England.

THE *Archivio Storico Italiano* for January publishes from the Tuscan Archives a very interesting document, the draught of a Bull of Excommunication made by the orders of Pope Clement VII. during his captivity in the Castle of St. Angelo after the sack of Rome in May 1527. The excommunication was directed against all who kept the Pope captive or secretly favoured their attempts. This projected bull suggests a large field of speculation. If it had been issued the history of Europe might have been greatly changed. If Clement VII. had broken with Charles V. and boldly defied him, the Reformation in England, among other matters, would have gone a different course. The publication is continued of the letters of Vincenzo Aramanui, the Genoese Envoy, who writes from Cologne the news that was brought to Henrietta Maria of the fortunes of Charles I. in 1642-43. Sig. Chiappelli writes an interesting article on "The Administration of Justice in Florence from 1300 to 1600." His evidence shows widespread corruption among the magistrates—a fact which was of much moment in determining the course of Florentine history.

IN the *Revue Historique* for January M. Faigniez begins a diplomatic research, "Le Père Joseph à la Diète de Ratisbonne en 1630." M. Puaud publishes an interesting document, the last memorial presented to Louis XIV. by the French Protestants immediately before the Revocation of the Edict of Nantes. Students of Roman history will be glad of the bibliography of German writings on that subject published in 1882, 1883. It is carefully prepared by Herr Haupt.

CORRESPONDENCE.

AN UNPUBLISHED LETTER OF THOMAS HOBBS.
 12, Horton Street, London, W.: Jan. 28, 1885.

As Prof. Croom Robertson points out, the necessary steps in the last paragraph of the demonstration given in the ACADEMY for January 17, were not all put down by Hobbes's amanuensis. We are not even told the position of N.; MN is the perpendicular drawn from M upon BC. The paragraph should, moreover, have commenced "And if on BN you make an arc to cut the chord BL produced in i you have Li," &c.; "i" being, of course, a different point from "I," the centre of the square ABCD, though, by a printer's mistake, the same symbol was made to serve for both.

With respect to the handwriting of the letter and proposition, it seems, from Aubrey's statement, that Hobbes had "not been able to write legibly since 1665 or 1666," and that "he gave to James Wheldon, his amanuensis [who writes a delicate hand], his pension at Leicester, yearly, to wayte on him, and take care of him, which he did performe to him living and dying, with great respect and diligence: for which consideration he made him his executor." It was probably Wheldon who made the beautiful manuscript copy of the *Leviathan*, which is now among the Egerton MSS. in the British Museum (No. 1910). The whole book, including the elaborate title-page, is transcribed on vellum in Indian ink, and Hobbes has made various alterations in his own handwriting. This work, which was formerly in the possession of the Earl of Macartney, is supposed to have been a presentation copy to Charles II.

In his *Elements of Philosophy* (1655) Hobbes made three attempts at squaring the circle. "In the comparing of an arch of a circle with a straight line, many and great geometricians, even from the most ancient time, have exercised their wits; and more had done the same, if they had not seen their pains, though undertaken for the common good, if not brought to perfection, vilified by those that envy the praises of other men" (*Works*, i. 287).

GEORGE A. AITKEN.

ODIN.

Oxford: Jan. 24, 1885.

With regard to my etymology of the name "Woden," it might seem that I had copied another scholar without acknowledgment, and Mr. Taylor's words suggest as much; but at the time I connected "Woden" with the Latin *vates* it came to me as a happy thought, and I had no notion that it had ever been suggested before. I have never used or copied Fick's book; but I remember telling Dr. Kluge my discovery, when he replied that it had also occurred to him. He made no mention of Fick; and I conclude that all three of us have independently hit on the same etymology, the correctness of which, to my mind, admits of no doubt. However, I gladly give the priority to the learned German etymologist, whose third edition bears the date of 1874. I say the third edition, as I do not find the equation with *vates* in the earlier edition of 1870. On turning to my article on "Óðinn" in the Icelandic Dictionary, written early in 1871, I find that I was within an ace of the *vates* etymology, as will be seen from the following words which I then used: "Óðinn... the fountain-head of wisdom, the founder of culture, writing, and poetry, progenitor of kings," &c.

In support of Woden being the wind, Dr. Isaac Taylor appeals to Hækleberg. This is but beating the air, for Hækleberg means not a cloak—"bearer," as "berg" means mount, Hækleberg is "Mount Hecla," the Icelandic volcano, famous in Northern Europe throughout the Middle Ages as the abode of the condemned souls. The old Icelandic Heklu-fell, Cope-fell (never Hecla alone) becomes in German Hækleberg. During the fifteenth century the trade in Iceland was wholly in the hands of the British, later on joined by the Hanseatic Hamburgers. The navigation of those days forced those foreigners to stay in Iceland through the winter. There were English winter-stations; we read of one numbering 300 men. One of the chief was within a day's ride of Mount Hecla. Small wonder, then, that in those dark ages confused legends about Heckeberg and John Hacklebirnie, "the devil," would reach Britain and North Germany. As the first eruption of Mount Hecla only happened in 1104, Iceland having then been peopled for nearly two centuries, the mountain

would have got its name long before it was known to be an active volcano. The name, we take it, was derived from the shape of the snow or the fog-cap at its top; at any rate, it has no bearing whatever on Woden, either as wind, or wizard, or vapour, or whatever you may choose to call him. G. VIGFUSSON.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Feb. 2, 5 p.m. Royal Institution: General Monthly Meeting.
 8 p.m. Victoria Institute.
 8 p.m. Society of Arts: Cantor Lecture, "The Distribution of Electricity," by Prof. Geo. Forbes.
 TUESDAY, Feb. 3, 3 p.m. Royal Institution: "Colonial Animals," by Prof. Moesley.
 7 p.m. Society of Architects.
 8 p.m. Biblical Archaeology: "Notes on the Antiquities from Babuts in the Collection of Mr. F. G. Hilton Price," "Some Karian Inscriptions," by Prof. A. H. Sayce.
 8 p.m. Civil Engineers: "The Design and Construction of Steam Boilers," by Mr. David Salmund Smart.
 8.30 p.m. Zoological: "Third List of Birds collected by M. Stolsmann in Ecuador," by Mr. L. Taczanowski and Count H. v. Berlepsch; "The Lepidoptera of Bombay and the Deccan. Part I., Rhopalocera," by Lieut.-Col. Swinhoe; "On *Echinia acanthion* from Northern Queensland," by Mr. Robert Collett.
 WEDNESDAY, Feb. 4, 8 p.m. South Place Institute, Finsbury: "Oligarchy and Democracy," by Mr. J. A. Picton.
 8 p.m. Society of Arts: "Education in Industrial Art," by Mr. O. G. Leland.
 THURSDAY, Feb. 5, 3 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
 4 p.m. Archaeological Institute: "Pierres à Bassins," by Admiral Tremlett; "Notes on Screen in Sandridge Church, Herts," by Mr. Somers Clarke.
 4.30 p.m. Royal Society.
 8 p.m. Society of Arts: Howard Lecture, "The Conversion of Heat into Useful Work," by Mr. W. Anderson.
 8 p.m. Linnean: "Morphology of Test in *Coelopneurus* and *Arbacia*," by Prof. Duncan and Mr. P. Sladen; "Burmese Desmidsiæ," by Mr. W. Joshua; "Generic Synonymy of Orthoptera to 1889," by Mr. W. F. Kirby.
 8.30 p.m. Antiquaries: "Two Ancient Clocks and Miscellaneous Antiquities," by Major Cooper Cooper.
 FRIDAY, Feb. 6, 8 p.m. Philological; "Old English Contributions," by Mr. H. Sweet.
 9 p.m. Royal Institution: "Thought and the Phenomena of Nature," by Mr. G. Johnstone Stoney.
 SATURDAY, Feb. 7, 3 p.m. Royal Institution: "The Scale on which Nature Works," by Mr. G. Johnstone Stoney.

SCIENCE.

WECKLEIN'S AESCHYLUS.

Aeschyl's Fabulae cum lectionibus et scholiis codicis Medicei et in Agamemnonem codicis Florentini ab Hieronymo Vitelli denuo collatis: edidit N. Wecklein. In 2 vols. (Berlin: Calvary.)

THE name of Dr. N. Wecklein, of Passau, has been long known and respected in connexion with the critical study of Greek tragedy. His *Ars Sophoclis emendandi* (Würzburg, 1869) already showed much critical acumen and independence of judgment. His first considerable instalment of Aeschylean studies, published at Berlin in 1872, contained, besides the evidence of wide reading, many original and suggestive observations; and his elaborate school edition of Sophocles in single plays, completed only last year, is a model of thoroughness, of terseness, and generally of good sense.

The present work is thus the fruit of long-continued industry, and carries with it the commendation of labour previously well bestowed. In order to judge fairly of it, so far as that is possible on a first view, it is important that the reader should bear in mind the purpose which Dr. Wecklein has kept steadily before him in preparing it. His object has been, not to produce a readable

Aeschylus, but to lay the ground securely for future criticism. This to some extent differentiates his publication from the nearly simultaneous edition of H. Weil (Lips., 1884), and from most of the previous editions; while in the means at his command, and in the comprehensiveness of his selections, he has been more fortunate than A. Kirchhoff, whose very useful work (Berlin, 1880) had a similar aim.

Of these two volumes, the first and most valuable consists of the text and scholia with the Medicean readings, and, in the passages of the *Agamemnon* where these fail, those of Laur., 34, 8 (f). These readings may now be used with a degree of confidence hitherto unknown. For in this part of his work Dr. Wecklein has enjoyed the collaboration of Prof. Girolamo Vitelli, who, being resident at Florence, an accomplished palaeographer, and a diligent and accurate collator, has given many of his hours in the Laurentian library to the task of rendering Dr. Wecklein's apparatus faultless in this respect. The first volume also gives occasional quotations from the readings of other MSS. (which are only allowed, however, to have the authority of conjecture), and a limited selection from the conjectural emendations of scholars, consisting only of such as in the editor's judgment are 1) certain or (2) highly probable. The former are admitted into the text, the latter are ranged with other various readings.

The second volume, of 315 closely-printed (octavo) pages, consists entirely and exclusively of such remaining conjectures as Dr. Wecklein thinks worthy of notice at the present stage of criticism. In this limbo ("Orci vorago vasta," as it is happily termed in the Preface), while the ghost of Burges is suffered to roam at large side by side with the more erected spirits of Canter and Cusaubon, and while G. Hermann and H. L. Ahrens jostle each other, and Hartung and Paley move side by side with Verrall the ingenious, the happy thoughts of Auratus, Scaliger, and Conington "apparent rari nantes in gurgite vasto." Mr. F. W. Newman's volume has appeared too late. But two late-comers, D. Margoliouth and Theodor Heyse (figures of Youth and Age), have consequently each a circle to themselves; and these, even where contiguous, are scarcely found to dwell together. It so happens that seven years ago, at Florence, the present writer was introduced by dear Karl Hillebrand to Heyse, then far advanced in his task of re-writing the *Oresteia*. His eye was full of genius, which fired up in him as he spoke of his labour of love. He had long since abandoned the MSS. and Scholia, and had left Hermann far behind. He did not expect that his recension would be published in his lifetime; but he added, "It will one day be acknowledged, that if my *Oresteia* is not precisely that of Aeschylus in every word, it is, at least, worthy of him." I remember, in particular, the confidence with which he pointed to the line which he proposed to insert between ll. 560 and 561 of the *Agamemnon*—*σπαργὴν θαλάσσης, ἄπορον ὁρμούντων τόνον*. For is not *σπαργὴ* suggested by Hesychius, and would not the eye of the scribe readily pass over it with *σπαρνὰς τὰρῆς* following? Q. E. D.

Although this collection (like the Variorum

Shakspeare) contains large evidence of the vanity of human judgments, it is of great value to the careful student. In quoting conjectures critics must hereafter assign them to their first authors. For example, *αἰεὶ* for *αἰεὶ* in *Agamemnon*, 142, which has been attributed to other critics, is restored to Lachmann. The only doubt is whether, in surveying so vast a literature, while some worthless matter is included, some things possibly of worth may not have been overlooked. For example, among the many translators of the *Agamemnon*, some like Symmons have suggested emendations which Dr. Wecklein, in taking account of the editions, may not un-naturally have overlooked.

But it is time to return to vol. i.; and here three points chiefly invite our notice.

1. In the stichometry of the lyric parts Dr. Wecklein follows the MS., except where there is manifest discrepancy in this respect between strophe and antistrophe. In this, for the special purpose of his edition, he has probably done wisely; for the Medicean Aeschylus, far more than the Sophocles, does bear distinct traces of an older metrical tradition, and the controversies about ancient rhythm which have been raised by the successors of Boeckh and Hermann are still far from settled. The arrangement has, moreover, the incidental advantage of supplying scholars with a numbering of the lines, which, for purposes of reference, they may find it convenient to adopt, instead of following Dindorf's often arbitrary divisions.

2. Signor Vitelli's collation of the Florentine MSS. for this edition may be regarded as all but final. Some test of the extent of advantage thus obtained may be afforded by the comparison of the new edition with that of Kirchhoff on a single passage. The corrupt ll. 315-475 (Dind.) of the *Choephores* will probably answer as well as any. Here, in the text, there is only one variation, which must be due to a misprint in Kirchhoff, who, in l. 319, gives *ἐσοτμορον*, where Wecklein and Hermann both give *ισοτμορον*. Kirchhoff also places a coronis after *θαρε* without authority (as now appears), and prefixes the mark of the person (HA.) in three places where Vitelli reports it absent. In the Scholia, on the other hand, there are sixteen discrepancies between Wecklein and Kirchhoff; most of them, indeed, of slight moment—a lemma added or omitted, an *ἀντι* filled out to *ἀντι τοῖ*, and (this is one of the most important differences!) *λέγει Πίνδαρος* instead of *κατὰ Πίνδαρον*. Wecklein rightly distinguishes the glosses (Gl.); and he has added one scholion—that on *ἀπριγδόπληκτα*. This is corruptly written *παραιο ἀπριξ πηλίσσ'τα ἀπριξ*; but if Dr. Wecklein is really "correcting the scribe, and not the scholiast," why is he not contented here with the change of one letter: *παρὰ τὸ ἀπριξ· πηλίσσοντα ἀπριξ*? In like manner, some obvious corrections of clerical errata might surely have been made elsewhere. For instance, in the Life of Aeschylus, *subinit.*, *τῶν δῆμων* should manifestly have been *τὸν δῆμον*, corresponding to *τὴν φύσιν* in what follows. And while believing that, as I have said, this collation is all but perfect, I cannot suppose that *ὕσφιν* in *Prom.* 513, and *Ἀγρείων* in the *Ὑπόθεσις* to *S. c. T.* are other than misprints.

Dr. Wecklein, in pursuance of his main purpose, has admitted into his text as certain many fewer conjectures than Hermann, although he is rather less sparing in this respect than Kirchhoff. It is here, of course, that an editor's judgment is most severely tested; but it is also here that a critic must be most circumspect, and beware of deciding off-hand nice questions which must have been maturely weighed. I will venture only one or two isolated observations. H. L. Ahrens, generally a sure-footed critic (whose *κύριον*... *φάος τόκον* in *Agamemnon*, 762, and *θράσος ἐκ θυσιῶν*, *ib.* 803, are among the happiest of conjectures), was for once misled by erring fancy to suggest *πόντον ὥστε ναῖσαι* | *ιχθῦς* (for *ισχῦς* in *Agamemnon*, 299; and the prudent Kirchhoff admits this into his text, thus ranking Clytemnestra with the victim of Sheridan's drollery. Dr. Wecklein has wisely avoided this, and for this we shall do well to thank him, even though his own *ἡπεικτο* (for *πείκη* τὸ) should not ultimately commend itself as "highly probable." On the other hand, he has adopted in *Prom.* 113 the very ingenious emendation *προουσελούμενος* for *πασσαλεύμενος*, which has occurred independently to himself and Moriz Schmidt. Yet it may, perhaps, be found that the rare word is here less exactly in point than at l. 453, where it derives some of its force from being *ἄπαξ λεγόμενον*, and also that the caesuraless line, *ὑπαίθριος δεσμοῖς πεπασσαλεύμενος*, though rugged, is not out of keeping with the deliberated meditative tone. Another bold adoption of a rare word, *ναῦονθ'* for *νέονθ'*, in *Supplikes*, 359, is solely due to Wecklein, and has even at first sight the merit of great plausibility (*ναῦο ἱκετεύω*, Hesychius). But such things cannot rank in point of certainty with Conington's *λέοντος ἱνι*, or Schuetz's *ἐκπιδύεται* for *ἐκπαυδύεται* in *Porsae*, 817. Nor can I admit that in *Agamemnon*, 1171, *ἐγὼ δὲ θρόμβους ἐν πῆδω βαλὼ τάχα* has even high probability, though it is well that Cassandra's "hot ear" (she was much talked of) and other vanities are (finally, let us hope) committed to the vasty deep of vol. ii.—unless haply Musgrave's *θερμὸν ροῦν* may be resurrectionised.

On the whole, it appears that the distinctive excellence of Dr. Wecklein's edition—and for this both he and Prof. Vitelli deserve our warm and lasting gratitude—is the completeness of the *apparatus criticus* here brought together into a synoptic view, and the self-denying steadiness of aim through which this result has been achieved.

The work is specially memorable for an alliance of industries that is of good auspice for the future. The progress which the last hundred years have seen towards a complete recension of the great classical texts was for a long time hindered by one circumstance—viz., that the chief collections of MSS. were in Italy, while the centre of philological learning was elsewhere. Such journeys as those of Bekker (1818-22) and Elmsley (1825) were necessarily rare, their sojourn in each place was limited, and it left them but scant possibilities of revising their work. But now for many years past Italy has boasted of distinguished names in Greek scholarship as in other departments of culture, and palaeography is one of the special channels into which natural aptitude and abundant opportunities

have directed the course of scholarship in that country. The generous kindness of Italian scholars, of which Dr. Weeklein here records his experience, is another capital point. And such collaboration as that before us gives earnest of a new departure in this kind of work, in which the advantage of unruffled leisure will be combined with those of learning, acuteness, and zeal.

LEWIS CAMPBELL.

SOME BOOKS ON CHEMISTRY.

A Treatise on the Principles of Chemistry. By M. M. Pattison Muir. (Cambridge: University Press.) Properly to review this excellent book on philosophical chemistry I should have to ask for half-a-dozen pages of the ACADEMY. To give a notion of its scope and of its treatment of the important topics discussed in its 470 pages, I might quote the Preface in its entirety, and give a *précis* of the table of contents. Neither of these plans being feasible, I feel inclined to content myself with a simple recommendation to every scientific chemist to read and re-read this most admirable volume. Any teacher who values Dr. Tilden's *Introduction to Chemical Philosophy* must have felt the need of a more complete and more advanced text-book on the same and cognate subjects. Here it is, in two books, respectively dealing with chemical statics and chemical kinetics. Of the topics discussed under these headings some idea may be formed from the titles of the several chapters and sections, atoms and molecules, atomic and molecular systems, nascent actions, dualistic and unitary theories, equivalency of atoms, allotropy and isomerism, molecular compounds, the periodic law, thermal methods, optical methods, dissociation, chemical change, chemical equilibrium, and chemical affinity. It should be stated that the references to original papers throughout this treatise are full and accurate, and that the author weighs in a judicial temper the experimental evidence on which the theories he discusses depend. The value of the book as a digest of the historical developments of chemical thought immense.

A Treatise on Chemistry. By H. E. Roscoe and C. Schorlemmer. Vol. III., Part 2. (Macmillan.) The volumes of this excellent text-book continue to make their appearance with commendable rapidity. The authors have succeeded in the difficult task of treating with sufficient fulness the philosophical as well as the descriptive aspects of the science. If the sections in which unclassified compounds are mentioned were amplified somewhat the work would gain in usefulness without suffering from undue expansion. An instance may be cited from the section on Gums (page 569) where the chemical differences between gum Senegal and gum Arabic are not so much as named. A second example is supplied by the two pages assigned to drying oils (pp. 478-480), which contain no reference to the oils of *Guizotia oleifera*, *Perilla ocyroides* and several others of importance, and which furnish no indications of the tests of purity, the specific gravity, and the relative fluidity of any of these liquids. No analysis of such an interesting product as honey is given: the six lines devoted to humus would lead the student to conclude that our knowledge of the intermediate decomposition products of vegetable tissues was of the most meagre description. Cellulose itself does not fare quite so well as its importance demands. I am bound, however, to say that in the volume now under review, as in the previous volumes, the chief processes of chemical industry which deal with organic substances are described with great skill and with adequate completeness:

they are also illustrated with a large number of clear woodcuts. The sections on sugar manufacture and sugar analysis (pp. 498 to 522) afford a case in point. It may be well to add that the part before me of this treatise opens with the discussion of divalent alcohol-radicles; takes up such important compounds as the uric acid derivatives and those of glycerin; describes citric acids and also the acetylen series, and finally gives 100 pages to the carbohydrates. It is a well-written and most interesting volume.

The Alkali-Maker's Pocket-Book. By G. Lunge and F. Hurter. (Bell.) Small as this book is its merits are great. Its origin is traced in a few prefatory paragraphs. Most analytical or commercial chemists and most chemical manufacturers have been long troubled by imperfect and discordant sets of tables of specific gravities, of volumes, of pressures, &c. Analytical processes, too, have been multiplied until the same substance was often analysed by half-a-dozen different methods, if submitted to half-a-dozen analysts. The German Society of Alkali-Makers took the judicious step, in order to end the prevalent confusion of processes and calculations, of having a standard manual published. This manual was first prepared by a committee, and then condensed, arranged, and revised by Dr. Lunge. Proofs of the work were submitted to private and public criticism, researches were undertaken to clear up doubtful points, and, at last, this authoritative book of numbers and standard processes was approved by all concerned. The laboratory work involved in its preparation was most arduous, and the sifting of the materials most exhaustive. Translated into English by Dr. F. Hurter, it now appears in a form adapted to the wants of English commercial analysts and chemical manufacturers. The adoption of the best data for the calculations and their accuracy are the characteristics of the tables—the giving of one analytical process only for the valuation of each material distinguishes the work from all others of the same scope. It would be impossible to give, in a brief notice like the present, any notion of the usefulness of the fifty-seven tables here most carefully printed. And in like manner, the single approved method described for the testing and analysis of the several materials included in the work combines accuracy of result with ease of execution. This neat volume is one which makes much laboratory work and calculation at once more rapid and more accurate. The saving of time which it effects is not the least of its recommendations, for one no longer need turn to three or four different chemical books for the data required by the alkali-maker; here they all are in the best form. One suggestion only would I make, could not the authors add a few chapters fitting the work for the use of chemical works other than those included in the volume? A separate volume would involve the reproduction of many of the tables given in this.

A Short Text-Book of Inorganic Chemistry. By Dr. H. Kolbe. Translated and Edited by Dr. T. S. Humpidge. (Longmans.) Granting that there was a gap in our English chemical literature which the late Prof. Kolbe's text-book could suitably fill, then it may be allowed that the translation before us is well done. The editor has presented us with a handy volume, well printed, adequately illustrated, and full of concise descriptions of chemical elements and compounds. In spite of the author's prefatory remarks as to the great relative importance which he attaches to the enunciation of chemical principles, rather than to the furnishing of the student with the material on which those principles are based, I think descriptive chemistry occupies a very

large space indeed in this manual. The twelve pages on atomic weights, the periodic laws, &c., which Dr. Humpidge has added, are very far from redressing this inequality. In respect to the accuracy of the figures and facts given in these pages, the best and most recent results appear, so far as my examination has extended, to have been adopted, although here and there an improvement in this respect suggests itself. For instance, it is really too antiquated to speak of the carbon dioxide in the atmosphere as amounting to so high a percentage as '04.

The Life and Works of Thomas Graham. By Dr. R. Angus Smith. Edited by J. J. Coleman. (Glasgow: J. Smith & Sons.) The bulk of this small book consists of sixty-four letters hitherto unpublished, written by the distinguished Master of the Mint, the late Thomas Graham. The rest of the volume is made up of about forty pages of abstracts and titles of the scientific papers published by Graham; there are also ten pages of biographical notes. The whole was intended to be given, as the "Graham Lecture," before the Philosophical Society of Glasgow. But the lecturer, Dr. R. A. Smith, did not live to finish and deliver his oration. His notes, however, have now been published, with some editorial comments by Mr. Coleman. The little volume is an interesting one, but it might easily have been improved. We are glad to have the insight here afforded us into the life of earnest endeavour and honest work which is unfolded in Graham's early letters to his mother, his sister, and his scientific friends. But there is a want of cohesion and completeness in these desultory fragments of correspondence which one cannot help feeling might have been avoided by means of further care and inquiry. Verbal inaccuracies, too, are frequent. It is not likely that Graham did not know how to spell his friend Hofmann's name, calling him sometimes Hoffman and sometimes Hoffmann. He is made to speak of G. H. Lewis instead of G. H. Lewes, of R. W. Wornum not Wornum, and of Wedgewood for Wedgwood. The fortunate possessors of the magnificent edition of Graham's collected papers, edited for private circulation in 1876 by the late James Young and Dr. R. Angus Smith, will, however, be glad to supplement that volume by the personal details of the great chemist's life here given to the world for the first time. A. H. CHURCH.

OBITUARY.

WE regret to record the death of Dr. John Gwyn Jeffreys, the eminent conchologist, who passed away quite unexpectedly last Saturday. On the previous evening he was present at the Royal Institution, listening to a lecture by his son-in-law, Prof. Moseley. Dr. Jeffreys had just completed his seventy-sixth year, having been born at Swansea on January 18, 1809. A lawyer by profession, he devoted much time in early life to the study of conchology, and for many years past had laid aside professional work, and entirely given himself up to his favourite pursuit. His minute acquaintance with the shells of Britain is sufficiently evident in his well-known treatise on *British Conchology*. Applying his conchological knowledge to the fossil mollusca of the pleiocene and pleistocene deposits, he became as well known among geologists as among naturalists. Dr. Jeffreys was not only an enthusiastic dredger, but a pioneer in deep-sea exploration; and, in 1869, conjointly with Dr. Carpenter and the late Sir Wyville Thompson, he explored the North Atlantic in H.M.S. *Porcupine*. As far back as 1840 he was elected into the Royal Society, in 1877 he was president of the Biological Section of the British Association, and for many years he served as treasurer both to the Geological and to the Linnean Society.

CORRESPONDENCE.

THE SOMA PLANT.

Teheran: Dec. 20, 1884.

In view of the correspondence on the Soma plant published in the ACADEMY on October 25 and on November 15 and 22, a few facts regarding the Soma of Persia may be of interest.

When travelling in 1879 between Bender Abbas and Kermân, and at an altitude of over 7,000 feet, I was shown the Hûm shrub, from which the Pârsis of Persia get the juice Hûm or Hôma, the Indian Sôma. It was, as far as I could make out, a *Sarcostemma* or *Asclepias*, growing to a height of four feet, and having circular fleshy stalks of whitish colour, with light brown streaks. The thickest stalks were about a finger thick; the leaves had fallen off as well as the flowers, which, I was informed, were small and white; some seeds adhered to the ends of some stalks; the seeds had long tufts of fine hair attached to them like the seeds of nearly all *Asclepiads*. The juice was milky, of a greenish white colour, and had a sweetish taste. A Pârsi who was with me, as well as others in Kermân and Yezd, told me that the juice turns sour after being kept for a few days, and that the colour of the juice, as well as that of the stalks, turns to a yellowish brown.* The plant I saw was not a creeper; but I was assured that when it grew near a tree it twined around it. The stalks break easily at the joints, the internodia, and then form small cylindrical pieces.

Of Hûm mixed with the juice of many (forty) plants, as mint, thyme, asparagus, kangar (*Gundelia Tournefortii*), &c., the juice of seven fruits, and the urine of a young pure cow, the purifying liquid Nireng† is prepared by the Pârsis. The priests drink a few drops of this every two or three days, and particularly when they have been to an impure place or have eaten anything prepared by an impure person, and the other Pârsis drink a few drops, never more than twelve or sixteen, daily during their Bîrahni time of purification. The liquid is also given as a remedy against sickness; a few drops are poured into the mouth of a newly-born child, and into that of a dead person before carrying the body to the Dakhmah, &c.; when taken in greater quantities, that is, more than twelve or sixteen drops, it is said to cause vomiting. The Hûm itself is used by the Pârsis in their religious ceremonies.

The plant is at present not very plentiful round about Kermân, and many shrubs, being cut by woodcutters when collecting firewood, it daily gets rarer. The mobeds of Kermân pay the woodcutters to preserve ten or twelve shrubs yearly.‡ The plant is also found on the mountains near Yezd, and a Pârsi told me lately that he had found it near Teherân on the Bibi Shehrbânî mountain (the Kûh i Tabarak of Bey). I daresay it grows on all high mountains of Persia. The plant was, as the Avesta says, brought from the mountains, but this statement does not preclude its having grown in plains. The best plants—that is, those giving most juice—were, however, certainly only found on the mountains, exactly like other Persian juice containing plants; for instance, the *Astragalus*, which is common all over Persia, contains more juice and exudes more gum (*Tragacanth*) the higher it is found. The Hûm grows also in plains, but is then stunted and contains little juice.

The Avesta says that the plant which gives the Soma grows on the mountains. Anquetil says it grows in Gilân, Mazanderân, and

Shîrvân,* Spiegel says that the Pârsis of Bombay get their Homa from Kermân and send their priests from time to time to get it.†

The Pârsis of Persia say that the Hûm they now use is the same that is mentioned in the Avesta.

The thicker stalks are sometimes dried and straightened and used as a walking-stick on festive occasions, or kept in a room as a talisman against bad luck. The botanical description of the plant quoted by Prof. Max Müller coincides very nearly with the Persian Hûm plant. The description says: "The creeper called Soma is dark, sour, without leaves, milky, fleshy on the surface; it destroys (or produces) phlegm; produces vomiting, and is eaten by goats." This is a description a person would give who had not seen the plant growing, who had details regarding it from the persons collecting it, and had seen it several days after it had been collected. The statement that it was eaten by goats would originate with the woodcutters or people sent to the mountains to collect the plant. They might have tried to account for its scarcity by saying that goats ate it. The plant is a creeper; the colour of the stalks would by the time the Hûm reached the describer have been brownish (dark), the juice would have been sour, the plant would have had no leaves, and the juice was milky, and the stalks had a fleshy surface. All this coincides with what I have said of the Kermân Hûm. Then, the plant was sleshmala and vamanî. The term sleshmala, phlegm-destroying or phlegm-producing, is medical. The term vamanî may be medical, producing vomiting, or may mean that the Soma was used as an offering to the god Agni. Hûm, as a part of Nireng, produces vomiting when taken to excess, and is also used as an offering during incantations, &c. The solving of this question, however, appertains to scholars like Prof. Max Müller and Prof. von Roth.

Different Persian dictionaries describe the plant as follows:—Hûm, a small tree, growing everywhere (in Persia); its stems have many knots; its flowers are yellow and resemble those of the jessamine; its leaves are small, and they are formed like those of the jessamine; the Zardushtis (Zoroastrians) take a piece of it in their hands during their prayers; it is also used by them at incantations and sacrifices, and thrown into the fire. Arabs call it Hûm-Majûs (Hûm of the Maji, Zoroastrians), and explain it as a plant with branches full of knots. Others say the plant is a deadly poison; its juice is used for poisoning arrow heads; its fruit is very much liked by partridges; it resembles a tamarisk tree, &c. The latter qualities evidently refer to another plant.

A. HOUTUM-SCHINDLER.

THE ORIGINAL MEANING OF MÂTEI, "MOTHER," BHRÂTEI, "BROTHER," AND SVASEI, "SISTER."

Bangor: Jan. 21, 1885.

Prof. Max Müller, by the clear and interesting statement of Indian theory which he quotes in full in the ACADEMY for January 17, raises the question of the original meaning of the simpler names of relationship. The Indians had begun to speculate on this subject at the time when the Vedic hymns were written, and it becomes important to notice what interpretations are to be found in these. Thus the undisputed meaning of *pitar*, "protector," is often alluded to; Agni is called (i. 31.10) *pramatis* . . . *pitâ* . . . *vayaskrt*, "our providence, protector, and nourisher."

The word *mâtar* occurs in the passage quoted by Prof. Max Müller (with the accent usual for nouns in -tar when used as participles governing

* Cf. Firdûsi, relation of Apâsiâb's fight with Hûm in Âzerbâijân.

† Spiegel, *Iranische Alterthumskunde*, iii. 572.

an accusative—cf., vi. 23.3.4, where five such participles occur), but hardly in the meaning "creator" or "maker"; *vi mâ* is commonly used of the gods as pacing out, measuring, or pervading space; so of *Vishnu*, i. 154.3, "in three steps he paced out this great universe." So *pari mâ* (vii. 25.18), "with his ray he has measured out the ends of heaven and earth, and filled both worlds with his glory. Of Varuna himself we have in the next hymn *âmimîta varimânam prithivyâh*, "he has measured out the extent of the earth." Thus *sâ mâta pûrvyâm pâdam* will surely be "he pervades the ancient habitation," the mysterious home of the gods. The same root *mâ*, as well as the compound *sam mâ*, is very frequently used to mean "measure out," "distribute."

There is also much reason to think that the title *mâtâr* is constantly used with a reference to this meaning. As applied to the earth, *prithivî mâtâr* may well mean the all-nourishing; but, besides this, we have *mahi mâtâ*, "the great" or "bountiful mother," who is the mystical giver of nourishment to men (R. V., v. 41.15, "let the bountiful mother give us refreshing draughts"), and who appears sometimes as a stream, sometimes as a cow, both forms typical of nourishment. Even more striking is the use of the superlative *mâtîtama*, "most motherly," as an epithet of refreshing streams only. In the same way we may, perhaps, find an explanation for R. V., v. 45.6—

"*éta dhiyam kṛnāvāmā sakhāyô*
'*pa yâ mātān īrutā vrajām gôh.*"

"Thus let us offer our devotion, comrades, which as a mother (i.e., food-distributor) opens to us the cow-stall." So that the Indians, too, entitled the mistress of the house "lady."

Bhrâtâr can hardly be derived from *bhar*, "support," from which we have already *bhartâr* for the husband, and no secondary root *bhrâ*. The title is used in the Veda of gods who are allied in battle; thus of Indra's comrades the Maruts in i. 170.2. The derivative substantive is *bhrâtrîva*; but, by the side of this, we have a cognate and older noun *bhrâtrâ*, which almost always occurs in connexion with *sakhya*, "alliance." Late researches suggest the meaning "partner" in the family property, agreeing with the Indian tradition. There are allusions in the Veda to the privileged position of the elder brother at a division of property (e.g., x. 11.2); but I do not know of any to a system of co-partnership. The Greek *φάτρως*, "clansman," also points to some similar meaning.

Both the meanings suggested for *svâsar* are somewhat forced. It is noticeable that in the Veda we almost always have *svâsaras* of large numbers—of the ten fingers (iii. 29.13), seven streams (ix. 86.36), seven fillies drawing the sun's car (vii. 66.15). The sisters are often described as trooping together, especially when drawn to any object by curiosity—e.g., iii. 29.13, *pûmânsam jâtam abhi sâdṁ rabhante*, which seems to mean "they cluster together to admire the boy-baby." Perhaps the word, too, means originally "companions," and *svasara*, "stall," is the place where animals crowd together.

E. V. ARNOLD.

SCIENCE NOTES.

THE February number of the *Journal* of the Anthropological Institute opens with a paper by Mr. Francis Galton, descriptive of the Anthropometric Laboratory which he organised at the late Health Exhibition. Mr. Galton enters into a discussion of the dense mass of returns which he obtained, and deduces from them some highly interesting results. It is hoped that the laboratory will be reinstated

* Cf. Yaçna, 11.3, regarding the evil of keeping fona, and thereby causing it to get spoiled.

† Dictionaries give the meaning of the word Nireng, sorcery, incantation, talisman.

‡ Cf. Von Roth, *Zeitschrift DMG.* xxxv., 687. Soma must be bought from a çudra who brought it from the mountains.

in an improved form, at the forthcoming Exhibition of Inventions.

DR. J. E. TAYLOR, the editor of *Science Gossip*, will start at Easter on a lecturing tour in Australia, Tasmania, and New Zealand. Mr. Taylor has for many years held the curatorship of the Ipswich Museum, where his popular evening lectures have been highly appreciated.

THE work on *Gas Engines*, by William Macgregor, being vol. ii. of the "Specialists' Series," edited by Drs. Paget Higgs and Charles Forbes, will be published February 5. There has been delay in issuing this volume owing to the desire to obtain the latest information concerning the most recent motors.

DR. J. A. FLEMING will commence a course of lectures and demonstrations on Modern Applications of Electricity in the Arts on Friday, February 6, at 4 p.m. The first lecture will be open to the public without payment or tickets.

THE Paris Electrical Exhibition, to be held at the Observatoire under the auspices of the International Society of Electricians, will be opened on March 15.

PHILOLOGY NOTES.

THE first half of Baehrens' Commentary on Catullus is announced to appear in April.

THE second volume of the *Actas* of the Congress of Americanists at Madrid has appeared. It contains two grammars by missionaries, and another (with vocabulary of the Darien Indians) by J. Vicente Uribe, a large map of Cuba, twenty-six Indian hymns with music, and the speeches delivered at the Congress.

HERR TEUBNER announces for early publication a *Lexicon Aristophaneum*, by Otto Kachler et O. Bachmann, based on the editions of Aristophanes by Dindorf, Meineke, and especially on that of Velsen, which is now approaching completion. The compilers have been engaged for several years in the collection of materials for this work, which is intended to furnish the completest possible analysis of the lexical characteristics of the poet's language. The book will not contain the complete *apparatus criticus*, nor is it intended to supply the place of a commentary, but in all corrupt or doubtful passages the various MS. readings will be given, together with the most approved conjectures; and all such phenomena as parodies, imitations, and plays on words will be indicated. Brevity will be carefully studied, but in order to facilitate the use of the work all quotations will be printed at full length.

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 22.)

MR. H. S. MILMAN, Director, in the Chair.—Mr. Hill exhibited rubbings from a few inscriptions from the Catacombs at Rome, which are now in the Kircherian Museum. Several of these had representations of Scriptural and other subjects, as well as epitaphs. Among these sculptures were Noah and the Ark, the Dove and Olive-branch, the Seven-branched Candlestick (this was on a slab with a Hebrew inscription), the Shepherd and Lamb, a man at a table holding a knife, the five loaves and two small fishes, and a human foot, without inscription.—Mr. Day exhibited two gold circular plaques from Cloynce, a gold bracelet from Skreen, Sligo, and a spear-head from the river near Cork.—Mr. Armfield described the discovery of Roman pavement at Abesford, Essex, between the river Colne and a creek which joins it. The pavement is of red tesserae without pattern. There were with it some fragments of broken pottery, coarse ware and Samian, some black urns, and two coins, which were perhaps of the time of Commodus.

PHILOLOGICAL SOCIETY.—(Friday, Jan. 23.)

REV. PROF. SKERT, President, in the Chair.—Dr. Murray, the editor of the society's English Dictionary, made his yearly report on the progress of the work. He said that part ii. was nearly finished, all being cast, part of *Ba* in proof, copy up to *Rai* in the printer's hands; *Bazaar* would complete the part. To get two parts a year out, which the Oxford Press Delegates held needful for the success of the book, nearly three times as much work as heretofore must be done in the year. It would be a very hard push indeed to get through it. The Delegates had agreed to make much larger payments than they were bound to, and thus enable the editor to live at Oxford, and give his whole time to the work. From three-fourths to five-sixths of it has been prepared by sub-editors; five of Mr. Furnivall's original ones were still at work, Dr. Shepherd, Messrs. Anderson, Brown, Rossetti, and Smallpeice. Many fresh ones had also volunteered—Misses Brown and Haig, Messrs. Beckett, Bousfield, Brockebusch, Brandreth, Elworthy, Fitzgibbon, Green, Hume (whose name was unluckily left out of the list in part i.), Henderson, Jacob, Lawley, Lyall, Löwenberg, Mount, Schrumpf, Tindale, Tristram, Wilson, &c. Among readers were Prof. Helvig, Dr. Brushfield, Messrs. Henderson, Kingsmill, Whitwell, Major, of Bath (who sent fifty slips a day up to the day of his death), Randall, Gray, Furnivall, Pierson, of Michigan, Boyd, U.S.A., &c. More help was pressing needed for *Ba* and *De*, and *P*; and a special divining power for such words as *Bachelor*—about the origin of which nothing was certain—*Badger*, &c. Some of the articles had been very long and hard; thus *A* had fifty-seven subdivisions of use and meaning, *At* fifty-three, *Ask* (spelt in so many ways), thirty-seven. *Back* was very long, and used as more parts of speech than any other word yet met with. Dr. Murray then read parts of his Dictionary articles on *As*, *Ask*, *At*, *Asparagus* (whose eighteenth century fashionable form "sparrow-grass" came from the 'sparagus' of 1640, &c.), *Aes* (degraded, ab. 1520, by Greek fables), *Assayer*, *Assets*, *Assist* (to be present at, as early as 1600), *Assize*, *At*, *Aume* (as early as 1745), *-ation*, *Atmosphere* (the gross air close to the earth, below the aether), *Atom* (the smallest measure of time), *Atone*, *Auburn*, *Azure* (1. ultramarine), *Auncel* (Anglo-Fr. *lancel*), *Avoirdupois*, *Aureole* (disk of gold), *Evacuate* (his garrison: Luttrell in the Civil Wars), *Avoid*, *Average*, *Ax* (not *Axe*) *Ay*, *Babble*, *Baffle*, *Baboon*, *Bag* and *Baggage* (1. an honourable phrase), *Bail*, &c.—Mr. Furnivall quoted an amusing opinion of Prof. Paul Meyer's on Dr. Murray's editing of the Society's Dictionary, "It is a beautiful thing. If, in despair of solving a difficulty, I send him bad stuff, he at once detects it. The man is not to be deceived."

ROYAL ASIATIC SOCIETY.—(Monday, Jan. 26.)

SIR F. GOLDSMID, in the Chair.—The Rev. Dr. Pope read a paper "On the Study of the Vernaculars of Southern India," in which he pointed out the importance and value of such labours as the surest means of gaining a real knowledge of the character and feelings of the native population. Hindus, he pointed out, are not apathetic when once their interest is aroused. He then gave a sketch of the Tamil people and language, the latter of which has a valuable literature, in character chiefly ethical, independent of, and antagonistic to, Sanskrit. In confirmation of this view Dr. Pope gave an account of the three most famous Tamil works: the *Kural* of Tiruvalluvar, the 400 quatrains called *Nāḷadi*, and the writings of the poetess Avvai. The author of the *Kural* was a weaver of Maitāpur or St. Thomé, the place where a tradition (generally accepted as true) records that St. Thomas preached and was put to death. Certain it is that a Christian community has existed there from the earliest times, and the influence of Christian teachings is very evident in the *Kural*, forgiveness of injuries, humility, and charity being forcibly inculcated. The character of a Tamil householder is finely drawn in twenty chapters. Dr. Pope then read translations of many passages, and illustrated them by traditions from South India, urging the desirability of the publication of a good edition of these moralists, with translations, &c.; the more so that

such an edition was actually ready for the press. He then warmly advocated the study of the vernaculars, remarking that if it was desirable that English should be studied by the natives, it could not possibly be well for them to neglect their own languages, especially those containing literary riches so great as does the Tamil.

FINE ART.

ART-BOOKS.

"The Great Historic Galleries of England."—*The Northbrook Gallery*. Edited by Lord Ronald Gower. (Sampson Low.) When Dr. Waagen visited the Baring Collection in 1851 it consisted of about two hundred pictures; but it has not been allowed to stand still, and many notable additions have been made to it by the present owner, till it may claim to be one of the most various and interesting of private galleries in England. The last volume of "The Great Historic Galleries," of which parts 54 to 56 have just been published, is specially devoted to this collection, of which it forms a careful catalogue, finely illustrated. It may be said to show the best qualities, and also the limitations of pure photography as a means for reproducing oil paintings. When the colours and the state of the surface of a picture favour the camera, its fidelity cannot be rivalled by any of the graphic processes. No engraving could, for instance, do such justice to the miniatures of Clouet reproduced in this volume, nor to Gainsborough's "Mrs. Jordan," nor to Van Musscher's "Portrait of William van de Velde the Younger;" while there is scarcely one of these photographs which does not render some portions or qualities of the originals with a perfection otherwise impossible. But, on the other hand, we have the deplorable fact that some of the very finest pictures in the collection—the Rembrandts, for instance, and the Mantegna—practically refused to be photographed, and thus, in spite of the care which has been bestowed upon the book, the illustrations do not represent all the gems of the gallery. This defect does not, however, extend to the letterpress, in which all the pictures of any importance are clearly noted. The last part is devoted to modern pictures, and contains photographs after Delaroche, Stanfield, E. W. Cooke, Webster, and Mulready.

The Magazine of Art, 1884. (Cassell.) We have so often, in the course of the year, seen reason to call attention to the articles and illustrations contained in this volume that it is scarcely necessary to do more than acknowledge the receipt of this volume. Apart, however, from the value of its items, it has a collective merit in representing more fully, perhaps, than it has ever done, the contemporary state of art and art criticism, both at home and abroad, in a thoroughly popular manner. That its literary quality should be remarkable is only what might have been expected of the staff, which contains the names of so many of our best writers. For a magazine to be popular it is necessary that it should be readable, and the editor has been well supported in his desire to spread sound information in an attractive form. The judicious introduction of verses of fine quality adds much to the charm of the volume, especially as they have been accompanied with original illustrations of much merit. In short, the volume is an example of how much admirable and useful work can be supplied at a cheap rate by an editor who deals ably with good material.

The Year's Art, 1885. By M. B. Huish and D. C. Thomson. (Sampson Low.) This useful Annual, which has entered its sixth year of existence, contains as usual more information than its predecessors. Complete lists of the Members and Associates of the Royal Society

of Painters in Water-colours from its foundation have been added, and the correspondence respecting the increased duty charged by the United States upon works of art has been printed *in extenso*. We do not quite understand why the Royal Institute should not be treated on an equality with the Royal Society of Painters in Water-colours; but perhaps this measure of justice is only reserved for another year. The Annual is again illustrated with a number of reduced copies of the illustrations to the catalogues of last year's art exhibitions at home and in the colonies, and also of some of the most important engravings published in 1884. Hogarth's "Shrimp Girl," recently bought for the National Gallery, and the great acquisition of the year, the Blenheim Raphael, are also represented.

WE have received from the house of E. A. Seeman, of Leipzig, Lieferung 8 to 14 of the beautiful edition, now in course of issue, of Dr. Lübke's *Geschichte der Architektur*, of which the first volume is now concluded. The work has been carefully revised and enlarged to include the latest information, and is illustrated with thousands of careful and well-executed engravings. We have also to acknowledge two more parts of the *Kulturhistorischer Bilderatlas*, published by the same house. The section now appearing is devoted to Antiquity, and is edited by Dr. Theodor Schreiber. The parts contain 200 illustrations of the worship, the games, and the war of the ancients. The last part received of Dr. Dohme's *Kunst und Künstler* contains a very able study of Ingres by A. Schmarzow, illustrated by the "Oedipus," an "Odalisque," "St. Symphorien," "The Apotheosis of Homer," the "Vow of Louis XIII.," "La Source," and the portrait of Mme. Devauchay.

OLD MASTERS AT THE ROYAL ACADEMY.

(Third Notice.)

THE ENGLISH SCHOOL.

IN dealing with works of the mediæval schools exhibited at these Loan Exhibitions, the question of authorship mainly occupies the art-student's energies. The date, the master, and the position among that master's works once discovered, the amateur has it in his power to enjoy the picture for himself, taking up, as pleases him best, either the æsthetic or the historical standpoint. Pictures of the English Schools of the eighteenth and nineteenth centuries present few problems of authorship. References to half-a-dozen well known volumes place any student in possession of the materials he requires. Thus our function in discussing works of this kind now exhibited becomes rather that of a chronicler than a critic. Reynolds and Gainsborough are not so far removed from us that we require the guidance of a specialist for the formation of a judgment upon their work. They painted for the public, and the public still remains their critic and their judge.

The annual harvest of Reynolds's shows no falling off. There are four full-lengths, four three-quarter-lengths, ten half-lengths, five busts, and one group; and among these pictures five are portraits of children. The best of the full-lengths, though only the head seems to have been actually painted by the hand of the master, is without doubt the portrait of John Musters of Colwick (189). It is as simple a portrait as can be: the man stands in his every-day attire in the midst of a homely English landscape. There is no affectation in his pose. There is no striving after "the Grand Style." All is reserved, and in this reserve is the highest art. The full-length of Mrs.

Musters as Hebe (198) is a contrast to the preceding in every respect—it was never a good picture, and now it is flayed. The half-length of the same lady (143) has suffered so severely as to be capable of giving little pleasure. Romney's bust of her (25) is certainly the best of the three; it is more visibly a portrait and, owing to a thick coating of varnish, is more pleasant in tone than Romney's pictures usually are. The portrait of Bennet Langton (52) is the most interesting of the three-quarter lengths. It is a little straggly in composition, but it renders the character of a refined gentleman as none but an English artist has ever, among the moderns, succeeded in doing. The attentive beholder will observe that the books on the table are *Clarendon* and *Rasselas*. The bust portrait of the artist himself (39), at an advanced period of his life, is peculiarly attractive. The face looks forth in Rembrandtesque illumination, from a dark background. The countenance is bright, the artist being joyously attentive to the speech of a person occupying the position of the spectator, whilst the gesture of the hand held to the ear and the straining of the features are an extraordinary rendering of deafness. The half-length (2) is one of many portraits of Angelica Kauffman painted by Sir Joshua. It can scarcely have been a good likeness, but it is certainly a lovely picture; the harmony of colour being superb and the paint in excellent preservation. "Little Penelope Boothby" (53) in her mop cap, sitting there in sly primness under the trees, is everybody's pet. Perhaps she is the best of Sir Joshua's children; she is certainly one of the best. Unfortunately the preservation of the picture is not wholly faultless, for the upper part of the face has lost some of its glazings. The rich colouring of the background, splashed in though it be, is perfectly suited to throw the simple little maid into charming relief. A further degree of finish could scarcely have added to the charms of the bust picture of "Mrs. Fazakerley" (40). Time has made sad havoc among the remaining works of Reynolds here exhibited.

The Gainsboroughs at the Academy form a welcome appendix to the Grosvenor collection. The best quality in Gainsborough's portraits is the air of distinction with which he seldom fails to endow them. He may not succeed in rendering the character of his sitters, as in the portraits of "Ladies Erne and Dillon" (17) he certainly failed to do, but he gives them at the least a look of high-bred dignity which no other artist, not even Reynolds, could attain. This aspect of gentlemanly refinement distinguishes the full-length portraits of "Mr. and Mrs. W. Hallett" (195) walking arm-in-arm through a park. The name given in the catalogue is an error, as a recent letter in the *Times* has pointed out. The picture at one time belonged to the Hilliard family, and was exhibited at the British Institution in 1859 and at the International Exhibition of 1862. The lady's figure is little less than perfect, but the posture of her husband might well be improved, the light on his advanced leg being a disturbing element in the composition. The three-quarter length of "Mrs. Hibbert" (191) is in the artist's best style and may be paralleled by two or three pictures at the Grosvenor Gallery. The small three-quarter length of her husband, "Thomas Hibbert" (34), is in size, style, and finish, a pendant to the beautiful little "Pitt" at the Grosvenor (13). The half-length portrait, within an oval, of "Lady Mulgrave" (47) is a most attractive picture, well deserving of its popularity. The character of the sitter was just that which appealed most strongly to Gainsborough. He has caught her sweet expression and pleasant smile with inimitable success. Moreover, he has endowed the picture with all manner of charms of bright texture

and varied colouring. Notwithstanding all these excellences, however, the half-length of the "Marquis of Lansdowne" (49) is a more solid piece of work, shows a deeper grasp of character, and a more monumental rendering of it. It is a picture that demands and repays close and long inspection. Two landscapes are examples of the earlier and later styles of Gainsborough in this kind of art. The first (71) shows him labouring carefully under the influence of the Dutch, and relying for effect chiefly upon his handling of light. The other (67) is bolder, but less successful.

Eight of Romney's portraits add little to our knowledge of the master. All of them can be paired off with pictures shown in previous years. Graceful flow of line was his most estimable quality. The three-quarter-length of the "Countess of Derby" (69) possesses this virtue, but the colouring is unpleasant, and it would be easy to criticise the composition. The "Lady Brooke" (192) is a full-length of Romney's ordinary type. The figure is elegantly posed and draped; but neither here nor in any of his other paintings does the colouring of the landscape harmonise with that of the figure.

Hogarth's bust portrait of "Quin" (6) is of an altogether different style of art. It possesses none of the technical charms to which the works of Reynolds and Gainsborough owe their popularity. Hogarth entered more deeply into the character of his subject, and laboured to give it complete expression. He subordinated all accessories to the face, made that supreme, and left it for better or worse to tell its own tale. Thus Hogarth's portraits are interesting according as the persons they portray are interesting; they must be seen often and looked at long for their power to be felt. They bring the beholder in contact with a definite personality, and take the man of to-day into the very presence of the man of long ago. The "Conversation at Wanstead House" (28) is a good specimen of Hogarth's portrait-groups. It is stated to have been painted about 1728, and so to be one of the master's earliest pictures. In all probability, however, it was finished at a later time. "Morning" (44) and "Night" (48) are two of the well-known series entitled the "Four Times of the Day." The scene of the former is laid in Covent Garden, that of the latter near Charing Cross. Misery, vice, and self-righteousness meet together in the one, and the cold wintry atmosphere is a pall about them. Misfortune and indifference are shown in the other, where the cries of the passengers in the wrecked coach do not even stir a crowding mass of beggar humanity from its slumbers, nor cause so much as a passing emotion in the fuddled brain of a drunken Freemason. Hogarth's vivid satire seldom found more direct and clear expression than in these two works. "Southwark Fair" (144) is less emphatic and plain-spoken. It contains a multitude of figures which, when inspected closely, yield food for thought; but the picture, regarded as a whole, seems confused, and the hasty observer will receive no impression from it. The most striking group of figures is that on the right, where a stage, on which the "Fall of Bajazet" was being performed, breaks down, and precipitates the actors on to the heads of two dice-players, so eager about their gambling as to be unconscious of the approaching peril.

"Idleness" (7) and "Diligence" (14) are charming Morlands. Each contains a small full length picture of a lady of sweet countenance, prettily attired, and seated within a pleasant chamber. They are remarkable for rhythm of line in the composition, and the harmony of colour, except in certain details, is pleasing. The picture of pigs (31) might be entitled "Contentment in a Bed of Gold." "Dancing

Dogs" is a larger picture, and covers a larger area of subject. The mother seated at the cottage door is typically English in sentiment. The faces of the two men show the touch of a hand vigorous and deft.

Among the landscapes, the views in London (53 and 62) by Samuel Scott, a follower of Canaletto, are of much interest. The view of Westminster shows the great schoolroom of the school, the Abbey buildings, with the south west tower in process of completion, St. Margaret's Church, the old Houses of Parliament behind a row of trees, and old Westminster Bridge, besides a number of other riverside buildings long ago destroyed. The water is without transparency, and the sky without atmosphere, but architectural forms are carefully delineated. "The Monastery of San Lazzaro at Venice" (20), by Wilson, is a picture in which the forms of Italy are painted with the atmosphere and colouring of England. There is a certain pleasant preciseness about the work, which is done in a simple and painstaking spirit. Nasmyth's landscape (51) contains good passages of careful detail, but the colouring is thick and heavy, the foreground badly composed, and there is a lack of general unity about the whole.

The four really fine Turners are enough of themselves to repay several visits to the exhibition. Seldom has the terror of fire been more startlingly expressed than in the "Burning of the Houses of Parliament" (197); the bridge, moreover, is a noteworthy piece of drawing, and the suggestion of vast multitudes of people is made as none but Turner could have made it. "Old London Bridge" (194), seen from Billingsgate Market, is cool in tone, and at the first glance seems a simple piece of work. It would be hard, however, to mention a picture in which a light river haze is better represented, or casts a more poetic glamour over the everyday activities of men. A number of boats are dropping gently down with the tide, their brown sails all bathed in sunlight. The red caps of the sailors are spots of rich colour, lighting up every dark corner. A landing-place on the river Tamar, by Saltash (54), is a picture the composition of which is worth careful examination. A more reserved and careful piece of work than the preceding is the "Devil's Bridge" (18), where the rocks are drawn, with architectural precision, within a girdle of clouds. Neither the summits of the crags nor the bottom of the gorge can be seen. The mind therefore magnifies the height of the one and the depth of the other, and so receives from the picture a rare impression of imposing grandeur. Records of what the S. Gottard pass once was have received increase of value since the destruction of the forms of its valleys by the unsightliest railway in Europe. Fortunately the neighbourhood of the Devil's Bridge is not injured.

"Arundel Mill and Castle" (64) is more speckled than even Constable could make it with impunity. It contains some fine elements, but cannot be called a pleasing whole. Callcott's "Tomb of Cicero" (68) does not offer much, but what it offers it gives—a quiet sky and a quiet sea bathed in light and enveloped with atmosphere. No less than six of James Ward's pictures are hung. "The Lioness" (58) will certainly receive the most attention. The idea of the picture is, of course, absurd, for the beast would devour the bird she holds in a few bites and not stop nibbling at the neck bones one by one. The coat of the lioness is not badly painted, but the vigorous handling which every part shows would be more effective if reserved for certain emphatic portions. The position in which the picture hangs renders it impossible for the spectator to avoid comparing it with Landseer's "Dead Lion" (22). "The Lioness" is certainly the best of the two.

Landseer's picture is woolly in texture to an unusual degree, and the landscape background, having been left unfinished, looks as though it had been meddled with by some other hand. The remaining Wards here shown will do little to add to the artist's reputation.

W. M. CONWAY.

FRENCH EIGHTEENTH-CENTURY PRINTS AT THE FINE-ART SOCIETY.

AN exhibition of finely-wrought engravings after many of the best French pictures of the eighteenth century is open at the gallery of the Fine-Art Society. It has, perhaps, already done something to draw attention to those excellences of French art which have been long ignored in this country, where fashion, submitting in the main to academical influence, has worshipped almost exclusively at the shrine of Italian painting. To some of our amateurs who have been deemed the most learned, the existence of a sustained school of French Art throughout the whole of the eighteenth century may come as a surprise; yet from Watteau's time to Moreau's there flourished at least three generations of artists who, to an adequate share of the gifts of the designer and the colourist, added a peculiar faculty of observation and a singular appreciation of grace. These men, like their Dutch forerunners in the century that preceded them, would have addressed themselves with but ill-effect either to "the endless series of Virgin Babe and Saint" or to the decayed themes of classic story. It was a sign of their intelligence that they fastened their attention on the life that was before them, and that they were sensible of its comedy and of its charm.

Of the minor masters, some, it is manifest, were by no means free from that coarseness which is not absent from Hogarth, and which is most conspicuously present in half the greater Dutchmen. But the really greatest artists of the French eighteenth century—Watteau and Chardin—were not coarse even for a moment. Coarseness was as far from them as it was from Keats and from Wordsworth. And the minor masters may be studied at the Fine Art Society's without contact with anything that is repulsive or distasteful, so much did they execute that was of pure grace and unalloyed humour. Now, therefore, that a fair opportunity has been offered for the observation of the interest of French design and the penetrating quality of French pictorial comedy, it is likely that some impetus will be given to the collecting of French prints by the English connoisseur, and in that way the school may get to be more rightly valued—at all events by the real judges. Ten Watteaus are exhibited. None of these show the occasional pre-occupation of the master with every-day landscape and with common folk; but in other respects they may, perhaps, be considered representative, and assuredly they make good the claim of the painter to have influenced the national art throughout the whole of the century. His was the genius of invention, his the command of firm draughtsmanship and festive colour. After Watteau comes his avowed pupil Pater; and his hardly less manifest follower, Lancret. After each there are a few prints engraved with complete skill. François Baucher, with his world of "false gods and Muses misbegot," was deemed not to require extensive illustration. There are but three of his compositions exposed. Nor was it necessary to represent Greuze very largely, though his masterpiece—the masterpiece of Massard, its engraver,— "La Cruche Cassée," is in the gallery. Attention has rather been concentrated upon the work of Chardin, replete with a "grave charm," and of two of the most vivacious

"Little Masters"—Lavreince and Moreau. The amateur who is possessed of the most elementary knowledge of French eighteenth century line engraving will hardly need to be told that "L'Assemblée au Concert" is the masterpiece of the Parisian Swede; but Lavreince is likewise well represented by the pendant to this example and by a smaller interior of amiable triviality, "Le Directeur des Toilettes." Moreau—who is called Moreau "le jeune," to distinguish him from a less famous brother—was himself not only a master of design but an exquisite engraver. The work at the Fine Art Society, however, is chiefly engraved by others. Of his mastery of costume it is said, and I believe with truth, that from most of his pictures "working drawings" could be made for the use of the dress-maker. But his mastery of human expression is even more conspicuous than his mastery of dress. The secrets of face and gesture were alike open to him. What can be more revealing than the attitudes of the figures in "C'est un fils, Monsieur!" where the nurse and the chambermaid burst into the study with the baby borne in triumph, and the amateur rises from among his *bibélots* with excitement and delight. Generally Moreau's art was bestowed rather upon subjects of ceremony or intrigue than upon those of domestic contentment. In his "Sortie de l'Opéra," for instance, everybody is provided with a love-letter; but you can no more take the flirtations of the crowd seriously than you can seriously accept the situations of literary comedy. The atmosphere is artificial, but it is gay.

Chardin's atmosphere, on the other hand, makes no claim to gaiety, and is not to be decried as artificial. For better or worse, it is natural, and of every day. Surnguy, Lepoicé, and Le Bas—admirable engravers of Chardin's period—were profitably busy, during twenty years of his popularity, in reproducing his subjects of tranquil *genre*. They recorded—perfectly as to expression and texture, less perfectly, sometimes, as to form—those scenes of the *bourgeois* interior in which his art delighted. "Le Bénédicité" depicts the unaffected piety of the poor; "La Gouvernante" the solicitude of the middle-class care-taker that the "manners" of her charge shall be unexceptionable and his bearing correct. A rare yet facile grace sits upon the adolescent figure of the girl in "Le Jeu de l'Oye"—Chardin, like all the masters of his school, from Watteau downwards, gives us the interest of a movement only just arrested, and immediately to be resumed. But he is more particularly, perhaps, the master of sustained quiet, and, as this, he is exhibited in "L'Econome" and in "L'Etude du Dessin." The former is in its sentiment an abstract and brief chronicle of all his art, which, even in its veracity, was the idealisation of homely virtues—the eulogium of prudence and a preachment of satisfaction with the day of small things.

FREDERICK WEDMORE.

EGYPT EXPLORATION FUND.

British Museum: Jan. 27, 1885.

It is felt by the Committee of the Fund that the cost of excavating the site at Nebireh, which Mr. Petrie claims to be that of Naucratis, should not fall wholly on the finances in hand. They were mostly given for excavation in the Biblical land of the East, and were not designed for the exploration of a Hellenic site of the West. A memorandum was therefore drawn up by Mr. Poole, which Mr. Newton kindly brought before the Council of the Society for the Promotion of Hellenic Studies, of which he is a vice-president. This memorandum ran as follows:—

"In the course of excavations carried on by the

Egypt Exploration Fund Mr. Petrie has discovered the site of a Greek town in Lower Egypt, which he believes to be Naukratis, on the evidence of an inscription which bears the name of the city, and of the great abundance of pottery dating presumably from the eighth or seventh century down to the Roman age. The date of the early pottery can be fixed by its association with Egyptian objects of known period. In the first few days of exploration Mr. Petrie has found three dedicatory inscriptions, one complete archaic vase, and many fragments of vases and inscribed handles of amphorae. He is now examining an elevation which he conjectures to cover the altar of the Hellenion at Naukratis, and the surrounding enclosure or *temenos*, the walls of which are still to be traced.

"The subscriptions of the Egypt Exploration Fund were given principally for the exploration of Biblical sites; the society cannot therefore undertake any large excavation on a Greek site. At the same time, it would be calamitous to leave Naukratis before the ground has been thoroughly searched; the site would, if left, be invaded by a crowd of diggers from Alexandria and Cairo, and the most precious remains carried off and dispersed without note being taken of their *provenance*, or any effort being made to use them for the increase of knowledge.

"It may be added, that in case of all excavations carried on by the Egypt Exploration Fund, a share of the antiquities discovered is presented by the Egyptian Government to the society, and is by them made over to the British Museum and other museums."

The result of this appeal was a donation of £50 for the exploration of the site in question. We are authorised to print the letter of the Hon. Sec. of the Hellenic Society, which letter is in itself a cogent statement in favour of the work of the Egypt Exploration Fund, and it need only be added that the motion for the grant was proposed by Mr. Newton and seconded by the Rev. Dr. Hort.

"London: Jan. 22, 1885.

"DEAR SIR,—I have the pleasure to inform you that at a meeting of the Council of this Society held this day, Mr. O. T. Newton in the chair, the following resolution was unanimously carried:—

"That the sum of Fifty Pounds be contributed by the Hellenic Society in aid of the excavations now being conducted on the presumed site of Naukratis by Mr. Flinders Petrie on account of the Egypt Exploration Fund."

"I may add that this sum is by no means to be regarded as the measure of the interest which this Society is prepared to take in this most important excavation should Mr. Petrie's further discoveries confirm the present strong assumption in favour of his identification of the site. But it was felt by the Council that such an immediate contribution would sufficiently show in the meantime that the Society recognised at once the claim which the present enterprise of the Egypt Exploration Fund has upon the sympathy and support of all who are concerned with Hellenic research.

"Wishing all success to your Fund, both in this and its other undertakings,

"Yours faithfully,

"GEORGE A. MACMILLAN,
"Hon. Sec."

"R. S. POOLE, Esq.,

"Hon. Sec. Egypt Exploration Fund."

We also gratefully record that our Hon. Treasurer, Mr. Edward Gilbertson, has made arrangements for the acquisition and transport of a typical series of specimens of pottery from Nebirah, which it is proposed to exhibit in this country, in proof of the value of this special excavation for Greek archaeology.

AMELIA B. EDWARDS,
REGINALD STUART POOLE,
Hon. Secs. Egypt Exploration Fund.

In reference to Mr. Pfeiffer's vigorous letter in your last number, I would explain that, on looking through our subscription-lists, we have great reason to be grateful for the support of eminent clergymen and laymen of the Church of England, though a more general recognition

would be an undoubted gain. Our present work in the Egyptian Delta, where we now have three explorers actively engaged; the cost of producing M. Naville's memoir on "Pithom," which is now about to be issued; and the cost of producing Mr. Petrie's first memoir on Zoan, now in the press, make heavy demands on our resources, and greatly increase our need of regular and earnest support. M. Naville's discovery of Pithom and his partial determination of the route of the Exodus is, be it remembered, the capital fact of modern Biblical discovery and deserves grateful recognition. Our appeal is not for large donations; but we do ask for large recognition and for effective moral support.

REGINALD STUART POOLE,
Hon. Sec. Egypt Exploration Fund.

NOTES ON ART AND ARCHAEOLOGY.

THE collection of the late Baron Davillier is now to be seen in one of the galleries at the Louvre, where it has been temporarily arranged with great care by MM. Courajod and Molinier. The ivories, the bronzes, the wood-carvings, the Medici porcelain, and the hispano-moresque majolica, the tapestry, and all the multifarious items of the choice, but very varied, collection are together now for the last time. Left to the State, they will be divided amongst the sections of the great national museum of the Louvre, bronze to bronze and ivory to ivory, while the glass and china will be sent to the technical museum at Sèvres.

AN exhibition of the works of the late young impressionist, Eva Gonzalez, is now being held in the Place Saint-Georges. The catalogue contains a preface by M. Philippe Burty and a poem by Théodore de Banville.

AN exhibition of the works of Eugène Delacroix will be held at the "Ecole des Beaux-arts" during March and April.

THE Palace of Tiberius has been discovered at Capri. Some fine mosaics and three beautiful wall paintings have already been exposed.

It is proposed to signalise the Paris Exhibition of 1889 by erecting a tower of the height of 300 metres. This would be nearly twice as high as Cologne Cathedral, and more than twice as high as St. Peter's at Rome. There are two projects for its erection, one by MM. Nouguiet and Koechlin, engineers, and M. Sauvestre, architect, who act under the auspices of M. Eissel. They would build it entirely of iron, in the shape of a *flèche*; the other is by M. Bourdais, architect of the Trocadéro, who would use masonry as well as metal, and make a colossal column of it.

We are glad to learn that M. Fétis promises to publish this year that catalogue to the modern pictures in the National Museum at Brussels, which, owing to contemplated rearrangements, has been so long delayed. We trust that these re-arrangements may include some judicious weeding, as, in spite of the many excellent pictures and the size and cheerfulness of the rooms, the collection is, on the whole, dispiriting.

THE second volume of M. Hymans' translation of Van Mander is ready for publication.

ON Jan. 23, the Bewick Club of Newcastle opened its second annual exhibition of works by local artists. We are informed that this second exhibition is even more representative of the art of the northern counties than the former one, and also contains many works contributed by distinguished English, Scotch, and foreign artists. Among whom may be mentioned Messrs. Aumonier, Boughton, John Charlton, Walter Crane, Calderon, and Herkomer. The exhibition will remain open until Feb. 28.

SOME beautiful still-life paintings by Hubert Bellis, are on show at the cosy little gallery of the "Cercle artistique et littéraire" at Brussels. M. Bellis paints with the bold quick touches of the modern school, and, in his case, confidence is justifiable. His flower and fruit pieces are distinguished by fine composition and rich harmonious colouring.

THE authorities of the *Bibliothèque Nationale* have commissioned M. Georges Duplessis and M. Henri Bouchot to take possession of the collection of engravings, &c., relating to the Department of the Aisne, bequeathed to the State by the late M. Husson-Flcury, of Laon, a brother of M. Champfleury. The number of the engravings and drawings is said to be about 15,000. A catalogue will be prepared shortly.

PREPARATIONS are being made at Paris for an exhibition of the works of the late M. Bastien-Lepage.

THE fourth exhibition of the Paris Union des Femmes Peintres et Sculpteurs will be opened at the Palais des Champs Elysées about the middle of February.

IN our announcement last week of Miss Beloe's lectures to ladies on Egyptian Antiquities, to be given at the British Museum, in the course of the next two months, we omitted to mention that she will also give a similar course of lectures on "Egyptian Art" on Friday, Feb. 13th and the five following Fridays. Each lecture will be illustrated by diagrams, and afterwards by a visit to the Egyptian galleries, in order to examine the monuments of the respective periods.

ADOLPH HUSZAR, the most eminent sculptor of Hungary, died of apoplexy at Buda-Pesth, on January 21, at the age of forty. He was of humble Slovak parentage, and in early life worked as a stonemason. His talents, however, becoming known, he was encouraged to compete for a government art scholarship, which he gained, and which enabled him to devote his whole time to study. In 1870 he obtained the prize offered for a design for the monument to Kötviös, which he afterwards executed in an eminently successful manner. Among his subsequent productions may be mentioned the monuments of Petöfi, Bem, Dugonics, and Déak. The last named of these works had only been completed a few weeks before his death.

MR. THOMAS TYLER will discuss some of the chief problems relating to Hittite history, and to the decipherment of the inscriptions, at the British Museum, on the first three Wednesdays in February.

THE STAGE.

THE French plays at the Royalty Theatre have for a moment become interesting by the appearance of M^{me}. Jane Hading, who has been seen in "Le Maître de Forges" and in "Frou-frou." But even her performance was insufficient to wholly deprive "Le Maître de Forges" of what it has of revolting—it is, in truth, not within the power of human art to make that drama agreeable. In "Frou-frou," M^{me}. Hading has been seen much better, and M. Damala—for some time the husband of Sarah Bernhardt—has displayed to advantage a manly preserved bearing. M^{me}. Hading has been for some little time the leading interest at the Gymnase—the very theatre at which "Frou-frou" was first produced, when Meilhac and Halévy had the benefit of the art of M^{lle}. Desclée. "Frou-frou," though in itself a pleasant enough comedy, and a study of manners humane in sentiment, is very dependent for its attractiveness, upon the stage, on the performance of the lady who plays its title-rôle. To several eminent artis'

of the French theatre—not to speak of Mdlle. Beatrice and of Miss Ellen Terry in England—has this task been deputed. The character was meant originally for Mdlle. Delaporte, who in fine performed it at St. Petersburg with undisguised success. But it was really Aimée Desclée who best succeeded in associating herself with the character in the public mind, both in Paris and London. Aimée Desclée became Frou-frou; when Sarah Bernhardt appeared in the part she did not become Frou-frou, but Frou-frou became Sarah Bernhardt. Next to Mdlle. Desclée, Mdlle. Jane Hading must be suffered to take place. At her command is a seemingly spontaneous gaiety and a simplicity and a rich depth of pathos. Accordingly, in London the piece has again been found life-like. Again—and for the first time since the death of Desclée—have we been able to witness a legitimate interpretation, in which the means employed were such as could be rightly directed to the end. Mdlle. Hading has already gone from us, but so cordial was her reception during the brief time of her stay that her return should hardly be a matter of doubt. If she is not as an artist as subtle as Desclée, she is as sympathetic as was Hélène Petit, and more could scarcely be said.

MUSIC.

RECENT CONCERTS.

BERLIOZ's sacred trilogy, "The Childhood of Christ," was performed at the Sacred Harmonic Society's concert at St. James's Hall on January 23. It was produced in London by Mr. C. Hallé in February 1881, but since that time has not been given by any society. The fact is that it was then received rather coldly. When a work by Berlioz, the extravagant Frenchman, is announced, the public expects some sensational orchestral effects: in "Faust" there is the celebrated "Ride to the Abyss," in the Fantastic Symphony the drum-thunder, in the "Messe des Morts" the four orchestras and numerous instruments of percussion; but in his trilogy Berlioz is quite *au naturel*. And again, the form of the work appears strange to ears accustomed to English oratorio; while the libretto is a curious mixture of the sacred and the profane. But it is a most interesting work, and we feel sure that it only needs to be better known in order to become popular. The second section, "The Flight into Egypt," is a delightful piece of writing: the quaint Overture, the simple and melodious "Farewell of the Shepherds," and the picturesquely orchestrated Scene in the Desert, called forth the admiration even of his enemies when Berlioz deceived them by having it announced at Paris as a "Mystère," by Pierre Ducré, "maitre de musique de la Sainte Chapelle de Paris (1679)." Taken unawares, they cried out, "Parfait, délicieux! voilà de la musique!"

At the Sacred Harmonic performance the principal soloists were Miss Carlotta Elliot, Messrs. Lloyd, Santley, and Hilton, and they all sang with great taste and fervour. In the first part the choir and orchestra were rough and uncertain; but afterwards there was much improvement. The choir made amends for all previous faults by singing in a most commendable manner the difficult unaccompanied chorus which closes the work, and we must also praise the invisible "Chorus of Angels." For these successes thanks are, we presume, specially due to Mr. W. H. Cummings.

After this came Goetz's setting of the 137th Psalm, "By the waters of Babylon." It was well rendered, though sufficient attention was not always paid to the composer's marks of expression; the solo parts were taken by Miss Elliot and Mr. Santley.

The concert concluded with Bach's cantata, "Gottes Zeit ist die allerbeste Zeit." The com-

poser probably used the organ throughout, and the total absence of that instrument at this performance made it sound thin and dry, more especially in the final chorus. We believe Robert Franz's additional accompaniments were used; if so, we do not think that he has reproduced as nearly as possible Bach's intentions. The cantata, though it contains many fine passages, is not, in our opinion, one of the composer's best. Mr. Hallé conducted the whole of the programme. On Friday, February 27, in commemoration of the bicentenary of Handel's birth, "Belshazzar" will be performed.

Last Saturday afternoon the popular concert attracted an immense audience. Mdlle. Essipoff interpreted Beethoven's sonata "Appassionata," and at the close was recalled three times. There was not enough dignity in her rendering of the first movement, nor enough power and passion in the finale, but in the Andante her playing was clear, delicate, and refined. Although there were points in her rendering of the work to which we take exception, we consider it, on the whole, her best performance of the season. The concert commenced with Mozart's fine quartet for strings admirably played by Mdlle. Néruda and her associates, and concluded with Schubert's pianoforte trio in B flat (op. 99). Mr. H. Thorndike sang in place of Mr. Maas, and contributed songs by Purcell, Dvorák, and Schumann; we notice that this gentleman always chooses something good and classical.

On Monday evening (January 26th) the programme included Dvorák's pianoforte trio in F minor (op. 63), introduced last season by Mr. O. Beringer. The cleverness and originality, as well as the beauties of this work, reveal themselves more fully at each fresh hearing. The performance by Mr. C. Hallé, Mdlle. Norman-Néruda, and Sig. Piatti was a magnificent one. Mr. Hallé, especially, was in splendid form. For his solo he chose Beethoven's E flat sonata (op. 31, no. 3), which is evidently as much a favourite to him as with the public. His rendering of it was exceedingly fine. The programme included Mozart's quartet in C, and some of the *Pensées fugitives* for piano and violin by Heller, a name seldom seen now on concert programmes. Miss Carlotta Elliot was the vocalist.

J. S. SHEDLOCK.

SOME MUSICAL PUBLICATIONS.

Nehemiah: an Oratorio. By Josiah Booth. Vocal Score. (Curwen & Sons.) The text is principally selected and compiled from the Scriptures by A. J. Foxwell. The Oratorio is divided into three parts. In the first, Nehemiah announces to the Jews in captivity the permission which he has received to rebuild the wall of Jerusalem. In the second, the work is in progress, and we hear the taunts and scoffings of the enemy, headed by Sanballat and Tobias. In the third, the tribes are solemnly convoked, and strains of joy and thanksgiving are addressed to Jehovah for his goodness and mercy. The subject is a good one, Mr. Booth is a sound musician, and if, on the one hand, there is nothing likely to attract those who are always in quest of something new and original, it must be acknowledged that his Oratorio will please small choral societies who like tuneful melody and plenty of choral work. There is no overture to the Oratorio; but No. 9 is an instrumental movement entitled Symphony, and besides that we have a march (by night) in the second part. The unaccompanied quartette, "O Lord, we come to thee," is short but graceful. Mr. Booth gives favourable specimens of skill in part-writing.

Edith: a Reverie for Pianoforte. By C. G. Sadler. (Ashdown.) Short, simple, and rather sentimental.

Antwerp, Bruges, for pianoforte, by E. M. Lott. (Ashdown.) Two light and effectively-written pieces: the first introduces *Les Carillons Belges*, the second *La Brabançonne*.

Romeo and Juliet, Puck: Pianoforte Illustrations of Shakspeare. By Seymour Smith. (Ashdown.) Two rather pleasing drawing-room pieces. We prefer the second.

Love's Legacy. By Charles Salaman. (Stanley Lucas & Co.) The words by M. C. Salaman are far beyond the sentimental style so much in vogue. The composer has admirably succeeded in reflecting the spirit of the poem. The melody, if not particularly striking, is taking, while in the accompaniment there is shown a great deal of taste and fancy.

LITERATURE.

George Eliot's Life as related in her Letters and Journals. Arranged and edited by her husband, J. W. Cross. In 3 vols. (Blackwood)

If a reader should open these volumes with the eagerness of literary curiosity, when he has advanced but a little way that feeling will be quelled by the stronger one of the joy of living for a while in company with large and generous ardours, tender affections and great and solemn thoughts. These, indeed, have already had their influences with those who heard the right voice, and followed it, in *Adam Bede* and *Silas Marner* and *Romola* and *Daniel Deronda*; but now they come with a more personal accent and a more intimate appeal to the heart and conscience. We are sensible of a pathetic beauty in the strength which is girt about with the weaknesses of frail humanity. We see the sensitive, fragile, trembling hand which reached forth to us so large a gift, and our gain of possession is purified by the gain of gratitude.

Mr. Cross has already his reward, for he must be conscious that he has done his work in the way which George Eliot would have approved. But he may also accept, as something worth having, the thanks and approval of those to whom George Eliot's memory is dear. Had there been a single jarring or false note struck by the editor, it would have been particularly hard to forgive it in the present instance. But there is not a single false or jarring note. Mr. Cross has done his work, as far as we can discern, with admirable judgment, fine feeling and dignified self-subordination to his theme. His decision was doubtless a wise one that her husband should not write a life of George Eliot, but that George Eliot should be her own biographer. I have no doubt that he was also fully justified in printing only such parts of George Eliot's letters as seemed to possess solid and enduring value in interpreting her character, setting forth her ruling ideas, or exhibiting the more important facts of her life. We can afford to sacrifice a trivial vivacity for sake of a deeper spiritual interest. If we do not get a running fire of epigram, a succession of sharp sayings, a multitude of sketches of persons living or recently dead, made vivid by the *malice* of a sprightly pen, yet something is given in each of these kinds. We can supply something from George Eliot's writings which sufficiently represents what is here missing; and we receive a gift of greater worth. It was Carlyle's wish that he should be presented to the world with his visage marred, and bearing about him all the stains of mortality; and to undiscerning gazers these have temporarily concealed the divine fire in his eyes and the

strength and tender passion of his heart. George Eliot's infirmities, save those which are of a kind to win upon us and attach us, were far fewer than Carlyle's. It was her hope that some of this burden of mortality might drop from her at death; that she might remain with men and the life of men unencumbered by what was of the earth, earthy, and that the discords of her days of striving and struggle "quenched by meeting harmonies," might

"Die in the large and charitable air."

There is no false idealisation in these volumes. We are shown George Eliot not as an Olympian, but human "to the red-ripe of the heart," an eager, sensitive, frail, dependent woman. There is no false idealisation, but what is of most importance in the characterisation is not crowded out of sight by what is of least importance. Nothing is here to attract or to fasten the stare of a hard curiosity. The rights of the living and the dead are recognised and respected. There is much to gratify the best kind of literary curiosity, but more to make the heart stronger and wiser, and to quicken and refine the sense of spiritual sight. Should the moral or intellectual tension of these volumes prove too severe for the reader, can he not at any moment refresh himself and restore his tone by the delightful trivialities, and dear and exquisite humanities—gaieties, sadnesses, gladnesses, bitternesses, and swift, penetrating gleams of love—in the fascinating letters of Jane Carlyle?

Setting aside the introductory chapter, a few closing pages of deep interest, and a rare occasional paragraph, we find George Eliot's life here recorded by herself from her nineteenth year until three days before her death, when her last words—words of loving sympathy with a sorrowing friend—were written as part of a letter which lay on her desk never to be finished. The letters and journal are skilfully dealt with, so as to form a narrative in which we seldom feel a lack of continuity. Now and again, indeed, we pass too lightly over something momentous, or pass beyond it, as it were in the dark. Thus the transition in George Eliot's girlhood from an ardent faith in the dogmas of "Evangelical" orthodoxy to her halting-point of theism is only partially explained. We can understand how with her chameleon-like sensibility she may have caught from her new friends, Mr. and Mrs. Bray and the Hennells, the colour of her creed; how to one attached before all else to ethical ideals, the recognition of noble and beautiful types of character formed in a school different from her own may have led of necessity to a broadening of her basis of belief; how to one whose intellect was quick to perceive the truth of things, escape from the bondage of any unnatural superstition may have been quickly felt as a blessed deliverance; how, moreover, she may have carried with her, and have transformed, but not lost, much of the very virtue of her old beliefs. Still we want to know how a heart so tender and passionately religious behaved during this toil and trial of the intellect; whether it suffered hot and cold fits; whether it was led on with firm hand by the reason, or whether it lingered long behind, casting backward glances to the

Paradise of childish piety, and those dread angels waving the swords of flame at the gates of Eden.

Our general conception of George Eliot's character is not altered in any essential by the new light thrown upon it. We had known that she was organised so as to possess the most trembling sensibility to physical sources of pleasure and pain; and here she appears with nerves servile to every skiey influence, saddened in a rare degree by cloud or rain, quickened and invigorated in a rare degree by sunshine, fine airs, and the breathing quiet of the country. The ground-tone of her spirit was not bright, and the autumn harmonised with her mood better than the spring. There is a lucid breadth, spiritual and touched by sadness, in a clear September day, which, to some tempers, more than compensates for the songs and blossoms of the spring-tide. The edge of autumn on the morning air would make even London a place of delight to George Eliot. She loved the sunset better than the dawn—a wide sunset seen over heath and moor, or spaces of the sea, and she would dream, like a child, of endless progress through the luminous vistas of the west into an unknown land, or would throw her spirit abroad on the receding flood of light and beauty, as on a wave of choral music, and, losing the sense of separate existence, would "feel melted into the general life." Autumn and sunset have in them some of that "finest memory" in which George Eliot found the substance of our "finest hope." Among perfumes she cared more for the delicate scent of dried rose-leaves—an emblem, as it were, of the piety of remembered happiness—than for the rich gusts from a garden in June. With such an exquisite sensibility, George Eliot was known to us as possessing a rare capacity for intense delights and prolonged and refined pain; and here she is revealed, ever and anon borne away by raptures of pleasure—a passionate lover of great music ("music," she writes, "arches over this existence with another and a diviner"), a delighted student of painting and sculpture, or unable to restrain tears of joy on meeting what is noblest in poetry. But, although a happy sharer in beautiful mirth, and herself a creator of wise and genial laughter, her disposition was not spontaneously buoyant or joyous. From childhood she owned that "liability to have all her soul become a quivering fear" which belongs to imaginative and sympathetic natures; her eye was even morbidly on the watch in cloudless hours for the "crow that flies in heaven's sweetest air." As a girl she suffered much from her own sensitiveness and passionate shyness; in later years she often found cause to object strongly to herself as "a bundle of unpleasant sensations, with a palpitating heart and awkward manners." She often held on her way through a valley of shadow haunted by cruel whisperings, or struggled forward through some desperate slough of despond. With her, as with Carlyle, much of this misery would have disappeared could she have gained what George Eliot terms "the one thing needful"—a sound digestion. It will, indeed, be no mean evidence of the progress of the species if the great teachers of the twentieth century learn to eat heroically, and defy the demon *Dyspepsia*. "My life for

the last year," wrote George Eliot, when *Middlemarch* was brought to an end, "has been a sort of nightmare, in which I have been scrambling on the slippery bank of a pool, just keeping my head above water." When her troubles were real and definite, she would face them courageously, and would turn away from false or illusive consolation. What she said to a friend with respect to endurance in trials of faith or scepticism, she applied to the lesser sorrows of life—"the highest calling and election is to do without opium, and live through all our pain with conscious clear-eyed endurance."

Her intensest pains and keenest joys were those of the affections. It was not only while she dwelt at Griff, "the warm little nest where her affections were fledged," that there lived the clinging child in her heart; all through life the most marked trait of her character, as Mr. Cross truly says, was "the absolute need of some one person who should be all in all to her." In girlhood she took refuge for a time in severe religious asceticism, because she could not be moderate in human loves, and felt that total abstinence was possible, although temperance was not. No child ever cared more to be cherished and petted, to hear kind words, to receive a motherly kiss, than George Eliot did as a grown-up woman. Her bump of adhesiveness, declared the phrenologists, was large; and in these volumes there is a wealth of the love of faithful friendship given and gladly received. Nor did she practise or approve a stoical repression of the utterance of affection. "I like not only to be loved," she wrote to Mrs. Burne-Jones, "but also to be told that I am loved. . . . The realm of silence is large enough beyond the grave. This is the world of light and speech, and I shall take leave to tell you that you are very dear." But there is always, as here, a touch of dignity in the expression of her love, no superlatives raised to the *nth* power, no "little language," like that which is the foil of Swift's inhumanity. Each MS. of her novels is inscribed to George Henry Lewes in words which make an outlet for the current of her affection so broad and deep that the stream flows with no uproarious hurry, but a grave, sweet majesty. The MS. of *Romola* bears the inscription—"To the husband whose perfect love has been the best source of her insight and strength, this MS. is given by his devoted wife, the writer"; and that of *Middlemarch*—"To my dear husband, George Henry Lewes, in this nineteenth year of our blessed union." In her elder days George Eliot's loving kindness was given with peculiar sweetness and grace to the young who were illuminated by the brightness of some new joy or who felt for the first time the keen edge of pain. "It is one of the gains of advancing age," she writes, "that the good of young creatures becomes a more definite intense joy to us." Her feeling was that pathetic one—purified from all egoistic pleasure—with which Shakespeare in the plays of his latest years bows tenderly over his Perdita and Miranda, his Ferdinand and Florizel.

This tender devotion to individuals and sympathy with personal joys and sorrows were united in George Eliot with a capacity for enthusiasm about great causes in which the general interests of a people or of human-

ity itself are at stake. Without such sense of a great common existence how could she have been quite ardent and quite true in singing her own part in "the great Handel chorus" of life? And when she felt that enthusiasm was not a blind warmth—heat without light—it was her happiness to abandon herself to the wave of emotion with no reservations or safeguards of a petty prudence. "I love the souls," she writes, "that rush to their goal with a full stream of sentiment—that have too much of the positive to be harassed by the perpetual negatives, which, after all, are but the disease of the soul, to be expelled by fortifying the principle of vitality." And on the occasion of that shining apparition, the French Revolution of 1848, she wrote to Mr. John Sibree:

"You and Carlyle are the only two people who feel just as I would have them—who can glory in what is actually great and beautiful without putting forth any cold reservations and incredulities to save their credit for wisdom. . . . I feared that you lacked revolutionary ardour. But no—you are just as *sans-culottish* and rash as I would have you. You are not one of those sages whose reason keeps so tight a rein on their emotions that they are too constantly occupied in calculating consequences to rejoice in any great manifestation of the forces which underlie our everyday existence."

Add to this power of enthusiasm for large causes, a rare conscientiousness about duties that to some appear small, and we perceive how complete was George Eliot's nature on the moral side. "'Conscience goes to the hammering in of nails,'" she writes, "is my gospel." This sense of the duty of thoroughness in detail was in part inherited from her father. It afflicted her seriously that, by a misprint, in the cheap edition, Adam Bede should be made to say "speerit," whereas the dialect required that he should say "sperrit"; and that she should have written "Zincalo" in the *Spanish Gypsy* instead of "Zincalo" was a misadventure which involved the careful recasting of several passages for a new edition.

This passion for definiteness and accuracy was a central characteristic of her intellect. It helped to determine her creed on the negative side, while her ardent sympathies went to work on the positive or constructive side to educe the richest meanings and the most vitalising force from that Human Catholicism which was her religion. But although she chose to build her temple of stone upon the solid earth, and feared that if she aspired to build in the heavens the shrine and temple-roof might be of cloud, George Eliot had no tendency to deliver her mind in the form of hard and definite opinions. She felt that the facts and the emotions which should suit the facts are generally larger than can be fitted to a precise formula of words, and she justly feared that such a formula might be a ligature apt to cause the growing soul to dwindle. "I shrink," she wrote to Mr. Frederic Harrison, "from decided 'deliverances' on momentous subjects from the dread of coming to swear by my own 'deliverances,' and sinking into an insistent echo of myself. That is a horrible destiny—and one cannot help seeing that many of the most powerful men fall into it." George Eliot was saved from a hard intellectuality, both by the enthusiasm of her affections, and by the presence of large

emotions which were winged by imagination. When asked whether in her opinion Goethe had a strain of mysticism in his soul, she answered Yes—"of so much mysticism as I think inevitably belongs to a full poetic nature—I mean the delighted bathing of the soul in emotions which overpass the outlines of definite thought." But again her sympathies and her intellect protected her against the waste of spirit in a vague and luxurious mysticism, which, as if to justify a dangerous form of self-indulgence, sometimes assumes high philosophic names. "I thought of you last night," she wrote to Miss Hennell,

"when I was in a state of mingled rapture and torture—rapture at the sight of a glorious evening sky, torture at the sight and hearing of the belabouring given to the poor donkey which was drawing me from Ramsgate home."

Always in George Eliot's passage through life she returned from the mystic sunset splendours to the poor belaboured donkey; but lest the burden of afflicted and long-suffering donkeyhood should drive her mad, there was the far-off sunset in which to bathe and refresh her spirit.

I have disappointed the reader who came to this article hoping for information about the facts of George Eliot's life, about the origin and history of her imaginative works, or her relations with the distinguished persons of her time. It would have been possible to have presented a delightful gathering of good things culled from Mr. Cross's volumes. But everyone will read the book itself, and is it not pleasanter to pick one's own plums or cherries from the branch than to accept them with the bloom and freshness rubbed away by the critic's finger? For my own part, in reading the *Life*, I was less eager to ascertain biographical facts than to revivify my impression of a great and beautiful nature, and to make assurance doubly sure that the woman was in no respect inferior to the author. I was also eager to assure myself that full justice had been done to the memory of Mr. Lewes, and to the great gift received by George Eliot from him—a gift hardly less than that which she gave. Full justice has been done throughout these volumes to the memory of that bright and ardent nature which sustained the sadder spirit of George Eliot, and yielded to all her thoughts and feelings the response of quick perception and vivid sympathy. The George Eliot who enriched the world with the series of writings from *Scenes of Clerical Life* to *Daniel Deronda* was not Mary Ann Evans but Mrs. Lewes; a large foundation of study and observation had indeed been laid in early womanhood, but it is doubtful whether without the fostering sympathy and devoted comradeship of her husband, we should ever have possessed one of those writings by which George Eliot will be remembered. In her dark solitude after Mr. Lewes's death, George Eliot was conscious that her powers were dwindling to decrepitude and sterility; the very power of love and the piety of memory seemed perishing, and loyalty to her past permitted or even enjoined an escape from such a death-in-life as this, if by any means it were possible. Of her second marriage let George Eliot herself speak:—

"Deep down below there is a hidden river of sadness, but this must always be with those who have lived long, and I am able to enjoy

my newly-reopened life. I shall be a better, more loving creature than I could have been in solitude."

And again:—

"The whole history is something like a miracle-legend. But, instead of any former affection being displaced in my mind, I seem to have recovered the loving sympathy that I was in danger of losing. I mean that I had been conscious of a certain drying-up of tenderness in me, and that now the spring seems to have risen again."

Those are happiest whom a great sorrow strengthens while it saddens, and who can carry on the past into the present in lonely fortitude. It was not so with George Eliot.

EDWARD DOWDEN.

TWO BOOKS ON INTERNATIONAL LAW.

Essays on some Disputed Questions in Modern International Law. By T. J. Lawrence. (Cambridge: Deighton, Bell & Co.)

International Law and International Relations. By J. K. Stephen. (Macmillan.)

THESE two books come like question and answer—"Is there a true International Law?" Prof. Lawrence asks in his first essay, and he argues that there is; half of Mr. Stephen's little work is devoted to showing that there is no such thing, and the other half to an illustrative explanation of what the rules really are which look like international law. That they are not rules of law, in any proper sense, is an opinion which has been freely expressed of late years, and the professors of the subject have never succeeded in removing the doubt. And yet the question is well worth settling. For, though in form it is a question of naming and classification, yet the answer to it will in many ways determine the future development of the whole subject. The text on which both writers discourse is a passage in Sir James Stephen's *History of the Criminal Law*, where the expression "International Law" is objected to as inexact and misleading, covering as it does rules, such as treaties, which are not laws, and rules, such as those of prize, which, so far as they are laws, are municipal and not international. Following out this idea, Mr. Stephen attempts to show in outline "how every department of the field of international relations might be adequately discussed in a science which should dispense altogether with juridical metaphor." He develops the criticism of the use of the expression "International Law," showing that it is mischievous in the hands of a conventional jurist like Mr. Hall, as well as in the hands of an *a priori* jurist like Prof. Bluntschli. Both classes, he says, are necessarily led into a confusion of international habits with international duties, and with a juridical bias they "describe those habits which are only rules in the sense of uniformity, as habits which are rules in the sense of enforced uniformity." He proceeds to state an alternative mode of treating the subject, sketching in outline a book which might be written without the use of legal terms. It would omit the ethical element altogether; it would be a more or less definite statement of existing usage; and it would distinguish those parts of the subject which have not, from those

which have, been incorporated in the municipal law of particular nations. Such a separation, besides being scientifically accurate, would encourage nations to legislate on matters of international import, by dispelling the delusion that there does at present exist a code of laws covering all international relations. Mr. Stephen's sketch is done with great ability, and a work executed on its lines would undoubtedly be freer from irrelevant matter than most of the existing works on international law. His classification of topics, too, is in many ways novel, and would be as useful practically as it is sound logically. But his preliminary criticism is less satisfactory, based, as it is, on the assumption that Austin's analysis of law is accurate and complete. He does not discuss the opinion stated by many writers since the date of Maine's *Ancient Law*, that Austin's definition does not fit in either with the past history of society or with its probable future. It is mainly on this ground that Prof. Clark in a recent work, and that Prof. Lawrence now, vindicate international law as true law, the essential idea in which is not coercion, but order. The differences from municipal law are very great, necessitating a wholly different mode of exposition, and these writers, perhaps, do not sufficiently emphasise this point; but their chief contention certainly leads them to a juster recognition of existing facts than is possible for a rigid Austinian. Nevertheless, Mr. Stephen will do good service if he completes the work of which he has now written the introduction. It will have much originality of method, and it will not dogmatise on international morality.

The other essays in Prof. Lawrence's volume treat of more substantial subjects. We can but briefly note their contents. "The Suez Canal in International Law" is an elaborate examination of the history of the canal, showing that its legal position is not settled by describing it as a narrow strait, wholly within the territory of one power, and connecting two open seas. Coming to the negative conclusion that international law here furnishes no precedents for the conduct of states, he develops a proposal for the conversion of the canal, together with a few miles of adjacent territory, into a principality guaranteed like Belgium. A similar problem is discussed at greater length in three essays on the Panama Canal, in which Prof. Lawrence gives an account of the Clayton-Bulwer Treaty, criticises the recent attempts of Mr. Blaine and Mr. Frelinghuysen to back out of it, and advocates a real neutralisation of the canal, as distinct from the guarantee of protection proposed by the United States under cover of the term neutralisation. The whole case is stated with admirable clearness and vigour, and, so far, at any rate, as the question turns upon treaty obligations, the argument is as convincing as anything well could be. It is expressed, too, with much plainness of speech. In this controversy, he says, the honourable directness of American diplomacy has been abandoned, and in place of it resort has been had "to the false facts, strained constructions, unhistorical history, perverted law, and illogical theory which it is the object of this essay to expose." The judgment is severe, but it is amply justified by much of Mr. Blaine's wild writing.

An interesting paper follows on Grotius as a reformer of international law, the most direct result of his work being effectively illustrated by a comparison of the atrocities of the Thirty Years' War with the restraint displayed in the war of the Spanish Succession. In an essay on the "Primacy of the Great Powers" Prof. Lawrence maintains that the doctrine of the equality of independent states is dead, and that

"we ought to put in its place the new doctrine that the Great Powers have by modern International Law a primacy among their fellows which bids fair to develop into a central authority for the settlement of all disputes between the nations of Europe."

In saying that the old doctrine has never been challenged since the days of Grotius, he is evidently not aware that Prof. Lorimer has anticipated him. Prof. Lawrence expresses himself in a less guarded manner than does Prof. Lorimer; but is there not in the minds of both some misconception of the doctrine which they assail? Germany is a more powerful state than Denmark, and, along with certain other states, is a member of a sort of European council in which Denmark has no place. Yet in regard to their legal rights and obligations they are surely equal. As belligerents they would be entitled to the same consideration at the hands of neutrals, and as neutrals they would be bound to behave alike towards other states at war. To put a parallel case, the proposition that all Englishmen are equal before the law is not contradicted by stating either the fact that some are wealthy men and others are not, or the fact that some are members of Parliament and others are not. Prof. Lawrence's volume ends with a hopeful prospect of the abolition of war. In the internal history of society there have been three stages—punishment of injuries by retaliation, the regulation of the modes of retaliation, the institution of the king's justice as an alternative to private war, and the supremacy of law. In the history of public war we have passed through two of the same stages, and have reached a position similar to the third stage. Is the fourth also possible in this "evolution of peace"? Prof. Lawrence believes that it is.

G. P. MACDONELL.

Sonnets, and other Verse. By Samuel Waddington. (Bell.)

THE sonnet is a poetical form which possesses a peculiar and almost irresistible fascination. Intense admiration for the achievements of the great sonneteers seems unable to exist for long in its simple and primitive form; it almost inevitably develops into emulation; and he who begins by being a sonnet lover ends by becoming a sonnet writer. It has been so with Mr. Waddington. We who belong to the once small but rapidly-increasing family of sonnet-fanciers have often given silent or spoken thanks for service rendered by his dainty pair of anthologies; and now added thanks are due for this exquisitely-attired little volume, which proves that Mr. Waddington is not merely a tasteful collector of these "cameos of verse," as I once called them, but a cunning and delicate carver whose carefully cut gems future collectors

will not despise. I do not mean to infer that Mr. Waddington is one of the great masters of the sonnet. They are few, and it is probable that the place left vacant by the latest of them, Dante Gabriel Rossetti, will be long unfilled; but, to borrow a figure from Mr. Waddington's almost too modest introduction, we can find something to delight us not merely in Sevres or Dresden ware, but in common delf, if only the simple vase be pure in colour and lovely in curve. The sonnets, forty in number, are so pleasantly varied in theme that even the severe test of consecutive reading does not induce a feeling of monotony, and in the treatment also there is as much variety as can be attained without disloyalty to the traditions of the form. Only thrice does Mr. Waddington ignore accepted canons to try a little experiment of his own by cutting off one or two of the orthodox five feet from every verse; and though the result, in the second instance, at any rate, is encouragingly pretty, it is curious to note how, by so simple a change, the unmistakable sonnet flavour is entirely destroyed. Instead of meditative weight and sobriety, we have a bright lyrical feeling; and though I would not part with the old form, I frankly admit that the new one appeals to me, and will, I think, appeal to other readers, very agreeably. The following is the better of the two examples. Note the graceful and winning *naïveté* of the conclusion:

"MORNING."

"And reddening Phoebus lifts his golden fire,"
GRAY.

"Now o'er the topmost pine,
The distant pine-clad peak,
There dawns a golden streak
Of light, an orient line:—
Phoebus, the light is thine,
Thine is the glory—seek
Each dale and dewy creek,
And in full splendour shine!

"Thy steeds now chafe and fret
To scour the dusky plain:
Speed forth with flashing rein,
Speed o'er the land, and yet,
Pray, linger in this lane,
Kissing each violet."

It will be seen that in every respect but one this is a perfectly orthodox performance. Mr. Waddington does not even neglect the pause or break in the middle of the octave which, as a note of Petrarchian purity, is so dear to my friend Mr. Hall Caine, but which I fear I have at times treated with the disrespect shown to the North Pole by Sydney Smith's memorable acquaintance. And yet the sonnet has gone and something else stands in its place.

In his more regular efforts Mr. Waddington displays both natural facility and acquired precision of workmanship. Hardly a single sonnet impresses one as being laboured; but in every one there has been so much conscientious painstaking, that a critic of the hole-picking species will find himself feeling somewhat depressed by lack of material. Doubtless there is here and there an ineffective line; and Mr. Waddington errs, I think, in utilising for rhythmical purposes syllables universally slurred or half-slurred in utterance—the use of "flowering" as trisyllabic is a case in point—but in matters of *technique* I have found no fault more serious than the unfortunately weak and disappointing close of

the otherwise strong sonnet entitled "To-day," the sestet of which runs thus:

"To-day! And yet To-day shall live for ever,
In every heart an everlasting mark;
The tides of time shall ebb and flow, yet never
Efface the deathless traces of to-day!
To-day, who will may work, who will may
play,
Soon, soon, the night shall come, the night is
dark."

There is something not altogether pleasing in the close juxtaposition of the words "efface" and "traces," but this is a slight defect compared with the irritating ineffectiveness of the clause I have italicised. So flat and commonplace a tag would ruin the finest sonnet.

Mr. Waddington's work has one quality which is in the minor poetry of the period rarer than all other good things—individuality unspoiled by eccentricity. The general substance of the sonnets reminds me more frequently of Clough and Mr. Matthew Arnold than of any other poets; but the manner is Mr. Waddington's own, and only in one example, "The Schoolmaster," does the mere literary influence of Mr. Arnold seem to have overpowered him. "A Metaphysical *Cul de Sac*" and "Soul and Body" are attractive examples of the quaint and dexterous subtleties loved by Donne and his school; but the greater number of Mr. Waddington's sonnets are, in virtue of the good quality just mentioned, rather hard to classify. Nor is it much easier to rank them in order of precedence, for they are differentiated rather by theme and mood than by varying degrees of excellence, and one's preferences are determined rather by personal taste than by exercise of the pure critical faculty. I myself have derived special pleasure from the sonnets respectively entitled "Nature," "Self-Sacrifice," "Through the Night Watches," "Nightfall," "Sweetheart," "The Aftermath," and "What hope is thine." The octave of the last-named is warm with strong imaginative fervour, but the sestet strikes me as being by comparison weak, and Mr. Waddington, as an artist, is perhaps more favourably represented by "The Aftermath."

"It was late summer, and the grass again
Had grown knee-deep,—we stood, my love
and I,
Awhile in silence where the stream runs by;
Idly we listened to a plaintive strain,—
A young maid singing to her youthful swain,—
Ah me, dead days remembered make us sigh,
And tears will sometimes flow, we know not
why;
If spring be past, I said, shall love remain?
She moved aside, yet soon she answered me,
Turning her gaze responsive to mine own,—
Spring days are gone, and yet the grass, we see,
Unto a goodly height again hath grown;
Dear love, just so love's aftermath may be
A richer growth than e'er spring days have
known."

Of the space that can be allowed me I have left but little in which to comment upon the "other verse" which occupies more than half of Mr. Waddington's volume. The miscellaneous lyrics are, however, of less importance than the sonnets, and may, therefore, without injustice, be dismissed more summarily. They are all bright, graceful, and daintily finished, but many of them are thin in substance, or imitative in manner. No one will quarrel with Mr. Waddington because he has been fascinated by the swinging music of Dante

Rossetti's "Cloud Confines"; but he certainly has made a mistake in attempting to reproduce it in the not very valuable poem which he calls "Finite and Infinite." I do not say that the attempt is specially unsuccessful, for in externals "Cloud Confines" is one of the most imitable of poems; but few people will think that the attempt was worth making, and I confess I am not one of the few. Mr. Waddington has shown that he can write a neat rondel, rondeau, or chant royal, and may henceforward rest upon his laurels. These pretty trifles have "had their day"—their two days in fact—and no one will mourn if they now "cease to be," say for another century. Lastly, I would say that among many pleasant, but not specially striking lyrics, may be found a few which the memory will not easily let go—notably the incisive stanzas headed "One with another," and the ballad "The Inn of Care," with its sparkling opening and pensive close, which is a very lovely and arresting bit of work.

JAMES ASHCROFT NOBLE.

The Dictionary of English History. Edited by
Sidney J. Low and F. S. Pulling. (Cassell.)

DICTIONARIES are not commonly pleasant reading. We have, however, read every word of the volume before us with extreme pleasure. The surprising thing is that it has never occurred to anyone to compile a book of this sort before. Few people, we will admit, could have done it so well as the present editors; but we should have thought that many others would have tried their hands at it. The fact that is most remarkable in the Dictionary before us is the admirable proportion which has been kept between one class of subjects and another. There is no shirking of uninviting matter for the sake of giving greater fullness of detail to those subjects which were most interesting to the editors. As Messrs. Low and Pulling are human beings, we are justified in concluding that they have some preferences as to time and subject. A careful search has not been rewarded by finding any indication of this. Of course we do not mean to imply that all the articles are equally well done. Those on "Jury," "Mary Queen of Scots," "Casket Letters," and "Mark System," are worthy of special commendation. On the other hand, the article on "Marriage Laws," though perhaps containing nothing that is absolute error, is so short that it will leave most persons in the helplessly unintelligent state in which it found them. It should have been pointed out so clearly that no mistake was possible that before the Reformation a valid marriage could be contracted in England by the mere consent of the parties, followed by their living together, and that no ceremony, ecclesiastical or civil, was necessary to make it binding, though, according to the opinions of the time, persons who did contract marriage in this irregular fashion were guilty of mortal sin. Theological books beyond number prove this; and the *Ripon Chapter Acts*, one of the publications of the Surtees Society, give some highly curious evidence taken with regard to cases of this kind. In a dictionary we are, of course, aware that condensation is of grave importance. We think, however, that a few words explaining the reasons why

he Royal Marriage Act was passed would not have been out of place. No plea in justification can be set up for any one who took part in that immoral piece of legislation; but it is not well that the point of view of those who commit acts of the greatest wickedness should be entirely left out of sight.

It would be absurd to complain of any dictionary of this sort because it did not contain articles on every special thing connected with history in which the reader happened to be interested. As, however, the development of the village into the shire and the kingdom is daily attracting more attention from historical students, we could have wished to have had short articles on some words that are omitted. The heading "Parish" occurs, and the account given is not unsatisfactory; but Township, Constablewick, Chapel, and Chapelry are not to be found. We conceive that the most difficult part of the work must have been the biographical articles. They are almost all of them well done, and the principle of selection, whatever it may have been, was evidently a wise one. A book of this sort is not a biographical dictionary. Here, if anywhere, it would perhaps bear retrenchment.

EDWARD PEACOCK.

"Palestine Pilgrims' Text Society." No. I. *Of the Holy Places visited by Antoninus Martyr.* Translated by Aubrey Stewart, and Annotated by Col. Sir C. W. Wilson, R.E. (Published for the subscribers only).

ALL who are interested in the history and topography of the Holy Land will welcome the formation of this society, the object of which is "the translation and publication, with explanatory notes, of the various descriptions and accounts of Palestine and the Holy Places, and of the topographical references in ancient and mediæval literature, from the earliest times to the period of the Crusades or later." Hardly any of these, with the exception of Antoninus, Bernard, Willibald and Saewulf, have as yet been translated into English. Arculph himself, in some respects one of the most important of all, though accessible in French in the very free version of Charton, can be found in English only in the abridgement of Bede, while the mass of information to be gleaned from the writings of Arabic travellers and historians is only available to the few who are masters of the language in which these were originally composed. We can hardly over-estimate the value of a continuous series of literal translations of all the several writings that have come down to us from the first nine or ten centuries throwing light on the topography of Palestine before the crusades.

Among other things, they will go far to make clear points that are and have been for many years the subject of keen, and sometimes, we fear, rather embittered controversy. On the topography of Jerusalem they may be expected to throw all the light that can be hoped for in the absence of a permission from the Porte to view the excavations of Sir Charles Warren. They will, at least, supply a basis on which the disputants may rest their arguments, and authorities to which they may with some confidence appeal.

In order, however, that this basis may be

as sound, and those authorities as unimpeachable, as may be, two points must be kept carefully in view by the editors of the series. The one is that the translations fairly represent the original text; the other, that in the notes no statements are made in the form of absolute assertions which are founded only on theory and not on ascertained and admitted facts. The first of these is not so simple a matter as it looks. Apart from the difficulty, in many cases, of translating accurately many passages of these early pilgrims, the texts not infrequently vary to a perfectly confounding extent, and very often just where the one or the other reading bears materially on some question in dispute. In most cases the difficulty may be solved either by quotation from the original in the notes or by a citation, and, if thought fit, a translation of the various readings. In some cases, however, as in the various texts of Theodorus (erroneously called Theodorus in the Introduction and second Appendix to the present work) which are to be found in the Paris, London, St. Gall, and Louvain libraries, nothing can be satisfactory short of a separate translation of large portions of each. As regards the notes themselves, it is hardly too much to ask that some indication should be offered of the existence of views or interpretations different from those which the editor of the works has the perfect right to express, where these latter represent only one side of a controversy.

We make these remarks because we notice in this print, which we take (as being out of its chronological order) to be somewhat of an experimental publication, some signs that the considerations to which we have referred are in danger of being overlooked.

Let us first, however, congratulate the Society in having secured as their director Sir Charles Wilson. His connection with the ordnance survey of Jerusalem in 1865, the foundation of all that has since been done in that city; his long acquaintance with and deep interest in all questions relating to its topography, and above all the spirit of fairness with which in all his writings he has dealt with every matter of pending controversy, eminently qualify him for such an office; and if we are obliged to refer to what seem to us to be a slip or two in the present issue, we believe these have been the result of inadvertence, probably of the haste consequent on his recent summons to Egypt, and have only to be pointed out to be corrected in the promised re-issue of the part in question in its due chronological order in the series of which it is to form part.

Let us also say that the translation, as a whole, seems very well done (though some reference should have been made to the existing version by Mr. Cowper in the *Journal of Biblical Literature* for January, 1866) and that the Notes, as a rule, seem a fair specimen of what such notes should be. The Introduction, too, is concise and lucid, though if the series is to take place as an English standard, the reader should not be referred for information as to MSS. to the publications of the Société de l'Orient Latin, which can be in the hands of only a few.

Let us note, however, how two crucial points in the topographical controversy as to Jerusalem are dealt with in this issue. Was or was not the site of the sepulchre of Christ

shown in the sixth century on the eastern hill? Was or was not the term Zion applied in that century to the eastern or the southern part of the eastern hill? Those who answer me on both of these questions in the affirmative are accustomed to refer to Antoninus as supporting their views. The argument is, of course, much too lengthy for these pages. But two of the points on which they rest are (1) that the sepulchre was the first object the pilgrim appears to have encountered on entering the city from the Mount of Olives, and (2) that a "tower of David," which was the second object, and which came between the sepulchre and the Basilica of Zion, was so placed that from it could be heard the "murmur of voices below in the valley of Josaphat." How are these passages dealt with in the work before us?

As regards the first, the translation given of the first sentence of chap. xviii. is as follows: "Bowed to the earth and kissing the ground we entered the holy city, through which we proceeded with prayer to the tomb of our Lord," and the following note is appended: "This passage seems to imply that Antoninus went some distance into the city before reaching the Holy Sepulchre." Now the text adopted by the translator (which is that of Tobler, St. Gallen, 1863) hardly of itself warrants such a statement, and still less do all the other readings given by Tobler himself in the St. Gall publication and printed by the French Society as appendices to their tract. Here they are for comparison:—"Osculantes proni in terram, ingressi sumus in sanctum civitatem, in qua perreximus adorantes monumentum Domini. Ipsum monumentum," &c.—St. Gall MS., adopted by Tobler in 1863. "Clinantes proni in terram ingressi sumus in sanctam civitatem, in qua adorantes Domini monumentum quem ipsum monumentum," &c.—Vatican MS. "Inclinantes proni ingressi sumus in s. c. et venimus ad sepulchrum Domini."—Ex cod. Cadomensi. "Inclinantes nos proni in terram ingressi sumus in s. c. in qua adorantes monumentum."—Berne MS. "Inclinantes proni in s. c. in qua adoravimus Domini monumentum."—Tournai MS. "Ingressi autem in s. c. Hierosolem, perreximus ad sepulchrum Domini ut ador. ibi Dominum I. C."—E. Musæo Cl. Menardi. When a theory is to be founded on a particular expression, it is only fair that the expression be accurately verified.

As regards the second point, we demur to the note on p. 14, where, referring to Antoninus's declaration that the valley of Gethsemane "lies between the Mount Zion and the Mount of Olives" and "is there called the valley of Josaphat," the editor admits that "Antoninus here calls the temple hill Zion," but gratuitously adds that "later (chap. xxii.) he alludes to the western hill as Zion"; to the whole of the second appendix, which assumes throughout the same fact; and especially to the note on p. 18, where the tower of David we have referred to above is without reservation explained as being "the tower of David, Phasaelus, near the Jaffa Gate." Certainly, the murmur of voices from the valley of Jehoshaphat must have been exceptionally loud to have been heard all across the city!

As the several translations are not, at least at first, to be issued in chronological order

and Sir Charles Wilson's absence in Egypt will delay the publication of *Santa Paula* and the *Bordeaux Pilgrim*, which were in hand at his departure, we would strongly urge that the Arabic authorities be undertaken without delay. These are in the original practically inaccessible to most, and an English version of Makadebai and some of the other writers recently edited by Goeje would be a boon of the first magnitude. ALEX. B. McGRIGOR.

NEW NOVELS.

The Queen of the Moor. By Frederick Adye. In 3 vols. (J. & R. Maxwell.)

Some One Else. By B. M. Croker. In 3 vols. (Sampson Low.)

Roger North. By Mrs. John Bradshaw. In 3 vols. (Sonnenschein.)

The Prettiest Woman in Warsaw. By Mabel Collins. In 3 vols. (Ward & Downey.)

Edith. By Redna Scott. In 3 vols. (Sonnenschein.)

Anna. By Marie Daal. (Sonnenschein.)

The Amphibion's Voyage. By Parker Gillmore. (W. H. Allen.)

The Queen of the Moor is one of the most conscientious of recent performances in three-volume fiction. Each volume is a volume, with 300 odd pages of solid reading. Mr. Adye, indeed, seems to have written his novel very much as an industrious and ambitious student reads for honours. He must have commenced his task with the resolution to make the most of his characters, his scenery, and the space at his disposal, and he has held by his resolution. The result is, perhaps, not a singularly powerful, but a singularly promising and eminently successful work. The majority of the readers of *The Queen of the Moor* will wish, perhaps, that Mr. Adye could have spared them his Devonian and Cornish scenery. It is not so much that he seems, when on such ground, to compete with Mr. Blackmore and to a certain extent also with Miss Braddon and even Mr. Black, as that there is so much of plot and character to take in that there is no time to take in scenery also. Yet Mr. Adye obviously loves his landscapes, besides endeavouring to do justice to them as an artist. His plot is original and effective. It is laid for the most part in Dartmoor in 1814 and just before the final overthrow of the First Napoleon, when there was a large number of French prisoners in England. Mr. Adye has taken the bold step of making his heroine Cecil Oalmady, the queen of the moor, fall in love with a French prisoner, aid in his escape, and marry him without sacrifice of maidenly modesty. There is scarcely one of the minor characters that is not as carefully drawn as the principals. Especially good are Frank Forster, one of Cecil's lovers, whom in spite of his fickleness all female readers of *The Queen of the Moor* will prefer to the more fortunate Arnaud, who is a trifle too much of an "interesting" invalid; Valérie, the French foil to Cecil; her "honourable Jack," and the faithful servants Angell and Jennifer, whose by-play is good without being an intrusion. Mr. Adye might have left out of his book the sad story of Tamsin, the fisher girl, although it introduces to us some ad-

mirable Cornish sea-pieces. The death of Cecil's husband is enough of tragedy for even such a three-volume novel as this. The English of *The Queen of the Moor* is good, and none the worse for being a little old-fashioned; while most of the characters are so sound in body and mind that one never thinks of physis or of psychology in connexion with them. Altogether, *The Queen of the Moor*, even if it looks rather too much like a prize essay in fiction, deserves hearty commendation. May its author never publish anything worse.

Miss Croker's new novel recalls *Pretty Miss Neville*, but is not quite equal to it. It gives us two loveable sisters, Gussie and Haidee, and two fine fellows, "Teddy Brabazon" and his cousin Miles, and that is about all that can be said. There is not so much variety and movement in *Some One Else* as in *Pretty Miss Neville*, and we are treated to a little too much girlish gush and chatter, harmless and natural though it all is. It is impossible to avoid a suspicion when one has got about half way through the third volume, that Miss Croker has had to write against time. She has not materials for three volumes, for her plot is rather thin. The separation of Miles and Haidee is nearly as absurd as the will which brings them together. The story of poor "Teddy," who, plucked in his military examination, and driven from his home by his stepmother—Mrs. Brabazon, by the way, uses unnecessarily brutal language—enlists as a private to die in Zululand, is not a successful one; somehow his death does not contribute to the plot the sadness that it ought. The best character in *Some One Else* is the vivacious Gussie, who becomes Mrs. Vashon. She is one of those butterflies who are quite intolerable in real life, but attractive in fiction.

Roger North, like the *Queen of the Moor*, is full three-volume measure; and Mrs. Bradshaw means well in every sense. Kate Galbraith is a very good example of the healthy-minded English girl who is the delight of clerical circles; and Roger North is a stoical manly squire, given, perhaps, too much to submitting to his mother. Sydney, the villain, is not a monster. If he has the bad taste to marry Kate and drink and gamble at the instance of a rather vulgar Iago named Thorpe, he has also the good sense to die, and to repent of his folly and wickedness before death. The story of *Roger North* is on the whole rather commonplace. But there is no attempt at fine writing, hysterical passion, or unpleasant realism. Mrs. Bradshaw reforms all her imperfect characters that she does not kill off. It is not difficult to believe that the class of novel readers that is "stiffened" by curates of the type of Kate Galbraith's father will read and like *Roger North*.

There is nothing risky in *The Prettiest Woman in Warsaw*, although it tells of actresses, whose beauty makes all male beholders frantic, and of Continental princes ablaze with love, jealousy, and diamonds. The boldest and handsomest of the princes, Demetri, compels one of the actresses, Zadwiga, privately married to an Englishman, to carry a dagger. This she uses rather clumsily on the breast-bone of Demetri, and as a result is believed by many people, including in the long run herself, to have murdered him. This is not true,

however. The real murderer of Demetri is Prince Niko, the brother-in-law of Zadwiga, who operated on the back of the would-be Lothario, in the belief that his own wife, the adorable, mischievous, but innocent Wanda, had been unfaithful. All ends in domestic bliss and a baby. But the story is wearisome and the sentiment in it is over done.

On the second page of *Edith* there appears a young man with "hair dark as night, almond-shaped dreamy eyes, a peculiarly straight, refined nose, but as most poets have, a sensual mouth." This looks alarming, and matters do not seem to improve when on the very next page—

"She, drawing hastily back, cried 'No! no! Norman, do not touch me; you forget our compact, it was to be friendship not love; that I will give you as pure and lasting as you please, but I can feel none of the other for you.'"

But Norman Russell, who is not only a poet but "one of the most rising young barristers on circuit," does nothing worse, in spite of his "sensual mouth," than become engaged to two charming girls at once. Happily there is a determined clergyman who prevents anything very dreadful from happening. This is a widower, Mr. L'Estelle, with two little girls, and burdened with a promise to his deceased Mildred "that he would not ask any one to be his wife till three years had passed from the day of her death." Mr. L'Estelle saves Edith Molyneux from Norman Russell, by ascertaining and revealing all about the barrister's entanglement with Alice Williams, who is a sort of ward of his own. So in the end Edith is discovered in the rectory garden at Bickleigh "lying back in a low chair, dressed in white, with crimson roses at her throat, Mr. L'Estelle's favourite colour. . . . The two little girls were playing at her feet, and a little white bundle was lying in her lap." *Edith* is, in short, one of those innocuous but weak stories the writing and still more the publication of which are hopeless puzzles to the critic.

Anna, which is translated from the Dutch, is a disguised homily against cruelty to animals; a by no means inconsiderable portion, indeed, in the form of a lecture by a professor whose heart is divided between Anna and animals, is of the nature of such homily quite undisguised. One dog separates Anna from her lover, Herman; another dog brings them together. She dismisses her father's housekeeper, to all intents and purposes, because that thoughtless woman drove off a cat for lunching on a singing bird. Apart from this cruelty to animals craze, *Anna* is a simple and pleasant story of domestic life in Amsterdam. Anna's cousins, the Bloemarts, who are more worldly and less learned than herself, form a good family group. The English into which *Anna* is translated is not unimpeachable. Although our counting-houses are being rapidly Germanised, we do not yet talk of "one of the most considered commercial establishments of our metropolis."

The Amphibion's Voyage is a farrago of nonsense, adventure, and geography, and is full of spirits, both animal and ardent. In truth, the champagne, "nips of Bourbon," and pro-

miscuous "liquors" that the lively Mr. Gillmore sends down the throats of his heroes, Sam Attwood and Prof. Ubique, become almost as much of a bore as Attwood's everlasting and imbecile "I swan." Why, too, did Mr. Gillmore take one of the best and most awful of the stories in *Dean Ramsay's Reminiscences* and (p. 132) spoil it in the reproduction? Nevertheless, some of the imaginary adventures of *The Amphibian* are undoubtedly very laughable; and the book as a whole may be enjoyed if read by instalments.

WILLIAM WALLACE.

SOME HISTORICAL BOOKS.

The Public Schools Historical Atlas. Edited by C. Colbeck. (Longmans.) The 101 maps composing this atlas are, with few exceptions, those which appeared in the volumes of the series called "Epochs of Modern History." An historical atlas produced by the process of binding together the maps prepared for the illustration of a number of treatises on separate periods could scarcely be an entirely satisfactory performance; but, in spite of the defects arising from the manner in which it was compiled, Mr. Colbeck's book will be found very serviceable for school use. It has the merits of being cheap and handy, and, moreover, the maps, unlike those in some other works of the kind, have been drawn with a view to the requirements of the English student. The series of maps begins with the fourth century A.D., and ends with the year 1815. Several plans of battle-fields are included, and there is a full Index. Although Spruner's *Hand-Atlas* has been largely used, we are glad to see that the maps of early Britain are free from the many gross blunders which disfigure that usually excellent work. The weakest point of this historical atlas, as of most others, is the local nomenclature, with regard to which no consistent plan seems to have been laid down. In our opinion, the best rule would be to designate every place by the name which it bore during the period to which the map relates, and to spell it in the orthography of that period. As an example of the want of system of which we complain, it may be mentioned that, according to Mr. Colbeck's maps, it appears that the name of Edinburgh existed in that form in A.D. 700, but had in 873 been changed to Edwinsburgh. Instances of misspelling, such as Unstrat for Unstrut, Sador for Sodor, are also not unfrequent. The maps illustrating the Napoleonic wars are very numerous and well chosen.

The third volume of the *Gentleman's Magazine Library* (Elliot Stock) deals with popular superstitions, and from the completeness of the material embodied in its pages may fairly be considered the most valuable of the series which has yet appeared. The contributions to *Sylvanus Urban* which are reprinted in the section on Witchcraft are of especial interest, containing the investigations of writers who had devoted unwearied attention to the history of that branch of superstition among the peasantry of England. The rise and progress of witchcraft among our ancestors of both sexes has not yet been chronicled with all the minuteness of which the subject is capable, and when the historian of the future betakes himself to his task he will not reckon this division of nearly two hundred pages among the least useful of his assistants. The notes of Mr. Gomme contain so much information within a small compass as to lead his readers to desire that the ten pages of commentary might have been expanded into twenty. We can readily believe that some of the persons into whose hands this book will fall must be gratified at being told that the Mompesson incident (pp. 240-

241) supplied Addison with the plot of a prose comedy. The essays on the King's Evil cured by a royal touch are equally worthy of perusal with those on witchcraft, and we could have wished that under this branch of his subject the commentator, when reproducing the story told in Carte's history of England of the miraculous effect produced by the touch of the exiled prince of the House of Stuart on a sufferer from this disease, had turned aside for one moment to remind the world of the detriment which this tale of the Jacobite historian inflicted on the sale of his laborious compilation. Mr. Gomme has extracted from the columns of this invaluable periodical of a past age a striking number of articles on the days and seasons celebrated in different parts of the country, as well as on the strange beliefs of our forefathers. His notes on the contributions to this volume are so useful that we are tempted to add that C. V. L. G., on p. 38, conceals the identity of Charles Valentine Le Gricie, the friend of Charles Lamb and Coleridge, and that W. S., on p. 83 stands for William Sandys. We again wish Mr. Gomme success in his undertaking.

Historical Readers. Stories from English History by Oscar Browning. (Griffith, Farran, & Co.) The four little volumes, which form this series, are undoubtedly the best historical readers for elementary schools yet issued. Instead of writing his stories from English history in baby English, Mr. Browning has boldly collected together the best and simplest descriptive passages of striking events in English history from the greatest English historians, such as Burnet and Clarendon, Macaulay and Gardiner, and printed their very words. To these passages he has added explanations of the more difficult words and allusions, with the happy result that a child's vocabulary will be strengthened by going through these readers, and not confined to a knowledge of the very simplest words. Happily interspersed among the prose extracts are selected passages from English poetry, including many from Shakespeare's historical plays, and some from Milton, Scott, Campbell, and Southey. The editor's name is enough of itself to prove that the information in the stories is in accordance with modern historical research, and that the old myths which used to be taught to children as historical truths are carefully discarded. The illustrations are hardly up to the mark, but they are quite as good as can be expected in a shilling school book, and the general impression left by the little series is that the next generation is far more likely to grow up with a correct knowledge of the leading events of English history, than their fathers ever had, or, such is the difficulty of unlearning in later years, ever will have.

The Royal Lineage of our Noble and Gentle Families. Compiled by Joseph Foster. Library Edition. (Hatchards.) Mr. Foster has enlarged this book, which was reviewed in the ACADEMY of January 19, 1884, from 170 pages to 544, by inserting additional pedigrees. Considering that every marriage qualifies another family for admission to the list, there is no reason why Mr. Foster's collection of families of royal lineage should not extend to as many volumes as the new Biographical Dictionary. It is, however, a handsome book, and there is no falling off in the new pedigrees, which are worked up with equal fulness and accuracy of detail. Among the pedigrees of interest, which by the way will surprise many people, are those of the Premier and Mr. Parnell, who both figure in Mr. Foster's pages. It seems that Mr. Gladstone's mother was descended through seven generations of Mackenzies, of whom few dates and particulars are recorded, from the second marriage of Joan Beaufort, Queen of

James I. of Scotland, and granddaughter of John of Gaunt. Mr. Parnell claims a nobler descent from the Dukes of Norfolk, and some will think it significant that it is traced through a sister of the brilliant and erratic Earl of Peterborough, whose popularity with his countrymen and audacity in parliamentary debate are familiar to every reader of Macaulay.

The History of the Literature of Wales from the year 1300 to the year 1650, by Charles Wilkins (Cardiff: Owen), is a well-got-up volume, opening with a goodly list of subscribers' names; but one gets disappointed on making closer acquaintance with the work. The author hardly ever ventures to render any specimens of Welsh literature into English, but retails the metrical translations of others in a way that does not greatly inspire confidence in his knowledge of the Welsh language. Possibly, however, that would be to misplace his difficulty. May it not be that his weakness in English, which he writes very peculiarly, made him feel shy in translating from Welsh? At page 183 we find him, however, paraphrasing a stanza, and it does not encourage us to trust him the more. The last line is, in the original—"Crossaw Duw—cares y dail," and his account of it is that the poet "concludes by welcoming God, kinsman, or linked to all." The whole is a welcome to the cuckoo, and the line in question means—"God's welcome (to thee), friend of the leaves." It contains no welcome to God, and still less does it perpetrate the solecism of applying to him the word *cares*, which means a relative and friend of the female sex—a kinswoman, and by no chance a kinsman, as Dr. Wilkins puts it. We are also disappointed to find the Welsh *cyghanedd*, or alliteration, very feebly treated; and we cannot comprehend why the author says so little of the Mabinogion, the so-called Historical Triads, and a quantity of other prose compositions. The foregoing may be reckoned among the graver shortcomings of the book, while it contains too many minor curiosities to be here mentioned one by one, such as the author's weakness for modern Druidism and his supposing that Julius Caesar has left a description of the national character of the Welsh people. On the whole, we fail to see why Dr. Wilkins writes on a literature the history of which has been treated in part by a scholar like Thomas Stephens, of Merthyr.

THE North Riding Record Society is doing good service, not only to its own immediate constituents, but to the country at large. In the volume and a half of *Quarter Sessions Records* already published, the editor, the Rev. J. C. Atkinson, gives with all the fulness necessary the records of the business before the magistrates of the Riding in the early years of the seventeenth century. With commendable self-restraint he has refrained from drawing conclusions where the evidence is insufficient. "Given," he says,

"that the Justices in Quarter Sessions had to make orders in half-a-dozen affiliation cases, on the average, in the course of a year, no clue is given as to comparative general morality of the people, unless we know what the population of the district embraced actually or approximately amounted to."

It is evident, however, that the further the Society proceeds with its work the more complete the statistics will become. For the present it is enough to remark that two facts stand clearly out from the lists of presentments for recusancy. In the first place, there was in the reign of James I. an active propaganda going on. In the second place, there is a very decided preponderance of the names of women over those of men upon the list. It is only right to add that intending subscribers may obtain all information from the Hon. Secretary, W. Brown, Esq., Arncliffe Hall, Northallerton.

The Norfolk Antiquarian Miscellany. Vol. II. Part 11. Edited by Walter Rye. (Norwich.) Mr. Walter Rye is, by universal consent, the most industrious living collector of materials for the history of Norfolk; and, in completing the second volume of his *Norfolk Antiquarian Miscellany*, he takes occasion to challenge comparison for his work, since 1873, with the publications of the Norfolk Archaeological Society during the same period. He has given his subscribers, for £1 10s., 1,183 pages, all indexed *literatim*; whilst the members of the Society have only received, in return for £4 2s. 6d., 680 pages poorly indexed. This difference of quantity cannot be accounted for by inferiority of quality in the matter supplied by Mr. Rye, or by excess in the number of his subscribers; for his editions are limited to 100 copies, and their merit is beyond dispute. Part 11 is equal to its predecessors, and Mr. Crabbe's analysis of the muniments preserved at Merton Hall is an important contribution to the history of the parishes in which the De Grey family have estates. Dr. Jessopp's commentary on the visitation of the Norfolk monasteries in 1535, showing the discrepancy between the report which was used to justify their suppression and the certificates of the commissioners, will satisfy most readers that the visitors did not scruple to fabricate evidence to support a foregone conclusion. But the most interesting paper in this volume is the sketch of rural life in a Norfolk village in the fourteenth century, which Mr. Francis Rye has deduced from the Court Rolls of Burnham and other manors. It requires a positive effort of mind to realise the jealous care with which the rights of the manor court were maintained, when inhabitants of neighbouring manors regarded each other as foreigners. A tenant who married outside the manor without license incurred a fine, and it was an offence against the lord of the manor to issue a writ at common law against another tenant. The lord's court took cognisance of every incident of social life, from inspecting weights and measures to sanitary precautions, anticipating modern legislation to a greater extent than believers in modern progress will be prepared to hear.

Lancashire Wills proved at Richmond, 1457-1680. Edited by Lieut.-Colonel Henry Fishwick for the Record Society. The tenth volume of the Record Society, formed for the publication of original documents relating to Lancashire and Cheshire, contains a list of the Lancashire wills proved within the Archdeaconry of Richmond between 1457 and 1680, which were removed to London in 1861, and are now preserved in the new Probate Registry at Somerset House. While the wills remained at Richmond such a publication would have been impossible; but since their removal they have been admirably arranged and indexed, and it is from these indexes that this volume has been compiled. The Archdeaconry of Richmond was erected by Thomas Archbishop of York in 1090, and was reckoned the richest and most extensive in the North of England. The Archdeacon exercised testamentary jurisdiction in the Lancashire deaneries of Amounderness, Furness, Kendal, and Lonsdale, and although his office was abolished in 1541 on the creation of the see of Chester, the wills for that division of Lancashire which lies north of the Ribble continued to be proved at Richmond before a commissary appointed by the Bishop of Chester. The Lancashire wills from Richmond now remaining at Somerset House of older date than 1680 are 12,483 in number, and are all calendared in this volume; but it is notorious that a large number of early wills are missing, and the editor, Col. Fishwick, has discovered a portion of these missing wills among the Towneley collection of MSS., lately acquired by the British Museum. This volume contains ab-

stracts of no less than 2,279 wills ranging between 1531 and 1652, and he has incorporated these abstracts in the list, which brings up the whole number to 14,762. Col. Fishwick proposes in a subsequent volume to bring down the list to 1748, and the first instalment is so well edited that every member of the society will wish him health and patience to complete his task. The value of such lists for local history and genealogy can scarcely be over-rated, and it is to be hoped that the time is not far distant when the calendars of the principal registry in London will be printed, if it is only to save antiquaries from the drudgery of searching for wills which do not exist.

NOTES AND NEWS.

MR. EDWIN ARNOLD's new volume, *The Secret of Death*, with some Collected Poems, will be published on February 15. The poem which gives its title to the book is, as has already been stated in the ACADEMY, a version, in a popular and novel form, of the *Katha Upanishad*, from the Sanskrit.

MR. ANDREW LANG is preparing a revised edition of *Custom and Myth*.

MESSRS. KEGAN PAUL, TRENCH, & Co. will publish next week a cheap edition of *My Ducats and my Daughter*, which, in its library form, was favourably reviewed in the ACADEMY a few months ago. The new edition will bear the names of its authors, Hay Hunter and Walter Whyte, showing that it is the work of a new literary partnership.

THE next volume of the "Eminent Women Series" will be *Susannah Wesley*, by Mrs. Elizabeth Clarke.

WE are informed that Mr. H. O. Arnold-Forster has become secretary to the firm of Messrs. Cassell & Co., Limited.

DR. CARL BEZOLD, of Munich, is preparing a German translation, with notes, of Prof. Sayce's *Fresh Light from Ancient Monuments*.

MESSRS. CASSELL & Co.'s new edition of Mr. James Grant's *Recent British Battles*, an issue of which has just been commenced in monthly parts, will include an illustrated descriptive account of the campaign in the Soudan.

WE understand that Mr. George A. Aitken, of the secretary's office, General Post Office, has been for some time preparing a collected edition of the works of Sir Richard Steele. The plan adopted by the editor will be to set Steele's writings in a narrative which will aim at giving a full account of all that is known about their author. Mr. Aitken has been so fortunate as to discover various facts relating to the subject, and to obtain many letters which have not been published; and he will be much obliged if any who possess information or documents illustrative of Steele's life, will kindly communicate with him.

THE Society for Promoting Christian Knowledge announce as now ready *The Official Year-Book of the Church of England for 1885*; a Concordance to the Revised Version of the New Testament, embracing the marginal readings of the English Revisers as well as those of the American Committee, by J. R. Thoms; and a fine edition, suitable for a wedding present, of *The Form of Solemnisation of Matrimony*, with Introduction and Notes by the Rev. E. L. Cutts.

MESSRS. WILLIAMS & NORGATE announce for publication this month a work by Mr. Raymond S. Perrin, of New York, entitled *The Religion of Philosophy*, which undertakes to analyse the chief philosophical and religious systems, to point out the relation of Christianity to the other great faiths, and to offer a solution of the

metaphysical problem of the categories of thought, as a means of building up the true science of morality.

WE have received the first number (January, 1885) of *The Manx Note-Book*: a Quarterly Journal of Matters Past and Present connected with the Isle of Mann, edited by A. W. Moore (Douglas: G. H. Johnston). Among the contents are "A Few Words on the Fylfot at Onohan," by Mr. Llewellynn Jewitt, with thirty-three illustrations; articles on "Old Manx Families" and on "Manx Worthies"; "The Title-page of the Manx Doomsday Book"—by which is meant the *Liber Assedationis Terrarum* of 1511; and the first of a series of old Manx ballads—"Creggyn Scarlode" (Scarlet Rocks), written in English and Manx by Archdeacon Rutter about 1645. There are also obituaries of prominent Manxmen, and short notices of current events of special interest to the people of the island. Mr. Moore has made a good beginning, and his undertaking deserves to be well supported. The paper and type are excellent, but the press-work of the illustrations might be better managed.

PROF. LUDOLF KREHL has in the press a work entitled *Die Lehre des Muhammed*, which may be regarded as a supplement to his *Leben des Muhammed*.

A "NATIONAL" edition of Victor Hugo's works is about to be brought out in Paris by M. Lemonnier as publisher, and M. Georges Richard as printer. The plan of this new edition has been submitted by these gentlemen to M. Victor Hugo, who has given them the exclusive right to bring out, in quarto shape, the whole of his works. The publication will consist of about forty volumes, which are each to contain of five parts, of from eighty to a hundred pages. One part will appear every fortnight, or about five volumes a year, and the first part of the first volume, which will contain the *Odes and Ballads*, is to appear on February 26, which is the eighty-third anniversary of the poet's birth. The price will be 6 frs. per part, or 30 frs. per volume, so that the total cost of the forty volumes will be close upon £50. There will be also a few copies upon Japan and China paper of special manufacture, while the series will be illustrated with four portraits of the poet, 250 large etchings, and 2,500 line engravings. The 250 large etchings will be by such artists as Paul Baudry, Bonnat, Cabanel, Carrier-Belleuse, Falguière, Léon, Glaize, Henner, J.-P. Laurens, Puvis de Chavannes, Robert Fleury, &c., while the line-engravings will be by L. Flameng, Chaupollion, Maxime Lalanne, and others.

THE festival at Capua in commemoration of the bi-centenary of the birth of the distinguished antiquary and philologist, Alessio Simmaco Mazzocchi, which should have been held last autumn, but was postponed on account of the cholera, was celebrated on January 25. The meeting in the Museo Campano was attended by a large number of visitors from the neighbouring towns and from Naples, and speeches were delivered by the Prefect (Comendatore Winspeare), Prof. F. Barnabei, and several others.

MESSRS. WYMAN & SONS will publish next week, under the title of *John Bull to Max O'Rell*, a short humorous reply to *John Bull and his Island*.

MESSRS. WILSON & MCCORMICK, of Glasgow, will publish, on or about February 14, a new dramatic work called *Diabolus Amans*. The same publishers will issue a new edition of *From the Pew to the Pulpit*: addressed to the Saints by a Sinner.

WE are informed that two editions of 10,000

each, of *Found Out*, Miss Helen Mathers's new work, have been sold prior to publication.

THE forty-eighth volume of the *Archæologia* contains papers by Mr. Robert Brown, jun., on "The Gryphon, Heraldic, and Mythological," and by Mr. Henry Bradley, on "Ptolemy's Geography of the British Isles."

MR. R. W. COCHRAN PATRICK, M.P. for North Ayrshire, will deliver a lecture to the members of the Philosophical Institution, Edinburgh, on February 17, on the progress and prospects of archæology in Scotland.

AMONG the works in preparation for issue by the Ayrshire and Wigtownshire Archæological Society are the records and charters of the Abbey of Crossraguel, the muniments of the Royal Burgh of Irvine, and a volume of miscellanies, containing, *inter alia*, accounts of the recent explorations in the Cave of St. Ninian, in Wigtownshire, and of the Lake Dwellings in the same county.

It was mentioned some time ago in the ACADEMY that the celebrated burlesque essay on "The Solar Myth in Oxford" had been translated by M. Henri Gaidoz in the *Mélanges*. We observe that a German translation of this *jeu-d'esprit*, by K. Fr., under the title "Wer war Max Müller?" has been printed as an appendix to Herr Otto Schulze's Catalogue of new publications.

WE are happy to announce the first volume of the second edition of Dr. Kuenen's *Historisch-kritisch onderzoek*, which may be briefly described as a critical introduction to the Pentateuch and the Book of Joshua. Every page bears the impress of revision and re-writing, and the volume amply justifies the claim of its author to have exhibited the present position of the great and far-reaching critical questions, as he himself now views it. We postpone a further notice till the appearance of the English translation, which we hope will give the notes (the most important part of the work) in a somewhat larger type.

MR. EDMUND GOSSE, who will by this time be in England again, having sailed in the *Arizona* on January 27, has been interviewed by the representative of the New York *Critic*, whose report of the conversation occupies four columns. Mr. Gosse said that, having only anticipated reading before the Lowell Institute, he had come unprovided with other lectures, and, therefore, when asked for a lecture not in his course, he had been obliged to give "a *vis-à-vis* address." We presume this expression is due to the interviewer, who also makes Mr. Gosse say that Harvard University is an "alumnus" of Emanuel College, Cambridge. The Boston lectures were listened to by large audiences, Dr. Holmes, Mr. Howells, Mr. Parkman, Mr. Phillips Brooks, Mr. E. E. Hale, "and others of the same quality" being among the hearers. Mr. Gosse was much struck by the beauty of Boston, and regards Trinity Church in that city as the most beautiful modern ecclesiastical edifice he has ever seen. Elsewhere in the same paper Mr. Gosse is quoted as saying that he considered Messrs. Armstrong's issue of his edition of Gray as decidedly superior in form to the English edition.

THE Duca di Sermoneta has been elected President of the Italian Geographical Society.

THE library of the late Dr. Robert Angus Smith has been presented to the Owens College, Manchester, by the action of a number of his friends, who wished to keep it for the city with which he was so long identified as an appropriate memorial. It contains many chemical books, but is also strong in Celtic philology and archæology, and includes some curious works on alchemy and the occult sciences, some of

which had been collected by his brother, the Rev. James Smith, better known as "Shepherd" Smith, from the title of a periodical edited by him.

A TRANSLATION.

(FROM THE ANGLO-SAXON OF THE SO-CALLED CAEDMON.)

THEN in his pride he spake who once outshone
In brightness all heaven's angels; whom the love
Of God enwheeled, till by his foolish pride
Moved to dire wrath the Almighty headlong hurled
Him down to torment and the bed of death;
Bade hell's high King be henceforth Satan called,
Rule hell's dark depths, nor ever war with heaven.
Thus Satan spake, pride swelling in his heart,
And all around a sea of torturing fire;
O how unlike the place that once I knew
High in the heavens, the realm God gave me, but
The Omnipotent hath reft me of my throne,
And plunged me in the abyss of hell, and He
Shall give my home to man! That pains me most,
That Adam wrought of earth in heaven shall be
A throned power, find grace with God, while I
Endure hell's torment! Would these hands were free

For one brief winter-hour, then with my host—
But ah, iron-bonds are round me once a King;
My limbs are galled, held fast by the hard clamps
Of hell, on all sides round a sea of flame,
Region of sorrow, fire unquenchable.

GEORGE R. MERRY.

OBITUARY.

THE suicide of Mr. Thomas Nash at his chambers in the Inner Temple, on January 28, caused a painful sensation in Manchester, in which city he was born in 1845. He was educated at the Manchester Grammar School, and graduated M.A. of Balliol College, Oxford. "Tom Nash," as he preferred to call himself, was a well-known figure in political and literary circles. He began life as a Liberal, and is understood to have been a contributor to the *Echo*; but some years ago he threw in his lot with the Democratic Tories and was accepted as the Conservative candidate for Stockport, but finally decided not to stand. He wrote frequently under the name of "Tom Palatine," and published, in 1883, under that pseudonym, a volume of tales and sketches entitled *A Long Lane*. He contributed to the current issue of the *Manchester Christmas Annual*, and on the day of his death wrote a letter about an unfinished farce. The coroner's jury returned a verdict of temporary insanity, and there can be but little doubt that insomnia, resulting from over strain, was the cause of the rash act that brought to a miserable close a career of bright promise.

THE death is announced at Jena, aged seventy, of Dr. K. V. Stofj, the Professor of Education, a man of some celebrity not only in Germany. He was invited to attend the Committee on Education at the Health Exhibition last year. He was a pupil of Herbart at Göttingen, and founded, 1842, a school at Jena, which soon acquired a European reputation, and which has for some years past been conducted by his son. He was also the head of the "Seminary," or training school for teachers.

MAGAZINES AND REVIEWS.

IN the current number of the *Westminster Review* is an article "On the Study of the Talmud," written, we believe, by a young and talented scholar, now resident in London, who is evidently a master of his subject. The article is of interest as containing, amongst other things, a discriminating estimate, from the point of view of a Talmudic student, of Dr. Edersheim's recent work, *The Life and Times of Jesus the Messiah*. The number contains

two other noteworthy articles: "The Materials of Early Russian History" and "English Character and Manners as portrayed by Anthony Trollope."

THE last three double numbers of the *Altpreussische Monatsschrift* (April to December, 1884) carry on a discussion as to the priority of Peter of Dusburg and the Chronicon Olivense, two of the early Prussian chronicles. In two bulky articles, a young scholar, Dr. Fuchs, attempts, by a comparison of the two texts in their descriptions of the early struggles of the Teutonic order, to prove that the portion of the Chronicle of Oliva, treating of these events, was written not later than 1260, and that upon it is founded the prolixer narrative of Peter by Dusburg. This view is criticised by the veteran Perlbach, who reiterates with the requisite arguments his position that the Oliva chronicler only made an excerpt in the fourteenth century from Dusburg and his German translator. An article on the *Struter*, freebooters who carried out, by murder and plunder, the wild justice decreed by the order against the heathen, and another on an old Church at Bülak, which was once a frontier fortress in the same contest, may be read in connection with this historical discussion. The author of the last-mentioned paper contributes a genealogy of his family, the Beckherrs. Its most notable figure seems to have been a physician, Daniel Beckher, whose greatest feat (in 1635) was a successful operation for the release of a five-and-a-half inch knife from the stomach of a Prussian peasant. Beckher's book, *De cultrivoro Prussiano*, was, in 1871, advertised in a second-hand Paris catalogue, with the remark "Histoire singulière d'un paysan prussien qui avalait des couteaux. Cette race est si gloutonne." A paper on the "Plague-year 1709-10 in Prussia," forms a pendant to a recent article on the cholera of 1831. Tracing the connection of the outbreak with the insanitary state of the province, it criticises the extreme methods adopted to isolate infected areas. Each of the three numbers contains an instalment of Kant's unpublished work. The two bundles (I. and VII.) of papers which are here given touch more than the others on questions of ethics and theology. A pathetic interest attaches to Kant's hundred and more attempts to grasp a definition of his own philosophy, and to his sporadic jottings on the sheets in the first bundle. One may, *inter alia*, note the expression of a characteristic wish, that, instead of a day of prayer (*Betttag*), "an utter superfluity," the magistrates would institute a yearly day of penance (*Busstag*), "a true holy day," when real reparation for wrongs should be made. We regret to see that Dr. Reicke seems to fear an interruption in the publication of this MS., and venture to hope that he will soon be able to complete the service he is rendering to Kant students by the publication of the three remaining "convolutes."

WE have received the first number of a new Spanish periodical, the *Boletín Folklórico Español*, a fortnightly review, which aims at being the official organ of all Spanish folk-lore societies, as well in the colonies as in Europe. The first number is mainly introductory. The editor is Señor Guichot y Sierra; the place of publication, Seville.

CORRESPONDENCE.

MYTHS AND HOUSEHOLD TALES.

1 Marlborough Road, W.: Jan. 31, 1885.

I AM almost ashamed to ask for a little of the space of the ACADEMY, for the purpose of defending, if I can, the theory set forth in my introduction to Mrs. Hunt's *Grimm*. It is not very easy to make oneself understood, but it appears to me that Mr. Bradley, in his kind and candid notice of my remarks, very nearly understands what I am driving at. The points on which we differ are, perhaps, incapable of actual proof either way, a more or less plausible theory seems all we can hope for. 1. Were mythic tales originally told, as a rule, of a "nameless somebody," or of a known and named character or being? Following Mr. Tylor (*Prim. Cult.* i. 394), I have regarded Somebody (originally nameless, in my opinion) as a very common original hero of myth. Of course, if I am right, all interpretations of myth based on analysis of names *must* be precarious, for (a) the story may be older than the name; (b) the story may have been transferred, as happens daily, from one named person to another. How all this works in the archaeology of jokes, may be read in Mr. Brander Matthews's essay in the February number of *Longman's Magazine*. Mr. Bradley replies that the "doctrine of a nameless Somebody is a mere hypothesis, which no direct evidence can prove or disprove." Quite true; but the doctrine of an original named hero, whose name is still attached to the myth, is in the same predicament. We must choose between rival probabilities, varying in each case. We must ask, is it more probable that "stretchers" (as Huckleberry Finn would say) were originally told, by very early men, about named and known or nameless and fanciful

persons? Mr. Bradley observes "it seems to me that it would require a greater effort to invent a story concerning a 'nameless somebody' than to imagine some known and named person going through a series of adventures consistent with and suggested by his general character." Now (a) his general character is only the impression we derive from the sum of the incidents narrated of him. How often has it been observed that the affair of the Cyclops is out of keeping with the character of Odysseus. The legend, probably Mr. Bradley will admit, was not originally told of Odysseus; it occurs very widely where that hero is unknown, and was obviously attracted into his cycle from the floating mass of *Märchen*. (b) Does it really require "a greater effort to invent a story concerning a nameless, than a named person"? Direct proof is unattainable. But surely, when little children "make up a story," it is almost always about "a man," or "a little boy." "Once there was a man, and he did," so and so. I need not add that the heroes of *Märchen*, civilised or savage, are, perhaps, more frequently nameless than named. "There was a certain king of a certain country," begins the *Zulu Märchen*, "Erant olim Rex et Regina," says Apuleius. "Anes there was King and a Queen," saith the Scot. In *Zulu Märchen*, however, to name the hero or heroine is rather the rule than the exception. In Eskimo, perhaps, named and nameless heroes occur in equal numbers. In Samoyed, I think, anonymity prevails. In Grimm's collection names are very rare indeed. Clearly it is possible to retain hundreds of tales in which the characters are nameless. The daily efforts of children tend to show that it is easier for them to invent a story concerning a nameless somebody, than a named somebody. Take another case: a boy is in a scrape. "Please, sir, it was the other boy that did it," he cries; to invent a name and personality for that "nameless Somebody" the "other boy" takes more effort. Thus, to my mind, probabilities are in favour of stories having been first told about anonymous heroes. But it really, as against Mr. Bradley, does not signify. He remarks, "when once an adventure had been narrated respecting one known person, it could easily be transferred afterwards to another known person." Very well, what will be the value of the analysis of the name of the second known person, about whom the tale was not originally told? How will the analysis of the name (about which the philologists will fight among themselves) help us to understand the story?

2. Mr. Bradley says I say "that the household tales of modern Europe contain but few instances of degraded divine myths." In Greece, and Scandinavia, and Germany, I believe that many *Märchen* occur which may be degraded divine myths. Or they may be survivals of the story as it was before it was attached to the legend of a God, and became divine. Mr. Bradley asks, if prehistoric stories have survived, what has become of the divine myths "which, in comparatively recent times, were deeply imprinted on men's mind by religious reverence." Imprinted on what men's minds? Does Mr. Bradley suppose that the peasantry of Greece knew most of the myths of Zeus, Hero, Apollo, Demeter? Aristotle expressly says that—even in Athens, educated Athens—most of the best known myths were unknown to most of the spectators in the theatre. "Ἐπεὶ καὶ τὰ γὰρ ἱερὰ ἀλλοῖσι γινώσκονται." I add Ritter's translation, "quamquam notae illae fabulae et a majoribus traditae, paucis spectantium vel legentium notae sunt" (*Poetica*. ix. 8). Prof. Max Müller has also exposed the absurdity of fancying that a Greek swineherd, like Eumaeus, must have been well acquainted with Greek myths. My own impression is that the People, the Folk, in Greece, as elsewhere, were more concerned with the

still surviving Nereid, or Fairies, with anointing fetish stones, and with other minor supernatural beings, and superstitious rites, than with priestly and poetic gods, and divine myths. If this view be right, the great gods and their myths would vanish first from popular memory, the "lesser people of the skies" would endure, as they do. Again, doubtless ancient divine myths abide in *Märchen* and stories of saints, as Sir G. W. Dasent shows in his Preface to *Tales from the Norse*. But, perhaps almost as frequently, the old *Märchen* has got attached to the new Saint. The case of Sainte Tryphine is one in point. There are many others. I have actually seen Cinderella become a saint at Mentone; *Cendrillon*—*Cendrouette*—*SAINTE ROSETTE*. Thus, when a Household Tale corresponds with a divine myth or a saintly legend, the tale may be a degraded divine myth or legend; or, on the other hand, the tale may represent the original fiction out of which the legend or divine myth was elaborated and developed. Both processes have doubtless been at work.

3. Mr. Bradley says that aetiological nature myths, which answer a question as to the origin of some natural fact, "cannot have originally been told of a nameless somebody." Why not? Let us ask, Why is Eildon Hill split in three? Possible original answer, "Somebody split it." Later popular answer, Michael Scot split it. Why does not the sun (as the Inca asked) run at random about the sky? Possible original answer, "Somebody tamed him." Maori answer, "Maui tamed him." Algonquin answer, "Toha ka betch tamed in." Why cannot such feats have originally been attributed to some nameless person? I cannot prove that they were, but obviously it is not, as Mr. Bradley says, impossible. As Mr. Tylor says, "In Mexico the great somebody assumes the name of Montezuma, and builds the aqueduct of Tezcuco;" in Russia "somebody" is called Peter the Great; in Europe generally the Devil steps in, or Michael Scott; and I even know a case in which "somebody" is called "Lowrie," though nothing else is known of him but that he caused a "scur" by jumping the Ettrick. I cannot reply at this length to all Mr. Bradley's arguments; but I assure him that I do not think "that the mythopoeic age belongs to a time long anterior to history." Most savages, most peasants, many ladies, are still in the heart of the mythopoeic age, nay, so are many mythologists, whose theory of a "mythopoeic age," of polyonymy, synonymy, and the rest, appears itself to me to be an aetiological myth, a story they tell themselves to account for facts.

4. Mr. Bradley says, about the influence of Language on Thought:

"There was assuredly once a time when the movements of the sun could only be spoken of by using what we should call violent metaphors—by describing them, for instance, as the actions of a man. This habit of speech would inevitably lead to the belief that the Sun-man, of whom the visible sun was a disguise, had in his proper human form literally gone through such and such adventures."

I have replied constantly to this that the necessity for "using violent metaphors," and speaking of inanimate things as if they were personal, is a necessity imposed on language by early thought. It was thought, the notion of all things as personal, that gave genders to language, not language that imposed an error on thought. Compare Prof. Max Müller's *Selected Essays*, i. p. 360, note (where the view I uphold is quoted without expressed disapproval), and p. 604, "You may say all this shows, not so much the influence of language on thought, as of thought on language. . . . There is some truth in this." The author adds that the tendency of language to personify was "in its

origin intentional, and, therefore, the result of thought." But myth, in the same passage, is derived, *not* from this original intention of thought, but from the influence of the tendency after it "became a mere tradition in language." As long as the thought that all things were personal was alive, it seems to have produced no myths, but miracles were wrought at its tomb when it was a mere tradition in language, and "it thus reacted on the mind with irresistible power." Mr. Bradley will see that I attribute myth to living thought, whose actual existence and personalising character are acknowledged, not to dead thought surviving as a tradition in speech. Which view is the more probable?
A. LANG.

Scrayingham Rectory, York: Jan. 31, 1885.

I should not in any case have troubled you with any further remarks in defence of the general theory or position of comparative mythologists; and happily the task is rendered superfluous by Mr. Bradley's review of Mr. Lang's Introduction to the Grimm Stories in the ACADEMY of January 31. I am quite ready to admit, with Mr. Bradley, that there may have been some erroneous applications of that theory, and that some departments of the subject may have been inadequately treated. But when this theory is said to be radically unsound, and for all practical purposes worthless, we are justified in asking for somewhat greater completeness in the theory which is put forward in its place. To this point I now confine myself.

Mr. Lang holds that the general characteristics of myths and also of household tales are explained by the fact that both are "derived and inherited from the savage state of man, from the savage conditions of life, and from the savage way of regarding the world" (p. xli).

To deal with these myths and tales, a classification of some sort is necessary; and one of Mr. Lang's classes comprises those stories in which the youngest of the family is the most successful (p. xvi). This is supposed to be explained by the assertion that "the youngest child in polygamous families is apt to be the favourite and heir." This is all the explanation offered to us for the growth of a class which consists of vast multitudes of legends. How far does it account for them?

To be the favourite and the heir implies a life of considerable ease, comfort, and honour. It implies that all is done by the parents and the household for the happiness of the child on whom by the hypothesis all favours are showered.

Now, all the stories of this class agree in representing the youngest child as being reputed the most stupid, the most slothful, and the most cowardly in the family. His place is the kitchen or the ash-heap; and from this fact most of his nicknames are derived. For convenience sake they may be classified as Boots Stories; and of the hero of these tales we may say with Sir G. W. Dasent that

"he starts from the dust-bin and the coal-hole. There he sits idle whilst all work; there he lies with that deep irony of conscious power, which knows its time must one day come. . . . When that time comes, he girds himself to the feat, amidst the scoff and scorn of his flesh and blood; but even then, after he has done some great deed, he conceals it, returns to his ashes, and again sits idly by the kitchen fire, dirty, lazy, and despised, until the time for final recognition comes."

Is this a description of an heir who is also the favourite in the house? These features are of the very essence of these stories. Take them away, and nothing remains of the stories. To put forth a statement which professes to explain them without taking notice of these features is really to throw dust in our eyes, and to ask us to keep our eyes open to receive it.

But what is the meaning of the assertion that in polygamous families the heir and favourite is generally the youngest? If it be so, the heir and favourite of one year will not be the heir and favourite of the next, but he will be constantly displaced by a later comer. Is the proposition, however, even approximately true, or is it true at all? Is it not rather the fact that in polygamous families the eldest son of the first wife succeeds, while gavelkind is the result of monogamy in countries with an abundance of unoccupied land on which the elder brothers may settle?

Thus Mr. Lang's hypothesis fails utterly to account for or explain these stories, and his supposed fact turns out to be not the fact.

But these "Boots" stories cannot be dealt with apart from the correlative class, which may be termed the Cinderella or Ash-pettle stories; and of these Mr. Lang takes no notice whatever.

Again, Mr. Lang asserts that the savage mind takes no account of distinctions between man and brute. Queens give birth to puppies; frogs marry princesses; and such incidents are brought forward as evidence for belief in kinship with animals (which word, I suppose, means brutes). "Girl wooed by Frog" is the formula which is supposed to explain the story of the Frog-King. Does it explain this story, which is the first in the series translated by Mrs. Hunt? Here is a tale of what Mr. Lang calls savage life. What are the main incidents in it? Surely these: that the king's daughter has a golden ball, which, when she was dull, she threw up on high and caught; that this ball rolls into the water; that her tears and cries call up a frog, who says that he can bring it up again, on condition that she will be his wife; that the girl in her disgust at being made to keep her promise throws the frog against the wall, and then the frog becomes a beautiful prince. These features are of the very essence of the tale; and of them Mr. Lang takes no notice.

But this tale at least is not evidence of "belief in kinship with animals (brutes)." The belief goes just the other way. The frog is not a frog; and I am not aware of any Aryan stories which imply anything but a denial of belief in kinship with brutes. The charges that queens bring forth puppies always turn out to be malicious lies. The monster in the large class of Beauty and Beast stories is not a beast, and there is not one word in any of them which implies that he is by birth and kind a beast. To exhibit such beings as brutes is, I am bound to say again, to throw dust into our eyes by way of enlightening us.

I might go on almost to any length in showing that Mr. Lang's hypothesis is as ludicrously inadequate an explanation of other stories in these volumes as it is of those already cited. If any choose to think that a reference to savage life generally can account for the features of the Rapunzel tale, the golden hair on which the enchantress and the prince ascend from the earth to the summit of a lofty tower, there is nothing to hinder them; but they who care to preserve the sanity of their judgment are not likely to feel tempted in this direction.

Mr. Lang holds that the conditions of what he calls savage life will account generally for all that is peculiar, extraordinary, and wonderful in these stories. On the contrary, I have no hesitation in saying that scarcely one in twenty, or even one in fifty, of these features is so accounted for, and that the really essential features of the tales are left out of sight altogether. At best, his hypotheses account for a little of the local colouring in some of these stories. Of the origin and growth of these tales they tell us nothing all. There has been a great crying; but there remains not much wool.

GEORGE W. COX.

ODIN.

Oxford: Jan. 31, 1885.

As I differ from the etymology of Wuotan or Oðinn, proposed by Dr. Vigfusson, I send you the following notes—written some time ago, though not yet published.

"Still it happens sometimes that, after we have established the true meaning of a mythological name, it seems in no way to yield a solution of the character of the god who bears it. No one can doubt the phonetic identity of the names haritas in Sanskrit and ἁρίτες in Greek; but the former are the horses of the rising sun, the latter show no trace whatever of an equine character. Kuhn supposed that Prometheus took its origin from the Vedic pramantha; yet pramantha is only the stick used for rubbing wood to produce fire, Prometheus is the wisest of half-gods. Saramaya in Sanskrit is a dog, Hermeias a god, Kerberos in Greek is a dog, Sarvari in Sanskrit is the night. The Maruts in the Veda are clearly the gods of the thunderstorm; but there are passages where they are addressed simply as powerful gods, as givers of all good things, without a trace of thunder and lightning remaining. We see, in fact, very clearly how, in their case, the idea of gods of the thunderstorm became gradually generalised, and how, in the end, the Maruts, having once been recognised as divine beings, were implored without any reference to their meteorological origin.

"Strange as this may seem, it could hardly be otherwise in the ancient world. If one poet became the priest of a family, if one family became supreme in a tribe, if one tribe became by conquest the ruler of a nation, the god praised by one individual poet could hardly escape becoming the supreme god of a nation, and having become supreme, would receive in time all the insignia of a supreme deity. In the Veda the old supreme deity of the bright sky, Dyaus, who remained the supreme god among Greeks and Romans, is visibly receding, and his place is being taken by a god unknown to the other Aryan nations, and hence probably of later origin—Indra. Indra was originally the god of the thunderstorm, the giver of rain (indra, like indu, rain-drops), the ally of the Rudras and Marats; but he was soon invested with all the insignia of a supreme ruler, residing in heaven, and manifested no longer in the thunderstorm only, but in the light of heaven and the splendour of the sun.

"Something very like this has happened among the Teutonic nations. With them, too, Tiu, the Teutonic reflex of Dyaus, has receded, and his place has been taken by a god who, to judge from the etymology of his name and many of the legends told of him, even after he had attained his divine supremacy, was originally a god of storm and thunder. The gods of storm and thunder were naturally represented as fighting gods, as brave warriors, and, in the end, as conquerors; and with war-like nations, such as the Germans, such gods would naturally become very popular—more popular even than the God of Light, who was supposed to live enthroned in silent majesty above the dome of heaven, the one-eyed Seer, the Husband of the earth, the All-Father. I speak, of course, of the High-German Wuotan, the Norse Oðin.

"According to a view which was very prevalent in former days, and which even now counts some very distinguished scholars among its adherents, 'Odin was the founder of the ancient Northern and Teutonic religion, who was afterwards worshipped as the supreme god, the fountain-head of wisdom, the founder of culture, writing, and poetry, the progenitor of kings, the lord of battle and victory, so that his name and that of Allföðr, All-Father, were blended together.

"Those who take this view derive Odin's name not unnaturally from an old word, akin to the

Latin *vates*, a prophetic singer or bard, and compare with it the Old-Norse *óðr*, inspiration; but they have never shown how *vates* in Latin could become *Óðinn* in Old Norse and *Wuotan* in Old-High-German. Verner's Law is extremely useful to account for exceptions to Grimm's Law, and, in the true sense of the old saying, 'exceptio probat regulam.' But Verner's Law must not be used as a mere excuse. If we could prove that the accent in *vates* was originally on the last syllable, we might accept Low-German *d*, High-German *t*; but to invert this reasoning, and to postulate the accent on the final syllable of *vates*, because we wish it to correspond to *Óðinn* and *Wuotan*, is a very dangerous proceeding. It is equally dangerous to speak of a root *vat* in the sense of 'to know.' That root occurs four times only in the *Rig-veda*, always with the preposition *api*, and whatever its meaning may be in these obscure passages, and in the still more obscure passages of the *Avesta*, it does not seem to have been 'to know.'

"Grimm, in his *Deutsche Mythologie*, treats the name of *Wuotan* and *Odin* as from the beginning a name of a superhuman being, and derives the Old-High-German *Wuotan*, the Lombardian *Wōdan* or *Gūddan*, the Old-Saxon *Wuodan* and *Wōdan* (Westphalian *Gūddan* and *Gudan*), the Anglo-Saxon *Wōden*, Frisian *Wēda*, the Old-Norse *Óðinn*, from the Old High-German verb *watan*, *wuot*; Old-Norse *vāða*, *ðā*, meaning to move along quickly, then to be furious, a transition of meaning which is likewise found in Latin *vehī* and *vehemens*. This root *watan* cannot be connected with Latin *vādere*, because *d* would become *t* in Low, but not in High, German. From this verb *watan* Grimm derives the substantive *wuot*, *wuth*, 'fury,' *Wuths*; and the Old-Norse *óðr*, 'mind.'

"As the supreme god of the Teutonic nations, *Wuotan*'s character is summed up by Grimm in the following words (Translation by Stallybrass, vol. i., p. 132): 'He is the all-pervading creative and formative power, who bestows shape and beauty on men and all things, from whom proceeds the gift of song and the management of war and victory, on whom, at the same time, depends the fertility of the soil, nay, wishing, and all highest gifts and blessings' (Saem. 113⁴).

"In the popular legends, however, what may be called his etymological character is still far more clearly perceptible. *Wuotan* is there the furious god, the god of war and victory, armed with a spear (*Gūngnir*), followed by two wolves (*Geri* and *Freki*), and two ravens (*Huginn* and *Muninn*). He sends the storm, rides on the gale, has his waggon or wain, and his horse. In the Old-Norse legends he is an old man with a broad hat and a wide mantle (*heklū-māðr*, a hooded man), and as such he appears in the German *Hakeloberend*, the leader of the wild host, who lives on even now in John Hacklebernie's house, though he is, no doubt, quite unconnected with *Hakelberg* (i.e., Mount Hecla). The *t* in High-German *watan* would presuppose a Low-German *d*, and a classical *dh*. As *h* in Sanskrit is a neutral exponent of *gh*, *dh*, *bh*, we might postulate an original *vadh* for *vah* (part. *vodha* for *vah-ta*), particularly as in *vehemens* we see traces of the same meaning, as in *wuot*, 'fury.'

"Grohmann proposed to identify *Wuotan* with the Vedic *Vāta*, 'wind,' and at first sight that etymology is very tempting. But *vāta* has the accent on the first syllable, and ought, therefore, to show *th* in Low, *d* in High-German. Still, Grohmann was right in making *Wuotan* the god of wind and weather, only that his etymon seems to me to lie not in the wind, but in the weather. Weather, before it took its general meaning, meant stormy weather. This is still very clear in the German *Wetterleuchten* (*wēter-*

leich, cf. rik-van), *Donner-wetter*, *Wind und Wetter*, *Unwetter*, *Watterschlag*, and even in English weather-beaten. It is the Old-High-German *wetar*, Anglo-Saxon *veder*, Old-Norse *veðr*. The same word exists in the Veda, namely *vādhas* and *vādhar* (Delbrück, in *K. Z.* xvi. 268); but it there means chiefly the thunderbolt of Indra and of his enemies, and also weapon in general. From the same root we have *vadhā* (striker and weapon), *vādhatra* (weapon), *vādhatrā* (Indra's thunderbolt). In Greek this root has been discovered in *ἄδω*, in *ἔν-οστ-χάω* (see Curtius, s.v.). From this root, and from no other, is derived *Wuotan*, literally the striker with the thunderbolt, the weather-god, the storm-god. There is another form in Old-Norse *óðr*; and, as Freyja is called *óðs mey* (Od's maid), this can only be another name for *Óðinn*.

"If, then, the name of *Wuotan* meant originally wielder of the thunderbolt, we must begin with that concept, and slowly trace the transition from the furious huntsman to *Óðinn*, the All-Father, the solemn and majestic 'Hliðskialf gramr,' just as in the case of weather we have to start from the special meaning of storm, and end with a meaning so general, that we may now speak of fair weather as well as foul." F. MAX MÜLLER.

Settlington Rectory, York: Feb. 2nd, 1885.

I hope Dr. Vigfusson will accept my assurance that I had not the slightest intention of imputing to him any felonious appropriation of Pick's philological property. I simply quoted the name of the scholar, by whom a very obvious suggestion was first made.

Next, as to the name of the Wild Huntsman. Even in the "dark ages," as Dr. Vigfusson calls them, which followed the fifteenth century, I do not see how English, or even Hanseatic mariners could possibly have introduced the name of Mount Hecla into the ancient legends of the South German forests; and still less how the name and legend attached to the motionless mountain *Heklu-fell* could be transformed, as Dr. Vigfusson supposes, into the name and legend of the wild huntsman *Hakelberg*. A mountain and a stormwind are not cognate ideas. It would be almost as reasonable to derive the name of Robin Hood from the name of Mount Hood in Oregon. It seems more probable that the name of the cloud-clad mountain and of the cloud-clad tempest were independently formed from the same verbal elements. Moreover, the name *Hakelberg* seems to be a mere corruption of an older name. In Westphalia, the wild huntsman is called, not *Hakelberg*, but *Hakel-bärend*, "the cloak bearer," which is apparently the original form of the name. The transformation of *Hakel-bärend* of Westphalia into the *Hakelberg* of the Hartz has been explained by the transference of the ancient legend to an actual person, Hans von *Hakelberg*, the chief huntsman of a Duke of Brunswick, who may easily have obtained his surname from some German *Hakelberg*, or "cloud-capped hill." In like manner the purely mythological Sigurd of the *Völsunga Saga* has been transformed, in the *Nibelungen Lied*, into Siegbert, the semi-historical Austrasian king who repulsed the Huns.

But as to the really fundamental point, the identification of *Woden* with the Wild Huntsman of later legend, this does not rest merely on the *hackle* or cloud-cloak worn by both. In some districts of Germany the Wild Huntsman is called, not *Hakelberg* or *Hakelbärend*, but the *Woenjäger*, the *Woinjäger*, the *Woejäger*, or simply *Wode*, names which seem to identify with *Woden* as definitely as do the legend and the cloak. In England we have in the legend of Herne the Hunter, and probably of Robin

Hood, with his "mantle on his back," and his significant name, the last lingering echoes of the great *Woden* myth. ISAAC TAYLOR.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Feb. 9, 8 p.m. Inventors' Institute.
8 p.m. Society of Arts: Cantor Lecture, "The Distribution of Electricity," by Prof. Geo. Forbes.
8.30 p.m. Geographical.
TUESDAY, Feb. 10, 3 p.m. Royal Institution: "Colonial Animals," by Prof. Moseley.
8 p.m. Anthropological Institute: "The People of East Equatorial Africa," by Mr. H. H. Johnston.
8 p.m. Civil Engineers: "The Modern Practice in the Construction of Steam Boilers," by Mr. D. S. Smart (adjourned discussion): "The Metropolitan and District Railways," by Mr. B. Baker and Mr. J. W. Barry.
WEDNESDAY, Feb. 11, 11.30 a.m. British Museum: "Egyptian Antiquities," by Miss Beloe.
8 p.m. South Place Institute, Finsbury: "Oligarchy and Democracy," by Mr. J. A. Pictou.
8 p.m. Microscopical: President's Address, "The Life History of a Septic Organism hitherto unrecorded."
8 p.m. Society of Arts: "Report of the Royal Commission on Metropolitan Sewage," by Capt. Douglas Galton.
8 p.m. Geological: "The Tertiary and Older Peridotites of Scotland," by Prof. J. W. Judd; "Boulders wedged in the Falls of the Cynfael, Ffestiniog," by Mr. T. Mellard Reade; "Chilostomatous Bryozoa from Aldinga and the River-Murray Cliffs, South Australia," by Mr. Arthur W. Waters.
THURSDAY, Feb. 12, 3 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
8 p.m. Society of Arts: "Production of Ammonia from the Nitrogen of Minerals," by Mr. George Beldy.
8 p.m. Telegraph Engineers: "Some Experiments in Electrotyping with a Dynamo-Electric Machine," by Capt. H. R. Sankey; "The Working of Railway Signals and Points by Electro-Magnets," by Mr. Illius A. Timmis.
8 p.m. Mathematical: "Sur les Figures semblables Variables," by Prof. J. Neuberg; "The Extension of Ivory's and Jacob's Distance-Correspondences for Quadric Surfaces," by Prof. J. Larmor; "A Property of a Quadrilateral in a Circle, the Rectangles under whose Opposite Sides are Equal," by Mr. B. Tucker.
8.30 p.m. Antiquaries: "The Ancient Charters of Winchester," by Mr. T. F. Kirby.
FRIDAY, Feb. 13, 11.30 a.m. British Museum: "Egyptian Art," by Miss Beloe.
7.30 p.m. Civil Engineers: Students' Meeting, "The Maybole Waterworks," by Mr. Gilbert Hunter.
8 p.m. Quakett Microscopical Club.
8 p.m. New Shakespeare: "Shakespeare's Use of the Extra Syllable and Run-on Line," by Miss Grace Latham.
9 p.m. Royal Institution: "Forms of Leaves," by Sir John Lubbock.
SATURDAY, Feb. 14, 8 p.m. Royal Institution: "The Scale on which Nature works," by Prof. G. Johnstone Stoney.
3 p.m. Physical: Annual General Meeting.

SCIENCE.

Lotze's System of Philosophy. English Translation. Edited by Bernard Bosanquet. (Oxford: Clarendon Press.)

THIS translation is the joint work of many able hands. The philosophy and scholarship of Oxford have co-operated in its production. To praise its precision and elegance is superfluous. It suffices to mention the names of Prof. Green and Mr. R. L. Nettleship. The book belongs to the small class of translations which are more readable than their originals. This advantage is enhanced by the excellent table of contents and index which accompany the English version.

The first use of these facilities which will be made by readers of the English school will probably be to explore those parts of *Lotze's* philosophy which are least remote from life and practice. What corresponds most nearly to the English Inductive Logic will be found in Book II. on "Investigation" or "Applied Logic." It is instructive to compare Mill's "Laws of Nature" with *Lotze's* ideal of science:

"The art of induction, which is to bring us

to universal laws, rests wholly on the acumen shown in developing pure and self-connected propositions of the form Σ is Π out of the impure and confused material of our perceptions, which come to us in the form S is P A complete expression of the actual fact demands addition and subtraction, and would run thus: $S + s - \sigma$ is $P + p - \pi$ or Σ is Π , while our first defective observation set down S is P as the fact. Only for the complete proposition Σ is Π (supposing this were given in a peculiarly fortunate perception) would universal validity be guaranteed by the law of identity. . . . The law of identity guarantees that if the same [subject] were once more perceived in a second experience, it would be impossible that the same predicate should be absent, or should be replaced by some other predicate.

It cannot be said that Lotze has contributed much towards the attainment of this ideal—anything comparable with the methods of Herschel and of Mill. Those whom our author's scientific fame may have led to expect new illustrations of experimental methods will be disappointed. The positive science best represented is mathematics. The treatment of this science occasionally suggests the caution that "physics should beware of metaphysics." More generally our author's mathematical speculations suffer from a fault rare among metaphysicians—an excess of common sense. In illustration of the former criticism we may cite the following remark on the relation between compression and resistance.

"The measure of this resistance cannot be a constant quantity independent of all the agencies which here co-operate. It must on the one hand be proportional to the specific intensity of the inner repulsions, to which the resistance is due, and which are different for different bodies; on the other hand it must be proportional to the amount of compression already effected, since it is this which, by bringing the elements closer to one another in the manner described, intensifies their mutual repulsions."

Again, the remarks on the reduction of observations seem to savour too much of a-priority.

"We have no absolute ground for trusting one value more than another, and, as we must now suppose all our observations to be more or less erroneous, we are most probably right in fixing its [the quæsitum's] true quantity at a value whose assumption involves the least sum of errors in the measured values. The arithmetical mean is thus to be regarded as the most probable value."

After this we are not surprised at the reader's being "referred to the classical exposition of Gauss, and to the text-books which found upon that exposition," without any mention of Laplace.

Elsewhere mathematics do not suffer from the intrusion of philosophy. Our metaphysician is not metamathematical. He ridicules the higher space-dimensions, "Riemann's Multiplicities." In the principle of parsimony Lotze refuses to see any deeper mystery; enforcing his view by the no doubt striking remark:—"The one thing which we should perhaps assert would be this: that nature is sparing in matter or in force, in time, in distance, or in velocity, all of which cost her nothing, but that she is sparing in principles." Again, in the criticism of Boole's symbolic logic there is doubtless abundance of common sense, but perhaps deficiency of that finer sense which discerns mathematical analogies.

The most fruitful of Lotze's mathematical reflections are possibly those which are most remote from common sense. We allude to those passages in which he seems to countenance the application of quantitative science to human affairs. He touches upon problems "which have not as yet been brought within the range of calculation, though there is nothing to prevent them being so brought, if an advance in psychological knowledge should ever afford us starting-points from which to grapple with them." A specimen of such calculation is presented in the chapter on "Elections and Voting." It is proposed to take account of each voter's repugnancies as well as preferences, so as to "express as completely as possible the collective will of the voters." There is, of course, a difficulty in defining "collective will"; in determining what is best to aim at, "whether the completest satisfaction of the majority, or the greatest average satisfaction of all . . . considering the lesser satisfaction of one as compensated by the greater satisfaction of another." The author is aware that "various circumstances combine to make these logical requirements unrealisable in practice."

We have so far been attempting to look at the work before us from the point of view of positive science and utility. This, however, is rather too severe a test to apply to logic and metaphysics. It is not by their fruits that we shall know them. If we adopt a less insular measure and compare Lotze's system with others of similar pretensions, he would surely rank high above a Hegel or a Schelling. In his excursions into the transcendental, he seems still to have steadied himself by keeping a hold upon physical fact. He never yielded to the impulse which springs eternal in the metaphysical breast "to unfold in a scheme the meaning of the world"—

"the wish to have a universal scheme in which not only all the modifiable relations of different elements that we can think of, but also the values of the difference between any two modifications should be laid down so completely that the difference of the kinship between any two conceptions, M and N, should be exactly indicated by their position in the universal scheme."

The dreams of a Pythagoras or Hegel he set down at their proper worth. He felt the grandeur of the aspiration; he knew the poverty of the performance. It may well be, therefore, that Lotze's utterances "on the Being of things," "becoming and change," and "the One and the Many," will repay attention better than it is generally rewarded by such topics.

A few samples taken from the earlier part of the work will enable our readers to judge whether it is worth while to proceed to the higher mysteries. On the theory of the concept Lotze

"expresses the conviction that, as a rule, the marks of a concept are not co-ordinated as all of equal value, but that they stand to each other in the most various relative positions, offer to each other different points of attachment, and so mutually determine each other; and that an appropriate symbol for the structure of a concept is not the equation $S = a + b + c + d$, &c., but such an expression as $S = F(a, b, c, \&c.)$.

"No objection need be made to the co-ordination of copper, gold, silver, within the sphere of S , metal; on the other hand attention should

be drawn to the great difference of value between the subordination of the species to the genus, and that of the universal S along with its species to the universal marks a, b (dactile, &c.) . . . the lesser circle S , gold, occurs only in a particular place in the larger G , yellow, and intersects it without lying wholly within it."

The assertion

"that the extent and content of every concept vary inversely . . . seems to me to be untrue where its truth would be important, and to be comparatively unimportant where it is true.

"Of the true universal . . . it may rather be said that its content is always precisely as rich, the sum of its marks precisely as great, as that of its species themselves, only that the universal concept, the genus, contains a number of marks in a merely indefinite and even universal form; these are represented in the species by definite values or particular characterisations."

"What form does the entire system of our concepts assume? . . . The ordinary view gives it the form of a pyramid, ending in a single apex, the all-embracing concept of the thinkable."

From Lotze's point of view,

"the entire structure of our concepts rises like a mountain chain, beginning in a broad base and ending in several sharply-defined peaks"—a just and striking metaphor, even if we do not agree with the author as to what concepts are to be placed in solitary grandeur on these speculative heights.

These specimens, taken from the comparatively dry tree of formal logic, allow the reader to infer how exuberant are the maturer metaphysical developments. It is a luxury, if we mistake not, which requires pruning. But the task of abridging Lotze's metaphysics demands both a more powerful and a more friendly hand than ours. Are not the necessary powers and sympathies possessed in an eminent degree by the editor of this translation and his academic coadjutors, and might we not expect from them an introductory analysis of Lotze's doctrines? One naturally looks to Oxford for the performance of a task requiring qualities rare in their combination—readability, and devotion to German metaphysics.

F. Y. EDGEWORTH.

CLASSICAL SCHOOL BOOKS.

The Oeconomicus of Xenophon. Edited by H. A. Holden. (Macmillan.) *The Oeconomicus of Xenophon* has long been a favourite book to read, or, at least, to read about. Not only does it contain "a faultless definition of wealth" and "the ideal of domestic life," as Mr. Ruskin said when he hoped to place it among "the chief domestic treasures of British peasants"; but people have always been attracted by the pictures of the great Phœnician ship, of the morning's work of an Athenian gentleman, and of the frightened and puzzled young wife. Yet, like the *Hieron* (ACADEMY, November 23, 1883), it had never, till Dr. Holden took it in hand, been edited in English. Translated of course it has been, though not with remarkable accuracy. Dr. Holden has lavished great labour on his edition, and succeeded in making it very complete and helpful. The Lexical Index of all the words in all their uses (in which the article *s* takes thirteen columns) would alone justify both these epithets; but the commentary also is almost exhaustive. We

say almost, because there are just one or two passages in which we look in vain for notes. For instance, there seems difficulty enough for a note about the double *ὅτι* in c. 19.9.54, where a tree-cutting is spoken of as planted *πλάγιον ὅτι τῇ ἀποβελήμενῃ γῇ*. On c. 7.26.143, *διδόναι καὶ λαμβάνειν*, a note would be all the more desirable, as the words are open to two explanations. The Index makes *λ.* mean "receive as produce"; but then *δ.* wants explaining; and the two together might mean "spending and getting," like the wide use of *δοῖς καὶ λῆψις* in the *Nicomachean Ethics*. It would be a good suggestion that *δοιμυήσκειν* in c. 19.9.41 may refer to Socrates' theory of reminiscence, if we could be sure how much of the theory is Socrates' and how much Plato's. As to the interpretation of the abrupt *ἐπιτιμώμεν τιμὴν στρατηγῶν συμπαρόντες* (c. 11.24.144), there may, as Dr. Holden suggests, be some words lost, or perhaps even in two places; but we can hardly believe that *στρατ. συμκ.* is "when in presence of a general," especially as the Index makes *συμκ.* mean *una adesse*. There are a few curious oversights in the volume. The analysis of c. 4 mentions and distinguishes Cyrus the elder and Cyrus the younger; but only the latter occurs in the text, and only he is in the Index. P. xix. translates *ἐμβάλοι* of c. 8.9.54 by "sows barley," &c.; p. 163 by "put into his granary," no doubt more rightly. There are several wrong references. Perhaps these things point to their having been more haste in the printing than in the composition of the book. We hope it is Dr. Holden's intention to edit some more of the less read treatises which bear Xenophon's name.

The Fourth Book of Thucydides. Edited, with Notes, by A. J. Barton and A. S. Chavasse. (Longmans.) Mr. Barton and Mr. Chavasse have given us an excellent edition, with notes, of Thucydides' Fourth Book, somewhat larger in scale than the recent publication of Mr. Graves. Their edition is in appearance, and, as it seems, in plan, a sequel to Sheppard and Evan's notes on Books I.-III. Nor will it be found less useful. The solutions offered of the difficult passages, of which there are so many in Book IV., always deserve consideration, if they do not command assent. Thus on IV. 98. 2, they are right in attacking Arnold's interpretation of *τῶν τοῖς θεραπεύμενα, κ.τ.λ.*, and in urging that, whereas he must have been trying to make *πρὸς τοῖς εἰσθόσι* mean "no less than by the customary," the obvious interpretation is "as well as by the customary rites"; so that the whole would mean something like the keeping up of the old rites with any additions which Athenian piety could make to them in the future. On c. 26. 7, it seems hardly worth while to quote from a Scholiast the impossible statement that linseed-meal is a remedy for thirst and the poppy for hunger. The account of the food itself, poppy-seed, honey, and linseed, may (as Col. Mure suggested) be a reminiscence of Alkman. On c. 48. 3, the uncommon use of *καθίστημι* might have been noticed. About *σφραγισμένον κ.τ.λ.*, in c. 60. 1, the editors point out, no doubt rightly, that "this family of words always imply self-restraint." Here it means, "if we can curb the impulses of narrow self-interest"; but we should have been glad to see the whole passage discussed. Mr. Graves does not really deal with it. Mr. Crawley and Prof. Jowett seem to take *εἰ σφραγισμένον* with *γνώσει* *χρῆ*. But may we not suppose a confusion, quite in Thucydides' manner, between two phrases or ideas—"If we are wise it will not be" and "We ought to know that it is not?"

New editions often fail to get from critics, overburdened with the multiplicity of books with more claim to novelty, the attention which the labour spent upon them might deserve. In

the case of Dr. W. Smith's smaller Latin-English Dictionary (Murray), the time spent upon its revision has probably been little less than that required for its original preparation; and the result is that it now stands far above any of its rivals in the same field. The most important changes have been made in respect of etymology, which has been placed in the thoroughly competent hands of Dr. J. K. Ingram; and it is not too much to say that there is nothing in English so trustworthy as this little dictionary in its present form.

Exercises in Translation at Sight. Arranged by A. W. Spratt and A. Pretor. Vol. II. The English Version. (Rivingtons.) We have already expressed a dislike of the publication of Key-supplements to books intended for the use of schools. We think that they are not easily kept from the learners, and that they demoralise the teacher, who, especially in "unseen" work, should be encouraged to go through the same ordeal as his pupils, and feel their difficulties. Having repeated this objection in *limine*, we freely admit the utility, in some directions, of this volume. Re-translation is a useful, and even a necessary process: though even here we think versions of Latin and Greek poetry are hardly profitable. The style of Mr. Spratt's renderings is bright and racy; its defect is a certain tendency to curt, anaphoric sentences—as on p. 155, sect. 49—where the first four clauses explode like successive barrels of a revolver. Mr. Pretor renders Pindar (pp. 132, 124) with grace and power: on the other hand, he seems somewhat stiff for Aristophanes (pp. 121, 143). Perhaps, with the wide world of Latin literature from which to choose, Mr. Spratt need not have presented us with an unsavoury and suggestive extract from Juvenal (part i., p. 5). We note also an odd misprint on p. 148 (Note) "*παροῦσαν*." Perhaps used as in old. Rex 971. It needs reflection to detect here a reference to Sophocles.

Sallust's Catilina and Jugurtha. Edited with notes by the late George Long. Second Edition. Revised by J. E. Frazer. (Whitaker & Co.; George Bell.) "The last edition of Sallust," said Mr. Long, writing in 1860, "will never be;" and we have had several English editions since then. Thus, not to mention some anonymous school editions, Dr. Merivale edited the two complete treatises; Mr. Pollock translated them; Mr. Cook has edited the *Catilina*; and Mr. Capes, among the other good points of his edition of both treatises, has met Mr. Long's wish that "the teacher could give to his pupils some exact notions of the kind of country in which the Jugurthine War was carried on." But no later labours have really superseded Mr. Long's own Commentary and Introduction. The exegetical notes remain useful, and the hard-headed scepticism with which the "facts" were analysed in his *Sallust* and in his *Decline of the Roman Republic*, taken together, is very valuable. It is therefore gratifying to find that Mr. Frazer has left Mr. Long's work substantially unaltered. He has, however, included and commented on the longer fragments of Sallust—a thing we have always wished to see done; but we regret that he did not include all the Fragments and the two *Declamations* and the *Epistolæ ad Caesarem* connected with Sallust's name. That all these things have never been edited with a commentary in English illustrates our dangerous addiction to school-books that will sell. But what Mr. Frazer has undertaken, he has done well. May we, however, point out to him a better parallel to the *scaevus iste Romulus* of the *Oratio Lepidi*, § 5, than the *perverse Menalca* of Virgil? It occurs in Plutarch, *Cat. Maj.* 19, *ἐλαττοτέρους Κάτωνας*. Mr. Frazer has revised the text of Sallust, and admitted some of Prof. Postgate's conjectures, including the clever one, *laeti quierant* for *laetique erant* in *Jug.* 53. § 5.

Fabulae Faciles. A First Latin Reader. By F. Ritchie. (Rivingtons.) This little volume, so far as it differs at all from its thousand and one competitors, perhaps does so for the better. The exercises are well arranged and graduated; the elementary rules of syntax are intelligibly put. We commend also the marking of quantity, often neglected in prose manuals; and the stories adjusted, not only in style but in actual phrases, to Caesar, as the normal text-book (v. Pref. p. vi.) of youth. The Argonauts also, and Ulysses' career, lend themselves well to Mr. Ritchie's treatment by consecutive anecdotes. We observe a serious misprint on p. 93, where *dixit* (l. i.) is construed as a present very misleadingly; and on p. 76, s. 113, *iste* has supplanted *isto*.

SCIENCE NOTES.

THE last number of the *Mineralogical Magazine* contains several interesting papers, most of which were communicated to the Mineralogical Society at its session in Scotland last midsummer, and hence relate to Scottish mineralogy. The tone of the journal has been much improved since the union of the Crystallogical and Mineralogical Societies. The effect, however, has necessarily been to introduce a number of highly technical papers. Thus, in the present number, the most solid contribution is one by Mr. H. A. Miers, of the British Museum, formerly a student under Prof. Groth at Strasburg, in which the crystallography of Bournonite is discussed with much thoroughness.

PROF. O. STOLZ, of Innsbruck, has in preparation *Vorlesungen über Allgemeine Arithmetik*, which is intended to present in a form suitable to learners the results of modern researches on the science of number. The first part, which is now in the press, will contain an introduction on the conception of magnitude, which will be treated in accordance with the views of Grassman, and chapters on the theory of rational and irrational numbers, powers, roots, and logarithms, the theory of functions, and that of infinite series. The investigations of Hankel, Du Bois-Reymond, Cantor, Cauchy, Abel, Dirichlet, and other eminent mathematicians, have been carefully studied. The second part of the work will treat of the arithmetic of complex numbers and some of its geometrical applications.

PROF. WILHELM KILLING, of Brunswick, is about to publish a work, entitled *Die Nicht-Euklidischen Raumformen in analytischer Behandlung*. The author's object is to exhibit the results which have been so far attained in the investigation of the properties of Non-Euclidean space, so far as these results can lay claim to scientific precision, and thus to clear the way for the elucidation of those parts of the subject which have not yet received satisfactory treatment.

PHILOLOGY NOTES.

WE learn from the *Journal* of the Anjuman-i-Punjab that it is intended to establish a branch of the Punjab University in England, to conduct examinations in Oriental languages, and to grant degrees. It was unanimously resolved that Prof. Max Müller should be asked to preside over the Board of Examinations and literary publications in England.

BERNHARD TEN BRINK's *Chaucer-Grammar* (*Chaucer's Sprache und Verskunst*) has just appeared at Leipzig. Its treatment of the substantive declension, the Romance verb, and the accentuation of Romance words, is specially commendable.

PROF. LESKIEN's monograph on the ablaut of the radical syllables in Lithuanian has just

been published at Leipzig; and the new number of Techmer's *International Journal for General Philology* contains a paper, by Prof. Donner, of Helsingfors, on the influence of Lithuanian on the Finnish languages, obviously suggested by Thomsen's excellent work on the Scandinavian loan-words in Finnish.

In the department of Celtic philology we have a somewhat similar work by Prof. Thurneysen, *Keltoromanisches* (Halle, 1884), which in form is an acute and learned criticism of the Celtic etymologies in the last edition of F. Diez's *Etymological Dictionary of the Romance Languages*. Thurneysen was a pupil of Prof. Windisch, and his master has enriched the new part of Ersch and Gruber's *Encyclopædie* with an article on the six Neo-Celtic languages, not neglecting the Gaulish and other Old-Celtic dialects. His remarks on the names of the chief Celtic peoples and countries are particularly interesting. He adopts Glück's equation of *Keltos* with Latin *celsus*, and adds the Lithuanian *keltas*, "gehoben"; *isz-keltas*, "erhaben." Gullt and *Γαδραι* he connects with Irish *gal*, "valour"; *galdae*, "valiant." They have nothing to do with *Goidil*, now written *Gaoidhil*, and anglicised *Gael*. The etymology of this word and of *Scott* he considers to be still obscure, though he mentions Siegfried's connexion of the former with Latin *hoedus* and Rhys's connexion of the latter with Welsh *ygythru*, "to cut," also "to paint." The Welsh *ygythru*, "ictus," by which Zeuss explains *Scotti*, is only a loan-word (Anglo-Saxon *scot*, Old-High-German *scotz*, "Geschoss"). *Picti* is connected with the Gaulish *Pictavones* and *Pictavi** (whence *Poitiers*), and the Irish *cicht* ("carver," "engraver"), with the usual *c* for *p* from *kv*. The Irish name for "Pict," *Cruithnech*, Windisch finds in the Old-High-German gloss *Gallia, uo lio lant*; *Chortonicum auh uualcho lant*. The Pictish glosses *pean-fahel* = Welsh *pen-gwal*, "wall's end," and *mu-nghu*, "meus carus," prove distinctly that the Picts were more nearly connected with the Britons than the Gaels. Mr. Skene's contrary theory, founded almost wholly on the names in the Pictish Chronicle (which is of Gaelic origin) and on names ill-transmitted by Irish scribes, is dismissed with prompt decision. The genuine Gaelic names which occur in the Pictish lists are accounted for by the facts that the Picts stood in close relation to the Scotti, and that many of their kings had Scottish blood in their veins. Prof. Rhys's theory as to the non-Aryanism of the Picts is an ingenious but unconvincing conjecture. *Caledonia*, Old-Welsh *Clidon*, is connected with Irish *caill* ("wood"), stem *caldi*, and Anglo-Saxon *holt*; the *dvē* in Ptolemy's *δων-καληδόνιος* either with Irish *dōi*, "right" (and consequently also "southern"), or with Irish *dōe*, "wall." *Albion*, "white-land," the name for the whole island of Great Britain (the cognate Irish *Alba*, genitive *Alban*, means only Scotland), is explained by the Old-Irish *alab̄t .i. alaind*, "fair," an epithet for the sun in the Calendar of Oengus, and compared with Greek place-names like *Leuca*, *Leucadia*, formed from *λευκός*. So in Italy *Lucania*. As to *Ériu* (Irish *Ériu*, genitive *Érenn*, dative *Érinn*), Welsh *Iwerdon*, which represents an Old-Celtic stem *Iwerdon*, Windisch adopts Rhys's conjecture that initial *p* has been lost, and that the word may, accordingly, be connected with Sanskrit *pīvan*, feminine *pīvari*, Greek *πίνα*, feminine *πίναρα* (cf. *πίναρα* *ἄπολ*, *Ilíad* xiii. 832), and the name *Πεπία*, the birthplace

of the Muses and Orpheus. Pictet's and Zimmer's connexion of *Ériu* with Sanskrit *ārya* is rightly rejected, though the name of *Érem*, genitive *Éremon* (one of the Irish *Stammvörter*), is equated with the cognate *Āryamā*. A connexion between *Iberi* and *Eber* (name of another Irish *Stammvörter*) is probable. As to Britain, the primeval name of this island was *Brettāna* (whence Welsh *Brython*), with double *t* and single *n*. The Welsh *Prydain* is borrowed from the Latin form *Britanni*, but modified with reference to *Prydyn*, the native name for the Picts and Scotland. Windisch seems unaware of the late Prof. Evander Evans's suggestion that the *p* of *Prydain* (*Ynys Prydain*) was the *b* of *Brydain* protected by the *s* of *ynys*, "island." The *π* in *Περτινίκιος* (so spelt in the oldest MSS. of Strabo) may, Windisch thinks, be due to the pronunciation of the British *b*, which was different from that of *β*. Rhys may be right in connecting *Brettāni* with Welsh *brethyn*, "cloth," and explaining it, accordingly, as the "clothed or cloth-clad people." As to *Cymro*, plural *Cymry*, Windisch holds to Zeuss's explanation from *Com-brog*, and sees in it a correlative to the Gaulish *Allo-broges*. The Gaulish stem *brog*, Welsh *bro*, Irish *brug*, Old-Irish *mruig*, *mruig*, point to a primeval Celtic *mruig* or *mruigi*, cognate with Gothic *marka*, plural *markos*, *τὰ ὅρια*, Latin *margo*. As to the name *Welsh* (Old-High-German *walahisc*, *walihisc*), the Anglo-Saxons called the Cymry *Wealas*, plural of *Wealh*; and the *ll* of the mediaeval Latin *Wallia*, *Wallenses*, are due to the old double-consonance *lh*. The oldest Teutonic form, *Walh*, has no Teutonic cognates; and Windisch adopts Gaston Paris's conjecture that it was taken from the name of some neighbouring Celtic race, such as *Volcae*. The *Volcae Tectosages*, it will be remembered, settled in the Hercynian forest. *Cornwall*, Anglo-Saxon *Corn-walas* (cf. *Bryth-walas*) is connected with the name of the *Kopraoiotai* (whom Ptolemy locates in the present county of Chester), the Hesychian gloss *ἀκρόν τῆς σάπυργα* *Γαδραι*, and the Latin *cornu*. *Armoricae* (civitates), more correctly *Aremoricae*, is a formation like Greek *ἄραρος*, for *are* is = *ραρ*, and the second element is cognate with Welsh *mor*, Irish *muir*, stem *mori*, Latin *more*. The Welsh name for Brittany, *Llydaw*, Old-Welsh *Litau*, Geoffrey's *Letavia*, was, like the cognate Irish *Leitha*, also applied to Latium. The Anglo-Saxon *Lid-wicas* is the Old-Welsh *Letewiccion*, which means, apparently, "litorales," and may be cognate with Latin *litus*.

The first part of Geldner's edition of the *Avesta* has just appeared at Stuttgart.

Corrigenda.—In the "Philology Notes" which appeared in the ACADEMY for January 24, 1885, for "pignoris captio," read "pignoris capio"; and for "Zeuss, G. O.," read "Zeuss, G. C."

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Anniversary Meeting, Tuesday, Jan. 27.)

THE retiring President, Prof. Flower, in his anniversary address, gave an outline of the classification of the varieties of the human species which appeared to him to be most in accordance with the present state of knowledge on the subject, but which, he remarked, differed in its main outlines but little from that adopted by Cuvier, sixty years ago. It was first stated that there were three extreme types, those called by Blumenbach Ethiopian, Mongolian, and Caucasian, around which all existing individuals of the species could be ranged, but between which every possible intermediate form could be found. The distinctive characters of each of these extreme types were described and their subdivisions pointed out. The Ethiopian or Negro branch was divided into—(1) African Negroes; (2) Hottentots and Bushmen; (3) Oceanic Negroes, or Melanesians; (4) Negritos,

of which the natives of the Andaman islands are representatives. It was suggested that the Australians who have always presented a difficulty in the classification of the races of men, owing to the combination of negroid characters of face and skeleton with hair of a different type from that of the rest of the group, were probably not a pure race, but descendants of a cross between an original Melanesian population and later intruders, probably from the South of India, and of Caucasian descent. The Mongolian type was represented in an exaggerated form by the Eskimo, in a typical condition by the greater number of the inhabitants of Northern and Eastern Asia, the Tartar Chinese, Japanese, &c., and in a modified or sub-typical form by the Malays. The brown Polynesians were still further modifications of the same type, greatly mixed with Melanesian and possibly also Caucasian blood. The position of the native races of America was next discussed. Excluding the Eskimo, they all form one group, which, although inclining on the whole nearer to the Mongolian than any of the three great types, had so many special features that it might be looked upon as forming a fourth primary division. The Caucasian or white branch includes two sub-races now much mingled together, the Xanthochroi with fair hair and eyes and the Melanochroi with dark hair, eyes, and complexion. To the former belong the inhabitants of Northern Europe, to the latter chiefly those of Southern Europe, Northern Africa (greatly mixed in varied proportions along their frontier lines with Negroes) and South-West Asia, the principal subdivisions being the Aryans, Semites, and Hamites.—The address concluded by a reference to two members of the council lately deceased, Dr. Allen Thomson and Mr. Alfred Tylor, to the change of locality of the meetings which had taken place during the year from St. Martin's Place to Hanover Square, and to other matters relating to the affairs of the Institute.—The officers and council were elected for the year 1885.

ROYAL SOCIETY OF LITERATURE.—(Ordinary Meeting, Wednesday, Jan. 28.)

SIR PATRICK COLQUHOUN, V.-P., in the Chair.—A paper was read by the Rev. A. J. D. D'Orsey, on the "Art of reading Papers before Societies," in which the author laid down what he considered to be the true canons for composition as well as for delivery, and drew a clear distinction between elocution falsely so called and elocution proper. In the discussion which followed, varying opinions were expressed by the chairman, Mr. E. Gilbert Highton, Mr. J. W. Bone, Mr. Percy Amer, and others.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 29.)

MR. EDWIN FRESHFIELD in the Chair.—Mr. Everard Green exhibited an illuminated pedigree of the House of Orange, and another of the Family of Green, as specimens of modern heraldic painting. Mr. Ferguson exhibited two copes belonging to Carlisle Cathedral, of the sixteenth century, one of blue damask with gold stars, and the other red and gold baudekin. The former had embroidered figures of saints on the orphrey. Another very beautiful cope was exhibited, belonging to St. Augustine's, Kilburn. Besides the figures of saints on the orphreys, this specimen had a curious group of a wolf and a sheep on the morse. Mr. Ferguson also sent an account of a discovery of about a thousand coins, most of the reign of Edward III. at Beaumont in Cumberland.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HARRIS, 115, Strand, near Waterloo-bridge.

THE DRAWINGS OF RICHARD DOYLE.

ALTHOUGH the importance of other exhibitions open at the present time may explain our delay in noticing the collection of his drawings at the Grosvenor Gallery, we cannot allow the opportunity to pass of saying a few words about the works of Richard Doyle, especially as it may be some time before so large

* It is curious (though, perhaps, only a clerical error) that the *Vita Secunda* of S. Patrick (Colgan, *Tras Thaumaturga*, p. 13) makes his predecessor Palladius die "in Pictavorum finibus," meaning "Pictorum."

† The *ai* is an infected vowel-fragment, the primeval Celtic form being *abhi-s*.

number of them will be gathered together. For a long time this artist, once so popular, ceased to court praise or criticism. After his retirement from *Punch* in 1850, his illustrations to *The Newcomes*, 1854-55, and his *Tour of Brown, Jones, and Robinson*, 1854, were his most considerable works, and for some years before the Grosvenor Gallery gave him a new means of communicating with the public, his name and fame had been things of the past. That he ever recovered, as an old man, the popularity he had earned almost as a boy cannot be said. The world went on, but Doyle stopped, and the elaborate drawings of the man of sixty showed the same faults and scarcely greater maturity than the sketches of the clever youth of twenty. As an artist, he learnt little, and when he appeared again, after all these years, he was as though he had passed them, like Rip van Winkle, in a trance.

Besides a vein of boyish fun and frolic, Doyle possessed a delicate fancy which was at home in fairy land; but to get far beyond the mirth and dreams of the nursery required apparently an effort which he was either seldom willing or seldom able to make. Wanting a thorough training as an artist his drawing was always incorrect, and soon became mannered beyond redemption. As long as he confined himself to work on a small scale, and especially work of a burlesque kind, this incorrectness mattered little—indeed, it may be said that his skill consisted principally in turning it to good account. The humour of such designs as "Ye Manners and Customs of ye Englysshe" is of the same kind as that of the portraits drawn by schoolboys on their slates. It was first-rate of its kind, but an indulgence in such clever play incapacitated the artist for serious work. In *The Newcomes* the best designs are those on the smallest scale, and and though he was successful in the expression of some of his types, like Mr. Honeyman and Lady Kew, his full-length figures are like marionettes. He caught, however, to a considerable extent the spirit of his author, and his little illustrations to Leigh Hunt's *Jar of Honey* are remarkable for the charming way in which he reflects the feeling of the idyll and the fairy tale. Despite the defects in drawing—which are specially disturbing in the classic scenes—these little designs show a poetic sensibility which promised better things than Doyle ever accomplished in after years.

If the exhibition at the Grosvenor was meant to show Doyle at his best, at least half of the drawings should have been weeded out. They seem to have been arranged, and even framed, with very little discrimination. What object, for instance, could there be in showing several drawings of mothers guiding the first steps of children, except to show that he was incapable of drawing either a mother or her child from nature. A few of the illustrations of fairy-land are exquisite; but such gems, both of fancy and colour, as the scene from (we suppose) the "Yellow Dwarf" (363), and the queenly young fairy who is stroking an owl (366), are framed with drawings not worthy their company. Such designs as those of the two fairies making love round a mushroom (364) and the frieze of birds and elves (400) are also quite charming in their way, but are surrounded by comparatively poor and childish efforts. As no artist probably varied so much in the merit of his work, there was the more need for a judicious selection. Worthy of him, for instance, is his portrait of Lady Griselda Ogilvy (272), but that of Miss Blanche Egerton (246) should have been rigorously excluded. "The Pied Piper of Hamelin" is a fine specimen of his imagination, especially in the face and figure of the piper; but there are other crowded scenes, whose only distinction is the facility with which the artist could draw pretty dolls. Neverthe-

less, there are sufficient good drawings of his here to establish, if exhibited by themselves, a claim for Richard Doyle to a distinct and honoured position among English artists. Among them should certainly be those we have mentioned with praise, and the weird and vigorous "Enchanted Forest" (236), the Duke of Norfolk's "Dame Blanche" (271), and Lord Coleridge's "Witch and Young Dragons." A collection of drawings up to the level of these would indeed be worth seeing. How far political or other caricature should enter into it is a question. From the specimens exhibited here, his power in this direction seems to have been very limited: his Tennyson is a transpontine villain, his Disraeli a costermonger. It is probable that he was not after all a great loss to *Punch*, and that his immortal design for the cover was the greatest service he was capable of rendering it.

THE EXHIBITION OF THE GLASGOW INSTITUTE OF THE FINE ARTS.

In the galleries of the Glasgow Institute we always find more of variety than in any other of the Scottish exhibitions. The displays held in these galleries have been made, for many years, as fully representative as possible of English and foreign as well as of Scottish art; and, as on the present occasion this is even more than usually the case, the exhibition contains many pictures which, though they are sufficiently well known to the London public, are fresh, and interesting, and excellently educative to the art-lovers of Glasgow. Among such works are the accomplished and admirably drawn "La Nuit," by M. Bouguereau; the "Intruders" of Mr. E. J. Gregory; the very refined portrait of Mrs. Mirrlees, by Mr. W. B. Richmond, and the quaint and interesting head of Rossetti, painted more than thirty years ago by Mr. Holman Hunt. To these must be added the large and masterly "Reading Aloud" of Mr. Albert Moore, undoubtedly the most attractive picture in the exhibition.

A few examples of the work of deceased artists figure on the walls. Most notable among them is Sir Henry Raeburn's rendering of his own powerful and massive head, with its great, penetrating, brown eyes—a picture which, it will be remembered, was shown in 1877 in the Winter Exhibition of the Royal Academy, and also in the International Exhibition of 1862; and Gainsborough's fine work known as "The Sisters," lent by Mr. J. Graham, of Skelmorlie—two dark-haired girls, with smiling faces, seated side by side, draped in softest robes of white and orange-red—a picture which certainly should have found its way to the Grosvenor Gallery display of the present year. Among the landscapes is a silvery little subject by Corot; and two small examples of Cecil Lawson contrast, in their rich colouring and generalising breadth of effect, with a highly finished landscape by Patrick Nasmyth, in which the wealth of delicate detail and the cool grey tone bear sufficient witness to the painter's study of the old landscapists of Holland. In the Water-Colour Room is a singularly spirited little piece by Sir David Wilkie, his drawing, in chalk slightly washed with colour, of "A Greenwich Pensioner in the Character of Commodore Truncheon," a sketch well known through the excellent engraving by Lewis.

In "The Pilgrim of Love at the Gates of Idleness," we have an important and hitherto unexhibited work by Mr. Burne Jones, which forms one of a series of the artist's illustrations to "The Romaunt of the Rose," of which such other subjects as "Sir Myrthe accompanied by Courtesy" and "The God of Love accompanied by Beautie," have also been executed, at least as designs. The present picture, begun ten years

ago, but only recently completed, displays the quaintness and the intensity of colouring which is chiefly characteristic of the painter's earlier manner. To the left, we see the crimson-robed Pilgrim, who has been travelling through a dreary, rocky ravine, with its leafless trees, on which are perched sable, ill-omened birds; and to the right, the green-clad "Ydelnesse" extends to him the hands of welcome—hands dainty and delicately gloved, to indicate that she is one of those who neither toil nor spin—and prepares to lead him within the walled inclosures of the garden of love.

Josef Israels shows in "The Struggle for Life" work on a larger scale than usual—a low-toned and harmonious rendering of the powerfully drawn figure of an aged fisherman, busy with his shrimp-nets among the surf of a grey dreary sea. Mr. J. Guthrie, whose "Scottish Funeral" scored such a success the other year, has a vigorous and well-lighted picture of a quaint little child driving a flock of geese "To Pastures New"; from Mr. W. Stott, another Paris-trained student, we have "Grandfather's Shop," an effective, dimly-lighted interior. Mr. J. E. Christie sends a pleasant subject of children playing at "Blind Man's Buff"; and several heads in the figure pictures of Mr. J. B. Lyle show a care and a perception of character which argues well for the artist's future work. Mr. R. McGregor exhibits several of his low-toned little scenes of village children and cottage interiors, while in "The Difficult Task" he paints the head and bust of a school-girl on a scale almost that of life.

Mr. H. Moore and Mr. Colin Hunter are each represented by a fresh and powerful sea-piece, giving excellent expression to the forms and motion of waves; and M. Jacob Maris has an admirable canal scene, especially remarkable for the luminous quality of its great piled masses of white clouds. Among the works of the Glasgow landscapists should be named Mr. R. W. Allan's "Autumn into Winter," and Mr. J. A. Aitken's mellow "Pastoral," bathed in the rosy light of evening.

Among the portraits of the exhibition are Van Haanen's "Venetian Brunette," a female head by Hans Makart, Mr. G. F. Watts's head of Mr. J. B. Mirrlees, and Mr. J. Lorimer's direct and forcible half-length of the Rev. Dr. Hatley Waddell.

The works of sculpture include Mr. Burnett's bust of "Wm. Forrest, Esq.," and Mr. D. A. Tod's bust of "Principal Caird," Mr. G. A. Lawson's picturesque statuette of "Richie Monipies," and Mr. M'Bride's simple and graceful "Murmur of the Shell."

J. M. GRAY.

THE PROPOSED BRITISH SCHOOL OF ARCHAEOLOGY IN ATHENS.

THE Executive Committee for establishing this school invited the General Committee and the subscribers to a meeting on February 2 at the rooms of the Royal Asiatic Society, 22, Albemarle Street, W. The purpose of the meeting was to obtain formal public sanction both to the general scheme of the functions of the school and also to a proposal for the immediate commencement of building.

The meeting was largely attended. Among those present, beside the speakers, were Miss Anna Swanwick, Mrs. Drake, Dr. Waldstein, Prof. Gardner, Mr. A. Lang, Mr. W. M. Ramsay, Dr. Fearon, Mr. E. D. A. Morshead, Mr. G. G. Marindin, Mr. J. R. Thursfield, Mr. Agg-Gardner, Mr. S. E. Spring-Rice and others.

The Bishop of Durham having taken the chair, Mr. Gow, one of the secretaries, read a short report of the Executive Committee, stating the circumstances under which the Committee was appointed, and the progress of

the scheme. To this was appended a report of the treasurer, Mr. Walter Leaf. The paid subscriptions now amount to nearly £3,200, unpaid to £1,500 more, and the site for the school, presented by the Greek Government, is valued at £2,700.

The right rev. Chairman then addressed the meeting. He said that there was no need, before such an audience, to point out the utility of the proposed school. In truth, we are bound in honour to establish it; for neither should England lag behind France and Germany and America, nor should we refuse to accept the generosity of the Greek Government. Describing himself as a "professional beggar," he confirmed the experience of the Committee that, for such a scheme, neither advertisements nor circulars nor letters could command the attention even of well-wishers, and he concluded with an earnest appeal to the subscribers present to use their personal influence with their friends to obtain the funds necessary for the effective management of the school.

The adoption of the Committee's Report was proposed by the Chairman, and seconded by Dr. Hornby; and Mr. W. S. W. Vaux proposed, and Mr. Argyropoulos seconded, a motion confirming the present Executive and General Committees in office.

Prof. C. T. Newton next proposed, and Sir F. Pollock seconded, the third resolution in these terms:

That the following statement be accepted as the basis of the scheme:

1. The first aim of the school shall be to promote the study of Greek archaeology in all its departments. Among these shall be (i.) the study of Greek art and architecture in their remains of every period; (ii.) the study of inscriptions; (iii.) the exploration of ancient sites; (iv.) the tracing of ancient roads and routes of traffic.

2. Besides being a school of archaeology, it shall be also, in the most comprehensive sense, a school of classical studies. Every period of the Greek language and literature, from the earliest age to the present day, shall be considered as coming within the province of the school.

3. The school shall be under the care of a director, whose primary duties shall be (i.) to guide the studies of members, and to exercise a general supervision over the researches undertaken by them; (ii.) to report at least once a year on the work of the school, to record from time to time, for the information of scholars at home, any important discoveries which may come to his knowledge, and to edit any publications of the school.

4. It shall further be the duty of the director to afford information and advice to all properly accredited British travellers in Greece who may apply to him.

Prof. Jebb proposed, and Mr. C. Waring seconded, a resolution to commence building at once. Mr. F. C. Penrose, speaking in favour of this motion, exhibited some plans for a suitable house, which he had drawn at the request of the Committee; and Mr. F. Clare Ford, late H.B.M. Minister at Athens, described the special interest which is taken by Athenian society in the project for a British school.

The Rev. H. F. Tozer proposed, and Prof. Colvin seconded, a resolution that formal appeals for support should now be made to the universities and other public bodies.

The proceedings concluded with a vote of thanks to the right rev. Chairman, proposed by Mr. E. A. Bond, and seconded by Mr. Walter Leaf.

A remarkable difference of opinion existed among the gentlemen who ought to know best, as to the probable cost of building on Mr. Penrose's plans. Mr. Clare Ford thought that £4,000 should be allowed. Mr. Penrose himself calculated that only £3,000 should be required, while M. Argyropoulos was of opinion that £3,000 would build a far more splendid man-

sion than the school is, at present, likely to require.

It is evident, however, in any case, that the funds of the Committee are sufficient to provide an excellent house and library at least. What is now wanted is an endowment which shall, at least in part, provide for the salary of the director, the publication of full reports, and the conduct, or assistance, of valuable excavations. For these purposes the Committee continue to appeal to the public.

NOTES ON ART AND ARCHAEOLOGY.

THE first part of the Second Series of the Palaeographical Society's Facsimiles, now ready for distribution to subscribers, contains two plates of Greek ostraka from Egypt, on which are written tax-gatherers' receipts for different imposts levied under the Roman dominion, A.D. 39-163; and specimens of the Curetonian palimpsest Homer, of the 6th century; the Bodleian Greek Psalter of about A.D. 950; the Greek Gospels, codex I, of the 10th century; and other Greek MSS. There are also plates from the ancient Latin Psalter, of the 5th century, and other early MSS. of Lord Ashburnham's library; Pope Gregory's *Moralia*, in Merovingian writing, of the 7th century; the Berne Virgil, with Tironian glosses, of the 9th century; the earliest Pipe-roll, A.D. 1130; English charters of the 12th century; and drawings and illuminations in the Bodleian Caedmon, the Hyde register, the Ashburnham Life of Christ, and the *Medici Horae*, lately purchased by the Italian Government.

PROF. MASPERO has now been about a fortnight at Luxor, and proposes to remain there till the middle of March. He has begun clearing the great Temple in good earnest. The old "Maison de France," in which Champollion and Rosellini lived and worked, and in which Lady Duff Gordon spent some winters, is gone at last, with all its touching memories. So also have vanished all the Arab houses which encumbered the splendid ruins between the pylons at one extremity of the Temple and the "Maison de France" at the other. The view through, from end to end, is now uninterrupted, and this grand structure is day by day emerging from the sordid grave in which for many centuries it has been half buried. In a letter addressed to M. Miller, member of the French Institute, Prof. Maspero speaks of a Coptic MS. which he has discovered, containing, at the same time, a Greek text which seems to contain fragments of Homer.

WE understand that, since its reduction in price to 1s. 6d., the *Art Journal* has very greatly increased its circulation. Both the January and the February numbers have had to be reprinted, and the demand for them is becoming greater every day.

THE *Courrier de l'Art* intimates that negotiations are going on for the purchase, by the State, of some of the late M. Bastien Lepage's pictures.

SATURDAY, February 14, has been appointed for the private view of the spring exhibition of the Nineteenth Century Art Society, at the Conduit Street Galleries, and the exhibition will be open to the public on Monday, February 16.

THE son of M. David, of Angers, has just presented to the Angers Museum his father's last work—a sketch in clay for the monument of Arago.

WE have received the catalogue of the exhibition of the works of the late Mdme. Eva Gonzalès, now being held at Paris. It contains a pleasing etching by M. H. Guérard (the husband of Mdme. Eva Gonzalès) from the

portrait of the artist by M. Manet, and two interesting articles by M. Théodore de Banville and M. Philippe Burty.

M. AUGUSTE RODIN has been selected as the sculptor of the monument to be erected at Calais in memory of Eustache de Saint-Pierre and his devoted companions.

THIS week's number of *Society* contains a portrait of Mr. Robert Browning, reproduced by Messrs. Sprague & Co.'s process from a photograph by Mr. Alexander Bassano. We are not quite disposed to say, in the language of the paragraph obligingly sent us for insertion, that "the softness and delicacy of the portrait are simply perfect"; but the likeness is excellent, and the reproduction is smooth and pleasing.

MR. HENRY CLARENCE WHAITE has been elected the first president of the Royal Cambrian Academy of Arts.

THE STAGE.

"AS YOU LIKE IT" AT THE ST. JAMES'S.

IF "Romeo and Juliet" had not been quite lately produced at the Lyceum, with an incompetent Juliet and an impossible Romeo, it might be said that of the recent Shaksperian revivals, that of "As You Like It" at the St. James's is the weakest. As it is, however, that can hardly be the case. Nor for such weakness as the spectator becomes conscious of as he sees the performance of "As You Like It," will he be inclined to blame only the principal interpreters. Heretical as it may be to say so, it is the weakness of "As You Like It" itself as an acting play—it is its inability to engross the attention of an audience during an entire evening—that is most apparent. "As You Like It" is a picturesque literary comedy that hardly gains anything at all by representation on the stage. Its quaint conceits and its poetic fancies are eminently of the kind that may be relished in the study. Its characterisation is insufficient to interest us profoundly in the fortunes of its *dramatis personae*, and its plot is at once too alight and too unreal to engage an undivided notice. Furthermore, it does not even offer a very ample field for the scenic display, without which it is not now the fashion to present the plays of the master of our drama. There is not change of place enough in the course of the play; or if the places are various, they are most of them too much alike. One wears pretty soon of the sylvan landscape wherein passes the action of the comedy, because sylvan landscape is just that which the artists of the theatre present with the least success. The scene painter, or rather the stage-decorator—for he it is who is in request much more than the painter—is greatest in interiors. Next to that he is greatest in stately and ordered gardens. But when it is the woodland that he is asked to arrange for us, especially on a stage small as that of the St. James's, and for such a piece as "As You Like It," we feel that the work, however prettily performed, would have been accomplished more triumphantly at Drury Lane. It would have been better done by Mr. Augustus Harris, the monopolist of pantomime.

Still, with all these drawbacks—and I have not exhausted the list of them, for the performance is too full of music, which is not quite exquisite, and of dancing which is not

first-rate—with all these drawbacks I say, it is possible to take pleasure in the St. James's interpretation, quite a mild pleasure, though—it moves one to but very moderate ecstasy. Orlando does not give Mr. Kendal a fair chance of impressing us; Rosalind, however various be her humour, does not afford full scope to Mrs. Kendal; Touchstone, on the other hand, is perhaps a little too much for Mr. Hare—the part has been played to satisfaction by only one actor of modern days, and to say that is to name Mr. Compton. Still, it will be readily understood that over and above certain players not yet spoken of, the players I have just mentioned have their merits. Mr. Kendal is habitually manly and sincere, and if as Rosalind Mrs. Kendal cannot be novel any more than she can be profound, it is at all events easy for her to be charming. The comedy of the situations she thoroughly realises and expounds, and it is not within the power of any actress to give additional beauty to the piece's evanescent poetry. But Mrs. Kendal is sometimes really simple, and is often arch and delightful. And, of course, Mr. Hare plays Touchstone with a thorough intelligence, if with little variety. Mr. Hermann Vezin, Mr. Maclean, Miss Webster, and Miss Lea are the remaining persons of whom note must be made. Miss Lea is absolutely new to the stage, it is announced. If that be so, she was born to act, and particularly to act Audrey. Her appearance is full of an engaging simplicity; her performance is of a well-advised stupidity hardly less becoming. She moves about with ease and pleasantness, and laughs like Jeanne Samary. Miss Webster is an excellent Phoebe. Jaques is played by Mr. Hermann Vezin. Is it a bit of old stage business, or is it a fresh thought of Mr. Vezin's own—for it is long since I saw the piece till now, and truly I forget—that the aged Adam in his moments of decay and helplessness shall be assisted chiefly by the professed cynic? Anyhow, it is an excellent motion, and one of the few illuminations thrown by the stage on "As You Like It." And, on the whole, Jaques is played excellently by Mr. Vezin. The part lies well within the limits of his powers. Mr. Vezin is a little dry. Emotion is somewhat foreign to him, and so is hearty and overflowing comedy. But such a character as that of Jaques he can perform to perfection; for his bearing has at need a simple courtliness; his air, if it is not enthusiastic, is often kindly, and he is a skilled master of elocution, to whom the speech of the "Seven Ages" offers no stumbling block. Mr. Maclean's Adam is among the best things of the performance. It is a very touching portrait of the faithful and decrepit servant—a portrait wrought by an artist of ripened powers, whose skilful labour is concealed under the guise of spontaneity. The representation of "As You Like It" is thus, perhaps, proved to be just interesting enough to witness; but there is nothing whatever in it that could justify a lavish eulogium, and the sooner the great actress of the English theatre returns from this comparatively ineffective comedy to the emotional parts in which reside her fullest opportunities for triumph the better pleased will be at least the most discreet of the admirers of her art.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

SATURDAY, January 31, was the eighty-eighth anniversary of Schubert's birth, and the event was commemorated at the Popular Concerts. Schubert's name is so frequently to be seen on programmes that it appeared hardly necessary to call special attention to it. But if noticed at all it should have been noticed thoroughly. Half a programme was not enough: the name demanded all or none. The Quintet in C (op. 163), admirably interpreted by Mdma. Norman-Néruda and Messrs. Ries, Straus, Pezze, and Piatti, is certainly one of the master's noblest contributions to musical art; but there are other instrumental works, such as the Quartet in G (op. 161), the pianoforte Quintet (op. 114), and some of the pianoforte sonatas, which are seldom heard, and one, or more, of these would, therefore, have proved particularly welcome on this occasion. And then the songs: what a mine of wealth still unexplored! Yet Mr. E. Lloyd sang only the "Sei mir gegrüsst," a short though charming *Lied*: the accompaniment deserved more careful playing. Mr. Max Pauer made his second appearance, and performed the Impromptus in F minor and E flat major (op. 142 no. 1, and op. 90, no. 2). The first was beautifully interpreted; the execution was clear and in every way satisfactory, and, besides, the pianist showed taste and good feeling. The second was turned into a presto movement, and suffered accordingly. Mr. Max Pauer has strong and agile fingers, but if he wants to show how quickly he can play, he should select some other piece. He was much applauded, but wisely refused the *encore*. The second part of the programme included a sonata for violin by Tartini, and Beethoven's pianoforte trio in G (op. 1, no. 2).

On Monday evening, Brahms' Sextet in G (op. 36) was performed by Mdma. Norman-Néruda and Messrs. Ries, Straus, Zerbini, Pezze, and Piatti, who all did full justice to this noble work. The slow movement, with its various and free metamorphoses of the leading theme, reminds one of the plan adopted by Beethoven in his later quartets. The simplicity and freshness of the themes of the opening and closing movements and their effective treatment so charm the listener that he is sometimes apt to forget all the skill and science which they contain. Brahms, like Schumann, gradually won his way into popular favour. This sextet, only introduced in 1879, has already been heard seven times.

Miss A. Zimmermann played for the first time at these concerts a Fantasia con fuga in D, by Bach. The fantasia consists of several short sections, some in fast, some in slow time. In the

F sharp minor section there is some elaborate counterpoint and interweaving of themes. The concluding fugue "flutters away on wings as light and airy as those of a butterfly." The piece, a difficult one, was interpreted with faultless precision. Mr. Thorndike, who was in good voice, sang with great taste and charm, Handel's "Tyrannic Love," from Susanna, and received quite exceptional applause. The second part of the programme included Schumann's pianoforte trio in D minor, Schubert's B minor rondo for piano and violin, and songs by Lassen and Mand White. The attendances at both concerts were very good.

The Monday programme-book contained an article entitled "Bach and Handel." As usual, in these books, the date of Bach's death was incorrectly given. But the statement that it was entirely the fault of Handel that Bach and he continued strangers to the last was a most unfair one. Twice the "Saxon giants" seemed on the point of meeting. The first time, in 1719, Bach arrived at Halle just after Handel had left for England; this failure to meet, so far as we can judge, was the fault of Bach. The second time, in 1729, neither was to blame: Bach was too ill to go and visit Handel at Halle, and Handel's mother was too ill for him to leave her and go to Leipzig. The most that can be said is, that at first Bach seemed more anxious to make Handel's acquaintance than Handel Bach's; and naturally so, seeing how the fame of Handel had spread through Europe already in 1719, when Bach was only Capellmeister at the small and modest court of Prince Leopold of Anhalt-Cöthen.

The performance of the "Rose of Sharon" last Wednesday evening at the Albert Hall was not a brilliant success. Mr. Barnby's choir is a fine one, but Mr. Mackenzie's difficult music had evidently not been sufficiently rehearsed. Of the principal solo vocalists, Miss Griswold was the least satisfactory; the notes were not all correctly sung, and there was a total absence of warmth and passion. Miss Hilda Wilson interpreted the contralto with good taste and great intelligence, and the public was right in bestowing on her the most applause. Mr. Barton McGuckin ably interpreted his part. Mr. Watkin Mills, who has a voice of pleasing quality, sang in a promising manner. We could not always agree with Mr. Barnby's *tempi*. The duet in the first part was dragged, the instrumental movement, "Lebanon," was too fast, and so also was Solomon's song, "Thou art lovely." The fine chain of choruses in the second part of the work was sung in a mechanical and, for Mr. Barnby's choir, feeble manner. The attendance was very good.

J. S. SHEDLOCK.

MR. T. FISHER UNWIN'S LIST.

CHARLES DICKENS as I KNEW HIM: the Story of the Reading

Tours in Great Britain and America (1866-70). By GEORGE DOLBY. Crown 8vo, 6s. (post-free).
"Is pleasant and unpretentious. . . . His account of his experiences is interesting in a very high degree. It will be welcome to all lovers of Dickens for Dickens' sake."—*Athenæum*.
"The humour, vitality, and what in most men might have degenerated into fussiness, of the owner of Gad's Hill, are exhibited with a devotion of more than Boswellian intensity."—*Contemporary Review*.

THE CHANCELLOR of the TYROL. By Herman Schmid. Translated

by DOROTHEA ROBERTS. 2 vols., crown 8vo, 21s. [Just ready].
"Full of fresh and uncommon interest. . . . Translation is seldom accomplished with so much success and so little trace of effort."—*Daily News*.

ICHABOD: a Portrait. By Bertha Thomas, Author of "The Violin

Player," "Life of Georges Sand," &c. 2 vols., crown 8vo, 21s.
"There are fine things in Miss Thomas's story. . . . Miss Thomas has drawn her chief character with striking individuality, and there are many parts of her story which are unquestionably clever."—*Academy*.

THE LOTHIAN PRIZE ESSAY, 1884.

THE ART of WAR in the MIDDLE AGES, A.D. 378—1515. By C. W. C.

OMAN, B.A., Fellow of All Souls' College, Oxford. Crown 8vo, 8s. 6d. (post-free).
"Mr. Oman has written an interesting book."—*Saturday Review*.

LONDON: T. FISHER UNWIN, 26, PATERNOSTER SQUARE, E.C.

SATURDAY, FEBRUARY 14, 1885.

No. 667, *New Series*.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Reminiscences, chiefly of Towns, Villages, and Schools. By the Rev. T. Mozley. In 2 vols. (Longmans.)

ONE can scarcely regret that Mr. Mozley should have fallen into his anecdotalism, when the fruit of it is an entertaining book like this. The reminiscences extend over more than half a century, and are none the less interesting because they are chiefly of places and people unknown to fame. We have been rather overdone lately with recollections of courts and cabinets, and are glad to listen to some one who can tell us pleasantly and faithfully how the past generation walked the humbler paths of life.

Mr. Mozley's memory is not, indeed, altogether faultless, and in the introduction to these volumes he explains how some of its lapses took place; but on the whole it is vivid and quite as accurate as the modest purpose of the author demands. It is really of no great importance that Mr. Mozley writes, for instance, Cluddesdon for Chaddeesdon, or uses a "k" in Murdoch instead of an "h." No one is likely to resort to his *Reminiscences* as an infallible authority for names or dates, but certainly no one will be disappointed who seeks in them a faithful and graphic picture of a past of which the traces are rapidly vanishing away. A man's power of memory (or imagination) must unquestionably be strong which can see in the marked features of the Premier and the late Primate "the two beautiful angelic, or rather cherubic, faces looking upwards from the foreground of Raphael's Madonna di San Sisto."

The autobiographical parts of Mr. Mozley's volumes are scattered rather promiscuously over its pages, and we may say, once for all, that there seems no particular reason why the first chapter should not have come last and the last first. But the interest in them is not impaired by their absence of arrangement, which seems rather to harmonise with the generally discursive character of the book. The Mozley family had, however, a beginning. The name suggests a Saxon origin and, says Mr. Mozley, "describes the wide, spongy, irregular lane or green, forming the approach to a village, much cut by wheel-tracks and potted, or trod into 'pockets,' by cattle." The term "ley" is rather what in Canada would be called a "clearing," and in the West Midlands we often find it joined with the Saxon proprietor's name, e.g., Kinnersley or Kinward's ley. Who first bore the name which the author has done his share in bringing into notice, it is, of course, impossible to discover. One William Mosley was constable of Conisborough Castle, in the reign of Edward III., and another Mosley—great-grandfather of the writer—lived beneath

the shadow of the same castle a century and a half ago. Whether the latter, who exercised the craft of weaver, was a descendant of the former, does not appear, and the presumptive evidence which the following incident offers may not have much value with a professional genealogist:

"A good many years ago I was walking down St. James's Street one afternoon, when I saw Denison and Woodgate walking up arm in arm. 'These fellows have been lunching,' I said to myself. The instant of our encounter, Denison exclaimed, for me to hear, 'Here comes Mozley. Doesn't he look like a policeman?' As far as I can see myself, I think I might be imagined 'a detective.'"

Be that as it may, Conisborough was undoubtedly the *cunabula gentis*, and Henry, one of the weaver's fourteen children, deserted it early in life, and struck out for himself a new course which led to comparative affluence. He settled down at Gainsborough, where business in various forms occupied his attention, and he seems to have been successively attorney's clerk, schoolmaster, accountant, grocer, mill-owner, and bookseller. He it was who changed the spelling of the name from Mosley to Mozley, and by his last commercial venture established the fortunes of his family. His son John added printing to the bookselling trade, and left, at his early death, a large and flourishing business, which was transferred in 1815 to Derby, where it was still further developed.

The author's own reminiscences of Gainsborough are necessarily faint, for he quitted it when only nine years old. But his father's recollections of the place are transmitted to and through the son, and they enable us to form a very clear conception of the dull life of a country town seventy years ago. "One advantage" of such life "is that, if the future is slow in coming the past is never quite gone. In fact, you do not always know whether you are in the past or in the future, for in the present you certainly are not." The friction of mind with mind under such circumstances was not likely to be great enough to produce any sensible effects, and the removal of the Mozleys to Derby was doubtless as good for their mental as for their material advancement. In Derby there was a good deal of really intellectual society, into which the immigrant family freely entered, and all its members must have derived advantage therefrom. The grammar school, it is true, did not afford much of an education, but through the advice and interest of Dr. Sampson Thomas Mozley was very soon transferred to Charterhouse, which he entered in 1820.

The description of his school life is one of the best parts of the book, and will be read with keen interest by many who have not had the good fortune to be Carthusians. Mozley's entrance was characteristic of the period:

"Half-way to the Green I met a big gown-boy. He was out of bounds himself, and was surprised to meet a very young stranger coming that way. He stopped, and said rather brusquely, 'What's your name?' To which I replied, I cannot conceive why, 'What's that to you?' He instantly administered a very severe thrashing, which was quite a novelty to me, indeed, something beyond my comprehension. I crept back to my house in a very sad plight, sobbing and shedding floods of tears."

His progress, however, was rapid, although he describes himself as slow and awkward—more so than any of his brothers—and decidedly provincial. The school system was much the same as prevailed (and still prevails) elsewhere. If a boy wished to learn, he could do so; if he made up his mind not to learn, that also was open to him. Floggings were frequent, but floggings will not make the idle industrious. In fact, as Mr. Mozley says, "the human mind, with the experience of some thousand years, has never yet discovered how to make a boy learn if he is resolved not to learn." But Charterhouse stood high in popular favour, and under Dr. Russell the numbers at one time rose from 300 to nearly 500. As the staff of masters never included more than eight, the opportunities for shirking work were large. Had the head master divided his attention ever so equally, he could not have given more than two minutes to each boy in the upper school, and, of course, such a thing as individual instruction was out of the question. Still, somehow or other, Mozley did learn a good deal—more than he was aware of—and the more genial atmosphere of Oxford quickly matured the development of his mental powers. How vast was the difference between the upper school at Charterhouse and the Oriel lecture rooms must be expressed in his own language:

"The class rooms of the Oriel tutors were heaven to me. Their soft voices and gentle manners; their patient waiting; their unobtruded, but careful and effectual guidance, all contributed to the impression that you were now higher in the scale of creation. . . . I hope not to be accused of either profaneness or of gross conceptions, when I say that I never contemplate the great change every day nearer without being reminded of that first week at Oriel, and the calm and peaceful atmosphere of the university."

Upon Mr. Mozley's memories of Oxford there is no need to dwell, for they formed the subject of his previous volumes. There is more of novelty to be found in what he has to tell us of the scenes of his clerical life. Moreton Pinckney—his first incumbency—must have been from some point of view a desirable place, for Tyler, of Oriel, had held it and Keble had wished for it. But the picture of it drawn by Mr. Mozley as he found it in 1832 is the reverse of attractive. "The parish flowed with milk," but not with honey also; and a vicar who had other interests beyond butter-making, calf-rearing and pig-fattening, met with little encouragement from his surroundings. The whole labouring population were paupers, and every month were apportioned among the larger ratepayers. "The appropriation was sometimes disagreeable to the master and to the man, and it was no uncommon thing for master and man to begin or to terminate a month's association with a fight on the green." The system was as bad as bad could be. The payments bore no relation to the work done or the mode of doing it, but were regulated wholly by age, condition and circumstances. As an unmarried labourer, no matter how strong or industrious, could only receive a shilling a day, there was a direct inducement to him to marry as early as possible in order to obtain "head money," which he might spend—and usually did spend

—upon himself. The children were often half-starved and half-naked and the mothers no better off. The supply of labour was far in excess of the demand, and "right social feeling was impossible where man was a weed, a curse and an enemy, possessing more power of mischief by doing nothing than he could have won by doing all he could." We have seldom seen a more intelligible account of the evil results of the old poor laws than Mr. Mozley has given us, and one cannot doubt that their reform brought with it an amelioration in the country parson's lot.

We have not space to follow Mr. Mozley from Moreton Pinckney to Cholderton and from Cholderton to Plymtree. The parochial annals of these places are not eventful, but they are told by him with much shrewdness of observation and no little humour, and the portraits which he draws of his clerical neighbours and chief parishioners are—we can well believe—thoroughly life-like. That the writer should have been advanced to no higher step in the hierarchy than that which a Rural Dean enjoys, may puzzle those who are ignorant of the laws of clerical promotion. But no party in the Church could claim Mr. Mozley as its own; by none could he be regarded as "safe" or "sound," and, to use his own phrase, he has been throughout life "rather multifarious." A clergyman is permitted to relax his mind and exercise his body in a variety of ways, but if he desire to win the substantial prizes of his profession, he must, above all things, abjure journalism. Now and then, perhaps, an exception may be made; but it will be in favour of one who has used his opportunities to advocate some special development of religion, and has made the press his tool, instead of being made (as the dispensers of patronage assert) the tool of the press. In Mr. Mozley's case the readers of these eminently readable volumes will easily discover some additional barriers to success. If such has not been gained by him within the limits of his profession, he may console himself with the approbation of that larger world which here and elsewhere he has favourably impressed.

CHARLES J. ROBINSON.

Rhymes à la Mode. By A. Lang. (Kegan Paul, Trench & Co.)

It is a comforting thought, even to critics who care for poetry, that, however they may choose to define it, poetry refuses to be defined. Wise critics agree that this and that mark are necessary to true poetry, and that any produce which does not exhibit them cannot be accounted genuine; but wise poets go on with their singing, and take "little heed, howe'er the thoughtful critic fret," and the wise world listens or not, just as it is pleased or not. And surely that is the proper course—to take what a poet gives us and be thankful for it, without complaining that it is not something else; because poets are attracted by different things in the universe, and the universe is wide, and there is beauty enough for all, only we shall ask that what the poets choose to sing about shall be interesting, and that they shall be content to sing in a natural voice of their own, and not in a fashionable falsetto.

One great charm of Mr. Lang's poetry is the naturalness of it. The voice and the hands alike belong to him. He sings only about what interests him, but about that he sings most musically, and makes no further pretension. Nay, as if to warn away those who might come to him as a seer or subtle-souled psychologist, he gives to his volumes disparaging titles—*Ballades in Blue China*, *Verses Vain*, *Rhymes à la Mode*. He thus, for the most part, abjures what Mr. Arnold has called "criticism of life"; and this is the less to be regretted since, if we may judge from one piece in this volume, where such criticism is introduced, it would not take the form which Mr. Browning tells us it ought to take—the revelation of "the universe in its actual state of perfection in imperfection"; but would add to that most dolorous of all literature—the poetry of pessimism. These are the concluding lines of Mr. Lang's "New Millennium":

"Nay, the old order shall endure,
And little change the years shall know,
And still the Many shall be poor,
And still the Poor shall dwell in woe;
Firm in the iron Law of things
The strong shall be the wealthy still,
And (called Capitalists or Kings)
Shall seize and hoard the fruits of skill.
Leaving the weaker for their gain,
Leaving the gentler for their prize,
Such dens and husks as beasts disdain,
Till slowly from the wrinkled skies
The fireless frozen Sun shall wane,
Nor Summer come with golden grain;
Till men be glad, 'mid frost and snow,
To live such equal lives of pain,
As now the huddled Eskimo!
Then none shall plough nor garner seed,
Then, on some last sad human shore,
Equality shall reign indeed,
The Rich shall be with us no more,
Thus, and not otherwise, shall come
The new, the true Millennium!"

For the most part, however, Mr. Lang is satisfied to forego criticism, and gives us instead pictures of life as men live it and pictures of the world as it appears. This living life—the taking the sad and the glad as they come—seems to be, so far as we can gather it, the philosophy of his Muse. We remember that he once wrote a poem which set forth the "Vanity of Melancholy," by the tale of certain Greeks who would not be happy while they might, and despised both Phaeacia and its treasures of art, and Circe and her delights, and "let the spring go by because the spring was swift to fly," and so came to no good end. And in a lighter vein the same envoy is attached to his "Ballade of Middle Life"—

"Oh, foolish youth, untimely wise!
Oh, phantoms of the sickly mind!
What? not content with seas and skies,
With rainy clouds and southern wind,
With common care and faces kind,
With pains and joys each morning brought?
Ah, old, and worn, and tired we find
Life's more amusing than we thought!"

We have, therefore, in this volume, as we should expect, poems both grave and gay. Of the poems of laughter some of the best are to be found in the sections "Art" and "Science." "Art's Martyr" is the piteous tale of a young man of culture who went to Borneo to be tattooed in blue, but European commerce had preceded him and he was treated with debased designs.

"Thus never more to Chelsea might
The luckless boy return,
He knew himself too dreadful, quite,
A thing his friends would spurn,
And turn
To praise some Grecian urn!"

The short line in this poem recalls an old friend, the "Ballade of Ouida," which we do not find here. "The Palace of Bric-à-brac," written in the metre of the "Garden of Proserpine," and the Rondeaux of the Galleries are both "in very gracious fooling." Under the head "Science," we have "The Barbarous Bird Gods"—a chorus from some unhellenic *Æves*; "Man and the Ascidian," a morality, and a "Ballade of the Primitive Jest." The science thus illustrated would seem to be the broad and general science of anthropology. Of the ballades, those that delight us most are the "Girton Girl" ("her forte's to evaluate π "), "Cricket," with its refrain from Mr. Swinburne, and "Railway Novels" (Miss Braddon and Gaboriau). These have all Mr. Lang's "inevitableness" of rhyme and rhythm in ballade writing. The "Ballade of Neglected Merit," on the other hand (which might well have a pendant since the recent ballot for fame in a "cultured evening" contemporary), seems written "boldly off" just as the rhymes suggested themselves. Of the graver poems, the dream of the "Fortunate Islands" certainly carries the palm. It is an example of a kind of work of which Mr. Lang seems fond and in which he excels—work often expressed by the word "after," in which the motive is borrowed from some older source and treated anew. This, then, is after Lucian. The interest of such work lies not so much in the design as in the exquisiteness of the workmanship, and Mr. Lang is an exquisite workman. Here are a few lines chosen at random:

"There sat three Judges by the Gate,
And I was led before the Three,
And they but looked on me, and straight
The rosy bonds fell down from me,
Who, being innocent, was free;
And I might wander at my will
About that City on the hill,
Among the happy people clad
In purple weeds of woven air,
Hued like the webs that Twilight weaves
At shut of languid summer eves,
So light their raiment seemed; and glad
Was every face I looked on there!"

The other longer poem, "The Last Maying," we should judge to be an earlier poem of Mr. Lang's, the work of a time before his own style had clarified. It owes more to Mr. Swinburne than the metre and the prose quotation which is no quotation, daring even to speak of lips as "wan from wild caresses" in quite the most fearless of old fashions. Still it does contain a word which has grown to be as much Mr. Lang's personal property as "wan" used to be Mr. Morris's—the word "grey" with "green" not far removed: this may be due to a re-touching, or the poem may be classed as a poem of transition. "Almae Matres" celebrates "a land of waters green and clear," and "a little city worn and grey." It is perhaps, on the whole, the most powerful and beautiful poem in the volume. It will be pleasant reading to Oxford-men; but dear to those of them who were first suckled by S. Andrew's, and say with Mr. Lang "Vetus melius est." If we were writing an essay on Mr. Lang's genius, in the manner of M. Taine, this poem would give

us much to say on the double stream of tendency which has given to Mr. Lang's poetry a colour too expressive to be merely "green," too lovely to be altogether "grey." But though Mr. Lang's patriotism is thus divided, he has only one fatherland, and to that he is faithful against the world. To him Ettrick and Teviot, rivers of Scotland, are better than all the waters of Greece and Italy, and the kingdom of Galloway, "with the smell of bog-myrtle and peat," more than Arabian myrrh and frankincense. (See "The Last Cast," and the "Ballade of his own Country.") Of the "Ballade of Summer," with a double refrain ("Then comes in the sweet o' the year, When fans for a penny are sold in the Strand"), we can only say with Vadius, whom Mr. Lang quotes on his title page, "Hom, c'est une ballade"; it is a ballade indeed, a very flower of ballades. There are many other poems of the more pensive muse which the reader must praise for himself: "Ronsard's Grave," which recalls Herrick, "From the East to the West," "Love the Vampire," *Νήμεος Αιών*, the last a poem not easy to forget.

There remain for notice the sonnets and the translations. Mr. Lang's sonnets are sometimes apt to be too like ballades. Their movement is scarcely deliberate enough; the pause falls too constantly at the end of the line; they even admit now and then what approaches epigram. "San Terenzo" escapes this influence, and so is the better sonnet. The two sonnets in octosyllables are as successful in form as their subjects are charming; we can hardly say as much for the trisyllabic ones. The octaves run all right, but the sestets read a little like baby poetry. The "Cameos," it is needless to say, are very delicately engraved. They are, as Mr. Lang says "pretty close" to the original; but they are not very close, or rather, it would be truer to say that Mr. Lang has been all through more careful to translate the spirit than the phrases.

H. C. BEECHING.

Europe. By F. W. Rudler and Geo. G. Chisholm. Edited by Sir Andrew C. Ramsay, with Ethnological Appendix by A. H. Keane. (Stanford.)

I HAVE already expressed my opinion of the general merits and demerits of the English version of von Hellwald's *Die Erde und ihre Völker* of which this is the sixth, and presumably the last, volume. The present instalment has all the merits and some of the demerits of the series to which it belongs. But while the former are more abundant than in any of its predecessors, the latter are reduced to a minimum, and, when not eliminated from the German basis on which Messrs. Rudler and Chisholm have built, may be regarded as inseparable from a work which, I still think, might have been permitted to remain in its original language without geographical science suffering any irreparable loss. This, however, is now, for all practical purposes, a superfluous criticism. A more agreeable duty is to state our belief that, taking it as a whole, the final volume of the "Compendium of Geography and Travel" is the best of the treatise, and in some respects, indeed, is comparable with the very best works on the same region, in no matter what

language; though, when one remembers that among the almost endless documents which are chronicled in the annual "Registrande" of Berlin, Peschel's *Staatenkunde*, and Mr. Webster's admirable digest in the *Encyclopaedia Britannica*, must be included as contributions to the literature of European geography during the last four or five years, it might be extravagant to pronounce the concluding portion of Mr. Stanford's venture altogether without a rival. In re-writing the book for the English reader, the editors have had at once an easier and a more difficult task than their colleagues in the earlier *fasciculi*. In the first place, the European section of von Hellwald's book was much superior to those on regions with which he was personally unfamiliar, and in some instances, treating of countries so well known as Germany, Holland, Austria, Scandinavia, and England, the Baron becomes sometimes almost lively and generally instructive. He is describing kingdoms no portion of the geography of which need be a mystery to the man who can either run or read. Yet the very superabundance of printed matter on Europe makes it difficult to crystallise out of the vast menstruum in which they are dissolved, the few hundred pages to which the editors are limited. They must pick and choose among the *embarras de richesse* at their disposal, and then, after rejecting with a sore heart many a fair fact, and abridging to a page many a goodly quarto, be, like Clive, astonished at their own moderation.

The gentlemen to whom the preparation of *Europe* has been committed have, nevertheless, proved equal to their commission. Of Sir Andrew Ramsay it is needless to say anything, except that it is to be regretted that his other engagements did not admit of his contributing more extensively to the pages over which he exercised a partial supervision. He has, however, had excellent substitutes. Mr. Rudler is one of the most accomplished geologists of the age, while Mr. Chisholm, though for the present less eminent, has already proved himself a physical geographer of rare merit, and is likely to rise in the opinion of a still wider circle by the masterly manner in which he has marshalled into shape a mass of data which might have overwhelmed a less experienced writer. The general arrangement of the book is much the same as that followed in its predecessors, though the tedious details of boundaries and so forth which gave such a school-book appearance to some of the series have been to a great extent relegated to the maps, where such facts can be gleaned to much better advantage than in the text. Here and there—as might have been expected in a work edited by three specialists—a little less geology would have been desirable, and a little more ethnography welcome, though, as a rule, the materials are very fairly distributed among the different portions of the volume—from France, which leads the van, to Turkey, which brings up the rear, no attempt being made to range the different countries into great ethnological divisions, after the manner so usefully adopted in the late Keith Johnston's geographical text-book issued by the same publishers. Statistics have been wisely thrown into an Appendix, while, as usual,

Mr. Keane assigns his valuable quota to the same secluded quarter.

In assorting a pile of facts so varied, it would be unreasonable not to expect occasional slips of the pen, and even a few mis-statements. It is, therefore, greatly to the credit of the editors that whenever their pages have been tested they have emerged from the ordeal in the most satisfactory manner. It is just possible, as I have all these years been telling a deaf world, which sticks to a good old crusted blunder with touching fidelity, that to describe Heligoland (p. 101) as being "already half-devoured by the sea" is only half-correct; while within the last three months doubts have been thrown on the current article of geographical faith which makes the North Cape the most northern point of Europe. Unless Capt. Sørensen is altogether in error, Cape Knivsjaerodden on the same island (Mageroe) is nearly thirty minutes nearer the Pole. Great care seems to have been bestowed on obtaining accurate accounts of each region; and, in general, a judicious eclecticism has been exercised in the selection of "papers" recommended to the reader anxious for further information. Still, we think Spitzbergen might have obtained more than a single line, Franz Joseph Land more than four lines, and Jan Meyen, on which there is a very remarkable volcano, is surely deserving of more than an eighth of this space? It may also be well in any future edition to see to the proper spelling of Pajkull's name on p. 206, and to remove Mr. Watts from the Peerage. The sixty cuts are, with a few exceptions, old friends, and nothing the worse for that; while the fifteen maps illustrative of the physical geography, political divisions, and languages of Europe are, so far as execution goes, absolutely faultless.

But the section of the volume which will most attract those to whom the literature of European geography is not new, is the ethnological appendix of Prof. Keane, who translated the entire treatise, which, with the exception of these ethnological appendices, he has left others to "grangeize." In thirty pages he supplies a condensed summary of the materials by aid of which "the Europeans" can be classified almost solely by their languages, though he allows with a tolerance rare in philologists that language is far from an unerring test of race. This little digest is, in the opinion of the reviewer, by far the most satisfactory of the four which have preceded it. It is not faultless, and it is not the wont of Mr. Keane to err on the side of expressing his views with too much diffidence. But dogmatism in a text-book writer is ever akin to a virtue, since it is only confusing his readers to ask them to choose between contradictory theories. It is the teacher's business to decide for his pupils what it is wisest for them to believe, for, if they are too opinionated not to accept his judgment as good enough for them, they had better be at once driven forth into the wilderness to be torn in pieces by wild professors. Mr. Keane, while adopting Wilhelm von Humboldt's Iberian theory, is discreetly silent regarding that extension of it which finds Basque blood among the Irish and English Celts. Again, while willing to recognise Sardinia, Corsica, and North-west

Italy—and doubtfully even North Africa—as Iberian lands, he is just as little inclined to fall in with the ideas of M. d'Arbois de Jubainville, who (*Les premiers habitants de l'Europe*) identifies them with the Atlantes, or with Mr. Boyd Dawkins, who is willing to accept the Caucasus Iberians as the Spaniards' kith and kin, as he is with Graslén and Bladé, who not only deny that the Basques are the descendants of the Iberians, but even scout the idea of Iberia having ever been anything but a Greek misnomer of Spain. At all events, he ignores the existence of any such attempts to disturb a good working and—it must be added—a singularly attractive theory. He is also too sound a philologist not to treat as anything better than the curiosities of ethnology Poesche's hypothesis that the Aryans were originally differentiated by a process of Albinoism in the marshy lands of White Russia about the water-parting midway between the Euxine and the Baltic. Nor, though we need not assert that the current views regarding the origin of the Indo-Germanic nations are anything like final, is it wise to discuss seriously the notions of Penka and Schrader that the Aryans dispersed from a centre in the vicinity of the Baltic—if, indeed, the recent evisceration of this hypothesis by Gustav Meyer has not given it the desirable coup de grace.

Mr. Keane separates the Italic from the Thraco-Hellenic group, basing his classification mainly, as we must do, on linguistic principles, though allowing that the Italic group is a purely linguistic division destitute of all ethnical unity. There is, indeed, strictly speaking, no Latin race, though plenty of Latin-speaking nationalities and Latin-speaking communities from Roumania to Mexico—the one being half gypsy half Dacian, the other three-fourths Indian and a quarter Spaniard, or something else. The separation of the Italic division from the Thraco-Hellenic one is owing to Mr. Keane being convinced that the "old idea" of Latin being derived from the Greek, which still "lingers in certain quarters" is utterly untenable. These "quarters" may have something to say to this somewhat ruthless dismissal of their "old ideas"; but, as they are quite able to take care of themselves, it is unnecessary to occupy space in re-stating what they have already written so voluminously. Mr. Keane's little Appendix is, however, so good, that it well deserves to form the foundation on which all future writers on European ethnology might build. Altogether, *Europe* is a most satisfactory book. We only regret that the educational series to which it belongs is closed without a separate volume on the Polar Regions, which have been so slightly touched on that a vast and interesting section of the earth is left without adequate description. Indeed, the literature of the Arctic seas and lands is becoming so profuse that before long no single writer will be able to overtake it; and a "syndicate" for the preparation of a work so extensive as a new edition of Scoresby or Richardson must be—von Hellwald's *Im ewigen Eis* being far from the ideal book—would be difficult to secure. Such an exhaustive digest must be done well or left alone, since it is not likely to be attempted oftener than once in a generation.

ROBERT BROWN.

Wide-awake Stories: a Collection of Tales told by little Children, between Sunset and Sunrise, in the Panjáb and Kashmir. By F. A. Steel and R. C. Temple. (Bombay: Education Society's Press. London: Trübner.)

We are indebted to Mrs. Steel and Capt. Temple for a charming volume of stories admirably fitted for the entertainment of children, and at the same time containing much valuable information for students. Its contents naturally resemble those of the collections previously made by Miss Frere, Miss Stokes, the Rev. Lal Behari Day, and Mr. Damant; but its authors justly claim for it the merit of special genuineness, inasmuch as "it has been mostly procured at first-hand from the lips of purely village children, who have never been inside a school," and "whose complete freedom from any European influence is beyond all question." The forty-three tales now "presented in purely literary form" have for the most part been already published in the *Indian Antiquary*, the *Calcutta Review*, and the *Legends of the Panjáb*, where they appeared in a literal version, to which reference can be made by those scholars who insist upon "a strict translation, however uncouth to English ears." But for all ordinary purposes the present volume will suffice by itself, being provided with thirty-four pages of excellent notes, an "Analysis of the tales, on the plan adopted by the Folk-lore Society of England," occupying thirty-seven pages, and fifty pages devoted to "A survey of the incidents in modern Indian folk-tales"—all testifying to the wide knowledge and painstaking industry of their author, Capt. Temple.

During the working hours of the day, says Mrs. Steel, no tales are to be heard in a Panjáb village, but after sunset comes "story-telling time." The heat is still too great for sleep, the darkness of night is relieved but slightly inside the mud-built cottages by the dim smoky flame of an oil-fed wick. So there is nothing for the children to do but to tell stories by way of passing the time. They have worked hard all day—the boys, half hidden in clouds of dust, tending the herds; the girls "kneading, drying, and stacking the fuel-cakes so necessary in that woodless country." Now has come their time for rest and amusement; so, after their scanty supper is over,

"the bairns drag their wooden-legged, string-woven bedsteads into the open, and settle themselves down like young birds in a nest, three or four to a bed; while others coil up on mats upon the ground, and some, stealing in for an hour from distant alleys, beg a place here or there. The stars twinkle overhead, the mosquito sings through the hot air, the village dogs bark at imaginary foes, and from one crowded nest after another rises a childish voice telling some tale, old, yet ever new—tales that were told in the sunrise of the world, and will be told in its sunset."

The most novel of the stories contained in the present collection is that of "Little Anklebone" (No. 14). "It appears to be unique among Indian folk-tales," says Capt. Temple, who compares it with Grimm's "Singing Bone." A boy is eaten by a wolf, which, at his request, hangs his ankle-bone by a thread to a tree. The bone maintains an independent existence, and, without changing

its form, acts like a human being, piping to beasts, and obtaining milk from tigresses and she-wolves. Another unfamiliar tale, apparently of literary origin, is "The Lord of Death," No. 27. A certain road had the reputation of being fatal to all who travelled that way. An old man who was walking along it sat down to rest, and perceived near him a scorpion, which turned into a snake. He followed it, and saw it kill many persons. Then it turned into a buffalo, and afterwards into an ox, still continuing its homicidal practices. Afterwards it became a beautiful girl, whose charms produced a fatal rivalry between two brothers. Finally, it assumed the form of a white-bearded man. Him the traveller, who had never ceased to follow close upon the destroyer, accosted, and learnt from him that he was called "The Lord of Death," because he went about bringing death to the world. Hearing this, the old traveller begged for death; but was told that his appointed time was not yet come.

No. 42 is a remarkable story about a mother and daughter who worshipped the sun, "giving everything they earned to it except two meal cakes," on which they lived. One day the daughter, who was alone in the house, had eaten her share of this food, when a beggar came asking for aid. Not liking to refuse, she gave him, in the name of the sun, half of her mother's cake. The mother returning hungry to dinner, found only half a cake to eat, and was so annoyed that she drove her daughter from her house. But the sun protected the outcast, who became the bride of a prince. Her mother found out where she was, and presented herself in her rags to the princess, intending to put her to shame; but the sun continued its protection to the daughter, and turned the mother into a golden stool. No. 40 describes a singular form of self-sacrifice on the part of a king, who was accustomed to give away a hundredweight of gold in charity every morning before breakfast. In order to obtain the necessary amount of the precious metal, he allowed himself to be fried and eaten every day by a *jaqir*, who, after the operation, restored him to life. No. 22 is a curious specimen of the stories in which women figure who are snakes in disguise. The snake-woman in this story was called in the original a *Lamia*, "said in Kashmir to be a snake two hundred years old, and to possess the power of becoming a woman," a malignant being, the nature of which has been discussed in the *Indian Antiquary* (vol. xi., pp. 230-35), and in the Folk-lore Society's edition of Comparesetti's *Researches into the Book of Sindibád*. No. 26 is one of the many forms of the tale which tells how a man becomes rich by the help of some wonder-working object, but has it stolen from him by an envious neighbour, who is eventually punished for the theft. In the present instance the miracles are due to a conch, which requires to be blown in a particular manner. The thief, not understanding how to use it, is obliged to surrender it to its original owner, but stipulates that he is to get a double share of whatever that owner obtains from it. The rightful proprietor of the conch, from a feeling similar to that which made the hero of another well-known tale ask for stripes as his reward, spitefully

prays for the loss of an eye. He straightway becomes one-eyed; but the thief, in consequence of his too grasping stipulation, loses both eyes, falls into a well, and is drowned. Nos. 31–39 give in a readable form a number of the stories about Rājā Rasālu, the chief legendary hero of the Panjāb, about whom so much information has lately been given by Capt. Temple in his *Legends of the Panjāb*, and Mr. Swynnerton in his *Adventures of the Panjāb Hero, Rājā Rasālu*.

W. R. S. RALSTON.

Egypt and Babylon. By Canon Rawlinson. (Hodder & Stoughton.)

This work may be described as an *evangelical* imitation—*longo intervallo*—of Schrader's *Keilinschriften und das alte Testament*. That popular publishers will undertake such subjects is a symptom that the subjects themselves are becoming increasingly popular, and an encouraging token of the steady progress of the Oriental Renaissance. No great harm will be done if at first, and for a long time, crude conceptions of history and language combine with imaginary necessities of theological orthodoxy to mar the course of speculation.

Canon Rawlinson's method is the simple one of citing passages from the Authorised Version, and adding his own comments *ad lib*. The first thing quoted is the fragment about Nimrod and his kingdom (Gen. x. 8–10). "Four facts," we are told,

"are recorded of Babylonia in this passage:—1, that it became at a very early date a settled government under a king; 2, that it contained, besides Babylon, at least three other great cities—Erech, Accad, and Calneh; 3, that among its earliest rulers was a great conquering monarch named Nimrod; and 4, that this monarch, and, therefore, probably his people, descended from Cush—i.e., was a Cushite or Ethiopian."

As to Canon Rawlinson's first fact, we must observe that there is no monumental evidence of a union of North and South Babylonia under one king before the time of Hammurabi-gas; but the Biblical notice names both Accad (that is, Northern Babylonia) and Erech (a town of Southern Babylonia) as included in Nimrod's territory.

Commenting on his second fact, Canon Rawlinson states that "no name at all resembling Calneh occurs in the primitive geography of Babylonia"; thus, apparently, ignoring Friedrich Delitzsch's comparison with Kulunu, in an ancient list of Babylonian towns. On the other hand, Accad is in the cuneiform inscriptions, so far as yet known, the name not of a town but of a district; unless George Smith was right in identifying it with Agadē, which Schrader questions. As to the third fact, happily for the prospects of true religion, the real personality of Nimrod is not an *artificialis stantis aut cadentis ecclesias*. Canon Rawlinson, while candidly admitting that "the third fact has not yet received any confirmation from the monuments," goes on to suggest that "the monarch had two names," one of which appears in Genesis, and the other lurks unrecognised in the Babylonian documents. This reminds us of the equally probable supposition, recently advanced, that Esau's wives and fathers-in-law,

and indeed several other personages who figure in the Old Testament traditions, had "Hittite" as well as Hebrew names. The suggestion is at least as much a "pure conjecture" as George Smith's identification of Nimrod with the Babylonian hero conventionally known as Izdubar or Gistubar. But although the name of Nimrod has not been read in the inscriptions, there is in fact a close parallel between what this passage of Genesis relates about Nimrod and what the Babylonian legend tells of Izdubar. Each is a Babylonian, each is a mighty hunter, each is connected with Erech. Accordingly the likeness has struck other scholars besides George Smith. Prof. Sayce has suggested that Nimrod is a Semitised (Hebraised) form of Accadian Amar-ud, the sun's disk (?); but Delitzsch more plausibly connects the name with Marad or Amarad, a town of middle Babylonia.

It is clear that Talmudic and Mohammedan stories about Nimrod are not historical evidence. The Biblical notice would be quite enough to set the Rabbinical imagination working, as in the instance of the story of Nebuchadnezzar and the Three Children. And the connexion of the name with various local sites is as intelligible on the theory of Nimrod's divinity as on that of his humanity. In support of his fourth fact, the author compares the name Cush with the Babylonian *Kassū* and the Susianian Cissii. Delitzsch (*Paradies*) has made the same combinations, but Schrader and others do not accept them. Solar myths about Memnon and Belus will hardly help us to a decision, in our ignorance of the movements of ancient populations; but it would not seriously affect our own faith in the unique value of the Scriptures, to find that Schrader was absolutely right in his suggestion that the "Jahvist" (or the story as it reached him) has confused the *Kassū* of the Babylonian tradition with the Aegyptio-Nubian Kush.

Canon Rawlinson next discusses Gen. ii., 1–9, remarking that

"We have here the Scriptural account of the meaning of the name Babel. The etymology was not accepted by the Babylonians themselves, who wrote the word in a way which shows that they considered it to mean 'The Gate of God.' This has been regarded by some as a contradiction of the Scriptural account; but we may reconcile the two by supposing either that the name was first given in scorn, and that afterwards a better meaning was found for it, or (more probably) that the word, having been intended by the Babylonians themselves in the sense of the Gate of God, was from the first understood in a different sense by others, who connected it with the confusion of tongues. The word is capable of both etymologies, and may from the first have been taken in both senses by different persons."

All this vague surmise and bad philology in order to avoid the harmless admission that the Old Testament writers are fond of allusive plays upon proper names, and that vernacular distortions of foreign words are as common in Hebrew as in other languages! We might as well derive our English *babble* from Babylon, or *vice versa*, as derive Babel from *bālal*, *balbel*, "to confound." The meaning "Gate of God" is established not only by the phonetic spelling, which Canon Rawlinson does notice, but also by the ideographic spell-

ing, which he omits to notice. KA. AN. RA., that is *ka dingirra*, or *ka dimirra*, is as certainly "Gate of God" in Sumero-Accadian as *bāb ili* is "Gate of God" in Assyro-Babylonian. For our own part, we have yet to learn that the inspiration of Scripture involves, among other things, infallible anticipations of the results of the very modern science of philology.

In supposed confirmation of the Biblical narrative, Canon Rawlinson quotes from the *Records of the Past* a "translation" of the fragmentary inscription K. 3,657 in the British Museum Collection. He does not stop to ask how

"... AN. RA. KI lamit ana ilkim
..... wa rabū uballu tulla "

can possibly mean

"Babylon corruptly to sin went,
(And small) and great were mingled on the mound;"

nor how "... danni tema utakkira melik-sun" can mean "he gave command to make strange their speech." If this fragment be really pertinent to the Biblical account, why has Schrader missed so striking a parallel?

We have carefully read Canon Rawlinson's defence of the old opinions about the Book of Daniel without discovering that he has added anything material to the pleas already advanced by Lenormant and others. But that story is too long to begin at the end of a short notice.

C. J. BALL.

NEW NOVELS.

Royal Favour. By the Author of "In Troubled Times." In 3 vols. (Sonnen-schein.)

The Chancellor of the Tyrol. By Herman Schmid. In 2 vols. (Fisher Unwin.)

Colville of the Guards. By James Grant. In 3 vols. (Hurst & Blackett.)

Creatures of Clay. By Lady Violet Greville. In 3 vols. (Chapman & Hall.)

Souls and Cities. By the Author of "The Cheveley Novels." (Kent.)

When All was Young. By Cecil Clarke. (Elliot Stock.)

RECENT years have witnessed an enormous development of the historical novel in Germany, in which, as a rule, historical or archaeological pedantry encumbers the action of a few bloodless lay-figures through volumes of interminable length. Works of this description have not found much favour hitherto in England. But the first effort of a young female novelist in Holland, who knows how to give fiction a historical interest without destroying its essential quality, won a hearing at once. The present translation of Miss Wallis's second venture, *Vorstengunst*, should establish her position among us, and enlarge her circle of readers. Miss Wallis has largely disengaged herself from many of the defects which blemished *In Troubled Times*. There is less diffuseness and digression, and the narrative is shorter and kept better in hand. It suffers, however, from precisely the same limitations. To give Miss Wallis's fiction a label, it belongs to the subjective historical school, and employs the method of psychological analysis. She is not a story-teller in

the proper sense of the word; but, as George Eliot avowed in her own case, frames her story to illustrate and explain a psychological problem or conception. Her characters, therefore, are not spontaneous creations, but constructions cunningly pieced together. As far as treatment is concerned, Göran Person stands side by side with Tito Melema. To this method Miss Wallis brings a close insight, a vigorous analysis, and an extraordinary ingenuity and fertility in devising effective situations. In spite, therefore, of the remoteness of the epoch, and the continual strain the book makes upon the reader's attention, it would be difficult, when once launched upon *Royal Favour*, to lay it down. The hero (or the problem) in *Royal Favour* is Göran Person, Melanchthon's favourite pupil, and the tyrannical chancellor of Eric XIV. of Sweden according to popular history. Miss Wallis's interest was early engaged by the curious inconsistencies in Person's character, which have always rendered it an enigma. Her book, though not a deliberate attempt to reverse the verdict of time, offers an alternative explanation, not wholly different from Mr. W. Story's attempt in the case of a too-celebrated actor in New Testament history. Eric's chancellor is an idealist eager to use his high powers for the advancement of humanity. At the outset of life his trust is misplaced, and his generous illusions rudely shattered. The wheel of fortune revolves, and places him in a position transcending his earlier aspirations. But Person is an unpractised student, who has drawn his enthusiasms from books, without comparing them with the realities of life. Moreover, though equally devoted to the welfare of mankind, he now looks upon individuals with suspicion, except in the instance of the king, to whose true character the glamour of old friendship and communion blinds him. The deception brings with it an inevitable train of calamities, and Person's eyes are opened just as the final catastrophe overwhelms them. Eric is scarcely a less powerful study than his chancellor, though by no means so pleasant, and of the minor figures Nils Sture is exceptionally natural and sympathetic. Without an acquaintance with the original, it is possible to infer that the work of the translator is not wholly successful. Mr. Irving has allowed the foreign language to influence and obscure his English style in more than one passage.

Dr. Herman Schmid has endeavoured to portray Tyrolean life and manners during the last half of the Thirty Years' War, when the Jesuits, working from their great seminary at Ingolstadt, were gradually extirpating the Protestantism that had struck root in the mountains, and recovering lost ground for the Church. He has achieved a fair measure of success; but the real interest of the book, which is rather overlaid with historical and social matter, centres in the relations of Chancellor Biener and Claudia de' Medici. Dr. Schmid has drawn his hero and heroine with bold touches, and among the subordinate characters Father Gravenegger is a good example of the conventional dark and dangerous Jesuit. As a narrative, however, *The Chancellor of the Tyrol* is interrupted by several detached episodes, and every now and then the author drops the main thread of

his story completely. He has crowded far more figures on to his canvas than it could well bear, and the natural consequence is that the whole presents a somewhat confused picture. On the other hand, Dr. Schmid has displayed much ingenuity in developing the intrigue which finally part chancellor and duchess, and several of the scenes possess an unusual dignity and pathos. Miss Roberts's work of translation deserves much praise; it is singularly free from Germanisms.

It is a long time now since the veteran author of *The Romance of War* began that series of tales of moving accident by field and flood which have done much to acquaint English boys with their fathers' deeds of daring and endurance. The vigour of Mr. Grant's invention is not yet exhausted, but it is impossible not to detect some signs of flagging and a tendency to repetition. In *Colville of the Guards* we have the familiar characters repeated, the *beau sabreur* who returns decorated with a V.C. after perils past, and the amiable heroine who is constant to his memory even after his name has appeared as "missing" in the *Gazette*. There are also one or two accessory personages with whom Mr. Grant is not very successful. To get rid of the villainous English baronet who has abducted Miss Ellinor Wellwood by blowing him up in a Hamburg lodging-house is a crude expedient. But we can follow the loves of Captain Colville and the elder sister with interest. Mr. Grant has selected the last Afghan War for his hero's exploits, and has introduced him into several scenes, notably by making him a member of Sir Louis Cavagnari's mission, where his name would not be found by the stricter historian. Mr. Grant so warms to the task that, as he himself apologetically allows, he is forced into a general account of the war independently of his hero's fortunes. He can plead the authority of great writers for wandering off into an episode whenever he finds an agreeable one. At any rate, his young readers will probably excuse artistic improprieties for the sake of more white-robed Ghazis, tulwars, and jizails. Mr. Grant should avoid such slips as *gendermerie* and *Epictetus*.

The title of Lady Violet Greville's novel will probably dispose the reader to expect that her characters are compounded of more than the usual admixture of human waywardness and folly. His expectations are not wholly doomed to disappointment; nevertheless Lady Violet Greville has on the whole taken a more favourable view of our common nature, even when exposed to the temptations of "society," and bent upon marrying and giving in marriage, than the title or one or two detached passages suggest. The bad people, however, are certainly bad, though it is perhaps straining our credibility a little to bring Mrs. Vincent to the brink of committing a murder. On the other hand, the good people are unnaturally good, and Julian Bruce, who plays the double part of guide, philosopher, and friend to the hero, and of general *doux ex machina*, is unreal and too inevitably providential. Miss Windermere is the most pleasant and natural of the characters who are meant to command our sympathy; but she possesses considerable inconsistency. If she was distinguished by the dignity and self-

respect we are led to believe, could she have listened to Mr. Carrol's more than egotistical proposals? The weak point, however, in *Creatures of Clay* is the main incident upon which the plot turns. The author must have been effectually driven into a corner before she admitted so improbable a makeshift as the necklace robbery and its rediscovery. For the rest, the book, except for one or two lapses into declamation, is written in a fluent, easy style, and the sketches of country electioneering and society are not devoid of humour.

Souls and Cities is a tragical, short story of the brief career of a Congregational minister in a small cathedral town. The Rev. Nathaniel Naylor was an unpractical idealist, and much above his flock. Moreover, he was destitute of common sense, and fell a ready victim to the gossip of the neighbours whom Swift would have described as having "just enough religion to make them hate, but not enough to make them love one another." He finally chastises these evil tongues in an indignant sermon (which his audience cannot interrupt), and in which he quotes from Ben Jonson, Seneca, and Fuseli, and (it is a deplorable moral) allows himself to be beguiled up to London to find a better sphere for his talents, instead of putting his hand to the plough. The author of *The Cheveley Novels* evidently keeps a commonplace book, and has drawn largely upon it. Besides the quotations given in the pulpit, we have *inter alia* sentiments culled from Hegel, Pliny, Dr. Channing, Ghenghiz Khan, M. Comte, and M^{me}. de Staël dragged in with cheerful irrelevancy.

When All was Young is a slight but simple story. The chief actors belong to that English colony in Dresden which settles there to retrench and to educate. Mrs. Juniper, a widow lady, is enabled by a singular freak of fortune to bring together a German Führer and his love, who have been parted by the usual misunderstanding, and her kindness brings her an unexpected reward. Master Harry, the pickle of the family, who alternately teases, coaxes, and "cold-pigs" his sisters, is probably drawn very closely from the life. At any rate, more than one English household is probably able to furnish a fellow to him, even in these days of over-pressure. Everybody is happy when the curtain falls, which is as it should be in fiction.

C. E. DAWKINS.

CURRENT LITERATURE.

The Poetical Works of John Keats. Reprinted from the Original Editions, with Notes by Francis T. Palgrave. (Macmillan.) If it may be thought that Keats has received something less than justice from recent critics, his admirers have at least no cause of complaint regarding the text of his poems. Within about twelvemonths there have been published in England (not to count what America has yielded) no less than three editions, each of which may be termed satisfactory. First, we had the four volumes issued by Mr. H. Buxton Forman, which were marked by the laborious collation of a scholar and the ardour of a bibliographer. Next came the handsome edition of Mr. W. T. Arnold, accompanied by a critical Introduction of much interest. And now Mr. Francis T. Palgrave, whom we take leave to call the founder of the "Golden

Treasury," contributes to that series a Keats which has a distinct place of its own by the side of the other two. While it is right that we should have an *édition définitive* of one who did not live to revise his own early works, and while no wealth of paper and binding can be too gorgeous for the author of the "Ode to a Nightingale," yet common people—for whom, after all, books are printed—may be pardoned for preferring a volume which can be put into the pocket and carried about as a familiar companion. If his predecessors had not exhausted the subject we should have been glad to dwell upon the reverence with which Mr. Palgrave has returned to the text of the original editions, and upon the sound judgment with which he has confined his own few remarks to the deliberately published writings of the poet, leaving alone the problem of the man's character. Our only regret is that it has been found necessary to use a type smaller, and therefore more trying to eyes no longer young, than in the other volumes of this series.

Tales of Old Lusitania. From the Folk-lore of Portugal by Coelho. Translated by Henriqueta Monteiro. (Sonnenschein.) Miss Monteiro has followed her translation of Consiglieri Pedros's Portuguese Tales by a selection of those of his equally distinguished compatriot, F. Adolpho Coelho. It is a pity that she has been so distrustful of her own powers as to put forth this volume without a word of preface of any kind. A few sentences concerning the author, of the position which he holds among the folk-lore of Portugal, and of the circumstances under which these tales were written or collected, would have been most welcome. As we have not the original at hand we must content ourselves with saying that these stories read well in their English dress, only occasionally is a phrase used which has too modern an air. The tales themselves are common throughout Northern Spain, but are told here more curiously than either in Galician or in Basque. Their variations show the influence of the maritime empire of Portugal: the charcoal burner, or the woodman, becomes a negro; and the tale of the "White Rabbit" reads like an echo from some ancestor of Uncle Remus. The devil is often treated in popular folk-lore much more indulgently than in theology; but in "The Value of an Egg" we have the greatest inversion we remember to have met with. He is there depicted as the defender of the innocent, the unmasker of falsehood, and the recompenser of good for evil! Infant critics to whom we have read some of these tales have been loud in their applause, and persistent in their demands for another, and yet another, hearing.

Cavalry in Modern War. By Col. F. C. Trench. (Kegan Paul, Trench & Co.) In this military handbook, the latest of the series edited by Col. Brackenbury, the important subject of cavalry organisation and training is dealt with in an able and comprehensive manner. So far as instruction in purely practical matters is obtainable from the perusal of books, very complete information is to be gained from this treatise. At the present time our cavalry arrangements are in a somewhat mixed state. For instance, the administrative unit is formed by the troop, whilst the squadron constitutes the tactical or real unit. And in order to collect a cavalry force sufficiently strong to take part in an expedition, not even directed against a European foe, the whole of the regiments quartered in England have to be thrown into confusion. It appears that during the late Egyptian War every cavalry corps that was left behind in England was denuded of effective officers, men, and horses. That a reorganisation of the cavalry arm in this country is necessary is clearly demonstrated by this book. Among other points that deserve in-

vestigation is the proportion of officers to men. In the cavalry this proportion appears to be about one to twenty-four, whereas in the horse artillery, which accompanies cavalry, the ratio is about one to forty. There is no doubt that in future European campaigns the rôle of cavalry—in respect of their function as the eyes or feelers of the army—will be capable of great development.

Letters to Guy. By Lady Barker (Lady Broome). (Macmillan.) The accomplished lady, whom we are doubtful whether to call Lady Barker, or Lady Broome, or by both names, is a pleasant and experienced writer, but she must be careful lest she degenerate into a mere bookmaker. The present little volume consists of a series of letters to her son at school in England, and were written from Western Australia, of which colony her husband, Sir Frederick Broome, is governor, during the thirteen months from May, 1883, to June, 1884. It is but seldom that letters to a schoolboy ought to go outside the family circle, and we cannot think the present series, bright and lively as it is, any exception to the rule. It is a pity the authoress does not take a little more trouble, as, with her powers of observation and description, she might give us, not only a pleasant, but a really valuable book on the colony. The present volume gives us a glimpse of Western Australia. The authoress praises the loyalty of nature, simplicity of life, and manliness of heart of the whole population; and gives an interesting account of the natives, and especially of their wonderful power of mimicry. One of the prettiest things in the book is the account of the wild paroquets in Rottnest Island, where the governor has a country house for the hot season. Lady Barker succeeded in so far taming these lovely little creatures that they knew perfectly well the time for afternoon tea, and an hour before would assemble in numbers on the trees by the house, and, as soon as the tea-table was brought out, would fly down on to the lawn for food, some of the bolder ones coming close to her feet to pick up the crumbs.

The Hundred Greatest Men: Portraits of the One Hundred Greatest Men of History, reproduced from fine and rare steel engravings. With a General Introduction, by R. W. Emerson, &c. (Sampson Low.) This volume contains no intimation that it is a reprint, though we have a distinct recollection of the book having been published, in a more expensive form, several years ago. The portraits have the appearance of being printed from worn-out plates. The hundred great men here commemorated are divided into eight classes, each class forming the subject of a "book." Introductions to the separate books have been furnished by Mr. Matthew Arnold, M. Taine, Prof. Max Müller, and M. Renan (whose name is adorned with a superfluous acute accent), Prof. Helmholtz, the late Dean Stanley, President Noah Porter, Mr. J. A. Froude, and Mr. John Fiske. Dean Stanley's and M. Renan's contributions are worth reading, but we cannot say that any of the others are very favourable specimens of the style of the eminent authors by whom they were written. Mr. Emerson's general introduction also exemplifies the writer's defects rather than his merits. The composition reminds one more of "a string of pearls" than ever, only the pearls lack the accustomed brilliancy. Here is one of them: "The Universal Man is gradually becoming a real being in the individual mind, as once the Devil was." The reader is not informed who is responsible for the biographies. The modern ones are tolerable, but those relating to antiquity seem to have been written with very little first-hand knowledge of the authorities, and contain many comical blunders. We read of a play by Æschylus called the "Oresteia,"

and of one by Sophocles called the "Trachinian Woman." In the latter case there may be a misprint, and the same excuse may be allowed to serve for the mention of a poem called the "Aenead." The article on Lucretius begins with the statement that "T. Carus Lucretius and Julius Cæsar were the only men of letters Rome ever produced." What the Universal Man (we trust there is no indecorum in the expression) the writer means by this our individual mind is unable to conceive. In the same article, Cicero is referred to as a "patrician." Taken altogether, the book will poorly fulfil the expectations which may reasonably be formed from its advertised list of contents.

Socialism in Theory and Practice: a Lecture delivered to a Working-class Audience. By Karl Pearson. (W. Reeves.) While the magazines are devoting themselves more and more to such articles only as suit the popular taste, there seems some reason to think that the old fashion may be revived of publishing original opinions in the form of the pamphlet. Among a mass of literature dealing with the prominent subject of Socialism, this lecture by Prof. Karl Pearson deserves to attract attention by reason of its definite suggestions on certain points, where most socialist writers tend to be vague. First, he insists that the reconstruction of society must be founded upon an historical basis, and that it can only be rendered secure by a renaissance of morality. Second, he urges the claims of those who work with their heads to the consideration of those who work with their hands, on the ground that both are equally necessary to the organisation of labour. And in this connexion he throws out the striking remark that "the same man might labour with his pen in the morning, and with his shovel after midday." Finally, as the most practicable mode of nationalising land (and also "most forms of capital"), he proposes that all freehold should be converted into leasehold for 100 years, with reversion to the State. We hope we have said enough to induce some of our readers to spend twopence on this little pamphlet.

UNDER the title of *The Socialism of To-Day* (Field & Tuer) Mr. Goddard H. Orpen has written a very readable translation of M. Emile de Laveleye's well-known work, *Le Socialisme contemporain*, which first appeared in 1881. The translator has appended a chapter on "Socialism in England," which seems to be written with fairness. He has also added a few notes of his own to M. Laveleye's text.

Tree Gossip. By F. G. Heath. (Field & Tuer.) Not only the Muses, but also the Hamadryads and "Pan deus Arcadiæ" himself, ought to smile upon Mr. Heath, so great is his enthusiasm for, so untiring his advocacy of, our wild trees and flowers. Here are some seventy papers, short and long, upon the most notable facts of tree-growth and tree-beauty. Occasionally, as in the short essays on Autumnal Tints and Devon Lanes in June, the writer adopts a picturesque tone naturally suited to the more poetic character of the subject. These may be followed by practical directions on pruning trees—a point on which nine out of ten gardeners are ludicrously ignorant—or by instructions how to make weeping trees, or by some historical account of such famous trees as the group of cedars on Mount Lebanon. Country lovers will find here some particulars of large trees, such as a wild cherry seven yards in girth at six feet from the ground, or a willow (*Salix alba*) which was twenty feet in circumference at five feet above the ground. We might add to this a fact, which is probably new to the writer, that we know of a rookery in a group of willow trees. Perhaps the best paper in the volume is one on the mistletoe, and the different trees on which it has been

found. Enough has been said to show the miscellaneous style of this little volume. Like all Mr. Heath's books, it will delight lovers of the country, and in the coming summer should give many "a green thought in a green shade." Mr. Heath's suggestion that a national tree-planting day, such as is annually appointed in California and Canada, when every one who possibly can, is enjoined to plant a tree, might be profitably imitated in Great Britain, is worthy of him who, more than any one else, secured Epping Forest for the Londoner.

NOTES AND NEWS.

MR. THOMSON MASON, librarian of Stirling's Glasgow Public Library, will shortly issue, by subscription, a work on the "Public and Private Libraries of Glasgow," which is likely to prove both useful and interesting to students of book-lore. Although the Libraries' Act has not yet been adopted by the citizens of Glasgow, they possess the very considerable Free Public Libraries, which are much frequented: (1) the Stirling's Library, founded in 1791, by Walter Stirling, which contains many rare and valuable works; (2) the Mitchell Library, founded by Stephen Mitchell in 1874, which already comprises no fewer than 56,000 volumes in all departments of literature. The Ewing Musical Library, preserved in the Andersonian University, is another important collection. Of the libraries of private Glasgow collectors, among those to be described are that of Mr. Wyllie Guild, which contains over 500 separate works on Mary Queen of Scots, and 315 portraits of that unhappy princess, besides a large collection of works relating to Shakspeare; that of Prof. Ferguson, of Glasgow University, rich in works on alchemy, magic, and witchcraft; and that of Mr. Alexander Young, remarkable for early editions of the old English dramatists. The edition of Mr. Mason's work is limited to 450 copies.

MR. C. J. LYALL, of the Bengal Civil Service, who is now at home on furlough, has made arrangements with Messrs. Williams & Norgate to publish a volume of translations from early Arabic poetry, some of which have already appeared in the *Journal* of the Bengal Asiatic Society. They consist partly of extracts from the *Hamasa*, and partly of entire poems, such as the *Mo'allaqah* of Zuheyr; and in the greater number of cases the metre of the original is reproduced. The book will have somewhat elaborate notes and an Introduction.

A NEW philosophical work, by Eduard von Hartmann, *Philosophische Fragen der Gegenwart*, is announced to appear very shortly.

MR. EDWARD CLODD will shortly publish through Messrs. Chatto & Windus a volume on *Myths and Dreams*, in which the place of myth in man's intellectual, and of dreams in his spiritual, development will be dealt with.

THE first volume of the autobiography of the late Dr. James Begg, of Edinburgh, is announced for immediate publication by Mr. James Gemmell, of Edinburgh. As is well known, Dr. Begg occupied a prominent position in the discussion of many of the most important social and ecclesiastical questions that have engaged attention during the last half-century.

THE first volume of Mr. Henry W. Lucy's *Diary of Two Parliaments*, embracing the Disraelian Parliament, will, we understand, be ready for publication next week. The work will be issued by Messrs. Cassell & Company.

THE Religious Tract Society will publish in a few days Mr. G. J. Shaw's book, *Madagascar and France*. The work seeks to set forth a true historical sketch of the connection of France

with Madagascar from the earliest times to the present, and also to answer various questions with regard to the country: its products and adaptability for foreign enterprise and commerce; the character and habits of its people; and their advance in civilisation and Christianity. A personal interest attaches to the work from the prominent part played by Mr. Shaw himself in many of the scenes described. The book will contain a large new map of Madagascar, and many illustrations from original sketches and photographs engraved by E. Whymper.

THE Society will also issue at the same time *An Introduction to the Books of Ezra, Nehemiah, and Esther*, by Prof. A. H. Sayce; *Galilee in the Time of Christ*, by Dr. Selah Merrill, U.S. Consul at Jerusalem; and *Wesley Anecdotes*, by Mr. John Telford.

MESSRS. WARD & DOWNEY will publish next week, in three volumes, a new novel by the author of *The New Mistress*, a story which attracted considerable attention about a twelvemonth ago. The new novel is entitled *Some Stained Pages*.

A FRENCH version of *A Mummer's Wife*, Mr. George Moore's realistic novel, now in its third edition, is about to be produced in Paris with a preface written by M. Zola. The book has been translated by M^{me}. Judith Bernard, the translator of Miss Braddon's works.

THE Société des Anciens Textes français announces for early publication an edition, by M. Suchier, of the poetical works of Philippe de Remi, Sire de Beaumanoir. Another work in preparation for this society is *Les Contes de Boscun*, a collection of stories which, it is asserted, throw important light on the origin of the *Gesta Romanorum*.

A THIRD edition of Mr. Farjeon's new novel, *Great Porter Square*, is to be brought out immediately in one-volume form.

MRS. EMILY PFEIFFER is writing an article for the March number of the *Contemporary Review* on "Women's Suffrage."

ACCORDING to the *Livre*, twenty-three new journals were started in Paris during the month of December 1884. The *Livre* gives full particulars of titles, prices, &c., from the official register.

THE "Old Boys" of University College School will hold their annual dinner at the Holborn Restaurant, on Tuesday, February 17, at 7 p.m. Mr. R. H. Hutton will occupy the chair.

IN the *Archivio storico per Trieste, l'Istria, ed il Trentino*, will shortly be published a collection of interesting documents, recently discovered, which relate to the life of Panfilo Custaldi, for whom the honour of the invention of printing has been claimed by patriotic Italians. It is not stated that these documents give any support to this claim, but it appears that Custaldi, who was a physician in Capo d'Istria, was already practising the art of printing with movable types as early as 1461, in partnership with two other residents in the same town.

MRS. H. LOVETT CAMERON will shortly publish a new novel, in three volumes, entitled *A Dead Past*.

M. LÉON SAY and M. André Theuriot are candidates for the chair of M. About at the Académie française.

HERR COSTENOBLE, of Jena, will publish in February a new three-volume novel by Robert Byr, entitled *Castell Ursani*. The same publisher has in the press *Der Verschollene*, a novel by Ewald August König.

MR. WILLIAM SHARP, the author of *The*

Human Inheritance, Earth's Voices, &c., requests us—on account of misunderstandings that have already occurred—to give publicity to the fact that he is not the author of the volume of verse recently published by Messrs. Kegan, Paul, Trench and Co., announced as "*Euphonia*;" or, *The Test of Love*. By William Sharp."

A COLLECTION of *Novellen*, by the late Wolfgang Menzel, the historian, will shortly be published, edited by his son.

THE volume relating to the early government of Manchester by its Court-Leet, which has been edited for the Corporation by Mr. J. P. Earwaker, F.S.A., is now ready for issue.

LANGE'S *Römische Alterthümer* is to be translated into French by MM. Didier and Berthelot.

A NEW novel, by Karl Emil Franzos, is to be published this month by A. Bonz & Co., of Stuttgart. It is stated that English, French, Swedish, Danish, Dutch, Russian, and Hungarian translations are in preparation.

WE understand that the articles on "The Correspondence of Sir Robert Moray" and on "James Sharp," in the last number of the *Scottish Review*, are by Mr. Osmund Airy.

THE *Magazin für die Literatur des In- und Auslandes* publishes an article by Mr. Karl Blind on the orthography of Goethe's surname. He points out that Göthe in the Frankfurt dialect means "godfather," and suggests that the poet adopted the spelling Goethe in order to get rid of the ludicrous associations excited by the signification of the name. The writer finds occasion to say a word in favour of the retention of black-letter for German books.

PROF. FRANCESCA TORRACA, well known under the signature of "Libero," is about to publish a volume of essays, entitled *Saggi e Rassegne*. (Leghorn: Vigo.) Many of the articles have appeared in the Italian periodicals.

PROF. SIDNEY COLVIN will give two lectures on Museums and National Education at the Royal Institution on Tuesdays, February 17 and 24.

THE Council of the Harleian Society had again a good record of work to give to their constituents at the annual meeting. Three hundred and sixty-nine members now remain on the roll, and of this total 169 subscribe to the register section. Within a very short time the Visitation of Bedfordshire will have passed through the press, and the printing of the Visitation of Dorset in 1623 will then be proceeded with. That of Shropshire in 1584 is now being transcribed for the press and will be pushed to a completion as soon as possible. The first volume of the Registers of St. James's, Clerkenwell, has been issued to the register members within the last fortnight, and its successors will be printed without any unnecessary delay. Another work in progress in the same section relates to "The registers of Christ Church, Newgate Street"; these have been transcribed and will be edited soon. The Marriage Registers of St. George's, Hanover Square, have been copied to 1769, up to which date they contain about 8,000 entries. The importance of these registers to genealogists cannot be over-estimated.

THE Deutsche Verlags-Anstalt, of Stuttgart, will publish this month a novel by the poet Wilhelm Jordan, which is the author's first attempt at prose fiction. The title is *Die Sebalde*.

Corrections.—Owing to some delay in the delivery of a proof, we have to note the following errata in Dr. McGrigor's review of "Palestine Pilgrims' Text Society (No. 1)" in the *ACADEMY* of February 7. P. 93, col. 1, l. 63, for "view," read "renew"; col. 2, l. 21, for "Theodorus," read "Theodosius"; col. 3, l. 5,

for "me on both," read "one or both"; l. 46, for "Cadomensai," read "Caduinensi." P. 94, col. i. l. 8, for "Makadebsi," read "Mokad-deni."

AMERICAN JOTTINGS.

AN international copyright bill, consisting of the following five clauses, has been introduced in the Senate by Mr. Hawley, Senator for Connecticut:

"1. The citizens of foreign States and countries of which the laws, treaties, or conventions confer, or shall hereafter confer, upon citizens of the United States rights of copyright equal to those accorded to their own citizens, shall have in the United States rights of copyright equal to those enjoyed by citizens of the United States.

"2. This Act shall not apply to any book or other subject of copyright published before the date hereof.

"3. The laws now in force in regard to copyright shall be applicable to the copyright hereby created, except so far as the said laws are hereinafter amended or repealed.

"4. Section 4971 of the Revised Statutes of the United States is hereby repealed. Section 4954 is amended by striking out the words 'and a citizen of the United States or resident therein.' Section 4967 is amended by striking out the words 'if such author or proprietor is a citizen of the United States or resident therein.'

"5. The proclamation of the President of the United States that such equality of rights exists in any country shall be conclusive proof of such equality."

It will be seen that the bill grants full copyright to foreigners, without any stipulation for "domestic manufacture." It has received the support of the American Copyright League, and also of the best-known New York publishers, including Messrs. Harper, Scribner, and Putnam. In substance, though not in form, it is identical with the Dorsheimer Bill, which was favourably reported on last spring by the Judiciary Committee of the House of Representatives. The subject, it will be remembered, found a mention in the recent message of the President to Congress. The present bill has been introduced in the Senate and not in the House of Representatives, because the latter body will shortly pass out of existence, while the former has a continuous life; but no immediate action is expected this winter.

MR. FRANCIS PARKMAN has presented to the library of the Massachusetts Historical Society a part of his MS. material for his series of histories of the French in North America. It consists of thirty-eight volumes, copied expressly from French and English archives and from private collections. Three volumes are filled with the private correspondence of Montcalm. Mr. Parkman, we may add, has been carrying on a correspondence in the *Nation* about the deportation of the Acadians, in which he disproves the statement that "the archives of Nova Scotia have been rifled of the documents covering the year of expulsion."

AN American Society for Psychical Research has been founded at Boston, with Prof. Simon Newcomb, of Washington, for president. For the present it will confine its attention to experiments in thought transference, and will not attempt to collect other evidence. In the *Nation* for January 15 Dr. Elliott Coues, the well-known ornithologist, suggests a physical explanation of "telepathy."

MR. GEORGE E. WOODBERRY's *Poe*, in the series of "American Men of Letters," was announced to be published in the first week of February.

THE American papers state that Mr. Austin Dobson's new volume of poems, *At the Sign of the Lyre*, will be published at New York about

March 1, several months before it is issued in England.

MR. W. M. Griswold, the compiler of the "Q. P. Indexes," has just issued a Directory of writers for the literary press in the United States, containing 350 names, based mainly upon information supplied by the writers themselves. We observe that Harvard supplies fifty-six graduates to the list, against only nineteen from Yale. No less than seventy-six were born in Massachusetts, as compared with forty-eight born in the state of New York. Among clergymen, four are Unitarian, three Congregational, two Anglican, and one Presbyterian.

THE Boston *Literary World* of January 10 contains a long defence of Margaret Fuller against the judgment passed upon her by Nathaniel Hawthorne, as recently printed in his *Life*. It is written by Mr. Frederick T. Fuller, her nephew.

IN the New York *Publishers' Weekly* of December 20, 1884, Mr. Thorvald Solberg completed his valuable list of books and articles relating to copyright.

ACKNOWLEDGMENTS.

WE have on our table:—*Leaders in Modern Philanthropy*, by Prof. W. J. Blaikie, with Fifteen Portraits (Religious Tract Society); *The Top of the Ladder: How to Reach It*, a Series of Sunday Talks with Boys and Girls, by the Rev. F. Langbridge (Cassell); *Sea Blossom: a Cornish Story*, by Mrs. J. A. Owen (S. P. C. K.); *The Religious Sentiments of Charles Dickens*, Collected from his Writings, by C. H. McKenzie (Newcastle: Walter Scott); *The Beauties of Festus*, with a Descriptive Index, by a Student (Longmans); *A Voice from the Dim Millions: being the True History of a Working-Woman*, edited by C. Despard, Frontispiece by F. Bernard (Griffith, Farran, & Co.); *The Fisherman's Text-Book*, by S. M. C. (Griffith, Farran, & Co.); *The Last Wolf: a Story of the Fifteenth Century*, by Mrs. Jerome Mercier (S. P. C. K.); *In the Watches of the Night: Poems*, by Mrs. Horace Dobell, Vols. III. & IV. (Remington); *Canada's Poet, James Gay*, with an Introduction by James Millington (Field & Tuer); *Brahmanism; or, History of Reformed Hinduism*, by Ram Chandra Bose (Bordon Hunt); *The Dilemmas of Labour and Education*, by Akin Károby (Sonnenschein); *An Important Question in Metrology*, by C. A. L. Totten (New York: Wiley; London: Trübner); *The Life and Opinions of the Right Hon. John Bright*, by F. Watt, with Illustrations (Sangster); *Forestry of the Ural Mountains*, by the Rev. Dr. J. C. Brown (Edinburgh: Oliver & Boyd); *Our Ethel: a Tale*, by M. C. E. (S. P. C. K.); *The Seven Words on the Cross, and other Hymns*, by S. M. C. (Griffith, Farran, & Co.); *Letters to a Cambridge Freshman*, by Robt. Somervell (Cassell); *Public Notices and Cautions: a Book for Youth* (Gadsby); *Blind Jem and his Fiddle*, by Mary E. Palgrave (S. P. C. K.); *Three Weddings* (S. P. C. K.); *Bob Curiman's Wife*, by the Author of "Clary's Confirmation" (S. P. C. K.); *Scarlet Anemones*, by L. T. Meade (Hodder & Stoughton); *A Good Copy*, by J. Bayford Harrison (S. P. C. K.); *All in the Sun*, by Mrs. Christophine Goddard (Dean); *The African Cruiser*, by S. Whitchurch Sadler (Griffith, Farran, & Co.); *Aunt Mary's Bran Pie*, by the Author of "St. Olave's" (Griffith, Farran & Co.); *Sunny Land Stories*, by the Author of "St. Olave's" (Griffith, Farran & Co.); *Practical Help for Infants' Teachers*, by J. E. Singleton (Jarrold); *A Practical and Philological Text-Book on the Analysis of Sentences, Parsing, and Punctuation*, by John J. Jones (Longmans); *Evolu-*

tion in History, Language, and Science: Four Addresses delivered at the Commencement of the Twenty-Fifth Session (1884-5) of the Crystal Palace Company's School of Art, Science, and Literature (Simpkin, Marshall & Co.); *A Dresden Romance*, by Laura M. Lane (S. P. C. K.); *The Way Out: Suggestions for Social Reform*, by Charles J. Bellamy (Putnams); *Dictation Exercises: a Graduated Collection of Passages extracted from the Works of Standard Authors* (Griffith, Farran & Co.); *Chambers's Graduated Readers, Book IV.* (Chambers); *Experimentum Brevisimum; or, a Concise Critical View of English Grammar, from a Mathematical Standpoint*, by Hubert T. M. Horne (Elliot Stock); *The Idyll of the White Lotus*, by M. C. (Reeves & Turner); *Handbook for Needlework Prize Associations* (Griffith, Farran & Co.); *Guide-Book for Pupil Teachers*, by James Beveridge (Chambers); *No Beauty*, by Harriet L. Child-Pemberton (S. P. C. K.); *The Man with the Knapsack*, by J. Jackson Wray (Nisbet); *An Analysis of Wit and Humour*, by F. R. Fleet (Bogue); *Scott's Lay of the Last Minstrel, Cantos iv., v., and vi.*, Edited by Arthur Patton (Dublin: Browne & Nolan); *Selections from the Essays of Elia*, Edited by Lewis A. Barry (Dublin: Browne & Nolan); *Versiculi: a Latin Elegiac Verse-Book*, by the Rev. J. H. Raven (Rivingtons); *Hygiene, Elementary Course*, adapted to the Syllabus of the South Kensington Science Department, by Thomas London (Chambers); *Sewing made Easy: Notes of Lessons on Various Stitches* (Moffat & Paige); *A Complete History of England for Junior Classes* (Blackwood); *The Mutiny of the "Albatross"*, by F. Frankfort Moore, Illustrated by W. H. Overend (S. P. C. K.); *Sweet Violets*, by M. H. Greenhow, illustrated by Gordon Browne (S. P. C. K.); *The Fine Arts and Arts of Design: their Origin, Nature, and Influence, with an Essay on Recreation*, by W. T. Ross (Glasgow: Maclehoose); *The Anatomy of Tobacco: or, Smoking Methodised, Divided, and Considered after a New Fashion*, by Leolinus Siluriensis (Redway); *An Agnostic's Progress from the Known to the Unknown* (Williams & Norgate); *The Spelling Experimenter and Phonetic Investigator*, conducted by W. R. Evans, in 2 vols. (Farrar & Fenton); *Thought Symbolism and Grammatic Illusions*, by H. Hutchinson (Kegan Paul, Trench & Co.); *The Homology of Economic Justice: an Essay*, by an East-Indian Merchant (Kegan Paul, Trench & Co.); *Lives, Great and Simple*, by Mrs. G. W. Tooley (Kent); *Heather-cliffe; or, "It's no concern of mine,"* by E. Marshall (Nisbet); *She Stoops to Conquer and The Good-Natured Man*, Comedies by Goldsmith, edited by Harold Littledale (Blackie); *Macaulay's Milton*, edited to illustrate the Laws of Rhetoric and Composition, by Alexander Mackie (Longmans); *Chaucer, the Clerk's Tale*, with Life, Grammar, Notes, and Glossary (Chambers); *Materials for Object-Lessons*, by Charles M' Rae (Chambers); *In his Courts*, by Margaret Hayes (S. P. C. K.); *The Story of a Great Delusion*, in a series of Matter-of-Fact Chapters, by William White (E. W. Allen); *Viri Illustris Urbis Romae: an Elementary Latin Reading-Book*, by G. L. Bennett (Rivingtons); *Songs and Rhymes for the Little Ones*, compiled by Mary J. Morrison (Putnams); *Martin Luther: Student, Monk, and Reformer*, by John Rae, with Six Illustrations by J. A. Vinton, engraved by W. Ballingall (Hodder & Stoughton); *Myths in Medicine, and Old-Time Doctors*, by A. C. Garratt (Putnams); *The Training of Children; or, How to make the Children into Saints and Soldiers of Jesus Christ*, by the General of the Salvation Army (Salvation Army Book Stores); *Pages in Waiting*, by Edmund Yates (Maxwell); *After Office Hours*, by Edmund Yates (Maxwell); *Introduction to the Study of History: Civil, Ecclesiastical, and Literary*, by W. B. Boyce (Woolner), &c.

A TRANSLATION.

PARTING LOVERS.

(From the Servian.)

Winding upward rose a slender vine-tree,
Winding upward round the fort of Buda.
Ah, no vine-tree was it winding upward,
But a loving maiden round her lover!
Early had the twain begun their loving,
Loving ever since their days of childhood,
Now they had to say farewell for ever.

To the maiden thus the stripling murmured:
"Three broad rivers, maiden, run before thee;
Nigh the third a garden green is growing;
In the garden blooms a tree of roses;
From that rose-tree pluck a rose, O maiden,
Lay it near thy heart, within thy bosom:
Faster than the rose-leaves fade within it,
Faster fades my heart for thee, beloved!"

To the stripling thus the maiden answered:
"Three high mountains, youth, arise before thee;
From the third there flows a quiet fountain;
Nigh the fountain lies a rock of marble;
On the marble stands a silver chalice;
In the silver chalice lies a snow-flake.
Bear away the snow-flake from the beaker,
Lay it near thy heart, upon thy bosom:
Faster than the flake of snow dissolveth,
Faster melts my heart for thee, beloved!"

WHITLEY STOKES.

THE HUNGARIAN WAR OF 1849.

THE War of Hungarian Independence was fought only thirty-five years ago, and several of the prominent actors are still alive—notably the Governor, Lewis Kossuth, and the Commander-in-Chief, Arthur Görgey. It is consequently still too soon for a final history of that interesting struggle to be written. An important contribution to the literature of the subject has just been published at Budapest. It is a volume of somewhat more than three hundred octavo pages entitled *From 1848 and 1849 (1848 és 1849-ből)*, and written by M. Stephen Görgey, the younger brother of the Commander-in-Chief. From the Preface we learn that it contains only a portion of the materials collected by the author during more than thirty years, mainly for the purpose of vindicating the fair fame of his elder brother. As an officer in the Hungarian army Stephen Görgey was by way of punishment enrolled in an Austrian regiment, but was bought out by a friend after nearly three years of service. He at once began the collection of documents relating to the war, some of which he acquired by the goodwill of friends, others in spite of his straitened means he purchased for money. These collections of documents by the adherents of the conquered cause had of course to be carefully concealed from the Austrian authorities until that tyranny was overpast, i.e., about 1865. An interesting appendix tells us how the officer who was entrusted with the destruction of the archives of Görgey's corps d'armée preferred to preserve them at his own peril. Those papers which he was able to carry about with him he succeeded in preserving; the rest, which he was obliged to trust to a non-commissioned officer, were lost. In 1865 he made over the documents he had guarded so long to his former commander, from whom they passed into Stephen Görgey's collection. After so many years spent in collecting materials it was only in the "seventies" that family cares and professional engagements left M. Görgey sufficient leisure to begin writing his memoirs, of which the volume before us is a sort of extract. A year ago he still entertained the melancholy resolution of keeping his memoirs unpublished until after his own death and that of his cruelly maligned brother. Fortunately he was led to change his mind by the Declaration, signed by 207 officers and soldiers of the Hungarian army of 1849, and presented to Gen. Görgey last November, in

which they expressed their sense of the falsehood and injustice of the charges commonly brought against their old commander. Whatever other effect that Declaration may have, it has already done good to the cause of historical investigation by hastening the publication of the memoir before us. As observed above, it is still only a fragment, as it only comes down to the deposition in March 1849 of Gen. Dembinski from the post of Commander-in-Chief of the Hungarian forces. In a second appendix M. Görgey gives us a list of sixty-seven works relating to the history of the Hungarian War of Independence in Hungarian, German and French. Two of these represent the Russian and about twice as many the Austrian account of the war; the rest are by Hungarian actors, partisans, and critics. Since 1867 the controversy appears to have been entirely confined to Hungarian writers addressing the Hungarian public. Since 1880 it has become still more active owing to the publication of M. Kossuth's memoirs.

MAGAZINES AND REVIEWS.

It is impossible to maintain an equal amount of excellence in each succeeding number of a periodical of the nature of the *Antiquary*; but we think that even when at low water-mark a higher level should be reached than we find in this month's number. With the exception of the second part of Mr. W. Carew Hazlitt's "Venice before the Stones," and Mr. G. B. Leatham's "Insecurity of English Coasts in the Past," both of which are good serviceable papers, there is really nothing that deserves criticism. The *Antiquary* should aim not at reproducing the knowledge to be found in printed books, but at adding to our store.

CORRESPONDENCE.

ARETHUSA AND ALPHEUS.

Sutton Court: Jan. 31, 1885.

I lately mentioned to a classical friend that I had seen Alpheus rising from the sea at Syracuse, and the fact seemed to him new and interesting enough to be worth telling your readers. Forty years ago I had gone in a boat to the scene of the great Athenian disaster; and outside the sea-wall, within which the washerwomen were at their work (since then, I believe, forbidden) in the fountain of Arethusa, the boatmen pointed out to me that a large stream of fresh water was welling up in the sea; and they told me that an English admiral—whom I understood to have been Nelson—had watered his fleet there. I found the stream or spring marked on an Italian map with the name of *Occhio di Zilica*. Was not this Alpheus? I have not found any recent notice of this curious phenomenon, though great scholars have described their visits to the fountain of Arethusa close by. And when, some years ago, I inquired in the *Spectator* whether any one had, like myself, seen this fresh-water spring in the sea at Syracuse, there was no answer, except that there was a like spring in the Bay of Bombay. But Brydone (*Tour through Sicily and Malta, 1774*) thus speaks of it:—

"At a little distance from the fountain of Arethusa, there is a very large spring of fresh-water that boils up in the sea. It is called *Occhio di Zilica*, and by some Alpheus, who is supposed by the poets to have pursued Arethusa below the sea all the way to Sicily. As this spring is not taken notice of by any of the great number of the antients that speak of Arethusa, it is most probable that it did not then exist, and is a part of that fountain that has since burst out before its arrival at the Island of Ortigia. Had it been visible in the time of the Greeks, there is no doubt that they would have made use of this as a strong argument to prove the submarine journey of Arethusa; as it in fact rises at some distance in the sea, and pretty much in the same direction that Greece lies from Ortigia. It sometimes boils up so strongly that after piercing the salt water I am told it can be taken up very little affected by it."

Brydone's observations correspond with my own; but I cannot agree with his inferences from the silence of the Greek writers. We know that nothing is more common than the puzzling

silence of writers, ancient and modern, as to facts they must have known, and might have been expected to record. Not that I write to explain the legend of Arethusa and Alpheus. I prefer to believe it, and to find in my recollection of what I saw, not a link with Sicilian washerwomen and English admirals, but with the days and the life when a man might

"Have glimpses that would make him less forlorn :
Have sight of Proteus rising from the sea,
And hear old Triton blow his wreathed horn."

EDWARD STRACHEY.

ODIN.

22 Rue Servandoni, Paris: Feb. 10, 1885.

The discussion which is now going on in the columns of the ACADEMY, between the most eminent exponents of Germanic lore, concerning the character of Odin and the meaning of his name, may perhaps turn some readers into sceptics as regards mythology. One says Odin is the heaven; another, Odin is the wind; according to a third, Odin is the storm. There is, by the way, no lack of etymologies; each of these opinions is supported by a learned etymology which pretends to be the genuine one. The discussion may remind the outsider of well-known speculations in clouds in the state of Denmark:

"Hamlet. Do you see yonder cloud, that's almost in shape of a camel?"

Polonius. By the mass, and 'tis like a camel, indeed.

Hamlet. Methinks, it is like a weasel.

Polonius. It is backed like a weasel.

Hamlet. Or like a whale.

Polonius. Very like a whale. . . ."

Have Shaksperian exegetes noticed that Hamlet was a forerunner of atmospheric mythology?

Prof. Max Müller's theory, although more comprehensive than the others, seems to me, in some way, henotheistic. By making everything of Odin, "the striker with the thunderbolt, the weather-god, the storm-god," and, next, by transition, "the All-Father, solemn and majestic," does not the learned professor take too little notice of *Thór* (Donar), whose empire of the storm has not been questioned yet, who may show his hammer as a proof of his rule, and throw it into the scale against all etymologies? Is not *Thór* really the Germanic thunder-god? If anything may be considered certain in mythology, it undoubtedly is that the hammer is the thunderbolt; and if *Thór*, the warrior with the hammer (*beatus possidens*!) is the thunder-god, Odin's character must originally have been somewhat different. I say originally because I do not believe in the immutability of divine characters. It is not to be denied that a concept may easily be developed out of another. When men believe in the actual presence of some god in Heaven—and by this word "god" I mean a man with superhuman powers—different and contemporaneous opinions are easily accountable. One may perceive several gods, relations, rivals, or enemies; another may attribute all phenomena in the sky to the same god. It depends on the subjective tendencies of obscure consciences. Diversity of fancies, and, therefore, of concepts—in other terms, a mythical anarchy—is customary at epochs (and also in societies or classes, in French I should say *dans des milieux*) when beliefs have not been unchangeably settled by councils or expressed in dogmas by theologians. Unity, always consistent with itself, is not in the nature of myths, no more than in the nature of clouds; and mythology is unity only when worked out by poets or by a sacerdotal caste, or by mythologists!

Let us look at those savages whom Prof. Max Müller did not think below his attention some weeks ago; let us consider the uncultured

strata of our European societies and the children. The result will be the same in the main. We shall find diversity, or henotheism as an accident in this diversity. Of course, in the struggle of myths, there is a "survival of the fittest," the survival of those myths which a clan or a society find more expressive, and coming nearer to what seems the actual circumstances of Nature.

To return to the Odin question (heaven, wind, or storm?), we may observe that phenomena which to us seem most different or even opposite may be conceived as proceeding from the same hidden cause. Are these things more contrary than the sun and the rain? and was not Victor Hugo right when he wrote, to express contrasts in life,

"La vie, hélas! dont on s'ennuie,
C'est le soleil après la pluie!"

Still, I read the other day that Samoans attribute both to the same being, the Someone in the sky: "Rain they supposed to be caused by the sun, and said that if he was a long time without giving any, some of the stars got angry, and stoned him until he caused rain to fall" (Turner's *Samoa*, p. 331). HENRY GAIDOZ.

Oxford: Feb. 8, 1885.

"Even in the 'dark ages,' as Dr. Vigfusson calls them, which followed the fifteenth century." Columbus, Luther, the men of the Reformation, ushering in the dark ages! what a statement Dr. Taylor puts down to me! What I said reads plain enough—"During the fifteenth century . . . the navigation of those days . . . that in those dark ages . . ." This puts me in mind of the first Latin word I saw; though but a little child, I see it still as if it had been yesterday—a tiny Icelandic volume, containing songs, all in black type, only one sentence in Roman type—the first, too, that I saw—*vale Pie Lector*! I looked with wistful, wondering eyes at this, as it was so nicely printed, and wanted to know what it meant; but nobody could tell me. I have learnt the secret since that day, and behold here is our old friend, *Pie Lector*, minus the gentleness, making me say a very improper thing.

But to revert to our dismal subject-matter—*Hekelberg*, *Heckenfell*, *Heklebernie*, *Heklu-fell*. The notion that the volcanoes of Iceland were the pits of hell is not of yesterday. Saxo, the Danish chronicler, writing about 1200, and the Norwegian writer of the *King's Mirror* (middle of the thirteenth century) discuss it seriously as a current opinion of their time. Misbeliefs die hard, so, still in the middle of last century, people told a famous naturalist and traveller that pitch-black ravens, with beaks and claws of iron, hovered over the crater of Mount Hecla, flying at and tearing the traveller that ventured to the mountain's top. Two centuries and a half anterior to that date there was one of the great eruptions of Mount Hecla; Old John Egilsson, the chronicler, gives an account of it from the mouth of his grandfather, who was then, thirteen years old, at the school of Scalholt, within the clear sight of the fire. Three men, he says—and he gives their names, all persons of worth and respectability—saw a king's crown in the flames; and it was computed, says he, that the King of Norway (our own king) died on that very day. This, then, was the heating of the apartments for his majesty's reception. Grim old republican Icelanders! In Sweden and Denmark "go to Heckenfield" was a favourite curse. In an old Danish hymn or song of the sixteenth century I remember having read, *horribile dictu*, of a drove or hunt of condemned souls on the way to Mount Hecla from Denmark. Satan, the drover, called Lureman, sings out, "Come, come, come you must to Heckenfield, to Hecken, to Hecken, to Heckenfield, with the swarm of souls, into the black hole." If one wants to

write *Gesta Diaboli*, here is something for him. Woden, the giver of song, is here altogether "out of court."

Observe that, in the old Icelandic annals, Mount Hecla is always called *Heklu-fell* (the full name); at the year 1430 there is a long break; but by the time of the Revival, about 1600, "Hecla," the shortened form, had obtained. The reader would bear this in mind, for Heckenfield, Hekel-berg, John of Hecklebernie's house, must needs have sprung from Mount Hecla, when it still bore its old name in full. When the Englishman, nowadays, says "Mount Hecla" he is right. In turning to the pages of Grimm's *Mythology*, I see no reason why Heckenberend and all the rest be not all of one descent. Remember this, that *heklu-maðr* (Hekelman), applied to Woden, only occurs in two late insignificant Icelandic texts; in the one instance, it is notoriously an interpolation put into an older text. Among the hundred names of Woden in Old Norse poetry there is not one whisper about "Hekla." We may dismiss it altogether. Let Mount Hecla have his due; for, though all else be small and Lilliputian about Iceland, her volcanoes, of a certainty, are not. That legends should carry the name of her most famed volcano into Westphalia, nay, even into Bavaria, and Swabia, why not? Men, even in those dark days, had fancies and demonic instincts; and volcanoes are no Crystal Palace fireworks. And now *vale Pie Lector*! G. VIGFUSSON.

MYTHS AND HOUSEHOLD TALES.

London: Feb. 7, 1885.

I am much gratified by Mr. Lang's acknowledgment that I have succeeded in giving a fair statement of his theories on mythology. My belief that I have correctly appreciated his position is further confirmed by the fact that the arguments he has brought forward in reply to my criticisms are in substance precisely those which I expected him to use. I feel, no doubt, that these arguments all admit of a sufficient answer; but whether I can present the answers intelligibly within the reasonable limits of a letter to the ACADEMY is very doubtful indeed. However, I will do what I can.

But first let me say a word as to the general character of Mr. Lang's theories. In answer to the accusation of want of method, Mr. Lang stated in a former correspondence that his aim was to follow "the method of evolution." This expression would aptly enough describe the process which a German "nameless somebody" is said to have adopted in studying the natural history of the camel; but in any other sense the phrase does not seem to me a happy one. The principle of evolution, as variously applied or misapplied, may give rise to many radically different methods. But my complaint is that Mr. Lang's theory of mythology is, in one legitimate sense of the word, the very opposite of an "evolutionary" theory. That is to say, he accounts for the origin of myths on the principle of conscious invention, whereas the theories which he rejects do at least endeavour to account for it on the principle of spontaneous growth.

My first objection to Mr. Lang's theory was that the invention of stories of "nameless somebodies" is unlikely to have been a characteristic of primitive thought. Mr. Lang replies by saying that the heroes of modern savage *Märchen* are generally nameless. Now (1) this does not prove very much. Modern savages have ages of unwritten history behind them, and there has been time enough for crop after crop of myths (and other tales about named persons) to grow up and then die down into tales of somebody. (2) It is very likely that the heroes of savage tales are not quite so frequently nameless as Mr. Lang thinks. To

a civilised collector of savage tales the names of the personages are the least interesting part of the tale; he is therefore likely in many cases to omit to ascertain or record them (unless he has a theory that the tales may be degraded nature-myths, and, therefore, the name may turn out to be significant). Moreover, the "savage," in telling his stories to a missionary or traveller, may often, very naturally, tell them in an anonymous form. I may know a story which is chiefly interesting to me as illustrating the character of some person of my acquaintance. In relating it to our common friends, I, of course present it as a story about Smith or Jones. But the story may seem to me, in itself, a good joke, and I may tell it to a stranger; and then it becomes, most probably, a tale of a "nameless somebody." Besides, in some cases, religious feeling may prevent the savage from mentioning to an unsympathetic foreigner the names of the heroes of his myths. And further (3) Mr. Lang's own statement is that the personages of stories among the Zulus are generally named; among the Bakimo, half are named and half nameless; among the Samoyeds most are nameless; and in German household tales names seldom occur. Really this progression is rather favourable, if anything, to the theory that the farther away you get from "primitive savagery" the more important does the part of the "nameless somebody" become.

Mr. Lang next urges that when children invent a story, they generally begin with the formula, "There was once a man," or "There was once a little boy." Quite so. But when children invent stories (and it is not every child who does so), they invent them after the pattern of the tales that have been told them by their elders. And to civilised elders the notion of the "nameless somebody" comes naturally enough. By the way, my own experience is that, if I tell my children a tale beginning, "There was once a little girl," it usually provokes the instant question, "And what was her name?"

But Mr. Lang says that, as against me personally, it is needless to prove that myths originated in mere tales about Somebody. I have conceded, he says, that myths have been transferred from their original heroes to others, and have undergone romantic expansion. Therefore, it seems, I am bound to admit that all philological analysis of mythic names is useless. Not quite so fast. I believe that there are many instances in which the name of a mythic hero seems to point to his being a personification of an elemental object or power, and most of the incidents of his story are capable of a reasonable explanation on this supposition. In these cases I am not prepared to set aside the obvious inference. The possibility of confusion of myths and of romantic expansion must always be borne in mind by way of caution; and that is all. To quote a parallel case: Mr. Lang may possibly believe that the maxim, *puter est quem nuptiae demonstrant*, is very far from being universally true. But he is not, therefore, logically bound to throw ridicule upon Mr. Galton's researches touching hereditary genius.

To my argument that much of ancient divine mythology must in the nature of things be still surviving in some disguised form, Mr. Lang replies, as I expected, by saying that the populace of Europe remained all through below the level of the higher mythology. In this, of course, there is much truth. I never supposed that Greek swineherds or ploughmen were well up in the Hesiodic theogony. But there is reason to think that many of the larger features of divine story were generally known, and many individual incidents were known in particular localities. And as to the inferior mythology of the Greek populace, which seldom comes into evidence in literature, there is no

proof whatever that it originated in tales of "nameless somebodies." Mr. Lang himself seems to admit that it consisted very largely of nature-myth. However, with regard to the probable extent of the survival of ancient mythology in household tales, Mr. Lang's latest statement seems, in its comparative liberality, a decided improvement upon the grudging concession he made in the Introduction to Mrs. Hunt's book.

And now as to aetiological myths, and my contention that they are "an unessential after-growth on a previously existing mythology." Mr. Lang seems to me to overlook the probability that most of what he regards as aetiological stories have originated, not so much in the sense that a natural fact required to be accounted for, as in the desire to find traces of the activity of some famous personage. Take the case (an exceptionally favourable one for Mr. Lang) of the Eildon Hills legend. Mr. Lang's formula of its origin is this: "The Eildon Hill is split in three. Who split it? Michael Scot the wizard." But even in this instance, may not the true formula just as likely be this: "Michael Scot the wizard lived hereabouts. Has he left his mark anywhere? Yes; look at the Eildon Hills." And, in the case of many such stories, the latter sort of explanation is obviously the more reasonable. Mr. Lang knows the popular accounts of the origin of the cross on the ass's back and of the thumb-marks on the haddock. It might have happened that the Gospel incidents of the ride into Jerusalem and of St. Peter and the tribute-money had come down to us merely in popular legend. Had it been so, would not Mr. Lang have disposed of both stories as being in their essence aetiological myths?

With regard to the influence of language on thought Mr. Lang says: "It was thought, the notion of all things as personal, that gave genders to language, not language that imposed an error on thought." Agreed; but let us take a concrete instance. A "primitive man," before he has spoken or heard speak of the sun, has a feeling that it is either a man or a woman, or something like a man or a woman. That is to say, the sight of the sun at one moment calls up in his imagination the picture of a man, at another moment that of a woman. But when he comes to speak about the sun, he has to make a definite choice. Suppose he elects to call it a man. The fact that he has done so once will give him a tendency to do so again; the female figure drops out of his imagination, and he believes thenceforward that there is somebody in male human form who disguises himself as the sun. Another man may have made the opposite choice, and he speaks and thinks of a sun-woman. Both conceptions might come into common tradition, or only one of them might do so. In the former event there would arise the notion of two different human beings, each of whom is in some confused way identical with the sun. I give this as one illustration of the way in which, as I believe, language has transformed the vague "notion of all things as personal" into a definite anthropomorphism. I cannot help suspecting that one ground of Mr. Lang's inability to recognise the myth-making power of language may be expressed in the classic words—

"O! for the sake of Somebody!"

If it be once granted that language has this power, then it will follow that nature-myth is competent not only to create imaginary beings, but to provide these beings with detailed biographies; and our dear friend Somebody might, sad to think, be in serious danger of losing his occupation.

It seems I have to apologise to Mr. Lang for one misrepresentation of his opinions. I said that he seemed to hold that the mythopoetic age

belonged entirely to a period long anterior to history. I now learn that, so far from this being the case, there are in civilised countries three classes of people whom he regards as living still in the heart of the mythopoetic age—namely, peasants, ladies, and persons who disagree with Mr. Lang. But, as Mr. Grant Allen says, "perhaps this is only his fun." At any rate, I thought Mr. Lang had more than once declined to listen to the evidence of the Vedas, on the ground that the date of the Vedas was long subsequent to the mythopoetic age. It appears to me that a very notable addition to the *dramatis personae* of mythology has quite recently been made, in the person of Somebody (with a capital S).

Although I do not expect Mr. Lang to admit the justice of any of my criticisms on his theory, I trust he will perceive that they have been written (as German reviewers say) *sine ira et studio*—except so far as *studium* may be taken to mean a hearty goodwill towards all who are trying to throw light on a difficult and important subject. HENRY BRADLEY.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 16, 4 p.m. Asiatic: "On the Palavas of Southern India," by the Rev. T. Foulkes.
8 p.m. Victoria Institute: "The Evolution of Religion," by Dr. Blackett.
TUESDAY, Feb. 17, 8 p.m. Royal Institution: "Museums and National Education," by Prof. Sidney Colvin.
7 p.m. Society of Architects.
7.45 p.m. Statistical: "Population Statistics of China," by Sir Richard Temple.
8 p.m. Civil Engineers: "The Metropolitan and District Railways," by Mr. B. Baker and Mr. J. Wolfe Barry.
8.30 p.m. Zoological: "Structural Characters and Classification of the Cuculidae," by Mr. F. E. Beddard; "Descriptions of the Phytophagous Coleoptera of Japan," by Mr. M. Jacob.
WEDNESDAY, Feb. 18, 11.30 a.m. British Museum: "Egyptian Antiquities," by Miss Beloe.
8 p.m. South Place Institute, Finsbury: "Oligarchy and Democracy," by Mr. J. A. Pictou.
THURSDAY, Feb. 19, 3 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
8 p.m. Linnean: "Recent Ephemeridae or May-Flies" (Part III.), by the Rev. A. E. Eaton; "Mosses of the Genus *Furidense*," by Mr. W. Mitten; "Structure of Ambulacra of Living Diadematae," by Prof. Duncan.
8 p.m. Civil Engineers: "Water Supply," by Dr. W. Pole.
8 p.m. Historical: Annual General Meeting.
8.30 p.m. Antiquaries: "On a Copy of Albertus Magnus de Secretis Mulierum printed by Machinella," by Prof. Ferguson.
FRIDAY, Feb. 20, 11.30 a.m. British Museum: "Egyptian Art," by Miss Beloe.
8 p.m. Philological: "Old-Irish Declension," by Dr. Whitley Stokes.
9 p.m. Royal Institution: "The Solar Corona," by Dr. W. Huggins.
SATURDAY, Feb. 21, 3 p.m. Royal Institution: "The Scale on which Nature works," by Mr. G. Johnstone Stoney.

SCIENCE.

J. N. Madvigii *Adversariorum Criticorum Volumen Tertium*. (Hauniae.)

THE publication of the two volumes of Madvig's *Adversaria Critica*, in 1871 and 1873, might well have seemed to mark the ingathering of "the last fruit off an old tree." But the untiring energy of the veteran scholar sufficed to carry him through yet another task, which would have overtaken many a younger man; and the comprehensive treatise "On the Constitution and Administration of the Roman State," noticed in these columns at the time of its appearance, showed that the physical affliction which had resulted in "an almost complete loss of the power of reading or writing" for himself, had done little to impair the soundness of the author's judgment, or the accuracy of his scholarship. Now, when the illustrious Dane has nearly reached his eightieth year, we have again a gleaming of the latest results of his unwearied reading.

The third volume of the *Adversaria Critica* cannot be compared in importance to either of the previous volumes. In the first place, it is less than half the bulk of either of them; and, secondly, it contains emendations on both Greek and Latin authors, so that the amount of the contributions to either literature is not very great. Then, again, even more than before, emendations have not been excluded which have been previously suggested by others, if the author hit upon them independently, or considered that they had been undeservedly neglected. On the other hand, with the exception of a single not very happy conjecture upon Juvenal, there are none of the unfortunate excursions into the field of Latin poetry which, in the case of the second volume, brought upon its writer the scoffs of many lesser men, and the crushing but not undeserved censures of Ritschl. There are no false quantities here, no open defiance of the laws of comic rhythm and prosody. For more than two-thirds of the volume Madvig is dealing as a master with Latin prose; for nearly half of it, in correcting the text of Cicero, he is on ground where some of his most brilliant successes have been won, and where, since the death of Halm, he has been without a rival among continental scholars.

On Homer Madvig proposes two conjectures, both somewhat attractive. In *Iliad* iii. 41, for the doubtful ὑπόβιον ἄλλων he would read a substantive equivalent to the later ὑπόβιον, in the sense of "disgrace"; in *Iliad* vi. 290, he would replace τὰς by τοὺς, thus making Paris bring the robes, and not the women who wrought them, from Sidon: ὑπόβιος, however, is not so indefensible in form as he supposes it to be (cf. Curtius, *Principles*, ii. 289); whether the latter suggestion is admissible depends partly on the importance which we attach to a citation in Herodotus. On the Ajax there are fifteen emendations, on the Ion thirteen. Some of these show wonderful ingenuity, both of conjecture and of interpretation; but none carry, to my own mind, the conviction of final inevitability, while others again have little in any way to recommend them. Even the correction which Madvig regards as most certain—to read in Aj. 1281 οὐδὲ σὺ μὴ, βῆναι for οὐδὲ συμβῆναι—though better than Schneidewin's defence of the traditional text, is not to be preferred to Hermann's conjecture. To substitute πῶς for πολὺ in Aj. 1357 is surely to force upon Sophocles a far more unnatural expression than that to which exception is taken. Nor is the serious difficulty in Ion 1288 well met by the suggestion of πατὴρ ἐν οὐσίᾳ, νέω for πατὴρ δ' οὐσίαν λέγω.

On Herodotus there are thirty-six emendations of the text of Stein. In i. 27, ἀρ' ὃ θεοὶ for ἀρίμενοι is more ingenious than convincing; in c. 132 θεογονίην, strange as it may seem, appears to be well supported from the *Avesta*: in c. 195 the difficulty which Madvig finds in περιβαλλόμενος is removed by taking it as thrown in by an after-thought, "wrapping it round himself." In ii. 25, he must certainly be right in inserting ἀνὲν before ἀνέμῳ. Stein's text makes Herodotus contradict himself, as well as the facts of the case, and Abicht's οὐκ ἐόντων has little or no authority. In c. 93 Herodotus ought perhaps to have written οὐκ for οὐτοί, but the following τρεφόμενοι (apparently overlooked by Madvig) makes it very doubtful whether he

did. Of the other emendations some, like ἔχεσθαι for ἀέσθαι in vii. 10, 1, are very attractive; others, like τῇ δὴ for τῇδε δὲ in viii. 94, seem due only to a misunderstanding. Of the emendations in Demosthenes the best have been anticipated by Cobet. The numerous suggestions on the fragments quoted by Athenaeus have been already published in the memorial volume issued a year or two ago in honour of the lamented Charles Graux, and do not call for discussion here. Among the miscellaneous conjectures upon Greek authors there is one on Herodian which goes near to carry away the palm for badness among all the vagaries of eminent scholars. For ὁρῶσα ἐν ἀρχῇ τὸν νεανίαν γενόμενον (said of Mammaea, the mother of Alexander Severus) Madvig gravely proposes to read ἐνὸρχην!

More interest will be naturally awakened by Madvig's criticisms on Cicero. It is now fifty-five years since he made his valuable contributions to the excellent edition of the *De Oratore* by his countryman Henrichsen; and since that time he has done very little directly for the rhetorical works; hence the twenty-five pages which he has now devoted to these will be studied with especial attention. In *De Orat.*, i. 198, Madvig recognises, as others had previously, how much the sentence is improved by the omission of *qui* or its replacement by *alii*; but the text is more defensible than he admits. In i. 219, his conjecture is much simpler than that usually adopted to restore sense to an unquestionably corrupt passage, and deserves to be welcomed. In i. 236, he has hit a blot in the reasoning of Cicero; but a consideration of the context shows that it is not lawful to remove it in the way that Madvig suggests, for the very phrase which he wishes to correct away is needful for the antithesis. In i. 248, his suggestion *iure*, "by a plea of justification" (cf. ii. 106), is clearly better than the traditional *in iure*, "before the praetor." But in i. 254, *accederet* is fully justified by the examples in Roby, § 1517 (where the rule is more exactly stated than in Madvig, § 382, obs. 4), and *quo plus sibi aetatis accederet* strikes one as very doubtful Latin; at the least, we ought to have had *aetas*; while in § 256 the suggestion of *iterum* for *iter* is by no means happy. Nor is the emendation which he puts forth on ii. 128, ignoring, as it does, the reading of the best MSS., likely to be accepted "sine dubio." In the corrupt passage in ii. 193, Madvig's *sponte aliena illa dicentis*, "as he utters those words at the bidding of another," in view of the extreme rarity of the phrase *sponte aliena*, is not likely to be preferred to Jeep's *ut sua sponte aliena dicentis*, though even this is somewhat doubtful. In several other passages of the same book his emendations fail to carry conviction as necessary. In iii. 79, Madvig has two suggestions, both of some value; in iii. 107, his emendation is not so good as those of Koch and Sorof.

On the Orator ten emendations are offered, some of considerable boldness, though curiously enough only one of these touches upon any of the passages noted by Heerdegen as especially difficult. The most ingenious is *Assidui plorare* for the senseless *dicat plura* in § 57; the treatment of § 163 suffers from a defective knowledge of the reading of the

MSS.; the suggestion of *assiduum* in § 230 is very unfortunate.

It would be impossible within the present limits to discuss even one in twenty of the emendations suggested on Cicero's Epistles—an inexhaustible field—or the hardly less numerous corrections proposed in his Orations. Many of them are excellent, and must certainly not be overlooked by future editors; for instance on the *pro Caccina* there are nine or ten, of which the greater number are little less than certain.

On Tacitus, Madvig offers twenty-seven emendations of the Annals, sixteen of the Histories, and one of the Agricola, in addition to the numerous instances in which he concurs in corrections previously made, but not in all cases generally accepted. Of the suggestions made upon the Annals, that on iii. 12, is plausible, while those on iv. 33, and vi. 2, 14, 36, and 49, approach certainty. Some of those on the later books are also deserving of attention. Several of the corrections of the Histories, too, are particularly good.

On the whole it may fairly be said that this last volume of the *Adversaria Critica* is by no means unworthy of its author's almost unrivalled reputation. That there is some chaff mixed with the wheat is in the nature of things. It is not to be expected that out of something like a thousand suggestions, all should be even plausible, much less certain. But there is unquestionably much that is of permanent value; and it is true of Madvig, as of our own great Bentley, that more is to be learnt from him when he is wrong, than from most scholars when they happen to be right.

A. S. WILKINS.

OBITUARY.

MR. RICHARD ATKINSON PEACOCK, a civil engineer and a Fellow of the Geological Society, died in London on February 2. He was a specialist, possessed with a consuming desire for investigating the causes of volcanoes and of subsidences of the earth. On these subjects he published several volumes containing many curious theories and much interesting information. One of his earliest works was an inquiry, *What is and what is not the cause of activity in Earthquakes and Volcanoes?* This was followed by a treatise *On Steam as the Motive Power in Earthquakes and Volcanoes*, which was passed through the press in Jersey in 1870 and re-issued in 1882. During 1866 and 1867 he contributed to *The Artisan* a series of papers on "Vast Sinkings of Land," which were collected together in the following year into a volume under the title of *Physical and Historical Evidences of Vast Sinkings of land on the North and West Coasts of France and South-Western Coasts of England*. This volume contained an enormous quantity of information, which he had spent a lifetime in acquiring. Mr. Peacock was the eldest son of Mr. John Peacock, and was born at Slyne, near Lancaster, December 8, 1811.

It is with much regret that we announce the death of Mr. Edward Caldwell Rye, who had held for many years the Librarianship of the Royal Geographical Society. Mr. Rye was well known as an entomologist, having written extensively on the Coleoptera. He was editor of the *Zoological Record* and a constant contributor to the *Field* newspaper. Full of energy and a great lover of athletic sports, he seemed likely to enjoy a long lease of life; but an attack of

small pox speedily proved fatal, and he died on the 7th instant, at the comparatively early age of fifty-two.

CORRESPONDENCE.

THE SOMA PLANT.

Kew: Feb. 3, 1885.

The Hûm described by Mr. A. Houtum-Schindler in his letter in the ACADEMY, January 31, p. 83, agrees sufficiently well with a *Sarcostemma*. The Parsis appear, however, to use other plants as the soma. Dr. Watt has recently sent me from India a scrap of one of these, and my colleague, Prof. Oliver, finds it indistinguishable from *Ephedra vulgaris*. This abounds in Afghanistan, and extends thence westward to the Mediterranean. It is a small rigid shrub, with what would be popularly regarded as leafless jointed branches, which are sometimes knotted. It bears in profusion small red berries, which are sweet and eaten on the Sutlej.

M. Houtum-Schindler mentions that the Persian dictionaries recognise a second Hûm beside the *Sarcostemma*. He says "the fruit is much liked by partridges; it resembles a tamarisk tree." Perhaps the latter remark would be near enough for *Ephedra* in the case of *Tamarix articulata*. But he also says it is "a deadly poison" (though apparently not to partridges). This does not agree with *Ephedra*, which is browsed by goats.

W. T. THISELTON-DYER.

SCIENCE NOTES.

M. JANNEZ, of the Mineralogical Department of the Museum at the Jardin des Plantes in Paris, has just issued a greatly improved edition of his useful little work entitled *Les Roches*. It forms a capital introduction to petrology, and gives a sketch of the modern methods of microscopic research, while it is illustrated by a number of coloured illustrations taken from MM. Fouqué and Lévy's classical work on the microscopic structure of the rocks of France.

THE syndics of the Cambridge University Press have undertaken the publication of a *History of the Mathematical Theories of Elasticity* left in MS. by the late Dr. Todhunter. The work of editing and completing has been entrusted to Mr. Karl Pearson. This history will contain a complete bibliographical account, so far as possible, of all the writings on the subject of elasticity since the time of Galilei, including an analysis of the more important memoirs. The first portion is already passing through the press.

PHILOLOGY NOTES.

THE *Times of India* states that the Educational Board of British Burma has awarded to Dr. E. Forchhammer the prize of Rs.1,000, offered by the President, Mr. Jardine, for an "Essay on the Sources and Development of Burmese Law, from the era of the first introduction of Indian Law to the time of the British occupation of Pegu." Dr. Forchhammer argues that originally the Burmans had institutions like those of the Chins, a tribe whose customary law has lately been described in a book compiled by Moung Tet Pyo and edited by Jardine and Forchhammer. About 1058 A.D. the Burman King Anawratha conquered the Talains and introduced the Buddhist religion among the Burmans. The latter, though victorious in arms, were intellectually conquered by the vanquished Talains, who had for centuries imbibed the culture of the Hindu colonies, which, from about 300 B.C. had existed on the shores and creeks of Burma.

From the Talains the Burmans received the Manusmaster of India; of this there are many versions in Burma, such as the Manu Kyay, translated in 1848 by Richardson, the Dhammavilasa, the Wonnana, the Manu Sara, and others, of which portions have been translated and edited by Jardine and Forchhammer in their "Notes on Buddhist Law" (Rangoon Government Press, 1882-83). One of the most ancient versions is called the Wagaru, from the name of the king of Martaban, who compiled it about 1306 A.D. A complete translation of this code of law by Dr. Forchhammer is about to issue from the Rangoon Government Press. It is in his opinion, "probably the only survivor of the original Manava school of India"; it bears no stress of the later struggle between Buddhism and Brahminism, but is perhaps the law of the Buddhist period, and is wholly devoid of the Neo-brahmanism of some of the Sanskrit textbooks. The Pali text of the Wagaru will appear in the Burmese character with many transliterated passages. The Prize Essay will contain the result of Dr. Forchhammer's researches into the history of the Dravidian, Urian and Gouri settlements in Burma as gathered from Kalyani and Talain inscriptions; in the Wagaru the reader's attention will be drawn to the pervading Hinduism of nearly all the legal institutions of the Burmans. The local officials seem not to have known that these laws are merely Buddhist editions of the famous Hindu Code, as the Judicial Commissioner observes in the "Notes on Buddhist Law," that they have been engaged for fifty years in interpreting Hindu law without knowing that it was Hindu. To remedy this state of things, says the *Times of India*, a Chair of Buddhist Law has been established; and an agitation has begun to found an University at Rangoon, so that this law and the Pali language may be studied together.

MR. BUNYU NANJIO is now lecturing on Sanskrit in the University of Tokio. He has discovered another ancient palm leaf, containing a Buddhist text in Sanskrit, in the Tô-zhi, i.e., the Eastern Temple at Kioto.

CLASSICAL students and philologists generally will await with great interest the appearance of MM. Bréal and Bailly's *Dictionnaire étymologique latin*, which is announced for early publication. The authors state that etymology in the narrower sense has by no means been the sole or even the principal object that they have had in view. While they have carefully endeavoured to ascertain the roots from which words are derived, they have regarded as still more important the task of tracing the development of their signification, and of arranging their various senses in their logical and historical order. To do this is to study the life of the Roman people as it reveals itself in their language. The authors remark that in their choice of examples they have drawn largely on Virgil, as no other Latin author so frequently employs words in their primitive sense.

MEETINGS OF SOCIETIES.

BROWNING SOCIETY.—(Friday, Jan. 30.)

MR. F. J. FURNIVALL in the Chair.—A paper, entitled "Is Browning Dramatic?" by Mr. Arthur W. Symons, was read. The writer took the view that Browning is essentially a dramatic poet—not working by Shakspeare's method, but by a method of his own. Shakspeare, in his objective drama, summed up into himself the whole character of his age; Browning, in his subjective drama, epitomises our age. Shakspeare aims at showing the development of character as it manifests itself to the world in deeds. Character is ever his study, but only so far as it produces or acts on a particular grouping of events. We may construct the motive thought from the action, but to exhibit the motive thought is not the intention—it is a

spectacle of life we are beholding. Is no new form possible which shall respond to the needs of a self-conscious generation? Browning's dramas are the answer. His is a drama of the interior, a tragedy or comedy of the soul. He takes an event which seems to confuse our sympathies and confound our judgments—applies himself to the problem; presently he begins to re-create before our eyes the whole series of circumstances, but turned inside out, so that we can watch the mental machinery in motion. We get to see that everything external is perfectly natural when we can view its evolution from the internal. Browning exhibits his dramatic power more in monologue than in dialogue, and this is natural to an introspective drama. It is often objected that Browning's speakers all speak the language of Browning—not the speech natural to their respective characters. This may, perhaps in many cases, be true—surely not in all—if we remember such instances of realism as the soliloquy of Andrea del Sarto, or the first scene of "Pippa Passes," and many others. The speeches in the dramas are too long for dramas constructed on Shakspeare's principles; but then, Browning's principles are not Shakspeare's. Shakspeare makes his characters live; Browning makes his think. We do not always feel, as in reading Shakspeare, "This is life, caught, and fixed for ever, as in deathless marble." Rather we feel, "This is thought, a breath of the soul rendered immortal in words." We have to accustom ourselves to the new method; we must put ourselves at our poet's point of view—as Goethe says, we must come inside to see the painted windows aright. What Browning's "men and women" utter is rather a rendering into words of what they thought and felt, than an exact report of what they would be likely, under present conditions and conventions, to say. Taking this view, the reproach that every "imaginary person" talks "like Browning" falls to the ground. Individuality in the mental attitude is presented. "The Ring and the Book" is a striking example of this, under the most difficult conditions. In his own words, Browning "does not deal habitually with the picturesque groupings and tempestuous tossings of the forest-trees, but with their roots and fibres naked to the chalk and stone." He takes

"For a nobler stage the soul itself,
Its shifting fancies and celestial lights,
With all its grand orchestral silences,
To keep the pauses of the rhythmic sounds."

—The Chairman read a letter which he had received from Mr. Henry A. Jones, who had been unavoidably prevented from presiding. Mr. Jones thought Mr. Symons had proved Browning to be rather a thinker and analytic poet than a dramatist, and discussed comparison or contrast between Shakspeare and Browning at some length.—The Chairman, while agreeing with Mr. Jones that the elder was the greater dramatist, protested, on the same grounds as Mr. Symons, against the comparison. It must not be forgotten, when considering Browning's position as a dramatist, that few of his plays had been acted, and that these few had had scant justice done them. Still, one could understand that they might never become popular on our stage. When he wrote them he had little practical experience of stage requirements. Nevertheless, his characters do live for us, though less vividly than Shakspeare's; and he had enormously enriched the mental gallery of his readers.—Mr. Revell expressed his belief that Browning is only here and there dramatic. He is notably dramatic in "A Blot in the 'Scutcheon,'" and in "The Ring and the Book."—Mr. Poel considered Browning to be a dramatic poet of the highest order, but not a practical dramatist. One style of expression is given to all the *dramatis personae*, thus leaving the actors little opportunity of identifying themselves with their several parts. The expressions, too, given them, were often out of keeping with the situations. Mr. Poel quoted several instances of this.—Mr. Slater disagreed with the last speaker when he accused Browning of putting unnatural speeches in the mouths of his *dramatis personae*. There was too easy an assumption that conventional "stage" gesture and ejaculation, in strong situations, are those of real life. The contrary was nearer the truth.—Dr. Berdoe said that the answer to the question proposed by Mr.

Symons depended on the meaning attached to "dramatic." Browning's dramas are not eminently adapted to stage representation. But that does not settle the matter. "Pippa Passes," for instance, is eminently dramatic but it could not be put on the stage. Browning is dramatic, but not a writer of plays adapted to stage representation.—Mr. Rosseter thought Mr. Symons had proved Browning dramatic, by making a special definition for the term. Browning was undoubtedly full of dramatic faculty, but lacked the art of turning it to account in play-writing.—Mr. Day thought all poets were more or less dramatic under the extended meaning given to the term by Mr. Symons. On the question whether Browning's plays were fit for the stage, until they were actually and properly performed, only playwrights could speak with authority; but his own conviction was just, under fitting conditions, they would be found successful.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, Feb. 3.)

DR. SAMUEL BIRCH, President, in the Chair.—A paper entitled, "Notes on the Antiquities from Bubastis, in the Collection of F. G. Hilton Price," was read by the author. It was explained that the collection now described were discovered in or about the large mounds now called Tel Basta, and marking the site of the ancient Egyptian city of Bubastis. The ruins of the capital of the Bubastite Nome are situated to the south-west of Tanis, upon the eastern side of the Pelusiac branch of the Nile, near the modern town of Zagazig. Bubastis was a city of considerable importance as early as the time of the eighteenth dynasty, but increased in both size and magnificence under the kings of the twenty-second dynasty, and was at that time probably the most considerable place in the Delta. After the conquest of the Persians (B.C. 352), who dismantled its walls, the town was, as is proved by the antiquities discovered in the ruins, evidently occupied by the Greeks and Romans. The cat or lion-headed goddess Bast, or Sekhet, was the tutelary deity. To her all cats were sacred, and after death were mummied and deposited in the tombs connected with her temple, which, as Herodotus informs us, was very magnificent, and occupied a prominent position in the centre of the city. The somewhat careful description of Herodotus, including that of the oracle of Bast, as well as the city, were quoted by Mr. Price, and after a few notes on the special worship of the goddess as connected with the mythology of ancient Egypt, he commenced his description of the antiquities. The arrangement taken by Dr. Birch, in his catalogue of the Alnwick Collection, was that followed. The pantheon first, secondly the animals, followed by the symbolic or mystic eyes, the amulets, the apulchral objects, the domestic or civil antiquities, the terra-cotta figures, lamps, vases, &c. The sarcophagi, of which a large quantity have been recovered at Tel Basta, were reserved for a future communication. The figures of the gods most commonly met with are, as may be supposed, principally those bearing some relation to the goddess Bast, as being the great deity of the city—viz., Ptah, Bast, Neferatum, Shu, Thoth, Isis, Osiris, Harpocrates, Anubis, Bes, and Tauer. After having examined the peculiarities of the statuettes of the gods in the collection, Mr. Price passed on to the animals, of which a large number of figures have been found, the cat naturally occupying a very prominent position, the others being the monkey, ram, and hawk. The other divisions mentioned above were shortly described, with explanations of the use of the objects, and such points in the Egyptian mythology were referred to as seemed necessary.—A paper by Prof. Sayce, on the "Karian Language and Inscriptions," was also read.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 5.)

MR. FRESHFIELD, V.-P., in the Chair.—Mr. Hope exhibited a cast of the seal of the Corporation of Lyme Regis, the device being a ship with a crucifix on one end and St. Michael on the other. The date of the original seal was about 1280.—Mr. Blair exhibited a photograph of a Roman sepulchral stone found at South Shields. The person commemorated was represented in a reclining

attitude holding a cup, and below was another smaller figure standing, perhaps a servant bearing wine. The inscription described the deceased as a Moor.—Mr. Godwin exhibited a genealogical roll of the kings of England as far as Henry IV. All but the last skin was of the reign of Edward II. The kings were drawn enthroned, within circles, in the style of their great seals.—Major Cooper exhibited two ancient clocks. In one of them, of Swiss make, the hour-hand completed a revolution in four hours, so that the hours were marked on three concentric circles; the other was made by Robinson, of Westminster.

FINE ART.

Teordannekh. A Reproduction of the Edition printed at Augsburg in 1519, Edited by W. H. Rylands, with an Introduction by George Bullen. (Printed for the Holbein Society.)

UNDER the auspices of the Holbein Society, and the direction of two Fellows of the Society of Antiquaries (one of them holding the highest official position in England connected with the study of old books), a reproduction of the finest specimen of printing and illustration published in Germany in the sixteenth century has now been issued. The volume reflects little credit upon English scholarship.

The original work was published for the Emperor Maximilian I. in the year 1517. Of the first edition there were two issues, differing from one another in certain quires, which, for some unexplained reason, were twice set up. Exactly the same thing happened with the second edition; and the reproduction in question has been made (though there is no statement of the fact in the book itself) from a *misbound* copy of that issue of the second edition which was probably the later of the two. In the first edition the woodcuts and type are beautifully crisp and new, in the second both are much worn and broken. In the first edition the peculiar flourishes attached to certain letters are put in with definite intention, in the second they are placed almost at random. In the first edition the cuts and chapter-headings are correct, in the second edition the cuts and headings belonging to chapters 63 and 64 are transposed. In all copies of the first edition the cuts numbered 13, 39, 42, 48, 58, and 69 have the mark of Hans Scheifelin, who made the designs; in some copies cuts 30 and 70 have the same mark, while 70 has likewise in some the mark of Jobst Dienecker or de Necker, who was foreman of the woodcutters. In the second edition only cuts 48 and 69 have Scheifelin's monogram. The second edition differs from the first in many other ways. The spelling and abbreviations are different, the royal privilege is introduced, the title-page is different, and there are several other variations of greater or less importance. A reproduction, if made at all, should beyond all question have been taken from the first edition, of which there are certainly three copies in the British Museum. If all copies of the first edition had been destroyed, another copy of the second should have been chosen, at any rate, for the pages containing cuts 58 and 59, both being disfigured by pen-and-ink additions, which the reproduction makes to appear a part of the woodcuts themselves.

Given, however, that the copy selected was

the only one available for reproducing, the reproduction should have been better done. The process chosen is some kind of photolithography, not the best process known, but still one capable of yielding good results, as Hirth has amply proved. The present work has, however, been badly done. The lines are all very much thicker and heavier than even in the worst copy of the second edition. The type looks like a fount badly imitated from the real letters. All the charm of the woodcuts is lost. There is no brightness or gloss about them. Then the last leaf of the quire *h* is put after the first leaf of quire *i*; the fifth leaf of quire *P*, which should be blank, is missing; and so are blank leaves which should be before and after the last quire *A*. There are several other minor mishaps, resulting in the omission of a long flourish here and there (e.g., *m* 6), which, perhaps, extended beyond the edge of the negative, and one or two of the signatures are faultily reproduced. Still, when the worst has been said, the reproduction is better than could have been made by tracing; and the book will be of use for reference to those who are well acquainted with the original.

The introduction can, however, be of small use to anybody: not to the general public, for it gives little information and most of that information is incorrect; not to students, for it does not refer them to authorities by means of which they may pursue the very interesting history of the work for themselves. Of omissions we need say little more than that almost everything is omitted. A reference to a few German authorities would have placed the writer in full possession of the story of the genesis of the poem, and would have enabled him to say what share in the writing of it Maximilian took himself, how much was due to Marx Treitzsaurwein, and how much to Melchior Pfintzing. He would not then have penned the following platitudes:—

"Pfintzing . . . may be fairly taken as the author of the poem in its published form. Its moral tendencies and prolixity have all the flavour that might be expected from a droning ecclesiastic of the period, commissioned by an imperial master in his dotage [Was Maximilian in his dotage at the age of fifty?] to compose in rhyme something analogous to the prose work of Treitzsaurwein; Pfintzing, perhaps, being reputed to have a gift in the rhyming direction."

Considering that we know all about the making and designing of the illustrations, considering that we possess four of the original designs for them and some letters about them from the workmen employed, the following sentence, which is all that the introduction contains on the subject, is decidedly meagre:

"The work is illustrated by 118 wood-engravings designed by Hans Scheufelein, a pupil of Albert Dürer, and engraved by Jost von Negker, probably also by Scheufelein himself and other artists."

Moreover, this brief sentence bristles with faults. Albert Dürer should be either Albert Durer or Albrecht Dürer. Jost von Negker is worse. The man's name was Jobst de Necker or Negker, which he sometimes wrote Jos Dienecker, the *de*, in any case, being the Flemish definite article, not the French preposition, and so not possibly translatable by the German *von*. Further,

we know that Scheifelin did not engrave the blocks but only designed them, and we have in Dienecker's own handwriting a statement of the share taken by him in the work. Again, when it is considered that we know, from a contemporary source, who designed the type with which the book was printed, and even what Maximilian said when the form of the proposed letters was shown him, it is a little hard upon purchasers of this reproduction to be told only that—

"the letterpress was often supposed to have been executed in wood, but has been proved by the late M. A. Firmin-Didot to have been produced with movable types, while the remarkable flourishes, by which it is accompanied, were engraved either on wood or lead, and carefully fitted on to the text."

Especially when this is followed by the misleading statement that—

"the first and second editions of the poem differ very little from each other, except in the adjustment of these flourishes."

We are next told that "each engraving forms the subject of a chapter," which, again, is untrue, for the 117th is a tailpiece to the chapter illustrated by the 116th. Then follows a list of the chapter headings translated into English, probably from the first edition, the headings to chapters 63 and 64 being in their right order, not in the order in which they occur in this copy of the book, though no notice is taken of the discrepancy.

Luther's name is twice dragged in by main force. It is hard to see what in the world he has to do with *Teurdannekh*.

"Maximilian did not long survive the publication of *Teurdannekh*. He lived into the time of Luther, with whom he appears to have had no sympathy. . . . Had he lived longer, with his veneration for the past, he might perhaps have consented to the propriety of burning the great Reformer as an Arch-heretic."

Does not Mr. Bullen know that, so far from Maximilian being a blind Conservative in Church matters, he recognised the ecclesiastical evils of his day, and, with the spirit of a statesman, sought a remedy from the advice of such scholarly theologians as Jacob Wimfeling, rather than from the impassioned representatives of popular ignorance?

This edition of *Teurdannekh* is likely to attract attention in Germany, for the book is of interest to all—and especially to all German—lovers of old books and old prints. It may naturally be accepted abroad as a specimen of the best work English scholarship can do, seeing that it is published by the only (at present) English society for the reproduction of ancient prints, and that it is accompanied by an introduction from the pen of a gentleman whose official position should imply that he is the national representative of bibliographical study. Foreigners have a low enough opinion of English scholarship. This publication will not tend to raise it.

W. M. CONWAY.

NAVILLE'S CRITICAL EDITION OF "THE BOOK OF THE DEAD."

EGYPTOLOGISTS particularly, Orientalists generally, and students of religion and myth universally, will rejoice to learn that M. Naville's great critical edition of that most ancient and famous miscellany of Egyptian prayers, incantations, invocations, rhapsodies, and

creeds, known as the *Todtenbuch*, the *Livre des Morts*, *The Ritual*, and *The Book of the Dead*, is at last in the hands of the lithographer and printer, the entire cost of publication being generously undertaken by the Prussian Government. The history of this colossal work, to which a great scholar has already devoted nine years of unremitting labour, may with advantage be recapitulated in a few lines.

In 1874, in accordance with a suggestion put forward by the late Dr. Richard Lepsius, it was proposed to M. Naville by the Orientalist Congress, then holding its second session in London, that he should undertake to collect and edit the most ancient known texts of the so-called *Book of the Dead*, giving especial attention to the addition and collation of variants from all possible sources. In 1875, M. Naville applied himself to the task thus vaguely outlined, beginning by a first tour of inspection through the principal museums of Europe. In the course of this tour (subsequently followed by many others) he discovered that the number of funerary papyri of the XVIII. and XIX. Dynasties was so considerable that it would be well to base the restoration of the text upon examples dating from those two periods. This course was accordingly adopted, and a definite frame-work was laid down for the work. To fill in that frame-work occupied M. Naville from early in 1875 to the month of May 1884. Many hundreds of papyri were read, analysed, compared, and utilised, many thousands of variants were classified and collated, during those nine years of patient and unremitting labour. At length, just as the great task was completed, Lepsius died; one of the last letters that he was able to write being to congratulate M. Naville on the successful accomplishment of an undertaking in which (proposed, as it was, in the first instance, by himself) he had all along taken the liveliest interest. This interest had been very practically manifested as far back as 1875, when, in consequence of his (Lepsius's) representations as to the great scientific value of M. Naville's work, the Prussian Government engaged to be responsible for its publication. The death of Lepsius, just as the MS. was finished, necessarily interrupted the course of events. Happily, however, all is now in train, and the Ministerial authorities of Berlin have arranged to reproduce the entire work in photolithography. In fact, it is already in progress, and will, it is hoped, be completed before the end of the present year. The work is to consist of two 4to volumes and an Introduction; one volume to contain the text in 212 plates; the other volume to contain the variants synoptically arranged, in 448 plates. The Introductory matter, it is reasonably stipulated, shall be in German. In view, however, of the fact that this Introductory matter will be of extreme interest and importance to students of many nationalities and various aims, might it not be suggested that an English and a French version could be added as appendices in smaller type? So wise and graceful a concession would be widely appreciated in both hemispheres.

AMELIA B. EDWARDS.

CORRESPONDENCE.

"THE WOODCUTTERS OF THE NETHERLANDS."

New Haven, Conn., U.S.A.: Jan. 23, 1885.

Across the Atlantic I ask your leave to say a few words on a book just reaching me here: Mr. Conway's *Woodcutters of the Netherlands*. I had looked to this book as likely to supply some information concerning said woodcutters. To my great surprise it gives none.

Part I. is entitled "History of the Woodcutters," and chapter after chapter is headed, as concerning woodcutters, "The First Louvain Woodcutter," "The First Gouda Woodcutter,"

"The Second Gouda Woodcutter," "The Haarlem Woodcutters," "The same Workman, or his school, at Antwerp," "The Third Gouda Woodcutter," &c., &c. Yet throughout the book but one woodcutter is named (he only named), and there is not an iota of information as to any woodcutter whatever.

Mr. Conway does, indeed, after very wide research, and with admirable particularity, give an account of wood-cuts used at Gouda, Haarlem, Antwerp, &c., by the printers and publishers of those places; but of the woodcutters themselves he has nothing to say. His accounts and critical remarks do not even help toward identifying the personality of an engraver (or woodcutter); and his criticisms are infected with the usual and fatal mistake of inexperienced writers on engraving—the mistake of making the engraver responsible for the design. One instance may suffice. I will not say one of many, for it fairly samples the whole sack. Of the "Utrecht Woodcutter," he writes: "His leading characteristics are the clearness of his outlines and the fewness of his shade-hatchings, which are always laid widely apart." The cutter simply followed the lines of the draughtsman, which, therefore do not characterise the style of cutting. The same mistake pervades the book.

The cutting of the early drawings on wood being purely mechanical, the whole of Mr. Conway's observation of style, his attribution of work to this or that cutter or his school, falls to the ground as inapplicable to his "woodcutter." I speak as a practised woodcutter, and to some extent conversant with old cuts, when I say it is impossible so to ascribe and apportion the works of the period of which Mr. Conway writes.

I am, of course, only dealing with the one section of his book, which else, I doubt not, will be valuable to the bibliographer; but as a History of Woodcutters, or as a guide to the qualities of woodcutting, it is nought, based throughout on a misconception of what a woodcut is, and written apparently in utter ignorance of the process of woodcutting. Interested in my own art, I cannot but protest against so flagrant an instance of unlearned judgment.

W. J. LINTON.

MS. CATALOGUE OF THE TOWNELEIAN MARBLES.

Henbury, Bristol: Jan. 26, 1885.

It may be worth mentioning in the ACADEMY that I have in my possession a MS. Descriptive Catalogue of the Towneley Marbles—from the sale of the Towneley library, 1883—consisting of forty written pages, small folio, half-Russia, having on each cover a red morocco label inscribed

CATALOGUE
TOWNELEIAN
MARBLES

with the bookplate at the commencement of John Towneley. The Catalogue is not signed nor dated, but by the watermark of the foolscap on which it is written—

"Joseph Coles"
"1804"—

it must have been written about the period of the death of Charles Towneley, which took place on January 3, 1805. The writing in some respects resembles Charles Towneley's, but is certainly not his. By the note, vol. i. p. 11, of the *Townley Gallery* (Nattali, London, 1846), it appears that the estates of Charles were inherited by his brother, Edward Towneley Standish, who did not long survive him. They then came to his uncle, John Towneley, Esq., of Chiswick, who added his well-known collections in the art of engraving and curious library to those bequeathed to him

in Park Street, the London residence of Charles Towneley. This accounts for the presence of this Catalogue in the library of John Towneley.

The following is the order of the Catalogue:

Page 1. *Park Street Dining Room*.—Over the door a rich candelabrum in bas-relief, &c.

Page 12. *Street Drawing Room*.—A Head of Apollo Musagetes, resembling in the dress of the hair, &c.

Page 17. *Library*.—A Head of a Muse, crowned with a wreath of laurel, &c.

Page 21. *Park Drawing Room*.—A Figure of a Youth placed on the ground, &c.

Page 23. *Street Parlour*.—A Head of an Amazon in the early style of Grecian sculpture, &c.

Page 27. *Hall*.—A Sarcophagus near seven feet long, &c.

Pages 38 to 40. *Marbles not placed*.—A Sepulchral Cippus, three feet high, &c."

The bust of "Clytie" is thus described, p. 22, *Park Drawing-room*:—

"A Bust of Isis placed in the flower of the Lotus, formerly in the Laurenzani Palace at Naples."

I am informed that the British Museum possesses an inventory of the Towneley Marbles in two quarto volumes. The Dining-room is the last entry in vol. i. I purpose comparing my copy with that in the British Museum.

SPENCER GEO. PERCEVAL.

P.S.—Throughout the Catalogue appear the names of Doctor Ant. Askew, Mr. Lyde Browne, Mr. Beaumont, Sir Charles Frederic, Mr. Gavin Hamilton, Dr. Swinney, Mr. Topham of Windsor, the Duke of St. Albans, Mr. Topham Beauclerc, Mathew Duane, Mr. Byers, &c. The name of Mr. Hamilton occurs several times, which, with that of Byers, is of historical interest in connexion with the Towneley Collection. I have also from the same sale Charles Towneley's own copy of the "*Ædes Pemphigianæ* : a new Account and Description of the Statues, Bustos, &c., in Wilton House" (thirteenth edition, Salisbury, 1798), in the original paper cover, which contains numerous notes in his handwriting. At the commencement is "An Abstract and Discrimination of the Marbles at Wilton described in the printed Catalogue, 1798," with the above heading, consisting of three pages in the writing of Charles Towneley. Throughout the book the words "modern" and "rubbish" occur frequently on the margins of the pages.

NOTES ON ART AND ARCHAEOLOGY.

WE learn with much satisfaction that Mr. W. M. Ramsay has been appointed to the newly-founded Lincoln professorship of Archaeology at Oxford. As most readers of the ACADEMY will be aware, Mr. Ramsay has conducted important and successful archaeological researches in the Levant (the results of which have occasionally been communicated in our own columns), and was some time ago appointed to a travelling fellowship at Exeter College for the prosecution of similar work.

MR. RICHARD JACKSON, of Leeds, will publish next month a reproduction, in facsimile, of the late Mr. Geo. Walker's *Costumes of Yorkshire*, illustrated by a series of forty engravings, being facsimiles of original drawings in colours, with description in English and French. The reproduction of the plates, which fully illustrate the manners, customs, dress, and industries of Yorkshire in 1814, has been undertaken by Ernst Kauffmann, of Lahri; and the work will be edited and annotated by Mr. Ed. Hailstone, of Walton Hall, in whose possession are the original water-colour drawings. The edition will be limited to six hundred numbered copies, and the price will be three guineas.

MR. A. BRUCE JOY's statue of Mr. Christopher Bushell was unveiled by the Archbishop of York, on January 30, in the great hall of

the Brown Public Library, Liverpool. The statue, which is said to be a highly successful work of art, was subscribed for by a number of prominent citizens of Liverpool in recognition of Mr. Bushell's eminent services to the cause of education, and is intended to be placed in the new building of the University College, with the establishment of which Mr. Bushell's name is so honourably connected. Mr. Joy has completed a bust of Miss Mary Anderson in a new material, the composition of which is being patented, and for which it is claimed that it possesses in a great degree the beauty and durability of marble, while much easier to work. The bust is now being exhibited at the Liverpool Free Library.

THE celebrated French picture of the fifteenth century, representing the *Jeanneilles* of Charles VIII. and Anne of Brittany, belonging to M. E.-M. Baucel, and supposed to be the work of Jean Perréal, to whom no other existing picture can be confidently attributed, has been offered to the Louvre on the condition of its being placed in the *Salon Carré*. M. Baucel has presented to the National Library two letters relating to this artist's architectural works at Brou. One of them is from Jean Lemaire, of Belgium, to Marguerite, of Austria, strongly recommending Perréal, and the other from the artist himself containing his projects. The dates of the letters are respectively, November 25, 1510, and October 9, 1511.

THE private view of Mr. W. Ayerst Ingram's Yachting and Marine Studies is fixed for to-day, at Messrs. Dowdeswell's, of New Bond Street, who will, we understand, exhibit in April a number of drawings and pastels by M. Paul Rajon, the well-known etcher.

THE famous portraits by Franz Hals of the founders of the Hooftje van Beeresteyn at Haarlem, formerly one of the sights of that town, have been acquired by the Louvre for 100,000 francs. They comprise a portrait of a man (dated 1629, or when Hals was forty-five), one of a woman and a family party in a garden.

THE Delacroix Exhibition at the Ecole des Beaux-arts will follow a new collection of Portraits du Siècle which will open on May 1; and one of the works of Bastien-Lepage is being organised by M. Proust. There will be an exhibition at Moulins for a month, beginning on May 16.

PROF. HODGETTS is, we are informed, about to deliver a course of six lectures at the British Museum on the Mediaeval English Remains preserved there, as illustrating the history of the English race, beginning on Friday, February 20, at two o'clock, and continuing for the five Fridays following. Each lecture will deal with a separate branch of the subject under the following heads: the Normans, their character, manners, and effect on English history; the English, or Saxons, their position after the Conquest, illustrated by MSS. in the Museum; the monastic institutions and military monks, ancient armour, civil dress, and sports and pastimes.

THE Exhibition of the Manchester Academy of Fine Arts opened on Tuesday last. The strength of the local artists continues to be chiefly in the direction of landscape.

MESSRS. CASSELL & Co. have arranged to re-issue in monthly parts their fine art edition of *Illustrated British Ballads*, embracing all the favourite ballads, old and new, with original illustrations by the leading artists of the day. Part 1 will be ready on February 25.

THE opening of the Salle Davillier at the Louvre is delayed pending the completion of some formalities. M. Suchetot has received a commission for a bust of the late baron.

THE STAGE.

"THE SCHOOL FOR SCANDAL" AT THE PRINCE'S.

THE unsuccessful production of "The Princess Georges" has been followed, at the Prince's, by the revival of "The School for Scandal." "The Princess Georges" was treated hardly by a portion of the press, and yet more hardly by the public. The principal actress was only forgiven—she was not approved of—and the piece was condemned. That the choice of the play was an unfortunate one for English audiences we readily admit. The plays of M. Dumas are not for the amusement of a couple of hours when men have well dined. Still less are they for the edification of the school-girl or of the British housekeeper. They exact serious attention, and they discuss social problems which our playwrights for the most part avoid. It is on these accounts that the comedies of Dumas are cheaply condemned. There are a class of critics—critics in the drawing room; critics sometimes, though much more seldom, in the newspapers—who consider that they have settled for ever with a play or a novel when they have said that it is not quite desirable reading for girlhood. But the accident that damsels of an immature age go to the circulating library, and are taken to the theatre, does not constitute as the only standard of judgment the fitness of a novel or a play for their entertainment. We are accustomed, in England, to hear something too much of the tribunal of the nursery-governess. But from that inadequately constituted court literature has fortunately the right of appeal. And until Mr. Browning's "Inn Album" is accepted as a "penny dreadful," M. Dumas's comedies will not be condemned as simply "objectionable." They are, at least, dexterous studies executed well within the limits permitted to a thinker and an artist.

So much by way of allusion to the "Princess Georges," which the ACADEMY did not criticise minutely when it was produced, and which, indeed, was produced under circumstances by no means favourable. For Mrs. Langtry, "The School for Scandal" is a wiser choice; yet it is not altogether a successful one. Already her performance has been spoken of in influential quarters, where judgment is generally well considered, as charged with the faults of an amateur. To this account we must take some exception. When a lady has played, as Mrs. Langtry has played in America and the country, the part of Lady Teazle for a hundred and fifty nights, may not the faults of her performance be put down to her own deliberately adopted method, rather than to the fact that she was not originally intended for the stage? Mrs. Langtry, in Lady Teazle, may be—and we hold indeed that she is—an actress sometimes mistaken in her means and her effects; but she is scarcely an amateur, and the time has come to forgive so industrious a student for having some years since been a "professional beauty." She says and does nearly everything with intelligence and point; much she does likewise with grace. But her performance is, to our minds, unduly full of mimicry, of illustrative action: she imitates a preacher when she refers to a sermon; when she speaks

of horse-flesh she drives a pair of imaginary ponies. Mrs. Langtry must strive to exhibit more repose, but it must be an occupied repose. Discarding the suggestions of an almost fussy ingenuity, she must yet, if possible, acquire an increase of gaiety. Yes; to be satisfactory as Lady Teazle she must be both restful and gay. At present she is too apt to be fidgety instead of happy, and restless instead of blithe. So intelligent is Mrs. Langtry that she has the full capacity for improvement, and on that account we have spoken with severity, rather than with indulgence, of her defects. She has worked very hard upon the part already, and an additional effort wisely undertaken may yet repay her for her past labours. A word now of the other ladies. Mrs. Arthur Stirling's Mrs. Candour was much relished by the audience on Tuesday night; but, with all respect for the actress's experience, we can imagine a much better performance. Mrs. Arthur Stirling does not allow Mrs. Candour to be quite enough of a lady, and, as Mrs. Arthur Stirling represents her, no one would believe for a moment in her geniality—she spits out her news with malice and rapidity, rather than happily revels in it. From the artistic point of view the performance is coarse. Piquancy is absent from it: there is no one in all that drawing-room whom Mrs. Candour would have influenced and charmed. And this is surely wrong. Miss Kate Pattison is handsome enough as Lady Sneerwell; but Lady Sneerwell says sharp things, and does not desperately need to be handsome. Maria, on the other hand, says nothing smart; nothing, indeed, that is not proper and artificial; the tameness of her sentiments can only be excused through her good looks. Miss Sothern's appearance does, perhaps, just permit the uninteresting character to be endurable, yet the young actress's voice is wiry and unsympathetic. And now for the men. Of the men's performances, at once the most finished and the most important is that of Mr. Farren as Sir Peter Teazle. But the playgoer is too familiar with it to require that it shall be criticised. Enough to say that it retains its power, its grace, its old-world breeding. Mr. Coghlan's Charles Surface is only a little less known. It is just what it should be—hearty and gay, chivalrous with wildness, and, in the picture scene, not too sentimental. Sir Benjamin Backbite again engages the rightly fantastic art of Mr. Lin Rayne. Joseph is played by Mr. Beerbohm Tree, who acts the part for the first time, and does not overdo the expression of its villany. He is, indeed, an agreeable companion, and something very much like a serious lover. Of the smaller men's parts, the one best played is certainly Snake's. The actor is Mr. Courtney Thorpe, whom we cannot recollect to have seen before. He makes of Lady Sneerwell's malicious confidant a reality, and by his appearance endows him with a Past which justifies his Present.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

MR. WALTER BACHE gave his twelfth orchestral concert at St. James's Hall, on Thursday evening, February 5, and once again the whole of the programme was devoted to the compositions

of Franz Liszt. Our first duty is to praise the concert-giver for the patience and perseverance which he shows in a cause which every year seems to become more hopeless; our second duty is to say a word or two about the music itself. Mr. Bache, in no way disheartened by the cold reception given to Liszt's Symphony to Dante's "Divina Commedia," when produced at Mr. Ganz's concerts in 1882, again brought it before the notice of the public. We formerly thanked Mr. Ganz for giving us an opportunity of hearing the work; but we found the din of the first movement more akin to noise than to music, and were relieved when the long, and, to our thinking, dreary "Purgatorio and Paradiso" movement had come to an end. Now we have again listened to the symphony, and a few passages excepted, can find nothing to admire in it. There are two Symphonic Poems of Liszt which have not been heard in this country. We wonder why Mr. Bache did not choose one of them. The titles—"Ce qu'on entend sur la Montagne" and "Hamlet"—are attractive: the former would surely be less noisy than the "Dante," while the second would deal with a subject particularly familiar and congenial to an English audience. Mr. Bache played the E flat concerto with great dash and brilliancy, and at the close received quite an ovation.

An "Angelus" for strings was a novelty, but not one of great interest: the annotator himself in the programme-book spoke of the "monotony" of the leading theme, but qualified it as "heavenly." Mdlle. Barbi sang in an expressive manner the *scène dramatique*, "Jeanne d'Arc au Bûcher." The concert commenced with the "Rákoczy Marsch," arranged for orchestra. The Hungarian March in Berlioz's "Faust" has the same subject-matter. Liszt's appears to have been written first, but during Berlioz's lifetime he would not allow it to be performed or published. His version is clever and brilliant, but it has neither the *verve* nor the variety of tone-colour of the one by the French composer. The concert concluded with a March from the oratorio "Christus." The whole of the programme was conducted by Mr. W. Bache, with the exception, of course, of the piano concerto, when Mr. E. Dannreuther wielded the *bâton*.

Miss A. Zimmermann appeared at the Popular Concert last Saturday afternoon, and played Beethoven's Sonata in C (op. 2, no. 3) with admirable finish and brilliancy: the trio of the Scherzo would have proved more effective if taken a shade slower. We are glad to find many pianists, Miss Zimmermann among the number, are beginning to decline encores. It had become quite a habit—we might almost say a nuisance—at the Popular Concerts. Mrs. Hutchinson sang songs by Mozart and Maude White with great purity of tone and charm.

On Monday evening last the concert commenced with Beethoven's Quartet in B flat (no. 6), brilliantly interpreted by Mdlle. Néruda and her associates. Mdlle. Haas played Beethoven's Variations (op. 34) with admirable precision and delicacy; she was recalled, and gave the Andante spianato from Chopin's op. 22. She also took part in Schumann's pianoforte Quartet. Mozart's Duet for violin and viola was rendered to perfection by Mdlle. Néruda and Herr Straus. Miss Louise Phillips and Mdlle. Fassett sang two duets by Hollander, and also two very fresh and pleasing duets by Miss M. Carmichael, entitled "A poor soul sat sighing" and "Who is Sylvia?": they were so much applauded that the second was repeated. The ladies were accompanied by the composer.

Mr. E. Dannreuther gave his second evening at Orme Square last Tuesday. It commenced with a very good performance of Brahms' Sonata in E for pianoforte and violoncello (op. 38) by the concert-giver and Mr. C. Ould. Miss Eva James, a clever pupil of Mr. Dann-

reuther's, played a new piece, entitled Variations on a Theme in D minor, by Dr. C. H. H. Parry. They are interesting, but laboured; very much after the manner of Brahms, with a dash in them of Raff's florid style of writing. They are extremely difficult, and, therefore, scarcely likely to become popular. The programme included Beethoven's pianoforte Trio in D (op. 70, no. 1), Wagner's "Albumblatt" (Herr Kummer), and three characteristic songs by E. D., sung by Miss Butterworth.

Mr. Anton Hartvigson gave a pianoforte recital last Wednesday afternoon at Prince's Hall. The programme commenced with Beethoven's Sonata in E flat (op. 27, no. 2), then came rather a long Chopin selection, and afterwards pieces by Raff, Rubinstein, and Liszt. The pianist has good fingers; but his touch and tone leave much to be desired. There was a good attendance, and much applause.

J. S. SHEDLOCK.

MUSIC NOTE.

AT the second concert of the season, on Monday last, the Highbury Philharmonic Society performed "The Crusaders," by Niels Gade—a somewhat ambitious work for a band and chorus formed for the most part of local amateurs. The part of Armida was sung by Miss Clara Samuelli, and that of Rinaldo by Mr. Edward Lloyd; the bass solos being undertaken by Mr. F. Ward. The whole performance was creditable, and appeared to be highly appreciated by the crowded audience at the Athenæum. The second part of the concert included selections from Gounod's "Faust," and the spinning chorus from Wagner's "Flying Dutchman," besides violin solos by Mr. Gilbert H. Betjemann.

"The distinguishing character of the autotype reproductions is that they are cheap and absolutely faithful copies of originals, which may themselves be of the very highest excellence; and they are therefore especially adapted for all situations in which the moderation of their cost is an important element, and especially for all in which it is desirable, for educational reasons, to keep before the eyes either of children or of adults the most perfect representations of natural or of ideal beauty." *Times*, September 4th, 1879.

LITERATURE.

The Lives of the Berkeleys from 1066 to 1618.
By John Smyth, of Nibley. Vol. II.
Edited by Sir John Maclean for the Bristol and Gloucestershire Archaeological Society.
(Gloucester: Bellows.)

THE second volume of Smyth's *Lives of the Berkeleys* will be found by most readers more interesting than the first, for it deals with a more eventful period of English history, whilst the tale of the chequered fortunes of the family, and their inveterate quarrels, is almost as strange and stirring as a romance. The narrative extends over eight generations, and carries the story from the death of the fourth baron, who never recovered from the wounds which he received at the battle of Poitiers, to the majority of the thirteenth baron, who was Smyth's pupil and patron.

Thomas, fifth Lord Berkeley, was a husband of eight months' standing when his father died in 1368, although he was little more than fifteen years old. But an early marriage was a necessary precaution in his father's precarious state of health, for it was one of the harshest features of feudal tenure that the guardian in chivalry had the absolute disposal of his ward's marriage, as well as of the rents of his estate. Lord Berkeley, however, effectually forestalled the interference of a guardian by selling the marriage of his son to his comrade in arms, Warine, Lord l'Isle, who paid him 1,100 marks to secure the match for his only daughter Margaret. She was only seven years old; but, notwithstanding her tender years, was married to the heir of Berkeley in November, 1367, at Lord l'Isle's castle at Wingrave, in Bucks. Lord Berkeley was too ill himself to make the journey, but did honour to the occasion at home by arraying himself on the wedding day in a new suit of cloth of gold. The bridegroom was clad in scarlet and satin with a silver girdle, and was attended by three knights and twenty-three esquires of his father's household, who were all attired in liveries of fine cloth of ray furred with miniver. He returned with his retinue to Berkeley after the ceremony, but the bride was left with her father, for it was part of the marriage contract that she should remain in his custody for the next four years. They were soon, however, brought together again, for Lord Berkeley died on June 8 in the next year, when Lord l'Isle purchased from the Crown the wardship of his son-in-law, and was allowed to farm his ward's estates at a rent of £400 per annum. Ten years after her marriage the young Lady Berkeley became a great heiress in prospect through the death of her only brother; but Lord l'Isle was consoled for the loss of his son by the affection of his son-in-law. These two lords expressed their mutual

regard after the quaint fashion of those times by executing a deed, wherein it was solemnly agreed and declared that Lord l'Isle might at his pleasure come, go, and stay at Berkeley Castle, with leave to hunt and fish in all his son-in-law's chases and parks; while Lord Berkeley promised to be his father-in-law's inseparable companion at home and abroad, in peace and in war, and that if he had children by the Lady Margaret they should bear the arms of l'Isle. This deed bears date November 30, 1381, and had scarcely time to take effect, for Lord l'Isle died within the next seven months. Wat Tyler's rebellion was in this lord's time, when the discontent of the peasantry, who had learnt their strength in the French wars, brought about a social revolution, which changed the whole system of English husbandry. Up to this time noblemen farmed their demesnes themselves, under the oversight of reeves, who were annually elected in each manor, and were bound by the tenure of their copyholds to superintend without salary the cultivation of the lords' demesnes. But the fifth Lord Berkeley began to let his meadows on lease, and to take in other men's cattle for pasture by the month and quarter, letting out more acres every year "as he found chapmen and price to his likeing." This practice was continued and extended by his successor, and, before the end of the fifteenth century, it became the universal custom for lords of manors to let their demesnes at rack rents, or else at reduced rents, with fines at agreed intervals, which was the general course of husbandry in Smyth's time.

On Lord l'Isle's death in 1382, the baronies of l'Isle and Tyes, with twenty-five manors and lands in seven different counties, came to the Berkeleys. But only one generation profited by this accession, for the heiress had no son, and her daughter carried away more lands from the family than her mother had brought. Lord Berkeley was still in the prime of life when his wife died in 1391, but he could never be induced to marry again, although Berkeley Castle, which was then assumed to carry with it the barony, was entailed on heirs male. The result was, that when he died in 1417 the castle passed to his nephew, James Berkeley, whilst his daughter, the Countess of Warwick, took his unentailed estates as well as the baronies and lands of her mother's inheritance. But although the nephew's right of succession was beyond dispute, the Earl of Warwick was the most powerful subject in the realm, and the Countess took advantage of her husband's influence at Court to keep possession of the castle for nearly four years to the exclusion of the rightful heir. It was not, in fact, until James purchased the assistance of the king's brother, the Duke of Gloucester, by the sacrifice of his Welsh patrimony, that he got livery of the castle and lordship of Berkeley, and a writ of summons to Parliament as a baron. But this was only the beginning of strife, for the respective rights of the heir male and heir general were ill-defined, and Lord Berkeley contended that the manor of Wotton-under-Edge and others, which the Countess of Warwick claimed as heir to her father, were entailed with the castle. These claims were urged and resisted with so much violence, that the

Earl and Lord Berkeley seldom met in public without a squabble, in which their servants came to blows. In the meanwhile the Countess died, and when the quarrel ceased to be between near relations it grew less bitter. It was agreed in 1426, through the good offices of the Bishop of Worcester, that the earl, who had no son, should keep the manors during his life. This truce lasted thirteen years; but when the earl died in 1439, the feud broke out more fiercely than ever. For as soon as Lord Berkeley heard the news of Lord Warwick's death, he and his servants took forcible possession of the manor house of Wotton, and made havoc of its contents. The earl's daughters, who were outraged by these proceedings, were married to three of the greatest nobles in the realm, and the eldest was the wife of that valiant warrior, Lord Talbot, afterwards Earl of Shrewsbury, who was all-powerful at Court. When, therefore, Lady Talbot complained to Queen Margaret of Anjou, who was then supreme, that her manor house had been wrecked during her husband's absence on the King's service in Normandy, Lord Berkeley was committed to the Tower, and was not released from prison until he had given bonds for £1,000 to appear when summoned and take his trial for the riot and robbery. He took care, however, to stay at Berkeley, where he had no fear of being summoned, and when at last the order was served on him from the Court of Chancery, the messenger was beaten for his pains, and was forced to swallow the "*subpoena*, both wax and parchment." In the meanwhile, the quarrel was not limited to legal proceedings, for the followers on both sides waged open war, in which the towns of Wotton and Berkeley suffered by turns waste and devastation. There were limits, however, even to Lord Berkeley's defiance of the Royal authority, and when neither he nor his sons could safely show themselves in London, he sent his wife Isabel to appear for him in Westminster Hall. She was a woman of great spirit and descended from the blood-royal, for she was the daughter of that Thomas Mowbray, Duke of Norfolk, whose challenge to Henry of Hereford in the lists at Coventry is familiar to every reader of Shakspeare. Contrary to all expectation her son succeeded in her right forty years after her death to an immense inheritance, but in her life-time she suffered from straitened means, and on her last journey to London her husband had to pawn the furniture of her chapel for twenty-two marks to enable her to get home again. She gained little by her journey, for three months afterwards Lady Shrewsbury's son, Lord l'Isle, forced his way into Berkeley Castle with a band of armed followers, and captured Lord Berkeley and his four sons as they were sleeping in their beds. They were kept prisoners in durance vile for eleven weeks, and to save their lives were forced to execute a series of deeds, by which they disclaimed all right to the manors in dispute. They were then dragged to Bristol, and were compelled to acknowledge before the Mayor three statutes of £10,000, £2,000, and £1,000 respectively, while at Lady Shrewsbury's instance a special commission issued in December, 1451, for the purpose of judicially con-

firming the deeds of disclaimer. The prisoners were at last released; but among the deeds which Lord Berkeley was forced to execute on this occasion was a lease for two years of Berkeley Castle to Lady Shrewsbury and her sisters, reserving only house-room for himself and six servants, so that on recovering his liberty he found himself no longer master of his own house. It is significant that after all these proceedings Lady Berkeley thought it prudent to get a pardon under the Great Seal for herself on May 29, 1452, and another for her husband on July 20 following. In the meanwhile, Lord Shrewsbury and his son obtained a patent of protection from all lawsuits as long as they were with the army in France, and two of Lord Berkeley's sons went with them to the war. But there was no peace for the Berkeleys, for two months after her husband's departure Lady Shrewsbury issued execution on the statute of £10,000, and Lord Berkeley's lands were extended by the Sheriff, although two of his sons were then actually fighting under Lord Shrewsbury's banner. Lady Berkeley appealed in vain to the King's Council, for she was arrested by order of the Countess, and her royal descent did not protect her from a cruel death, for she died piteously on September 27, 1452, in the dungeon at Gloucester, into which she was thrown, without legal warrant, by her merciless adversary. In the next year all legal proceedings were stayed by the death of Lord Shrewsbury and his son, who were both slain at the battle of Chatillon. But the battle was almost equally disastrous to Lord Berkeley, for one of his sons was killed and the other was taken prisoner. This common misfortune reconciled for a time the survivors, for the second Earl of Shrewsbury had no interest in maintaining his step-mother's quarrel, and was well contented that Lord Berkeley should marry his sister, Joan Talbot. This marriage secured to Lord Berkeley in his old age a few years of peace, for it left the Countess without supporters in her own family, since her grandson, Lord l'Isle, was still a child. But her vindictive spirit refused to be appeased, and it was not until seven years after Lord Berkeley's marriage to her step-daughter that she consented to sign a truce for the rest of their lives. He was on his death-bed when this reconciliation was concluded, for the deed is dated October 22, 1468, and he died within thirty-six days. His successor William, the seventh Lord Berkeley, was of a bolder and fiercer temper than his father, and was moreover encouraged to renew the contest by better prospects of success, for Lady Shrewsbury's influence was no longer paramount at Court. He presented a petition to the king recounting the wrongs done to his family in the last reign, and praying for redress; and this suit was still pending when the Countess died in June 1468. But her grandson, Lord l'Isle, who was now nineteen years old, inherited her vindictiveness as well as her estate, and challenged Lord Berkeley to settle their differences by mortal combat. His challenge was accepted, notwithstanding their disparity of years, and they met at Nibley Green on March 20, 1469-70, with all the armed followers they could muster, when a pitched battle took place, and Lord l'Isle was slain in the *mêlée*. The memory of this fatal

conflict was still fresh at Nibley in Smyth's time; but, owing to the political disturbance of the period, the riot passed unpunished, for it happened on the eve of a fresh outbreak of the War of the Roses. The Duke of Clarence and Warwick the King Maker were proclaimed traitors and rebels on the day after the battle of Nibley Green, and King Edward had too much occasion for Lord Berkeley's services to call him to account for the death of his kinsman. In the meanwhile Lord Berkeley's victory was complete, for he proceeded to take possession of the manor house of Wotton-under-Edge and of the other five manors which had been so long in dispute. He was too powerful to be dislodged, and, after years of litigation, Lord l'Isle's heirs were obliged to content themselves with the annuity which he gave them in lieu. This acquisition, however, was insignificant in comparison with the inheritance which came to him eventually through his mother. She was the grand-aunt of the last Duke of Norfolk of the Mowbray family, whose infant daughter was married in childhood to King Edward's younger son, the Duke of York. She was the greatest heiress in the kingdom; and in order that her estates might be secured to the royal family Lord Berkeley was induced to convey to the king and his heirs in tail male the moiety—to which he was entitled in reversion, as the heir of his mother—in case the duchess died without issue. He received in compensation a full discharge from his debts to the heirs of the Countess of Shrewsbury, amounting to £34,000; and when, in 1481, his conveyance was confirmed by Act of Parliament, he was created a viscount. It turned out a good bargain; for ten weeks after the Act was passed King Edward died, and soon afterwards the princes were murdered in the Tower, when Lord Berkeley's rights of inheritance revived, as if the conveyance to the king had never been made. The Mowbray estates, which were now divided between the Viscount and his cousin, Lord Howard, were of enormous extent, comprising manors and castles in fifteen English counties, as well as in Wales and in Ireland. Richard III. lost no time in conciliating such powerful supporters by dividing between them the extinct titles of the Mowbrays, and on the sixth day after his coronation the earldom of Nottingham was given to Viscount Berkeley, while Lord Howard was created on the same day Duke of Norfolk and Earl Marshal. The earl was jealous that his cousin, who was the son of a younger sister, should have the dukedom; and, as he cared more for rank than wealth, he settled on the king and his heirs male thirty-five of his manors in the hope of being promoted to a higher dignity. All such expectations perished with the king on Bosworth Field; but, as the Duke of Norfolk was slain with his master, the coveted office of Earl Marshal fell vacant, and, as King Richard left no son, the earl recovered his thirty-five manors. The preference shown to his cousin by King Richard recommended the earl to the favour of Henry VII., and he was created Earl Marshal during pleasure four days before the Coronation. Four months afterwards he obtained a grant of his office in fee tail; but this patent was dearly purchased, for it cost him two castles and twenty-eight manors

in Shropshire and North Wales, which he gave by deed of the same date to Sir William Stanley, the Lord Chamberlain. The Earl Marshal, however, was still greedy for advancement in rank, and, as he had no children, and was absolutely devoid of natural affection for persons of his own name and blood, he made a bargain with King Henry in 1487 to barter the reversion of his patrimony for a marquisate. In consideration of being created Marquis of Berkeley, he settled the castle and honour of Berkeley, together with the baronies of Bedford and Gower, and divers manors and castles in England, Wales, and Ireland to his own use in tail general, with remainder to King Henry VII. and his heirs in tail male, remainder to his own right heirs. Nor was he contented with this settlement on the King, for his brothers and their children were further disinherited by reversionary grants, which he lavished on courtiers. Subject to his own life-estate, he gave nineteen manors to the king's stepfather, the Earl of Derby, and three manors to his own step-son, Sir Richard Willoughby; and, if some of these manors eventually reverted to the Berkeleys, it was through some accident, for which they had not to thank the marquis. His prodigality was such that notwithstanding the enormous estates which he had inherited, he so completely exhausted his resources that when he died in 1492, there were not sufficient assets to pay arrear of wages to his household servants.

On the death of the marquis, Berkeley Castle and the bulk of his inheritance passed under the settlement to King Henry VII., and were lost to the family until the death of Edward VI. According to the notions of those times, the castle carried with it the barony, and, therefore, Maurice Berkeley, the brother and heir of the marquis, was never summoned to Parliament, and was only styled Lord Berkeley by courtesy. He was fifty-six years old when his brother died, and set himself patiently to work to examine the deeds by which his brother had alienated his estates. It turned out that many of them would not bear legal scrutiny, and within the space of seven years he succeeded in recovering upwards of fifty manors, besides other lands and possessions. He was his own lawyer, and was successful, in spite of the proverb, through his perseverance and great legal acumen. Smyth's language almost rises to pathos as he describes the old lord's appearance and exertions:—

"with a milk-white head in his irksome old age of seventy years, in winter terms and frosty seasons, with a buckram bagg stuffed with law cases, in early mornings and late evenings walking with his eldest son between the four Inns of Court and Westminster Hall, following his law-suits in his own old person, not for himself, but for his posterity, to regain part of those possessions with a vast brother had profusely consumed."

He died in 1506, and his eldest son Maurice, who was Lieutenant of Calais, was created a baron in 1522 for his military services. This was a new creation, for he ranked as the junior baron, and he was only induced to accept it as an earnest of the king's favour. He died in the next year without having taken his seat, and without issue, when this new barony became extinct; but six weeks

afterwards his brother and heir, Thomas, received a writ of summons, and strangely enough the precedence of the original barony was allowed to him. This summons seems to have been unknown to Smyth; but it is certain that both this Thomas and his son of the same name, who were neither of them owners of Berkeley Castle, sat in parliament with the precedence of their ancestors, whilst the next baron, Henry, who recovered Berkeley Castle as heir in remainder after the male issue of Henry VII. became extinct, so far from gaining precedence by his accession, sat in a lower place than his father, who never possessed the castle. These facts are so material to Smyth's contention that the possessor of Berkeley Castle was a baron by tenure that he could scarcely have ignored them if they had been known to him. But they were urged with great effect in opposition to the claim, when it was revived in the present reign and rejected by the House of Lords.

The romance of Smyth's narrative ends with the recovery of the castle and the final settlement of the great family feud. But this volume throws a flood of light on the social and domestic history as well as the manners and customs of the sixteenth century. For instance, it enables us to realise the immense pecuniary loss which was sustained by the old nobility through the change of religion. The Berkeleys lost the right of presentation to sixteen different religious houses, founded by their ancestors, of which they were hereditary patrons. Besides this, the suppressed houses held under them more than eighty knight's fees in different counties, for which they were bound to render suit and service. The Lord of Berkeley was entitled to a grant in aid from all these communities who held land under him, whenever he took the field in time of war, and also when his eldest daughter married, and his eldest son was made a knight. He had also the right of quartering on them his poor relations and old servants, and they were bound to give instruction to his children, for the abbeys and nunneries were the great boarding schools of those times. These privileges were known as *corrodies*, and Smyth estimates the money value of their loss at more than £10,000. We get some notion of what this sum would purchase in those days, when we read that the Lord Berkeley, who was contemporary with the suppression of monasteries, resided in 1534 in the house of the Countess of Wiltshire at Stone, near Dartford, and that he paid her for the "board of himself, his wife, two gentlewomen and six men, at the rate of £1 5s. 4d. the week for them all." A gross misprint in this passage suggests the remark that throughout this volume we have less assistance than we might have expected from the editor, for most readers would wish to be informed who this Countess of Wiltshire was at a time when the Earl of Wiltshire was Queen Anne Boleyn's father. The fact is that Smyth made a mistake in calling this Lady Wiltshire a countess, for, as Sir John Maclean might have learnt by reference to the *History of Kent*, the Lady Wiltshire who resided at Stone Place in 1534, and was buried in Stone Church, was the widow of Sir John Wiltshire, Knight, Comptroller of Calais, who died in 1526. EDMOND CHESTER WATERS.

Poems. By Miss M. Betham-Edwards. (Kegan Paul, Trench, & Co.)

THE art of the lyrist is probably much less birdlike and unpremeditated than is popularly believed, though the lyric is, in its highest manifestation, the purest and most artless form of poetry. The notion that Shakspeare "warbled his native wood-notes wild" must be accepted with reserve. With the most uncontrollable lyrical emotion there is associated some artistic design; though the poet may not be conscious of deliberate intention, the most spontaneous lyric is subjected to the artistic instinct that determines its form and limits. It undergoes alight but important changes before the poet gives it to the world. It is to be feared that this truth is not an article of faith with all writers of poetry. It is certainly not popular with readers of poetry, who love not to picture the poet a diligent student of felicities of expression and verbal proprieties, or assiduous in the detection of blemishes. Poets, however, seldom warble, or enact the nightingale's part, and great poets have been significantly careful to attain the excellent grace of finish. Miss Betham-Edwards speaks in one of her poems of

"the proud bliss, akin to mothers' joys,
That poets feel, when from their weary brain
Springs forth some heaven-born child, the pride of
time."

The advent into a dull world of a perfect poem, equipped with splendour, and power, and beauty, like Pallas Athene, issuing from the poet's weary brain, is so rare as to deserve to be accounted miraculous. The passage is intended, perhaps, in a hyperbolic sense, and not as indicative of the writer's conviction of the truth of the phenomenon. Miss Betham-Edwards possesses so true a gift of song that she is probably well aware that even the perfect lyric is produced with more or less pain and care, and that a happy and careless exuberance is seldom absolutely spontaneous. The merits of the following sonnet are of the kind that appeal to every one, and its concluding verses are truly felicitous; yet it contains one unfortunate tasteless phrase—a blemish which is fully as obvious as its beauties, and which scarcely needs explicit reference:

"A RECOLLECTION.

"We loved two poets in that happy time:
We read together—sitting, hand in hand,
Where the rocks cast a shadow on the sand,
And sunny waves made echo to the rhyme—
Theocritus of Sicily, who sung
Of many a dusky dryad-haunted grove,
Of shepherds' sorrows and of maidens' love,
In measures sweetest of the sweet Greek tongue;
And Milton, whose blind spirit could conceive
The Paradise no other mortals know,
The grand primeval passion and the woe
Of the first lover Adam and sweet Eve;
And as we read we marvelled Love could be
So old, and yet so new to her and me!"

The allusion to Milton's blindness is an extraordinary infelicity, and to speak of the "blind spirit" of him whose all-beholding spiritual vision was comparable only to that of Dante is something worse than an error. It is one of those ill conceits that are an offence against the very essence of poetry, and is the more lamentable because it mars a poem of genuine grace and simplicity.

Nor is the above a solitary instance in these

poems of excrescences that are easy to emend, yet injurious to harmony and good taste. If this were not so, if they were common and not occasional blemishes, if they did not occur in lyrics otherwise true in expression and tender in feeling, they would not be matter for note or regret. At this point criticism of Miss Betham-Edwards's poems is stayed, or takes a more agreeable and natural form. The influence of external nature, of woods and fields and flowers, is illustrated with much freshness and rapture in several poems; in "The Sorrel Blossoms," for instance, two poetic moods of vision are finely contrasted, and with delicate insight. In the opening stanzas the picture is brilliant and vividly defined, and the poet's exaltation and delight are expressed with natural sweetness and grace:

"In hope I climbed the grassy stair,
Green hill in sunlight glancing;
A thousand grasses blossomed fair,
The breezes set them dancing;
Each seemed a happy soul to be,
Rejoicing with the summer:
I smiled to think they danced for me,
And every glad new-comer.
"But, ah! a rapture greater still,
Behold, my heart awaited,—
It was the self-same grassy hill,
But wondrously translated!
It seemed that gems had dropped in showers,
The hill with glory lining:
'Twas but a crowd of sorrel flowers
Through which the sun was shining.
"Each little flower with ruby wings
Moved to a rhythmic measure;
Spell-bound I watched the lovely things
As one who finds great treasure;
I danced, I sang, I could not choose
But of their brightness borrow;
I felt as if I ne'er could lose
That joy in any sorrow."

Once again the poet visits the scene and finds the visionary charm fled past recall, with the cloud of despair over it, though, doubtless, recollection brought the special solace which Wordsworth felt in recalling his "dancing daffodils."

Some of Miss Betham-Edwards's lyrics suggest Wordsworth's influence less pleasantly, though even the most careless and inartistic of great poets would scarcely have defended the roughness and rhymes of "A Winter's Song." Much may be conceded to a playful mood, though little can be urged in extenuation of couplets like these:

"Snow flakes, soft veiling
Window and paling,
Come now to screen me
From eyes watching keenly;
Shut out the neighbours
Eyeing my labours;
Let none have an inkling
Of what I am thinking."

These inequalities are a little strange and disconcerting in a volume that contains much that is unaffectedly sweet and natural.

J. A. BLAIRIE.

TWO BOOKS ON THE JORDAN VALLEY.

Mount Seir, Sinai, and Western Palestine.
By Edward Hull. [Published for the
Palestine Exploration Fund.] (Bentley.)

*The Accursed Land; or, First Steps on the
Water-way of Edom.* By Lieut.-Col.
H. E. Colville. (Sampson Low.)

THESE two books treat, in the main, of the

same subject, but from entirely different points of view. The exploring parties left Moses' Wells within a week of one another, and travelled up the Wâdy 'Arabah in sight of each other, but held no communication whatever. This seems strange, but the fault lay wholly with Col. Colville, who, in wishing to free himself from any attempt at interference on the part of either Egyptian or Turkish officialdom, and to keep as much secrecy as possible under the circumstances, gave his scientific fellow-travellers—"the geologists," he called them—the cold shoulder completely. "The geologists" had offered their hospitality to "the engineers" in vain, and thus the parties worked independently. This is certainly to be regretted, for with a combined and stronger party time and work might have been saved, and perhaps a more extended exploration effected, as no suspicion of rivalry could ever have been conceived of by anyone who knew the work of the Palestine Exploration Fund.

It is nearly fifty years since that celebrated geologist Leopold von Buch expressed a hope that some day the Geological Society of London might send out one of its members to the Dead Sea "to illuminate with the torch of geology the facts which interest the world." And he added, "But it would be necessary to examine the geological constitution . . . of all the valley of the Jordan from Tiberias quite to 'Akabah." To-day a complete realisation of this wish can be recorded; not, however, as representing the labour of any geological society, but as having been almost entirely carried out under the auspices of our energetic Palestine Exploration Fund. For careful and enduring work of a rigidly scientific character there is, therefore, ample guarantee, so that the final results of this exploration of 1883-84 will be looked for with expectant pleasure.

In the meantime Prof. Hull has presented us with a clear and interesting popular narrative of the expedition under his leadership, in which he skilfully steers the desired *via media* between any tedium of scientific detail, so repellent to the uninitiated, and a mere journal of gossip and trivialities flavoured now and then with forced humour. Following in the steps of such a master of picturesque prose as Dean Stanley, and of such learned travellers and topographers as Robinson, Palmer, Drake, and Tristram, the Professor must have felt himself well-nigh compelled to write plainly as regards historical sites and questions. But we have a full recompense in the numerous physical problems which are here either explained or glanced at.

If there still be any well-meaning people who adhere to the theory which was depicted on maps of last century, and which lingered on into our own day in numerous text-books, viz., that the Cities of the Plain dotted the area now occupied by the Dead Sea, they will surely, on reading this book, be persuaded to relinquish a position which the facts of geology prove to be false, and which historical criticism as strongly refutes. Prof. Hull found unmistakable evidence that the waters of the Dead Sea had, in geological times, reached a height over 1,300 feet above that of their present level. At the same time, he agrees with Lartet in thinking that there has been no connexion between the Dead Sea and

the Gulf of 'Akabah since the Miocene period.

One or two points of new interest may be mentioned. Thus, the well-known salt mountain of Khashm or Jebel Usum was examined thoroughly for the first time, and proved to be a portion of the ancient bed of the Dead Sea, while evidence was found that the waters of the latter are still receding. For an answer to the important question, "Since this sea has no outlet, what has become of the materials which have disappeared?" the learned Professor refers us to a forthcoming volume on the geological results of the expedition. Another valuable "find" was made in the maritime plain extending through Philistia to the base of Mount Carmel,

"for here we came into contact with a new geological formation, hitherto, as I believe, unrecognised. . . . This formation consists of rather hard yellow calcareous sandstone, traversed by joint planes similar to those of the limestone. . . . There can be little doubt that the sandstone is newer than the limestone of the central plateau, which dips towards the west and passes below the sandstone in the direction of the Mediterranean sea-board."

To this the author has applied the name of "Calcareous Sandstone of Philistia."

Prof. Hull's book contains an outline geological map of Lower Egypt, Arabia Petraea, and Palestine, constructed on the scale of thirty miles to the inch, which helps greatly towards a comprehension of many points in the narrative; while an Appendix comprises Major Kitchener's report on the survey operations of the party, and Mr. G. Armstrong's diagrammatic section of the Wâdy 'Arabah.

In turning to Col. Colville's book, we notice at once a difference in calibre. The gallant author undertook his journey at some hazard, and managed to make a rapid reconnaissance survey of the Wâdy 'Arabah and especially the watershed, in order to ascertain for the "Palestine Channel Syndicate" the feasibility of a talked-of "Palestine Channel" or "Gulf of Galilee," as the author calls it. We are not enlightened as to the future of this scheme, which seriously means, as Capt. Burton has said, that half the "Holy Land" would be overwhelmed in a nineteenth-century deluge. It is to be hoped that by this time it may have been relegated to the limbo of the mighty improbabilities, never thence again to see daylight except to be consigned to the category of their neighbours, the sheer impossibilities.

The chief interest of the narrative lies in a certain dash of style, coupled with an ironical and imperturbable good-humour, which carry the author and his reader over not a few obstacles, while the never-failing antagonism between a strong Western will and the evasive Arab reason, if not exactly new, is a source of amusement, welling up as constantly as a geyser. Col. Colville, as in his previous volume, chooses his own method of spelling Arabic words and names, so that familiar places sometimes meet the eye as if they were utter strangers.

The title of the volume is curious, and we are left to conjecture whether the "curse" is pronounced by the author for a failure of the project which he went out to pioneer, or whether it refers to the striking

fulfilment of the denunciations uttered by Jeremiah. We may remark, too, that the title all through the book does not agree with that placed on the title-page and cover. Another curiosity is the use made of the geological term *talus*. The author continually writes the plural as *talus*; but it would have been better to follow Sir C. Lyell, who, we believe, invariably anglicised the word in its plural form, and wrote *taluses*. We also find *cataclasm* (!), and the name of the Comte de Bertou appears as de Birtou. With regard to the locality named Nuwaybi', Col. Colville does not seem to remember that the discrepancy between the chart and the place itself was pointed out by Capt. Burton some years ago.

These are signs of hastiness, which we may excuse when the gallant writer's services in the Soudân are borne in mind. But there is also a flippancy in places, as, for example, about the peaks in Sinai sacred to centuries of pilgrims, while a remark about the convent under Jebel Mûsa being only a *monastery*, seems utterly devoid of point; and for bathos of a nineteenth-century type the following passage may be quoted. The author has just described the real beauty of the situation and surroundings of 'Akabah, and he continues:

"'Akabah only wants a bloody war and a sickly season, followed by the arrival of one's yacht, with a French cook, a few cases of champagne, an ice-making machine, and the only woman one ever loved, on board, to make it a perfect winter retreat for any young man who does not mind roughing it, as long as he can enjoy the beauties of nature."

The book may serve a purpose if it can show to any future promoter of the Palestine Channel scheme "How *not* to do it."

GEORGE F. HOOPER.

How to Play Whist. By Richard A. Proctor
"Knowledge Library." (Longmans.)

MR. PROCTOR, being a whist player as well as a man of science, has amused himself by instructing the readers of *Knowledge* in the modern art of whist, and has now collected his papers in the above little book. He follows the approved system of James Clay and Cavendish, but is not, like Dr. Pole, a servile follower, and is not open to the charge which may possibly be brought against Cavendish, and certainly against Dr. Pole, that he considers the first object in scientific whist is not to win the game, but to act in accordance with the principles, and afford information to one's partner and opponents. Since the success of Clay's and Cavendish's works, many treatises on whist have appeared; and Col. Drayson was the first to apply common sense to "the principles," while Pembridge, the most amusing and one of the most instructive writers on the game, pointed out the absurdities of misplaced whist ingenuity, and the necessity of playing defensive leads rather than to attempt to bring in an impossible long suit with a weak hand. Many enthusiasts of "the principles" continue religiously to show their partner that they have two long cards which can by no possibility be brought in, while others of a higher ambition rack their brains at the whist table by seeing how often the grand coup can be brought off, and recklessly throw

away winning cards under the delusion that the occasion has offered itself for the performance of the brilliant feat.

Mr. Proctor is a sensible follower of Cavendish, and while he stands up for the proper practice of leading from numerical strength, does not ignore, though I think he does not lay sufficient stress on, the propriety of adopting defensive leads. In his very sensible and practical chapter on "How to play Trumps," he, however, distinctly insists on the necessity of not playing a forward game with a weak hand, and not attempting to establish a suit at all hazards—a warning not to be found in Cavendish, and, of course, utterly ignored by Dr. Pole.

Probably the only novelty in Mr. Proctor's book is his method of treating the leads. In every other treatise, after the enunciation of general principles, the practice has been to enumerate every possible combination of cards that can be held, and to point out the right card to lead in each case. Mr. Proctor adopts a new plan, which he considers far easier for the learner. He enumerates every combination of the cards in which it is right to lead the ace, the same with the king, queen, knave, ten, nine, and a small card; and, as he justly points out, when learnt in this way, the young player is more able to appreciate at once the meaning of each card that may be led, and adapt his play accordingly. His lessons on the play of the second, third, and fourth hands are founded on his method of teaching the leads, and have thus a natural sequence that should enable a clear-headed learner at once to grasp the principles by which the play of each hand ought to be guided.

As a mere method of learning the proper leads, I doubt whether Mr. Proctor's system is the most easy for the learner. In each case the same number of instances have to be learnt by heart; but I think he is right in his belief that his system should at once impress on the learner the meaning of each lead, and that it is consequently an improvement on the methods hitherto employed. In either case the proper leads must appear to the learner merely empirical, whereas in fact they are founded on principles evolved from the long experience of generations of whist players, which only personal experience can enable the learner to grasp.

It is singular that in his book Mr. Proctor makes no allusion to the newest system of so-called American leads, which within the last year has greatly exercised whist circles. This system consists, when leading from a long suit, of ignoring your small cards, and leading in the same way that would be done had you only the four higher cards of your suit in hand. The result is that by the close of the second round of the suit the whole table is informed that all the small cards must be in your hand, and the question in dispute is whether this amount of general knowledge is to the advantage of the leader, or the reverse. If he, or his partner, holds the strength in trumps, the system may give a great result; but on the other hand it can do no good, and may be productive of harm. To the school of players who support the dogma, "Give every information to your partner by your play," this plan of leading must be acceptable; but in plain suits, without the possession of trump strength by the

leader, it will probably have no more effect on the game than the analogous lead of the penultimate in like circumstances.

Mr. Proctor's book is completed by the publication of forty games, carefully annotated throughout. Of these, five are taken from Clay, Cavendish, and Pole, ten from the Westminster Papers, and the rest, with one or two exceptions, are original actual hands, of which eight, supplied by that excellent practical player, Mr. F. Lewis, with his own notes, are amongst the most interesting and valuable. There is no way in which a young player should improve more rapidly than by a careful study of such well-played games, and as far as my examination has extended Mr. Proctor's notes on the play are sound, and such as would give the learner every necessary explanation and instruction. Two of the games taken from Cavendish are examples of the grand coup, and beautiful specimens of whist intelligence and ingenuity. In each case, however, the possibility for the exercise of such ingenuity was afforded by bad play, which in the following instance was pointed out clearly in the Westminster Papers, and is repeated by Mr. Proctor.

The hand is, however, worthy of consideration on another point. The leader's cards consist of trumps, 9 and 7, hearts, the 8 having been turned up; spades, 9, 7, 5, 4; diamonds, 10, 7, 6, 4, 2; clubs, queen, 6. He properly leads the 4 of diamonds, to which his partner plays ace, and the last player drops the king. The leader's partner having four trumps and two honours, at this point properly leads his smallest trump, the 6, to which the second player plays 2, the original leader plays his 7 (8 having been turned up at his right), and wins the trick. If ever there was a position for a defensive lead it arises here. His long diamonds are useless, his spades are weak, and all the trump strength lies between his partner and the last player. He is bound, therefore, to lead the queen of clubs to strengthen his partner, who happens to hold the other honours in that suit, in which case, the score being four all, the odd trick is made at once. Instead of this, in the hand as played he returns his 9 of trumps, and the result gives the odd trick to the opponents by fine play, for which no opportunity need have been offered. JAMES INNES MINCHIN.

"THE CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES."

Hosea. With Notes and Introduction. By the Rev. T. K. Cheyne. (Cambridge: University Press.)

THE editor of the "Cambridge Bible for Schools and Colleges" is to be congratulated on this addition to his series. The difficult, but attractive, prophecy of Hosea could not have been entrusted to better hands. Mr. Cheyne is, of course, thoroughly at home with his subject; the prophet whose words thrill with the varying pulsations of a deep and genuine emotion finds in him a sympathetic exponent, and he writes throughout in his most genial and finished style. The Introduction contains a sketch of the times in which Hosea lived, a short but admirable exposition of the new truths acquired by the prophet, and the leading ideas which

dominate his prophecy, and an estimate of its position in the literature of the Old Testament. In his discussion of the much controverted narrative in chap. i., Mr. Cheyne adopts that form of the literal interpretation which is certainly demanded by the application made of the narrative by the prophet himself, and is also in other respects most free from difficulty. The experiences of Hosea's own domestic life gradually shaped themselves in the prophet's mind into the expressive symbol of Israel's unfaithfulness to its Lord and God; and he develops upon this basis, in opposition to the crude and unworthy conceptions of Canaanitish religion, the great doctrine of the moral union of Jehovah with his people. The importance attached by Hosea to the beautiful Hebrew virtue *chesed* (brotherly love or kindness) as the primary condition of living membership in the theocratic community, is illustrated in chap. iv. and in the note on vi. 6. The treatment in chap. v. of the literary questions arising out of the Book of Hosea is eminently scholarly and judicial. Most of the lists drawn up for the purpose of showing the use of particular parts of the Pentateuch by Hosea or other prophets are conclusive only as evidence that their compilers have not set before themselves the problem to be solved, or realised the conditions of logical proof. The few pages which Mr. Cheyne devotes to the subject may be commended as a model of the style in which such an enquiry should be conducted. His exegesis of viii. 12 is as delicate as it is precise, and will, we presume, find general acceptance.

Mr. Cheyne's superiority as a commentator comes out very distinctly in the notes. Nothing escapes him which is of value, in helping to carry home to the reader his author's meaning. The sudden transitions both of expression and feeling, the picturesque figures, the subtle differences between synonyms, are all noticed and explained. The diverging interpretations to which Hosea's abrupt and concise style not unfrequently offers scope are briefly, but clearly and sufficiently, noted. The renderings of the Authorised Version are corrected where necessary, emendations of the Hebrew text being sparingly and cautiously suggested. Illustrations from Semitic archaeology, or other similar sources, which in Hosea (*e.g.*, chap. ii.) are sometimes peculiarly valuable, are given with needful fulness. We observe in passing that due notice is taken, on vii. 9, of the discovery of Mr. Pinches during the past year, which appears to set at rest the long-suspected identity of Pul with Tiglath-pileser. It is wonderful how much Mr. Cheyne has contrived to say, and to say well, in the short compass of 130 pages. To appreciate Hosea, to sympathise with him, to understand his work, and to realise the relation in which he stood to the moral and intellectual civilisation of his age, no better help can be either needed or recommended than that which this volume affords. S. R. DRIVER.

NEW NOVELS.

Gerald. By Eleanor C. Price. In 3 vols. (Chatto & Windus.)

For his Friend. By E. M. Abdy-Williams. In 3 vols. (Sonnenschein.)

Johnny Ludlow. Third Series. By Mrs. Henry Wood. In 3 vols. (Bentley.)

A Rustic Maid. By A. Price. In 3 vols. (Sampson Low.)

So Runs my Dream. By Nellie Fortescue-Harrison. In 2 vols. (Remington.)

Mark Rutherford's Deliverance; being the Second Part of his Autobiography. (Trübner.)

Gerald ought more fittingly to have been entitled "Theodosia," for the heroine of the story is of much more account than the hero; and, in fact, the whole narrative is a mere frame to form the setting for her portrait—that of a beautiful, wayward, dreamy girl, with high ideals, and little practical faculty. One part of the situation strongly resembles the plot of *Beauty and the Beast*, for Theodosia Meynell resides under the roof of her old witch of a grandmother, Lady Redcliff, whose sharp tongue and crooked temper come into frequent collision with the younger lady, much as with Iris Compton and Lady Fermor. The later study is in no sense a copy of the first; and, in particular, Lady Redcliff's antecedents are more respectable than Lady Fermor's, besides which there is real attachment between her and her grandchild, despite all their squabbling; but the likeness is, nevertheless, very marked. The bridegroom of Theodosia's girl-friend brings Gerald Fane, ex-cavalry officer and present colliery manager, down to the wedding as his best man, whereupon Gerald falls in love with Theodosia's beauty at first sight, and she reciprocates the feeling, for no reason whatever then or afterwards discernible, save that which her grandmother assigns, that he has fine eyes. They meet again when she goes on a visit to her new-married friend, and before long come to a mutual understanding, in despite of their friends on both sides. Circumstances induce Gerald to give up his work in England, and go out to the diamond-fields in South Africa, leaving his young sister in charge of their elder half-brother, who desires for reasons of his own to bring about a marriage between her and his partner, a coarse person whom she dislikes actively. For this purpose he takes her abroad; but his plans are frustrated by Theodosia and her grandmother. Meanwhile, the suppression of a letter by Lady Redcliff's interference leads to Theodosia going out to the Cape after Gerald, and getting married to him there; after which they set off for the diamond-fields, and some of the best writing in the story is descriptive of their experiences at Kimberley. They are persistently unlucky, and return home after Theodosia's little fortune has been all spent, and her health permanently broken, for Gerald to resume the post at the colliery which he had held before. Gerald himself, beyond affectionateness, good temper, honesty, and willingness to work (all admirable qualities, no doubt), has nothing noticeable about him, and is entirely below his wife's level; yet she not only takes him on trust from the first, but remains contented to the end, which is scarcely in keeping with that love of ideals ascribed to her. The writing is careful and graceful throughout.

For His Friend resembles the previous story in concentrating the interest on the

heroine, Katharine Balfour, who is, however, of a very different pattern from Theodosia Meynell, being as high-spirited, impetuous, and practical as the other is dreamy and sensitive. She drifts into an engagement with a handsome, gallant, and fairly clever young man to whom she believes herself sincerely attached, and discovers, after pledging herself in the most definite fashion, that she has no more than strong sisterly liking for him, while the warmer feeling has been evoked by a friend of his, one Alexander Scott of Inverurie, a wealthy Scottish laird, and brilliant Cambridge man, who has himself fallen in love with Katharine at first sight. Charlie Hamilton, the accepted suitor, on returning from South Africa, whither he had gone "to make the crown a pound," so as to remove the money obstacles to his marriage, takes note of Katharine's changed demeanour, and accidentally learns that Scott is on the verge of insanity and death from hopeless longing for her. Accordingly, Hamilton puts his own feelings in the background, takes the responsibility of breaking off the engagement, and leaves the ground open for his competitor. There is a hint, at the very close, of possible compensation for him, in the person of a charming and wealthy cousin, who has been kept conveniently free of all entanglements. Some phrases here and there read as though the author had meant to solve the problem by means of fickleness on Hamilton's part, and had abandoned the notion as not fitting in with his character. The story is brightly written, and shows marks of culture.

The third series of *Johnny Ludlow* keeps fairly up to the level of the two former, and Mrs. Wood's inventive faculty stands creditably the strain of striking out what are in fact so many novels in germ, the situation being in most cases sufficient to supply the framework for an ordinary three-volume novel. Of course, they are for the most part commonplace enough, and *bourgeois* in conception and handling to a degree which would be the despair of a French critic, but Mrs. Wood knows her public's taste as accurately as do those congeners of hers in the field of pictorial art who produce *genre* subjects—"By the Cottage Door," "Baby's first Shoes," "Waiting for Grandfather," and the like—by the hundred every season. She does not aim high, and can scarcely claim to be more of a grammarian than Mrs. Squeers did; but she knows clearly what she wants to do, and does it far better than many of her more ambitious contemporaries, whether in prose or verse. But she would do well, if more of *Johnny Ludlow* is forthcoming, to amend one recurrent fault, whereby the present critic divined its authorship at once, when still anonymous: the incessant details of what ladies wore, and what they had for luncheon and dinner—about the last things that a healthy, intelligent, country lad of good family would think of chronicling.

A Rustic Maid is a very pretty story with a well-managed mystery in it, brought to light at last by easy and natural means, so that after a good deal of trouble all round, everything is made to end happily. Audrey Brooke's whole-souled devotion to the country, which earns for her the title she bears in the story itself as well as on the title-page, is

gracefully depicted, and her frank simplicity is throughout exceedingly taking. She has, however, one grievous fault—she always says "Different to." It is to be hoped that Miss Price will make her next heroine speak better English. Here is a rhyme for all whom it may concern, in respect of the true and false use of that combination of words:

"I do not resemble my brother Tom,
I have changed towards my brother Hugh;
And so the former I'm different from,
The latter I'm different to."

The author of *So Runs My Dream* endeavours to disarm critics at the outset by means of a brief preface, wherein all departures from matter of fact are declared to be merely the result of the nature of the story itself as belonging to dreamland, and thus not obnoxious to the laws of middle earth. If this means that she actually dreamt the story when she was asleep, and remembered it sufficiently to put it down in writing after she woke, the plea is adequate, and the story itself would have a certain psychical value. Or if she means that somebody else is supposed to have dreamt it, and that she is merely the narrator at secondhand, that too will do to urge in mitigation. But all she does appear to mean is that it is convenient to be free from any limitations in fiction, which is not the road to high art. After all, the most extravagant incidents in the story are of a very mild kind. There is an eccentric baronet who wears a live cobra as an occasional girdle and necktie, and there is a lovely violinist—on similar terms with the same cobra, and on yet more affectionate ones with the baronet's heir—who is peculiar in her attire, and such a mistress of her instrument that she would not have had an instant's difficulty in improvising a study which would have fulfilled the celebrated stage direction, "Music expressive of a gentleman travelling into a foreign country and changing his religion." Indeed, that is nothing to the feat she actually achieves by telling the baronet the whole story of his past life in musical form. The main situation of the story is that she travels about with her guardian, a mesmerist, physician, and revolutionary socialist of the rosewater variety, who pledges her to celibacy and the service of humanity with a capital H. She is quite satisfied, till she falls in with Rupert Conyngham, the heir above-mentioned, on whose behalf she outwits a very clumsy Jesuit, confessor and director of Sir Jasper Conyngham, who intends to secure all the baronet's large disposable wealth for the Church, to the exclusion of his Protestant heir. Her guardian forbids the banns, and refuses to assign a reason; but afterwards admits in writing that Irene is his own daughter by a secret marriage, in disobedience to the laws of the socialist fraternity to which he belongs, and that her mother, sprung from an insane family, had herself died mad, so that the disease would almost certainly reappear in Irene's children. This breaks off the engagement, and so the story ends. Its chief claims to the name of "dream" are two—first, the language, which is not that commonly heard, especially in the free interchange of "thou" and "you," "thine" and "your," in the very same sentence, however short; and next, a slightly soporific effect produced upon the reader.

Mark Rutherford's Deliverance is scarcely up to the mark of the former part. On the one hand, it is not a chronological sequel of the story, for much of it is occupied with scenes which ought to have been inserted early in the previous volume, as belonging to the hero's youth; and, on the other hand, the title is not justified. Those who have read the original *Mark Rutherford* will remember that it is the story of a young man born of Independent Calvinist parents, who embraces the ministry of that sect for a time, gradually loses faith in its doctrinal system, drifts into Unitarianism, finds that equally unsatisfying as his mind becomes more and more agnostic, and settles down as assistant to a freethinking bookseller and publisher. Now, the word "deliverance" in the title of the second part should point to some solution of the doubt and perplexity which are represented as causing him real suffering, whatever that solution might be, from Catholicism down to Cosmic Emotion. But nothing of the kind is supplied, and there is even one part of the story which does not seem to fit in with the earlier part, in that he takes up again with the woman to whom he was engaged as a lad, and had broken off with on the ground of having outgrown his first affection, and discovered how little they had in common. Now he finds out that he had loved her all along, and marries her, left a widow by an old acquaintance of his own; but the story rather makes for increased incompatibility having been developed in the meantime. There are clever passages scattered all through the volume, and a chapter on an attempt made at a secular mission to reform Drury Lane is vigorous and realistic; but there is loss of power, on the whole, as compared with the first portion. Another interpretation may be put on the word "deliverance," for we read of Mark Rutherford's death just at the close; but as it is not made in any way part of the narrative, nor led up to, but simply recorded by the supposed chronicler, Reuben Shapcott, as having happened shortly after the autobiography ceases, it does not fairly lend itself to that explanation. A few notes on the Book of Job, not specially noteworthy, and an essay on Principles, seemingly modelled on George Eliot, in her phase of *Theophrastus Such* (an influence visible elsewhere too), take up some forty-five pages at the end, but might have been omitted without serious literary or ethical loss. RICHARD F. LITLEDAL.

CURRENT LITERATURE.

Life of Lord Lawrence. By R. Bosworth Smith. With Portraits and Maps. Sixth edition, revised. In two vols. (Smith, Elder, & Co.) Mr. Bosworth Smith is to be congratulated on having gained a success to which we know no parallel in Anglo-Indian literature. His *Life of Lord Lawrence* has already become a classic, by the side of such biographies as Mr. G. O. Trevelyan's *Life of Macaulay*. The present edition, which is the sixth within about twice as many months, does not altogether satisfy our ideal of what a popular edition should be. By the adoption of smaller type and thinner paper, the original volumes have been considerably reduced in bulk, so that they can now be obtained for one guinea, without the loss of the portraits and maps. But if a book is intended

to be really "popular," it must be in a single volume, and its price ought not to exceed (say) 7s. 6d. We are glad to find that a copious Index has been added, besides an Appendix on Hodson of Hodson's Horse, about which it is our duty to say a few words. Whether it was necessary for Lord Lawrence's biographer to make a merciless examination into the character of one who only came within his sphere incidentally, is a question of literary ethics which different people will answer in different ways. Most will agree with Sir Henry Norman (II., p. 530) in "regretting the whole discussion extremely." But as the matter has been stirred, primarily through the ill-advised zeal of Hodson's own friends, it was inevitable that the truth should be told. After reading the documents printed in this Appendix, further controversy becomes impossible. And yet we cannot entirely withhold our sympathy from those who regard Hodson—as Scott seems to have regarded his own dishonoured knight—as a man whose crimes were half redeemed by his bravery. Nor will we shrink from passing upon him the charitable judgment of the poet:

"If ever, in temptation strong,
Thou left'st the right path for the wrong;
If every devious step, thus trod,
Still led thee farther from the road;
Dread thou to speak presumptuous doom
On noble Marmion's lowly tomb."

Let those continue the quotation who will.

Vita Haroldi: The Romance of the Life of Harold, King of England. Edited, with Notes and a Translation, by Walter de Gray Birch. (Elliot Stock.) Mr. Birch has done well in editing from the unique MS. the interesting legendary life of Harold, from which is derived the well-known story of his having survived the battle of Hastings, and ended his days in the practice of religious austerities at Chester. He has not been equally well-advised in attempting a translation of the book, as he is evidently incompetent for such a task. One specimen of his performance will be sufficient. In the prologue the author says, "Accedit stimulo huic calcarium insuper vice jam ultro currenti, hinc fraterna cum amica suasionis postulacio, inde eum paternam jussione sollicita commovicio." Mr. Birch's rendering is: "There is added to this stimulation, moreover, as the turn runs already beyond measure, on the one side a brotherly request with friendly persuasion, on the other side an anxious admonishing with a paternal command." Evidently Mr. Birch joins *vice* with *currenti* as an "ablative absolute," and imagines that *ultro* is a sort of synonym for *ultra*. Of course the author's real meaning is that while the attractiveness of the subject of itself impelled him to write the book, he had an additional motive ("by way of spurs to a willing horse") in the command of his superiors. Mr. Birch naturally complains that his original is frequently unintelligible, and he says that he has imitated this quality in his translation. He has succeeded not only in rivalling, but in surpassing his model. However, though Mr. Birch does not seem to be able either to read Latin or to write English, there is no reason to doubt his ability to copy a mediæval MS. Indeed, the general accuracy of his transcript appears to be proved by the fact that the passages which he has failed to understand are, as he has printed them, for the most part perfectly clear and fairly grammatical.

An *Analysis of the Principles of Economics.* Part I. By Patrick Geddes. (Williams & Norgate.) What was said in the ACADEMY last week concerning pamphlet literature, with special reference to Prof. Karl Pearson's lecture on *Socialism in Theory and Practice*, is still more applicable to this publication of a series

of papers read before the Royal Society of Edinburgh. Those who came across a previous pamphlet by Mr. Patrick Geddes on *The Classification of Statistics and its Results* (A. & C. Black, 1881) will recollect that he there attempted to reconstruct quantitative sociology upon the basis of a scientific classification. For our own part, we regarded that attempt as suggestive rather than satisfactory. The present is a further step in the same direction, dealing with the entire body of economical phenomena, not only with their numerical expression in statistics. It is certainly the more interesting of the two, and we are disposed also to call it the more valuable. Though unable to criticise it here, we may summarise its chief points. In the first place, the science of economics is distinguished from the corresponding art, and its relations to the other sciences are defined. Secondly, the principles of economics are traced to their origin in physics, biology, and psychology, forming an ascending scale of complexity. And, finally, the scientific principles thus arrived at are applied in each case to the solution of certain practical problems. In the author's style and terminology, no less than in his method, it is impossible not to trace the influence of Comte, though he nowhere mentions Comte's name. However sound the method may be, assuredly it derives no popularity from its expression, which we must beg Mr. Geddes to emend, before he composes the volume he has taught us to expect from him on the subject.

Reminiscences and Essays. By James Montgomery Stuart. (Simpkin, Marshall, & Co.) This little book is oddly put together, and does not display much literary power, but the author's "reminiscences" are interesting. "Visiting Lord Macaulay," he says,

"just at the time when the first instalment of Carlyle's *Life of Frederic* was published, I found him engaged in the perusal of the opening chapters. His wrath—I can use no milder word—against Carlyle's style was boundless. He read aloud to me four or five of the most Carlylean sentences, and then throwing the book on the library table exclaimed, 'I hold that no Englishman has the right to treat his mother-tongue after so unfilial a fashion.' . . . Before a week had elapsed I was again at Holly Lodge, and he at once recurred to Carlyle's history. 'Pray read it,' he said, 'as soon as you can find time. Of course I have not got, and never shall get, reconciled to his distortions and contortions of language; but there are notwithstanding passages of truly wonderful interest and power, and in the infinite variety of new historical facts, and in the delight and instruction they afford, if my first feeling has been that of annoyance at the strange way of telling the story, my second and permanent feeling is one of gratitude that—even in such a way—the story has been told.'"

In 1870 Mr. Stuart met M. Thiers at Florence, in the company of Rattazzi, Menabrea, and several other distinguished Italians. Thiers excited the surprise and dissent of his auditors by expressing his opinion that Gino Capponi was "the greatest among the living thinkers and scholars of Italy."

"Surely, M. Thiers," observed Rattazzi, "you do not place the Marquis Gino Capponi as a thinker and writer above Manzoni. The world has seen nothing from his pen to be compared with the *Promessi Sposi*." "I have," replied Thiers, "a very high admiration of Manzoni and of his *Promessi Sposi*, but I cannot rank his mind as at all equal to the many-sided intellect of Gino Capponi."

An article on "The Little Italian Organ-grinder" gives some startling information with regard to the infamous traffic in Italian children which, it appears, is still being extensively carried on. The book deserves to be widely read.

Literary Success: a Guide to Practical Journalism. By A. Arthur Reade. (Wyman.) Mr. Reade, who is not (so far as we are aware) on the staff of the *Pall Mall*, deserves the credit that is due for introducing the methods of American journalism into English literature. His *Study and Stimulants* won for him a reputation that was not quite sustained by the companion volume on *Tea and Tea-drinking*, which unaccountably omitted all mention of Cobbett. His present book, though its two titles form between them a contradiction in terms, is sure to be widely read, for it professes to point the road to fortune to anyone who can drive a pen, and it is highly seasoned with personal anecdotes. It forms a volume, we should add, in Wyman's "Technical Series."

Tales and Poems of South India. From the Tamil. By Edward Jewitt Robinson. (Woolmer.) At the last meeting of the Royal Asiatic Society, the Rev. Dr. Pope read a paper on "The Study of the Vernaculars of Southern India," in which he called attention to the claims of Tamil literature, as being rich in parables and ethical maxims not derived from the Sanskrit. Mr. Robinson, a returned missionary (from Ceylon, we fancy, where Tamil is spoken as well as on the main land), has here given a collection of extracts from the most famous Tamil writers, which will enable the public to judge for themselves. As a large portion of the book has already appeared under another title, we must content ourselves with this brief notice, merely saying that the stories in prose have attracted us more than the verse translations.

Parodies of the Works of English and American Authors. Collected and Annotated by Walter Hamilton. Vol. I. (Reeves & Turner.) While noticing this work—which, we are glad to see, is still being continued in monthly parts—we must resist the temptation of being led into a disquisition upon the legitimacy of parody, or of the collection of parodies. The success that Mr. Walter Hamilton has already met with is his own sufficient justification, if any were needed. The popularity of parodies, like that of burlesques, may be taken as a testimony to the popularity of the originals they caricature. Our only fear is lest the importance gained by a serious collection of them may unduly develope what is after all but a parasite of literature. In this volume are printed some hundreds of parodies after five poets—Tennyson, Longfellow, Bret Harte, Hood, and Wolfe. The last-mentioned stands first in respect of quantity, for his single poem on "The Burial of Sir John Moore" is here represented by no less than forty imitations, while "The Song of the Shirt" has thirty-one, "The May Queen" thirty, "Excelsior" twenty-five, and "The Charge of the Light Brigade" twenty-four. These figures by themselves suffice to show the pains which Mr. Hamilton has devoted to a task that cannot have been altogether agreeable. It is only just to give him thanks for having rescued from oblivion not a few verses of merit, and for carefully notifying the source and date in nearly every case. Occasionally his comments possess real bibliographical interest, though we must protest against the tone in which he has thought proper to speak of the Laureate.

We are sure that parents will thank us for drawing their attention to a bright little book by the authoress of *Phoebe's Pool*, called *Holidays at Brinnicombe* (Masters.) The whole tone of the book is excellent, while the descriptions of scenery bring sunny Devon vividly before our eyes. The children are naturally drawn, and their adventures extremely interesting.

NOTES AND NEWS.

It is announced that the Revised Version of the Bible will be published shortly after Easter.

MESSRS. MACMILLAN announce a History of the University of Oxford, from the Earliest Times to the Revival of Learning, by Mr. H. C. Maxwell Lyte, author of a *History of Eton*.

GEN. GORDON, when Governor of the Sudan in 1874, sent home to a friend a map in his own handwriting of the route between Suakin, Berber, and Khartum. Permission has been given to Mr. Stanford to reproduce this map in facsimile, as it will be of especial interest at the present time, and it will be published in a few days.

MR. W. C. COUPLAND, the translator of Hartmann's *Philosophy of the Unconscious*, is about to publish a volume on Goethe's "Faust," in which he aims at giving a connected exposition of the whole work, the unity of which he in principle accepts. The publishers are Messrs. Bell & Son.

DEAN VAUGHAN has nearly ready for publication *The Four Epistles of St. Paul's First Imprisonment at Rome*—Philippians, Ephesians, Colossians, Philemon. The book will contain a literal translation, with a paraphrase and notes for English readers.

We are glad to hear that the late Prof. W. Stanley Jevons left a "fragment" on the Principles of Economics, which has been placed in the hands of Messrs. Macmillan for publication.

We understand that Bishop Ellicott has almost completed the *Critical and Grammatical Commentary upon the First Epistle to the Corinthians*, with which he has been occupied for a long time. It will be published by Messrs. Longmans, probably before the end of the present year.

PART 16 of *The Roxburghe Ballads*, edited by the Rev. J. W. Ebsworth, is well advanced in preparation, and the editor hopes to have it ready for issue at Midsummer. The forthcoming part is the first of the sixth volume, and is devoted entirely to "a group of True-Love Ballads" of early date.

MESSRS. LONGMANS' announcements include *The Wanderings of Ulysses*, by Prof. C. Witt, translated by Francis Younghusband; *Sagittulae*, Random Verses, by the Rev. E. W. Bowling; and *School Board Idylls*, by James Runciman.

AN Italian translation of Mr. Herbert Spencer's *The Man versus the State* is announced for publication by S. Lapi, of Città di Castello (Umbria).

MESSRS. HURST & BLACKETT have in the press a new novel by Lady Hope, entitled *A Simple Life*, in three volumes. The same firm will shortly issue, in one volume, a second and cheap edition of *Donovan*, a Modern Englishman, by Edna Lyall.

THE next forthcoming volume in the "American Statesmen Series" will be *John Marshall*, by Gen. A. B. McGruder.

MESSRS. KEGAN PAUL, TRENCH & Co. will publish immediately a Life of Father Tom Burke, of the Order of St. Dominic, written by Mr. W. J. Fitzpatrick. It will be in two volumes, with a portrait.

The Sage of Thebes is the title of a new volume of poems by the author of "The Lady of Ranza," announced by Mr. Elliot Stock. The same house will publish shortly a fourth edition of E. V. B.'s *Days and Hours in a Garden*, and a brochure on Old and Rare Books, by James C. Woods.

A Journey Due South: Travels in Search of Sunshine, is the title of a new work by Mr.

G. A. Sala which Messrs. Vizetelly & Co. are about to publish. It contains a characteristic preface penned by the author on board the s.s. *Gallia*, en route to the United States on a lecturing tour.

MR. T. FISHER UNWIN has just ready for publication a novel by one of the first Dutch writers, an authoress formerly known as Miss Toussaint, married many years back to M. Bosboom, one of the best living painters of church interiors. This lady, now in her seventieth year, is still busy with her pen.

DR. FRANZ HIRSCH has retired from the editorship of the *Magazin für die Litteratur des In- und Auslandes*.

THE next number of the *Commonweal*, the organ of the Socialist League, will contain a poem by William Morris, "The Message of the March Wind"; articles by Stepniak on "The Condition of Russia," Fred. Engel on "England in 1845 and in 1885," Edward Aveling on "Mr. Forster and Co-operation," and several letters from foreign Socialists.

A NEW novel, by Friedrich Friedrich, dealing with military life, is in the press: the title is *Mit den Waffen*.

PROF. C. F. RICHARDSON, of Dartmouth College, New Hampshire, author of *A Primer of American Literature*, has nearly ready the first volume of his projected *History of American Literature*.

IN a few days Messrs. Simpkin, Marshall & Co. will publish *Modern Yorkshire Poets*, by Mr. William Andrews. It will contain characteristic selections from the works of the more noteworthy Yorkshire poets of the present time, with biographical and critical notices. A number of pieces in the Yorkshire dialect will be included. Several authors have contributed original poems.

The issue of the fourth edition of Brookhaus's *Kleines Konversations-Lexikon* is to be commenced in a few weeks.

DR. PARKER, who has hitherto been his own publisher, has sold the copyright of his works, including the forthcoming volumes of the *People's Bible*, to his printers, Messrs. Hasell, Watson, and Viney, who have made arrangements with Messrs. Hodder & Stoughton to supply the trade.

LUTHER's hitherto unpublished Commentary on the Minor Prophets will shortly be edited by Dr. Linke, from two recently discovered MSS., and be added to the Erlangen-Frankfurt edition of Luther's complete works. The first two volumes, comprising Hosea, Joel, Amos, and Obadiah, will form vols. xxiv. and xxv. of the Opera Exegetica Latina.

"THE Land of the False Prophet" is the title of an article that will appear in the *Century Magazine* for March. It is written by Gen. R. E. Colston, who has twice been over the route now taken by the British soldiers, and will be profusely illustrated, also containing a portrait of Gen. Gordon.

THE first complete translation of the Babylonian Talmud into German (or any other language) is announced to appear shortly at Innsbruck, in about thirty-six parts quarto. The translation being finished, and the entire MS. being, according to the publishers, in their hands, it may confidently be hoped that this gigantic and repeatedly attempted undertaking may at length be carried to a successful end.

PROF. FRANZ VON HOLTZENDORFF is editing a *Handbuch des Völkerrechts auf Grundlage neuerer Staatspraxis*, to which the most eminent scholars of the Continent are contributing. The work will consist of four octavo volumes, and the first volume will appear in the course of the

spring. Dr. Geffcken's pamphlet, *Die Völkerrechtliche Stellung des Papstes*, has been issued as a preliminary specimen of the work.

MR. ORDISH will contribute to the next number of the *Antiquary* the first of his series of articles on "London Theatres." For the same number Mr. Gomme will write on the "Rebellion of Wat Tyler," pointing out some new phases of that celebrated revolt. Miss Toulmin Smith contributes a paper on the "Companies of Marshals and Smiths at York," the material for which is obtained entirely from MS. sources not hitherto printed.

MR. GOSSE's lectures delivered in America are announced for early publication by Messrs. Osgood & Co.

THE New York Board of Education at a recent meeting voted to exclude Bryant's poetry from the schools, on the ground that scholars should read only the best poetry, such as Longfellow or Whittier. Bryant they regarded as only a second-rate poet.

WE hear that a young Oxford graduate, Mr. M. E. Sadler, of Trinity College, is delivering two courses of lectures on political economy to Lancashire working-men, which have this novel feature—that the entire expense is defrayed by the working-men themselves.

MR. F. W. ROBINSON is engaged in writing a new serial story for *Cassell's Saturday Journal*, which will appear early next month. The scene is laid in Lancashire.

WE would call attention to an article in the *Oxford Magazine* of last week signed "Locridides," which urges the desirability of compiling a general index to the materials for the history of Oxford that exist either in print or MS. The importance of such a work for the future "Bibliotheca Oxoniensis" is well pointed out.

WE have received the first number of the *Dublin University Review*, a monthly magazine, which aims at representing not only the interests of Trinity College, but also the literary life of Ireland in general. We learn from it of the foundation of the Helen Blake National History Scholarship, of the value of £95 for four years, to be awarded to the author of the best unpublished essay on "The History of Ireland under the Reign of Charles I." It seems to us improbable that genuine historical research will be promoted by such lavish means. If we remember aright, Helen Blake was the name of a lady who died intestate in London some six years ago, and whose property lapsed to the Crown in default of next of kin.

M. EDOUARD HERVÉ, the editor of *Le Soleil*, will be one of the candidates for the late M. About's chair at the Académie française.

WE note a curious double blunder in the *Cincinnati Courier* of this month. Under the heading "An English Opinion of some American Books," the *Courier* gives a long extract, with some eulogistic remarks, from a review of certain American novels, which, it says, was written by a "Mr. E. Parnell," and published in the *Athenæum*. On reading the extract, however, we discover that it is from an article by Mr. E. Purcell, which appeared in our own columns on December 6, 1884.

MR. CARL ARMBRUSTER will begin a course of five lectures at the Royal Institution on "The Life, Theory, and Works of Richard Wagner" on Saturday, February 28 (with vocal and instrumental illustrations).

MAGAZINES AND REVIEWS.

THE two latest numbers of the *China Review* contain articles of varied, if not of great interest. Dr. Edkins leads the way with a somewhat

disconnected criticism on an article by Mr. Parker on the "Chinese Old Language," and lays himself open to a temperate rejoinder by Mr. Parker. The same writer contributes an article on the Taou-tê, King of Laou-tze, and illustrates from that work the senses in which the founder of Taoism employed the words *Taou* and *Tê*. The true meaning of these terms, together with that of the whole philosophy of Laou-tze, must however be looked for in the Vedic literature. Evidence is forthcoming that Laou-tze was a native of one of the non-Chinese southern states, and possibly by way of Burmah received a knowledge of the Vedic philosophy, which he has reproduced in his Taou-tê King. Mr. Arendt continues his very interesting paper on Chinese Apologues. The spread of Buddhism disseminated over China and Japan quite a literature of fables, but those translated by Mr. Arendt are of an earlier date. The short notice by Mr. Parker of the "Tartars, Tibetans, Turks, Hindoos, &c.," who figure in the early records of China, contains valuable historical data. The prominence which events have lately given to Formosa gives a special interest to G. P.'s "Life of Koxinga," the celebrated pirate, of which we are promised a continuation. Mr. Dyer Ball gives another admirable chapter on Chinese mythology, a subject which will be found interesting by a large class of readers. Both numbers conclude with Notes and Queries which show in the subject-matter a marked improvement on those in the earlier volumes of the Review.

EVERY lover of Molière—that is to say, every lover of French literature—will be glad to have indicated to him a really valuable and extremely interesting paper in the February *Revue* on the "Early Illustrations of the Plays," by M. C. A. Livet, who speaks not merely as a scribe on the period. The paper extends to some twenty pages, is itself well illustrated, and is altogether one of the best that has appeared in this periodical for some time. The other contents of the number call for no special notice, especially as the chief of them is a condensed translation of Mr. W. F. Rae's paper on the *Times*. The habit of translating articles from English or American papers may be excusable in periodicals addressed to a people so incurious of foreign literature as the French, but it is not one to be altogether commended in itself.

THE *Revista Contemporanea* for January contains the conclusions of Narciso Page's Essay on the "Regimen Municipal," and of Diaz y Perez's work on the "Bibliotecas en España." The former considers that the Castilian Municipality had its origin among the *Mudejares*, and has no filiation to the Roman Municipium. The latter discusses the reforms of Señor Pidal, and declares them to be wholly illusory, amounting merely to a change of officials for party purposes. Two discourses are reported: one, eloquent but vague, on the Relations between Science and Poetry, delivered at the Ateneo of Madrid by C. Fernandez Shaw; the other, before the Academy of Lisbon, on Political Economy and Statistics in Spain by Señor Carreras y González, in which he defends the older school of political economy against the more advanced one of Azcárate, &c. D. Ramiro Blanco gives a summary of the publications connected with the centenary of the Marquis of Santa Cruz de Marcenado, in December last; and Alvarez Sereix treats of Inundations and of Earthquakes.

THE *Boletín* of the Institución Libre de Enseñanza of January 31 has three noteworthy articles: one, by the distinguished geologist D. José Macpherson, on the recent Earthquakes in Andalusia; another, "On the Rural Family in the Asturias," by D. M. Pedregal, and a third by Señor Haim Bidjarano on the popular literature

of the Spanish Jews in the East. Specimens of their songs, and numerous proverbs, are given. After so many centuries they still sing in mournful lament:

. . . Ah! mi amada España

Pierdimos la madre Sion!
Pierdimos también España!
El nido de consolación.

FASCIOULE VI. of the *Archives Historiques de la Gascogne* has just appeared. "Les Huguenots dans le Béarn et la Navarre, documents inédits, par A. Communay." It forms the complement of Fasciole IV., "Les Huguenots en Bigorre," par MM. Durier and Carsalade du Pont, and covers the period from September 1563 to May 1575. These careful publications will be of great service towards an impartial history of Jeanne d'Albret and her times, which has yet to be written.

ORIGINAL VERSE.

GORDON.

The Unrequitable.

GONE, with the toil of nigh twelve months undone,
Out from thy grasp by sloth and treachery
When friendly hands across that sandy sea
To reach thee at thy post had all but won.
Gone when thy hope was high as Egypt's sun,
From sting of failure and all charge set free,
A man no king was great enough to fee—
God's Servant, taking wage of Him alone.
Gordon, we may not give thee so much earth
As might suffice thy bones for resting-place,
But must remain thy debtors in our dearth;
Souls pure as thine are channels of God's
grace,
And all our famished lives must grow more worth
When such have dwelt among us for a space.

EMILY PYEIFFER.

OBITUARY.

DOM ANSELM BAKER, O.CIST.

ON Friday last a few friends—Mr. Edwin de Lisle, Mr. Everard Green, F.S.A., and others—gathered round the grave of Dom Anselm Baker in the cemetery of the Cistercian monks at Charnwood Abbey in Leicestershire. To a large circle, however, the death of Dom Anselm Baker creates a blank which cannot be filled up. He was stricken with illness some five years ago, and owed his partial recovery to the untiring devotion of a lay-brother of the name of Brother Aloysius; yet his death, when it did come, was a great blow to the large community of Cistercian monks in Charnwood Forest. During this time his mental activity had been happily unimpaired. He appreciated deeply the gathering of his friends and old pupils on Sunday afternoons, from whom he obtained the art-news of the outer-world, and to whom he in turn conveyed some of his vast stores of liturgical and artistic learning. He passed away on Wednesday, January 11, at the age of fifty-two. As a heraldic artist, he has had no equal in our age; and about two-thirds of the coats-of-arms in Foster's *Peerage* were by him. Many kalendars, books of hours, and other liturgical books, brought out either by the late Mr. Philp or by firms at Mechlin and Tournay, bear witness to his inventive genius. The illuminated *Liber Vitæ*, or Book of Benefactors to the Cistercian Abbey in Charnwood Forest, the Book of Armorial Bearings of English Cardinals, and the Book of Arms of the Cistercian Houses of Catholic England, are among the treasures he has left behind, all of which it is proposed to exhibit this spring in London.

A LETTER FROM EGYPT.

Assiout: Feb. 2nd, 1885.

I have been spending the last month on board a dahabiah out of the reach of posts and papers, so that the readers of the ACADEMY probably know a good deal more than I do of the success that may have attended M. Maspero's excavations at Medinet Abu, or those of Mr. Petrie and Mr. Naville at Naukratis and Tel el-Farân. I can report only my own doings, some of which may prove interesting to those who busy themselves with Egyptian archaeology, though, as will be seen from the address at the head of this letter, my voyage so far has not extended beyond Siût.

First of all I have to report the discovery of a new tomb. This is cut in the rock on the eastern side of a low hill in the desert beyond the Kom el-Ahmar or "Red Mound," the site of an extensive city of unknown name, which once stood near the modern Sharôna, a village between Maghâga and Minieh, but on the opposite side of the river. The tomb is buried in sand almost up to the ceiling, but the sculptures still visible belong to the period of the Old Empire, and the hieroglyphics which accompany them record the titles of a "royal scribe" who was "superintendent of the sacred registers" and "devoted to the service of King Pepi." The natives have a legend that a heifer comes out of the tomb once a year on the night of "Baptism-day" (January 18), runs to the Nile, and, after a draught of the waters of the river, returns for another year to its subterranean stall. If the tomb were cleared out, we should no doubt recover the ancient name of the Kom-el-Ahmar, which must occupy the site of one of the cities mentioned in the classical geographers as existing in its neighbourhood. Unfortunately, it is not unfrequent in this part of Egypt for the mounds of old cities to be completely covered by the mud of the Nile. Thus at a point about a mile above Golôsaneh the river has eaten away the western bank and laid bare the ruins of an ancient town, including the exterior wall of a temple, the highest part of which we found to be fifteen feet below the present surface of the ground. In a village near Maghâga, again, one of my two companions, Dr. Lansing, came across a block of limestone inscribed with the name of Ramses II., which had been brought from Etnêh, another village close to Maghâga, where he was told many similar blocks lay buried at a great depth under the earth. Golôsaneh itself stands on part of the site of a Graeco-Roman town, which has bequeathed some fine columns and capitals to the interior of a dilapidated mosque.

A short way above Minieh is another Kom el-Ahmar, so called, like all other mounds of the same name, from the masses of red pottery which strew the ground. The sculptured tombs behind it have been ruthlessly destroyed by blasting, and the inner chamber of one only now remains. This belonged to a certain Noferekhêru—a "royal scribe"—from whose obituary inscription I learned that the city below had been called "Annu" or "On of the nome of Anubis." That the nome of Anubis occupied the district in which the city stood was already known; but we now learn that besides the famous On of the north, or Heliopolis, and the hardly less famous On of the south, or Hermonthis there was a third On in central Egypt. All that is left of the exterior chamber of the tomb is a curious piece of sculpture, representing four cynocephalous apes, the attendants of Thoth, too on either side of a sacred tree, towards which their arms are extended in the attitude of adoration. A *tat*, or symbol of stability and eternity, is placed within the tree, and above it is the vault of heaven. At the side is written "Adoration to the sun in his rising glory" (*uben*). This is another solar tree to be added to those

enumerated by Mr. Le Page Renouf in the last volume of the *Transactions* of the Society of Biblical Archaeology.

After leaving the Kom el-Ahmar we spent a day at Metshara in the vain attempt to find "the curious sepulchral grottoes with names of old kings," which Murray's *Handbook* asserts to exist in the hills near it; but the villagers were unable to conduct us to them, and though we rode along the foot of the cliffs and explored the *wadis* we failed to find them.

The vast mounds of Antinoë, now called Antsina, and not Ansina, as the guide-books state, proved almost as disappointing; but we found that some limestone blocks with the cartouche of Ramses II. had recently been disinterred in them and built into a house in the neighbouring village of Dêr Abu Hannes. This proves that in founding his new city Hadrian chose the site of an older town or temple. At a pumping-engine on the other side of the river, and not far from the village of Mellawi, I copied some Greek elegiacs, badly cut in letters of a late date on a stone which, though adorned with two crosses and martyrs' palm-branches, had the form of a Roman altar. I came across a similar altar at Eshmunên, which had a cross upon it, but no inscription. The elegiacs are as follows:

OKATTOCOXPTEIOEPE
OIPOMOCOTTOO | ENXPTEHCT . . .
NOTATTIHAMANOON TON[AE]
FAPEKBAICAHOCXEITE(IA)CA(P)IC
EPTON | OCBHBMENE(I . . . A)CATI . .
EHEMETEPOMONATONAEKT(P)ON
EOOΔOPONAFIZHAHOEPAITHNH[N]
+ PAMHCOPACTEPHCCHKAKOKHAEMONA

Doubtful characters are denoted by round brackets.

In the quarries near Dêr Abu Hannes are early Christian paintings and inscriptions, in Greek and Coptic, all of which I have copied. One of them, which is bilingual, records the death of a certain Papias, son of Melito the Pissaurian; another, in Coptic only, is an exhortation to work, and a denunciation of those who "despise" it. I found some more Coptic texts in one of the old tombs at Sebaya, where I copied all the hieroglyphic inscriptions that remain, not knowing whether or not this had been done already. I may add that I examined all the quarries between those of Dêr Abu Hannes and the well-known "Tomb of the Colossus on a Sledge," and found nothing in the way of writing in any of them, except the Greek words *ἡ ἐκκλησία* at the entrance of one which had once been occupied by the Copts. Neither did I find the tablet "with the name of Amunoph III.," of which, according to Murray's *Handbook*, "report speaks"; the other tablet mentioned in the *Handbook* contains a representation of the Pharaoh worshipping the god Amun, who is entitled "the lord of the two worlds." The cartouche of the Pharaoh is destroyed.

At Tel el-Amarna I copied all the Greek graffiti in the northern group of tombs, and found that they were of the same age as those in the tombs of the kings at Thebes, none being earlier than the Ptolemaic period. Dr. Lansing obtained here a small object in blue porcelain, which has upon it the picture of an eye, and the words "the king's daughter, Amun-Ra-Mert." This princess is evidently the wife of Ra-se-âa-ka, who has hitherto been known to us as Aten-Mert; and it is curious that the substitution of the proscribed name of Amun for that of Aten should be found on an object coming from the city of Khu-n-Aten.

Towards the northern end of the Gebel Abu Fêda, and a little below Dêr el-Kusêr, I discovered some tombs with Greek inscriptions cut in the rock above them. Three of the inscriptions are bilingual, a demotic text being attached to them, and another is written in

Kypriote characters. This is the first instance of a Kypriote sepulchral text which has been met with in Egypt. Below the tombs are the remains of an old city, which must have been of considerable size, and probably marks the site of the Peala of the Itinerary, which was twenty-four Roman miles to the south of Antinoë. Yesterday we visited the famous Crocodile Mummy Pit of Maabdeh, from which Mr. Harris obtained his fragments of Homer, and found that the caverns are still full of human mummies at no great distance from their entrance, though the crocodiles have disappeared.

Archaeological explorations, however, have been rendered somewhat difficult this winter by a new danger which has made its appearance on the Nile. Formerly there was no country in the world in which the traveller felt himself more secure than in Egypt. He could wander almost everywhere, both by night and by day, more safely than in the streets of London itself. All is changed now. The country between Minieh and Siût has been infested by bands of brigands. A village close to Dêr Abu Hannes was attacked and two men killed the night only before we anchored near it; and three weeks ago the Mudir of Minieh fought a pitched battle with the bandits, capturing, it is said, more than a hundred of them. Some of them were undergoing trial when we were at Minieh: one of the men, who was secured by a particularly heavy chain, being known to have committed thirteen murders. The fellahin have been afraid to work in their fields, even by daylight. They still refuse to venture out after dark, and in many instances we were the first visitors to the mountain cliffs for months, even in cases where a village lay immediately below. Such are some of the results of the English occupation of Egypt. The archaeologist certainly has no reason to be grateful for it.

CORRESPONDENCE.

THE PEDIGREE OF FINN MAC CUMAILL.

Victoria University, Liverpool: Feb. 1, 1885.

Allow me to make the following remarks with reference to Mr. Thomas Powel's letter in the *ACADEMY* of January 24. In trying to uphold the identity of the Irish Finn and the Welsh Gwynn, he endeavours to find several points of contact in the pedigrees of these two personages, relying on a statement made by O'Curry in his *MS. Materials*, without asking where he got it and what it is worth. As long as those engaged in the study of Celtic mythology or folk-lore are content to rely upon information derived at second hand from such books as O'Curry's *Manners and Customs*, or the same author's *MS. Materials*, instead of going to the sources themselves, which are every year becoming more numerous or more easily accessible, the progress of Celtic philology will be retarded at every step. Mr. David Fitzgerald's paper on "Early Celtic History and Mythology," in the last number of the *Revue Celtique*, is a good instance of such workmanship on a larger scale, and of what it may lead to. Nor do I think that anything satisfactory can be achieved without a strict adherence to every sound philological principle that has once been recognised. If, therefore, Mr. Powel in the present instance takes his sole information from O'Curry, and if, moreover, in order to make out his theory, he sets at naught principles so far as to prefer a misprint or misreading (*Suait*) for what is expressly given as the correct reading (*Suait*), and to assume as proved the interchange of initial *b* and *m* in Irish and Welsh, he is sure to go wrong. The only equation of his that can be allowed to stand is that of Irish *Núadu* = Welsh *Nudd*. In the Welsh story, however, Nudd is the father of Gwynn, while in Irish tradition Finn is said to be the *maísa*, or the great-grandchild of *Núadu's* grandson! Cf. O'R. s.v. *fionnuia*. But apart from this, the tradition of Finn's pedigree is by no means so simple as would appear from O'Curry's statements. We have at least three different traditions of it which we may try to distinguish in the following way.

1. The oldest account of Finn, that in the *Lebor na hUidre*, p. 41, in which the historical elements are still clearly recognisable, makes him the son of Cumall, king-warrior (*rig-íreaid*) of Erin, and the grandson of Trénmór. His mother is said to have been Murni Mun-

chóem, granddaughter of Núadu mac Achi, one of the druids of Cathair Mór, King of Erin. No more is said about Finn's ancestors; there is nowhere a hint that he was in any way descended from, or connected with, any of the Leinster kings. He is often called *úa Baisne*, though who this Baisne is is never said. The same state of things is preserved in the *Macgnimrada Finn*, a story which though in prose it has come down to us in a MS. of the fifteenth century only, was well known in the twelfth; for there is in the Book of Leinster, p. 144b, a poem by Gilla in Chomded *úa Cormaic*, in which the youthful exploits of Finn are told with all particulars and details. One thing, however, is added here (see my edition in the *Rev. Celt.* v., p. 197), viz., that Cumall was from Corco Ocho Cuile Chontuind, to which belonged the *Ui Tairsig*, who were the *túath* of Cumall. This territory was, according to O'Donovan (*Oss. Soc.*, iv., p. 288), situated on the borders of the present counties of Meath and Cavan. Now this is what may be called the historical tradition of Finn's pedigree. It is certainly the oldest.

2. In the Yellow Book of Lecan, col. 768, the list of Finn's principal warriors, called the *fianderth fian Finn maic Cumail*, is headed by the following pedigree of Finn himself: *Finn mac Cumail maic Baisne maic Fir Da Roth maic Guill maic Irquill maic Daire maic Dedad maic Sin*. About these names I am completely in the dark, unless, indeed, the *Deda* mentioned here is the same as that from whom *Lúachair Dedad* had its name (*LL.* p. 169b). In that case this might be the Munster tradition of Finn's parentage. Indeed, in a marginal note we find the remark: *Ni Laignech in senchas sa* "this is not the Leinster pedigree."

3. Now, this Leinster pedigree is that referred to by O'Curry. It is contained in the Book of Leinster twice, on p. 311, and again on p. 378b, in a much later part of the MS. Here, in a genealogical list of the kings of Leinster, *Núadu Necht* is in rather a vague manner mentioned as the ancestor of the men of Leinster (*is áad atá bunad Lagen*). Then it says: *et is ua do Nuadat Necht Finn hua Baisne et Caille ut Senehan Torpeist cecinit*, and Finn's pedigree is then given as follows: *Finn mac Cumail maic Trenmór maic Suait maic Eltam maic Baisne maic Nuadat Necht*. The same pedigree is also given (with the variants *Sughail* and *Eltam*), and expressly stated to be the Leinster tradition at the end of the *Aided Finn*, which will be published in my forthcoming edition of the *Cath Finntrága*. Here it is also mentioned that there are different opinions about the origin of Finn, some saying that he was from Corco Ocho *úa Figinti* (*Fidhgeinte*, O'Donovan, *Oss. Soc.*, iv., p. 284) in co. Limerick; others (and this the author considers to be true) from the *Ui Tairsig* *úa Failgi*, who were *aithechtúatha*. O'Donovan (*l.c.*) mentions a third account, according to which Finn came of the *Ui Tairsig* of the *Lúaigne Temrach* of Fera Oul in Bregia.

Now, it is a well-known fact, first noticed, I believe, by Windisch, that the Ossianic cycle has borrowed largely from the older cycles, especially the heroic. Stories told of the Ulster heroes of Conchobur are with slight variations retold of the most prominent heroes of the *Fiann*. Nay more, entire personages are transferred from the older cycle to the later, or are fathered upon the favourite Ossianic heroes. Now, this is what I believe to have happened in the case of this Leinster pedigree of Finn. *Núadu Necht*, the fabled "progenitor of the men of Leinster," was selected, perhaps really by some such *file* as Senehan Torpeist, as the fittest ancestor of the greatest favourite hero of Erin. How the names *Suait* and *Eltam* were arrived at I do not know. Can it be possible that they were formed by a bisection of *Suaitam*, the name of Cúchulainn's father? This would

be just as likely a trick as any we might expect from an Irish genealogist. *Baisne*, we have seen, is old, and, indeed, together with *Cumail*, is the only name found in all the three pedigrees. KUNO MEYER.

ARETHUSA AND ALPHEUS.

Eton College, Windsor: Feb. 16, 1885.

In reference to the interesting letter on this subject in the last number of the *ACADEMY*, is it not likely that the word *ἐμπνευμα* in Pind. *Nem.* i. 1 (*ἐμπνευμα σερμὸν Ἀλφεοῦ, κλεινὰν Συρακοσσῶν ὅδλος Ὀρτυγία*) should be translated "breathing-place" instead of "resting-place," as rendered by Donaldson, Paley, Liddell and Scott, and Myers? The derivation of the word aptly describes Alpheus's rising to the surface to breathe after his long subterranean journey; and Pindar, as a resident for some years at the court of Hiero, might well have observed in the harbour of Syracuse the phenomenon mentioned by Sir Edward Strachey.

FRANK H. RAWLINS.

THE ZODIACAL CRAB.

Barton-on-Humber: Feb. 14, 1885.

In noticing the stellar-crab concept, I shall not fall back on *a priori* theories that "savage" man exercised his idle fancy and invention in the matter; for to do so is merely to relate the facts of the case—the savage "invented" the star-crab because it was "his nature to"—but will consider the evidence, working on the lines of Mr. Tylor's wise dictum, that "savage names of constellations may seem at first but purposeless fancies; but it always happens in the study of the lower races, that the more means we have of understanding their thoughts, the more sense and reason do we find in them" (*Prim. Cult.*, i., 322). This, of course, applies *a fortiori* to higher races; and the part played by "invention" at any time is wonderfully small.

Apollodōros (*II.*, v. 2) tells us, in his simple way, that when Hēraklēs was fighting at Lerna, "a Crab came to the assistance of the Hydra and bit the (hero's) foot," often the weak point in a solar champion. This crab was *δρεμπεγεθνη*, "of enormous size." Now there is a consensus of experts that the twelve labours of Hēraklēs are a reduplication of the twelve labours, one for each month, of the Euphratean Gishdhubar; and, further, the eleven archaic signs of the Zodiac are distinctly Euphratean, whilst ten of them certainly appear in Euphratean art. Only fragments of the epic relating Gishdhubar's exploits have been recovered, but these tally in a remarkable manner with the Signs—e.g., Tablet II. Account of the Bull-man Heabani (*Bull*); III. Friendship of Heabani and Gishdhubar (*Twins*); V. The Slain Lion (*Lion*); VI. History of Istar (*Virgin*, so-called); XI. Deluge-story (*Water-pourer*); and thus on.

Tablet IV. gives the hero's triumph over Khumbaba ("Maker of Darkness"), the Kom-babos of Lucian, who lived in a wondrous wood, which is reduplicated in the Homeric horizon-grove of Persephone, with its poplars and willows (*Od.* x., 509-10)—trees which are both black and white, as the grove itself is bright (when sunlit) and dark. Khumbaba lurked among his trees, and, being a darkness-maker, "poured a tempest out of his mouth." The fourth month is called in Akkadian "the Seizer-of-seed," and its patron divinity is Dumuzi-Tammuz, the original solar seed sown in earth and making it fruitful. The Scorpion (*Girtab*, "the Seizer-and-stinger") is, as I have shown, a familiar symbol of darkness alike in Nile and Euphrates Vallies; and this enormous crab which seizes is a variant of the colossal Scorpion-man of the Gishdhubar legend, who

reached from heaven to the under-world, and who is reduplicated in the sign *Scorpio*. In the stellar groups of the time of Aratos, as for ages previously, the huge *Crab* placed over the head of the retreating *Hydra* (Storm-and-darkness-power, vide my *Eridanus*, sec. vii.) faced the advancing *Lion* in defence of its natural ally; and in the apportionment of zodiacal space among the signs, a dark patch was naturally assigned to a special symbol of Darkness, and the *Crab* at the present day is known as "the Dark Constellation."

Zodiacal art shows innumerable instances of similarity in treatment of *Cancer* and *Scorpio*, both often appearing as absolute monsters. Lenormant recognised the *Crab* in several Euphratean zodiacal representations figured by Lajard, but here I can scarcely follow him. Certainly the Scorpion was the dominant type of the two. A picture of a tower in stages (*Chaldean Account Gen.*, 169) shows in the foreground a river in which is a huge crab, much larger than the fish around, but of course the scene is not zodiacal. Montfaucon (*Sup. I.*, Pl. LIII.) gives a curious figure of "Hercules Magusanus," "détournée sur le bord de la mer en 1514 à West-capello Bourg de la Zelande." The hero, who is naked with the exception of a toga over the left arm and head, holds a dolphin (a solar and stellar type, vide Ruskin, *Queen of the Air*, i., 32) in his right hand, and a forked staff resembling the "twig" or divining rod in his left, whilst a nondescript scorpion-crocodile-crab touches his left foot with its long pointed snout. *Magusa* is given by Pliny (*Hist. Nat.*, vi., 32, 35) as the name of towns in Arabia and Ethiopia.

In all this there is nothing of a crab-totem or of crab-sprung men; darkness, as in countless other myths, seizes on the sun when he reaches ocean (crab-region, sea, and also under-world), stings, bites, and swallows him. Thus, in Egyptian myth, the crocodile of the West fed on the setting stars. Whether a "savage" (whatever that term may mean) or a non-savage first thought out the crab-myth, he had a reason for the faith that was in him; and he no more "invented" the story than Kadmos beguiled a rainy day with the "invention" of the alphabet.

ROBT. BROWN, JUN.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Feb. 23, 8 p.m. Inventors' Institute.
8 p.m. Society of Arts: Cantor Lecture, "The Chemistry of Pigments," by Mr. J. M. Thomson.
8 p.m. Aristotelian: "Schopenhauer's 'The World as Will and Idea,'" continued by Mr. W. S. Beeton.
8.30 p.m. Geographical: "A Recent Exploration of the King Country of New Zealand," by Mr. J. H. Kerry-Nicholls.
TUESDAY, Feb. 24, 3 p.m. Royal Institution: "Museums and National Education," by Prof. Sidney Colvin.
8 p.m. Anthropological Institute: "Notes on the Race-types of the Jews," by Dr. A. Neubauer; and "The Racial Characteristics of Modern Jews," by Mr. Joseph Jacobs.
8 p.m. Civil Engineers: "The Metropolitan and District Railways," by Mr. B. Baker and Mr. J. Wolfe Barry.
8 p.m. Society of Arts: "The Spanish Gold-fields and the Mines of Rio Sil."
WEDNESDAY, Feb. 25, 11.30 a.m. British Museum: "Egyptian Antiquities," by Miss Beloe.
8 p.m. Literature: "Lucifer as portrayed by Mr. Bailey in his 'Festus,'" by Mr. R. B. Holt.
8 p.m. South Place Institute, Finsbury: "Oligarchy and Democracy," by Mr. J. A. Picton.
8 p.m. Society of Arts: "Methods of supplying Steam-boilers with Water," by Mr. W. D. Scott Moncrieff.
8 p.m. Geological: "On a Dredged Skull of *Ovis moschatus*," by Prof. W. B. Dawkins; "On Fulgurites from Mont Blanc," and "On Brecciated Porfido-rosso antico," by Mr. Frank Rutley.
THURSDAY, Feb. 26, 8 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
8 p.m. Society of Arts: "Tempered Glass," by Dr. Frederick Siemens.
8.30 p.m. Antiquaries: "The Seals of the University of Cambridge," by Mr. W. St. John Hope.
FRIDAY, Feb. 27, 11.30 a.m. British Museum: "Egyptian Art," by Miss Beloe.
7.30 p.m. Civil Engineers: Students' Meeting, "The Gauging of Flowing Water," by Mr. H. T. Turner.

- 8 p.m. Quekett Microscopical Club: "The Conjugation of *Rhabdonema Arcuatum* Kütz.," by Mr. T. H. Buffham.
8 p.m. Browning: A Paper, by Mr. E. W. Radford.
9 p.m. Royal Institution: "A Marine Biological Laboratory," by Prof. E. Ray Lankester.
SATURDAY, Feb. 28, 3 p.m. Royal Institution: "Richard Wagner," by Mr. C. Arnbruster.
8 p.m. Physical: "Notes on the use of Nicol's Prism," by Mr. James E. McConnell.
4 p.m. National Indian Association: Annual Meeting.

SCIENCE.

Aeschylus Choephoroi. With Introduction and Notes. By A. Sidgwick. (Oxford: Clarendon Press.)

IN preparing an edition of the *Choephoroi*, the most corrupt of the three tragedies of the Aeschylean Oresteia, Mr. Sidgwick had a most difficult task before him. The plan of his *Agamemnon* had to be followed, as concerns the amount of discussion given to difficult passages; that is to say, his judgments had to be given with the conciseness necessary to keep the volume within the compass required by the Clarendon Press, and yet with sufficient detail to make the grounds of his decision intelligible to sixth-form boys as well as more advanced students at the universities. He appears to me to have hit off this mean with very considerable success. The Introduction gives in twenty-seven pages a general account of the Oresteia, the growth of the story, the plot of the *Choephoroi*, remarks on on it as a drama, a comparison with the Sophoklean Oresteia, a brief notice of the MSS. and scholia. The notes are supplemented by five appendices: (1) on the Remote Deliberative, (2) on 819-837, (3) on the use of *iva* *ὡς ὅπως* in a final sense with the imperfect and aorist indicative, (4) on the Scholia, (5) on some conjectures of Mr. Verrall.

Speaking of the notes as a whole, they have the great recommendation of being very readable. Mr. Sidgwick's style is fresh and interesting. To be interesting when one is balancing interpretations is no easy matter; and in Aeschylus, particularly in this much vitiated play, interpretations branch off into every shade of variety. Anyone who wishes to estimate this for himself may do it by examining the second volume of Weeklein's new edition. In that will be found the "less certain conjectures" of an innumerable army of critics; and it happens not unfrequently that on the more disputed lines these conjectures take up a complete octavo closely-printed page. To advanced students such a conspectus is invaluable; and whatever effect it produces on ordinary readers, critics of new editions will have an *ἀφορμή* from which they may start with unparalleled safety to weigh opinions and pronounce on probabilities. I have kept this, with Weeklein's text, before me constantly in reading Mr. Sidgwick's little volume. As might be expected, the two editors are very often at variance; for Weeklein is rigidly conservative, Mr. Sidgwick accepts many radical changes.

Of his own conjectures he speaks with great diffidence. They amount to only three in all. The most plausible of these is perhaps the supplementary *πάρεπ* in 450. *Οἰκίων* genitive of *οἰκός* in 962 for the MS. *οἰκων* seems hardly so satisfactory, although it has also been made by Rossbach. *κλύση* for *ἐλάση*, 967, is ingenious, but cannot be

thought to be really settled by the metre, which here is a very uncertain guide. I observe that both Weeklein and Sidgwick agree in accepting the scholiast's *ἔλασε δ' ἐς τὸ πᾶν* in 935 for *ἔλακε* of MSS. The note here—"Literally, 'he drove to the uttermost,' i.e., 'he has accomplished his course,'" is not happy as a paraphrase of the scholiast's words, *ἔλασεν δὲ ἐς τὸ τέλος τοῦ δρόμου, ὃ ἐστίν, ἤνυσεν τὸν ἀγῶνα*. But I cannot believe that the scholiast is right. The expression is strange as Greek and difficult to realise as poetry. Whereas *ἔλακε δ' ἐς τὸ πᾶν*, the correction of Schütz, has nothing which need stop us (Mr. Verrall has not convinced me that *τὸ πᾶν* is objectionable), and is certainly the most natural explanation of the doubtless corrupt *ἔλακε*. It might be well for our editor to balance more scrupulously than he has done the relation of the MS. readings to those of the scholia: a question, indeed, of the widest kind, and requiring the most careful introspection.

Before leaving this *τὸ πᾶν* I cannot but dissent from Mr. Sidgwick's verdict on *τὸ πᾶν ἀτίμως ἔλας*, 434. He pronounces it hardly admissible, and reads *ταφὰς ἀτίμων*, a variation, but certainly a bad one, on Verrall's *ταφὰν ἀτίμων*. To me the sense of the MS. reading seems excellent, and Conington's defence of it quite adequate. It appears, too, to be tolerably unmolested by conjectures, except that *ἔρεξεν* has been proposed by Metzger, *ἔρεξας* by Herwerden, neither with much probability. By the way, not the least merit of Mr. Sidgwick's volume is that Conington's excellent and careful commentary (I believe he thought it his best work, and I remember his complaining of the little success it met with) has been carefully weighed by the editor, as it obviously has been by Weeklein. Neither seems to have made much use of Prof. F. W. Newman's *Comments on the Text of Aeschylus*, a work, no doubt, in which the chaff much exceeds the grain, yet with some remarks worth quoting, e.g., *σεβαστέον* for *σέβας τίων* (628). Mr. Newman also disputes with Heindorf and Paley the credit of *χορρίζοντας* (64).

Mr. Sidgwick's chief weakness is an excusable tendency to follow Hermann, particularly in his reconstitution of the corrupt choruses. In this I believe he will find himself in opposition to most students of the Aeschylean text, increasingly in proportion as the examination of MSS. has enormously increased since Hermann's time, and what was then accepted on faith is now subjected to the severe test of palaeographical probability. We are living, it is to be remembered, in the age of Cobet, and Cobet marks a new era in Greek philology. From this point of view, I confess my complete scepticism as to the form which Mr. Sidgwick has brought himself to adopt of some whole sections of the play—e.g., the stasimon *νῦν παραιτούμενοι, πάρεπ*. In particular, it is almost impossible that *διαδικᾶσαι* (787) should be a corruption of *καθ' ἑκάστην*, and very unlikely that *ὁδὸς τύχας τυχεῖν δέ μου κυρίως* should find an adequate solution in *ὁδὸς τύχας εὐ τυχεῖν κυρίως*. In a new edition, Weeklein's second volume ought to be constantly in Mr. Sidgwick's hands, for ingenuity is not confined to great names, and particular points are sometimes elucidated by men comparatively unknown.

But English scholars are apt to worship Hermann almost as much as German scholars idolise Bentley.

In 534 it is surely more probable that *ἀντίθεσις* is the antithesis of *θρησκεία*, and that we should translate "It is no empty vision—a vision of a real man"—of course, meaning Orestes. In 544 I have long believed the right word to be *ἐπισφραῖς* (see Dindorf's edition of Stephanus s.v. *Επισφραῖς*); and I would compare the very similar passage of Euripides (Herc. Fur., 1267, Kirchhoff):

Ἐν' ἐν γὰρ ἀκτὶ τ' ὅντι γοργώπουδ' ἔφεις
ἐπισφραῖσσε σπαργάνοισι τοῖς ἐμοῖς
ἢ τοῦ Διὸς σάλλεκτρος, ὡς δολομένη.

R. ELLIS.

THE GEOLOGICAL SURVEY OF THE UNITED STATES.

DURING the last few months several voluminous Reports, issued by the Department of the Interior at Washington, and rich in valuable information on the geological structure and mineral resources of the United States, have reached this country. Some of these publications refer to the old "Survey of the Territories," with which Dr. Hayden's name has always been associated; while others relate to the work of that more recent organisation known as "The United States Geological Survey."

It may be recollected that in 1879 the geographical and geological surveys previously in existence—two under the Department of the Interior, and one under the War Department—were discontinued by Act of Congress; and at the same time a new and far more comprehensive institution was inaugurated. The new Survey is an organisation of truly national character. While the objects of its predecessors were confined to the elucidation of the geologic structure of this or that particular region, the aim of the new Survey is to explore the broad domain of the entire Union. The personal element which was associated with the early surveys has thus disappeared. It is no longer possible to speak of the "Hayden Survey" or the "Powell Survey" or the "Wheeler Survey"; but all these minor corps have been absorbed—or perhaps, we should rather say, supplanted—by one central organisation which is simply *The Survey of the United States*.

So fundamental a change of administration necessarily needed much time for its completion. The affairs of Dr. Hayden's Survey were not to be wound up in a day; and it is easy to understand that after the old staff had been disbanded difficulties arose in the issue of the final Report—that Report which was to close for ever the work of the Territorial Survey that had been going on for twelve years. This publication has, however, at length appeared; and it now lies before us in the shape of two bulky octavo volumes, with an accompanying Atlas, forming *The Twelfth Annual Report of the United States Geological and Geographical Survey of the Territories*.

Geologists will be disposed to offer a warm welcome to this Report, for here we find for the first time a detailed account of the geologic structure of the Yellowstone Park. Preliminary Surveys, dating back to 1871, had indeed been made; but the so-called Park occupies a vast area, and the early explorations, necessarily of a sketchy character, failed to supply such details as would satisfy the specialist. During the later examination of this region, several groups of geysers and hot springs not previously known were discovered. Dr. A. C. Peale, who contributes to the Report an elaborate monograph on what he terms "Thermohydrology"—a branch of science that deals with hot

springs in all their bearings—is disposed to regard the geysers of the Yellowstone Park as older than those of New Zealand, and these again as older than those of Iceland. Much may be said in support of such a chronology. In Iceland there are volcanoes still active in the neighbourhood of the geysers, or at least not at any great distance from them; in New Zealand the associated volcanoes have long passed into the "solfatara stage," and no record of their eruption is extant; while in the Yellowstone region the volcanoes are of such remote antiquity that their very site is no longer definable.

It is exceedingly appropriate that Dr. Hayden's final Report should deal largely with the geology of the Yellowstone Park. It was his early writings that first drew attention to the remarkable features of this "fire-ridden country"; it was he who originally suggested that the district should be set apart as a reservation; and it was, we believe, mainly through his personal influence that Congress was eventually induced to reserve it.

On the consolidation of the surveys, and the foundation of the great National Organisation in 1879, Mr. Clarence King was appointed to the responsible office of Director. In due course he issued his *First Annual Report*, which, though little more than a thick pamphlet, contained important suggestions for the future operations of the Survey. In the early part of 1881 Mr. King was induced to resign, and Major J. W. Powell, previously Director of the Bureau of Ethnology, succeeded him as chief of the geological administration. At the close of the fiscal year it became Major Powell's duty—although he had been in office less than four months—to give an account of the progress of work in his department. This forms the *Second Annual Report of the United States Geological Survey*—a large and handsome volume containing not only such official details as might be expected, but also much matter of general interest to geologists, on such subjects as Nomenclature and Cartography. But by far the larger part of this volume is occupied by a series of synopses of geological monographs to be subsequently published. These abstracts are in the highest degree acceptable, not simply as foreshadowing future publications, but, being themselves voluminous, they contain in most cases a sufficiently full summary of facts and conclusions to satisfy any ordinary reader. Among the more generally attractive papers in this volume may be mentioned one by Mr. Emmons on the geology and mining industry of Leadville; and another by Mr. Becker on the Comstock Lode and the Washoe District, both illustrated by coloured geological maps. These preliminary reports will be highly appreciated by those who are interested in mining operations in the West. There can be no question that the rapid publication of short memoirs on the mineral resources of a country is the best possible means of rendering a geological survey popular.

Quite recently *The Third Annual Report*, forming a fit companion to the preceding volume, has been received in this country. Anyone perusing this Report will be struck with the comprehensive view taken by Major Powell and his colleagues of the functions of a Geological Survey. Not content with field work, with analyses of rocks in the chemical laboratory, and with the study of microscopic sections, they have established a well-appointed physical laboratory for geological purposes. The introduction of experimental methods into geology is not new, but the foundation of a laboratory of this character is decidedly a fresh departure, and one which is likely to be followed by most important results. In this laboratory the geologist may study the phenomena attending the fusion of

rocks under varying conditions of pressure, and here he may determine the thermal conductivity, the coefficients of elasticity and viscosity, and other physical constants of his rocks. Many phenomena connected with the physics of rock-masses are still obscure to a dense degree; and the work to be accomplished in this laboratory by Dr. Carl Barus, under the direction of Mr. Clarence King, may be expected to throw light upon some of the problems that have so long awaited solution.

It is impossible to notice here the many articles contained in this Third report, but we may point especially to Prof. Marsh's essay on "Birds with Teeth," a subject which he has made entirely his own; and to Dr. Irving's description of the copper-bearing rocks of Lake Superior—a paper which is illustrated by several chromolithographs displaying the microscopic structure of many of the rocks. The free introduction of colour into the works issued by the United States Survey is a powerful witness to the value in which this institution is held. The publications of the Survey, without being sumptuous, are embellished in a manner worthy of their subject; and it is evident that, to do this, the administration must be conducted with no niggardly hand.

These remarks are especially applicable to the beautiful monograph by Capt. C. E. Dutton, entitled *The Tertiary History of the Grand Cañon District*. By "the Grand Cañon District" is here meant that region—situated chiefly in Arizona, and occupying more than thirteen thousand square miles—which drains into the Grand and Marble Cañons of the Colorado River of the West. On no one would the task of describing this remarkable region have more fitly fallen than on the director of the survey himself, for it was in this country that a great deal of Major Powell's early geological work was carried on. Compelled, however, by his connexion with the Bureau of Ethnology to discontinue field exploration some years ago, the work passed into the hands of his old colleague Capt. Dutton. It need hardly be said that this officer threw himself with energy into the task. The Cañon district is, indeed, of so marvellous a character as to excite enthusiasm in any one, while the lessons on earth sculpture that the cañons have to teach are little short of fascinating to the student of physical geology. Probably, in no other region in the world can the effects of denudation be studied on so grand a scale. The subject of cañon-making is discussed by Capt. Dutton in so philosophic a manner that if all his earlier writings were destroyed, and this monograph remained his sole work, it would be sufficient to place him at once in the front rank of physical geologists.

Notwithstanding all that has been written of late years about the majestic rocks of the Cañons, Capt. Dutton declares that "their sublimity has been hitherto underrated." The reader's efforts to realise the extraordinary scenic features of the region are aided by the skilful pencil of Mr. W. H. Holmes. With a keen eye for appreciating the geological characteristics of a scene, and with a rapid pencil for portraying them, Mr. Holmes has executed a large number of sketches of Western scenery, many of which are reproduced in the present volume. Both Major Powell and Capt. Dutton testify to the fidelity with which he has depicted the fantastic shapes and glowing tints of the rocks of the Cañon region. In official reports we are accustomed to find little more than diagrammatic representations of the physical features of a country; but Mr. Holmes has embellished the Cañon monograph with illustrations which we do not hesitate to pronounce the finest to be found in any geological treatise. His masterpieces are contained in a

folio atlas accompanying Capt. Dutton's report. As we turn over these panoramic sketches of the Cañons we almost forget that we are looking through a geological atlas accompanying an official report; but feel rather that we are contemplating a series of highly finished sketches selected from the portfolio of an accomplished artist. F. W. RUDLER.

CORRESPONDENCE.

A CORRECTION.

St. Andrews: Feb. 14, 1885.

As the *Journal of Philology* appears only at long intervals, will you allow me to correct through the medium of your paper an error in my recent article on "Greek Tragedy"? *Journal of Philology*, No. 26, vol. xiii., p. 212, l. 22, for Schneidewin's read G. Wolff's. My "postscript" was written where I had no access to books of reference, and memory deceived me. LEWIS CAMPBELL.

SCIENCE NOTES.

THE Geological Society has this year awarded the Wollaston Medal to Mr. George Busk, in consideration of his researches on Fossil Polyzoa and on Pleistocene Mammalia; the Murchison Medal goes to Prof. Ferdinand Roemer, the well-known palaeontologist of Breslau; the Lyell Medal is given to Prof. H. G. Seeley, in recognition of his long-continued work on Fossil Saurians; and the Bigsby Medal, which is awarded every two years, has been assigned to M. Renard, of the Brussels Museum, as an appropriate tribute to the great value of his petrographical researches.

MESSRS. MACMILLAN will publish shortly the first part of a *Course of Practical Instruction in Botany*, by Mr. F. O. Bower, of South Kensington, and Dr. Sidney H. Vines, of Cambridge. This first part deals with Phanerogama to Pteridophyta, and will have a Preface by Mr. W. Thiselton Dyer, of Kew.

WE understand that the *Quarterly Journal of Microscopy and Natural Science* will in future be published by Messrs Baillière, Tindall, & Cox. This journal, which is the official organ of the Postal Microscopical Society, has been enlarged, but the price will remain as heretofore (1s. 6d. per quarter). Mr. Alfred Allen will continue to edit the publication on behalf of the Society.

THE Italian Government is distributing among wine-growers the seeds of American vines which are alleged to possess immunity from the ravages of phylloxera.

PHILOLOGY NOTES.

WE hear that Prof. A. S. Wilkins has finished his edition of the "Epistles" and "Ars Poetica," which will form the third volume of *Horace* in Messrs. Macmillan's classical series.

OTHER forthcoming volumes in the same series will be Books XIII. and XIV. of Ovid's *Metamorphoses*, by Mr. C. Simmons; and Books I. to V. of Plato's *Republic*, by Mr. T. H. Warren.

PROF. FIOR has in preparation a work on the *Iliad*, in which he gives a reconstruction of the text in its probable original form, in accordance with the principles of linguistic criticism which he has already applied in his investigation of the *Odyssey*.

MR. D. NUTT will shortly publish a Grammar of the Dutch Language, by A. L. Snell, late head master of Hanover School, Port Elizabeth.

It is based on the works of the best Dutch grammarians, and the rules are fully illustrated by examples taken from the classic writers of Holland.

It is very satisfactory to find that the reception of Dr. Merguet's *Lexicon to the Orations of Cicero*, has been such as to encourage the indefatigable author and his enterprising publisher (Jena: Fischer) to begin the issue of a similarly exhaustive *Lexicon to Caesar*. Our notice of the former has been somewhat unduly postponed, but it is impossible to judge a work of the kind fairly, except after long and frequent use of it. Dr. Merguet's *Lexicon* stands such a test thoroughly; and one can hardly speak too warmly of the help which such a transcription of the context of every important word gives to the student of the diction of Cicero. Unfortunately its cost places it out of the reach of most private students—a copy bound for use can hardly be procured under £10; but it ought to find a place in every public library of any pretensions to completeness in the direction of philology.

STUDENTS of Cicero ought not to overlook two excellent editions of the speech *pro Archia*, recently published by M. Émile Thomas in Hachette's series. The larger critical edition contains a new collation of the *Codex Gemblacensis*, the primary authority, a very complete introduction and full critical and explanatory notes. M. Thomas has overlooked Mr. J. S. Reid's masterly edition, but otherwise, his command of the literature is adequate and his judgment sound. In the smaller edition (at thirty centimes, a marvel of cheapness!), which is illustrated by more than a dozen woodcuts, there is a brief but adequate introduction, excellent little notes, and a critical, a historical, and a rhetorical Appendix. It is really a model little school-book.

OSTHOFF's essay on *The History of the Perfect in Indo-Germanic*, with especial reference to Greek and Latin (Strassburg, 1884), is full of interesting suggestions. Among others we may mention his explanation of the Greek perfects—*ἔδρα-κα, δέδω-κα, ἔειπ-κα*. In the final syllable he sees the particle *ka*, a Doric by-form of *ke* (see Gustav Meyer's *Griechische Grammatik*, § 22). A similar blending has taken place in Sanskrit *tasthā-u, dadhā-u*, &c. The veteran Georg Curtius, however, in his last publication, *Zur Kritik der neuesten Sprachforschung* (Leipzig, 1885), observes that *ke*, like *av*, is used to express the eventual or conditioned, and is never found in Homer with the perfect indicative.

THE philological students in the University of Rome have addressed to the Minister of Public Instruction a petition requesting that some of their number should be attached to the Italian Red Sea Expedition, with the object of exploring the island of Socotra and the adjacent mainland, in order to ascertain whether any inscriptions exist capable of throwing fresh light on the origin of the Indian alphabets, and on the commercial relations which are known to have existed between India and the Arabian peninsula. It is also suggested that the more accurate determination of the linguistic and ethnological affinities of the people bordering on the Red Sea might be included in the scope of the proposed investigations.

THE *Euskal-Erri* of February 10 contains a translation of the review by Prof. Rhys of Don Arturo Campion's *Leyes fonéticas de la Lengua Euskara*, which appeared in the ACADEMY of August 2, 1884. We learn that Señor Campion is preparing to publish a further contribution to Basque philology under the title *Adaptacion euskara de las palabras latinas ó románicas*, to be followed later by another entitled *Adaptacion latina y románica de las palabras euskaras*.

MEETINGS OF SOCIETIES.

ROYAL ARCHAEOLOGICAL INSTITUTE.—(Thursday, Feb. 5.)

THE President in the Chair.—Admiral Tremlett communicated a paper on the "Pierres à Bassins," or rock basins, of which many instances occur in Brittany, in which he pointed out that, so far from being Druidical rock altars, with basins to catch the blood, the hollows were merely the places whence querns had been extracted.—Mr. Somers Clarke read some interesting "Notes on the Screen in Sandridge Church, Herts," describing its peculiar character as a solid stone wall with door and windows between nave and chancel.—Among the objects exhibited were, in addition to drawings illustrative of the papers read, some rubbings of recently-found brasses in Norfolk, by Mr. Vincent; and three medieval patens, also in Norfolk, by the Rev. C. R. Manning.

PHILOLOGICAL SOCIETY.—(Friday, Feb. 6.)

REV. PROF. SKEAT, President, in the Chair. Mr. H. Sweet read some "Old-English Contributions." He said that the usual derivation of *to rack* from an Old-English *reccan* was not quite correct, the actual form in Old-English being *reccan* (pret. *rohte*), which was probably due to confusion with *reccan*—"direct," "recount." He explained *bilewit* "simple" as "bill-white," originally applied to young birds; and Middle-English *-ild* in *mabelild* "chatterer" as the *-ild* of Old-English feminine names. He attributed the so-called "palatal-umlaut" in Merician *āh* = *āhā*, &c., as being really due to the guttural of the following consonant. The late West-Saxon *y* in such words as *hyme, ye, hyt*, was attributed to their want of accent, these forms being specially Western, as confirmed by the evidence of Modern English.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Feb. 10.)

FRANCIS GALTON, Esq., President, in the Chair. Mr. H. H. Johnston read a paper on "The People of Eastern Equatorial Africa." The races treated of extend over a region of Eastern Africa lying between the first degree north of the equator and five degrees to the south, and bounded on the west by the thirty-fourth degree of east longitude, and on the east by the Indian Ocean. The forest country on the hills, or along the rivers, is occupied by resident agriculturists, almost exclusively belonging to the Bantu family, ethnologically and linguistically; and the forbidding wilderness in the plains is ranged over by tribes of either Galla or Masai origin, both of which may be roughly classed with the Ethiopic or Hamitic groups. The Wataita are of medium height, and have fairly good figures, but the men are somewhat effeminate and slight-looking. In facial aspect there is much variation. The teeth are filed and sharp-pointed, and the ears are so misshapen, by prevailing fashion, that it is hard to guess at their original shape. The body is disposed to be hairy; but is carefully depilated all over, even to the plucking out of eyebrows, eyelashes, beard, and moustache. The hair is allowed to grow only on the occiput, and here it is much cultivated and pulled out into long strings, which are stiffened with grease and threaded with beads. There are but slight traces of religion among the Wataita. They are afraid of spirits who are supposed to dwell in large forest trees, and perhaps for the reason that their dead are always buried in the forest. Their marriages are arranged, first by purchase, but after the preliminaries have been settled, the girl runs away and affects to hide. She is sought out by the bridegroom and three and four of his friends, and when found is seized and carried off to the hut of her future husband. The Akamba, who live to the north of Taita, are a very roving, colonising people and great hunters. One of the most interesting tribes are the Wa-taita, who exhibit marked peculiarities in their language and ideas. They are of fair height, some of the men attaining to six feet. They frequently let the beard and moustache grow, and usually abstain from plucking out eyelashes and eyebrows. Circumcision is general. Marriage is a matter of purchase; but no sign of imitating capture seems to be practised here. They number about two thousand, and bear an excellent reputation among the coast traders for honesty and friendliness. Mr. Johnston described some of the

chief characteristics of several other tribes with which he had come in contact during his visit to Kilimanjaro, and referred particularly to the languages spoken by the various peoples, one of the most interesting of which is the Masai, which has many characteristics not possessed by most of the other African languages.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 13.)

Mr. FRESHFIELD, V.-P., in the Chair.—Mr. Kirby, bursar of Winchester College, exhibited some charters belonging to the Corporation of Winchester which had recently been discovered in a solicitor's office, having been probably removed by a previous town clerk. Hitherto the earliest known charters of the Corporation were of the reign of Queen Elizabeth. The newly-discovered charters, thirty in number, were granted by the following kings: Henry II., Richard I., Henry III., Edward I., II., and III., Richard II., Henry IV., Henry V., Edward IV., Henry VIII., Philip and Mary, and Charles II. The privileges granted in the earliest charters are freedom from toll and other franchises to all citizens who are members of the Gilda Mercatoria; and one of the charters of Henry II. confirms a charter of Henry I., which is not extant. Henry III. grants a mint and exchange (five mints having been extinguished by Henry I.) and water-mills at Coybury. Edward III. grants exemption from barbanage and "Bretagnium," a payment for the repair of wooden outworks. Henry VI. grants a market to be held on Saturday, instead of on Wednesday and Sunday. During the Wars of the Roses the town was ruined, and Edward IV. exempted the city from certain dues to the Crown (a grace which was repeated by Charles II.), and granted them the goods of felons. For a similar reason Henry VIII. exempted the mayor from coming to London to take oath at the Exchequer, and Philip and Mary granted to the Corporation the chief rents of certain house property belonging to dissolved monasteries. This was probably done in acknowledgment of the reception of the king and queen at their marriage by the city. One of the deeds discovered was an agreement between the prior and chapter of St. Swithun's and the mayor and Corporation concerning their respective duties in repairing the town wall.—Canon Jenkins sent an account of the discovery of Saxon relics at Lymington, including bones, spear heads, and fibulae, set with garnet-coloured glass.

NEW SHAKSPEARE SOCIETY.—(Friday, Feb. 13.)

Dr. F. J. FURNIVALL, Director, in the Chair.—Miss Grace Latham read a paper on "The Dramatic Meaning of the Construction of Shakspeare's Verse, with especial Reference to the Use of the Extra Syllable and the Run-on Line," saying that Shakspeare wrote not to be read, but to be heard, and that, therefore, his verse, with all its irregularities, its pauses, rhymed couplets, &c., was constructed with a view to the effect it would produce when listened to, and to the manner in which it would express by its sound the ideas and passions of the *dramatis personae*. Miss Latham then showed that many of the chief peculiarities of his style were common to other dramatists of the Elizabethan school, quoting from Peele and Green, and showing how their choice of words, their arrangement of pauses, &c., expressed their meaning by sound as well as by sense. Thus, for example, by introducing an extra syllable into an important word, the ear was attracted to it by the slight variation in the rhythm. In tender passages words were chosen which from their soft open sound are capable of being easily said with the necessary intonation, which could with difficulty be given to others having the same sense, but a sharper sound, while different metres were used to express the variations in the feeling of the speakers. Then, turning to Shakspeare, she showed how he gradually ceased to use those means of expression which, like the rhyming couplet, were conventional, and employed in preference those which do not jar on the ear by producing an unnatural effect, chiefly using the extra syllable and the run-on line, which by obliging the whole or part of a line to be read more or less rapidly, and by creating effective and natural pauses in the midst of a sentence, bring the blank verse nearer to the speech of daily life. In illustration of this

portion of the paper, she quoted from "Midsummer Night's Dream" and "Richard III." as early plays, and from "Coriolanus" as a later one.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Feb. 13.)

Mr. A. J. G. BARCLAY, President, in the Chair. Prof. Tait communicated a note on a Plane Strain, which was read by Mr. W. Peddie. Dr. Muir gave an account of a paper by Mr. P. Alexander on Boole's proof of Fourier's Double Integral Theorem, and afterwards enunciated several theorems of his own on the Arbelos. Mr. Peddie discussed reflected rainbows; Mr. Allardice gave a note on spherical geometry, and Mr. A. Y. Fraser made some remarks on a problem in plane geometry.

ROYAL ASIATIC SOCIETY.—(Monday, Feb. 16.)

SIR W. MUIR, President, in the Chair.—Mr. Walhouse read a paper by the Rev. T. Foulkes, of Colmabore, "On the Pallavas." In this paper, Mr. Foulkes took advantage of the great mass of inscriptions existing in South and West India, and which have, in recent years, been edited by Messrs. Sewell, Rice, &c. By these means he has been able to rehabilitate an extensive and powerful dominion which flourished from Orissa far into the North and West Dakan for nearly nine centuries, from the 3rd and 4th A.D. to the 12th or 13th. During the whole of this time the history of the kingdom of the Pallavas is continually, though fragmentarily, recorded in the inscriptions, which have preserved many of the royal names. Mr. Foulkes has, with great care and trouble, constructed a Chronological Table of the varying history of the Pallavas for this long period. Their constant foes were the Chalukyas and the Cholas, the latter of whom ultimately prevailed over them. Their principal seat and stronghold seems to have been Kanchipur (or Conjeeveram), one of the most holy cities of the South of India.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromes, and Oil-paints) handsomely framed. Every one who purchases pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HARRIS, 115, Strand, near Waterloo-bridge.

La Renaissance en Italie et en France à l'Epoque de Charles VIII. Par M. Eugène Muntz. (Paris: Firmin-Didot.)

THIS volume, so full of spirit and erudition, so bountifully illustrated, and so finely printed, is a magnificent memorial of that distinguished amateur, the late Duc de Chaulnes, who in his short life managed to win fame both as a soldier and a promoter of art, and to prove himself a worthy descendant of the Alberti and the De Luynes. It is but the half of the work which he proposed to accomplish with the aid of M. Muntz. He charged himself with the history, military and diplomatic, of the famous expedition into Italy of the young Charles VIII. To M. Muntz he assigned the task of passing in review the antecedents and the effects in France and Italy of that expedition in its relation to art and the Renaissance. He did not live to complete his share of the work; but M. François Delaborde has undertaken to arrange and edit the documents which he collected for the purpose. These, under the title *Histoire diplomatique et militaire de l'Expedition de Charles VIII. en Italie*, will be published by MM. Firmin-Didot during the present year.

It need scarcely be said that the late Duc de Chaulnes made a wise choice of a *collaborateur*. The knowledge, the patience, and the taste requisite for the task were all possessed by M. Muntz; the labour was congenial, the road well known to him, and the result is, as might have been expected, a

learned and luminous picture of the history of the Renaissance in the fifteenth century. We confess that we do not see in it any sign of the influence of the late Duke, even in the collection of materials: the work, in spirit and execution, is purely that of M. Muntz. The merit of instigation and of enterprise may belong to the former, but the statement on the title-page, that the work is published "sous la direction et avec le concours" of the late President of the Musée des Arts décoratifs, sufficiently acknowledges his part in the performance.

M. Muntz has too often and too strongly pronounced his views of the Renaissance for us to be in any doubt as to the view that he will take. It is with difficulty that he will admit any charges against the beneficence of its influence or the nobility of its spirit. To accuse it of a tendency to irreligion is heresy; for freethinkers have existed in all ages, and was it not fostered by the Church? In his eyes the employment of *condottieri* showed no loss of valour, for were not citizens as ready as ever to fight each other? The bloodless campaigns of hired soldiers were a sign of noble humanity; the apathy of the Church in allowing the spread of ideas contrary to the most sacred dogmas was a glorious example of tolerance. Here is not the place to combat these views, even if we wished to do so: they have sufficient reason on their side to warrant their exposition, and no one could state them more clearly, or defend them more fairly, than M. Muntz. Only we have heard them before, and in a work like this should have been satisfied with a little less of *parti pris*. As in his *Précursurs de la Renaissance* we should have been glad of some more distinct recognition of the naturalistic movement, so in this, which deals with France as well as Italy, some more full and generous account of the noble French art which the Renaissance extinguished would have been welcome, if only for the sake of contrast. The feeling of joy at the reconquest of France by Rome, though a bloodless and aesthetic reconquest, would have well borne a little mitigation. The principal defect in the book is, however, one inherent in its scheme. The date of the expedition of Charles VIII. might be a very convenient one to determine a view of part of the Renaissance in Italy: the forces which induced its culmination were then in full activity, no element was wanting, and there is a certain value in concentrating the attention, not on the well-known result, but for a view of the events which preceded it; but for a view of the Renaissance in France it is very different. Of that the history had scarce begun, and M. Muntz has been, perforce, confined to what is merely the first chapter of it. His book is necessarily devoted three-fourths to Italy and but one to France; and, while the former part is, if anything, too full, the latter has to be eked out by an account of the expedition as given in the *Vergier d'honneur*, by André de la Vigne, and of the collecting in Italy of those art treasures which were to be left behind by the conqueror at the battle of Fourona; events, no doubt, very interesting in themselves, but treated on a scale misproportioned to the rest of the work. The book is therefore substantially an account of the Renaissance in Italy with a fragment on France; may, indeed, be viewed as a fragment altogether—a noble and

a colossal *torso* we may say, but palpably and awkwardly incomplete.

This is, however, a defect which M. Muntz can, and, we hope, will remedy, by persevering with those brilliant labours, which, commencing with the "Précurseurs," are continued in this admirable view of the Renaissance in the fifteenth century. There is very little incompleteness in the view he takes of any period to which he devoted his attention as a historian. Though he may fix his eye steadily upon one point—viz., the development of the classic principle in modern art—he loses sight of none of the forces at work, and of none of the phases of their activity. The progress of architecture and sculpture engages his attention as much as that of painting; he neglects neither engraving nor miniature, neither tapestry nor costume. Not only artists, but patrons; not only scholars, but poets and historians; not only manners, but politics, take their due place in the full and round picture he presents of the time. Any one who wishes to know what the life of a man of cultivation in the fifteenth century in Italy was like can scarcely do better than read this last book of his. No work of the kind has ever yet been so well illustrated, and merely to "look at the pictures" would be no mean education in the art and the manners of the time; but they are completely dominated by a text which is as entertaining as it is learned, for M. Muntz bears his knowledge "lightly, like a flower."

COSMO MONKHOUSE.

THE EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.

THE Exhibition of the Royal Scottish Academy which opened to the public last Saturday derives its interest mainly from the works of local painters. The contributions from London—though they include Mr. Orchardson's "Voltaire," a very admirable reduced replica of his Academy picture of 1883, Mr. Pettie's "Site of a Christian Church," Mr. McWhirter's "Windings of the Forth" and his "Sermon by the Sea," and Mr. Thomas Faed's "What is the wee Lassie thinkin'?"—are, on the whole, less numerous and less important than is usually the case, and foreign art is almost unrepresented.

Mr. W. E. Lockhart is seen at his best, and in a more poetic vein than is common to him, in "The Swineherd," a picturesque, skin-clad boy of Majorca, perched on the shattered fragment of a marble column blowing a great white conch-shell, a subject treated with the artist's accustomed power of draughtsmanship and splendour of colour. Mr. Thomas Graham, who was recently elected an honorary member of the Scottish Academy, sends a slightly painted, but fresh and attractive, picture of a rustic belle, bearing a basket of provisions for the midday meal of the haymakers, along with a smaller subject, "The Maid of the Inn," a loosely painted work, far less satisfactorily representative of this attractive, but singularly unequal, artist. Mr. Robert Gibb continues his series of military subjects, and exhibits "Letters from Home," an interior of a Crimean tent, with two officers examining their newly-arrived correspondence. The subject is well conceived and effective, but it would have gained by a somewhat more searching and thorough execution, and by greater variety and subtler blending of colour. Sir Noel Paton is represented by a life-sized head of Christ, which formerly figured in the Grosvenor

Gallery, and by a small and very highly finished cabinet-piece of "Sir Galahad and his Angel." In "If thou hadst known," Mr. Hole has taken a new departure, and exhibits the most impressive work of religious art that has recently appeared on our Academy walls. It shows, under a tender effect of grey evening light, the figure of Christ seated on the Mount of Olives, contemplating the distant city with its lighted dwellings, and its temple enclosure from which rises the smoke of the evening sacrifice. Mr. Hole has only one other subject—a moonlit scene in a village street; for during the past year he has been mainly occupied with etchings, especially with an extensive series of portraits of the Edinburgh Professors which is to be shortly published. In "A Tiff"—a child with a kitten—Mr. Otto Leyde shows one of the most pleasing and satisfactory works that we have seen from his brush. In "A Daughter of Eve" Mr. R. McGregor depicts a strapping beauty and her rustic swain with much vigour, if with no great delicacy; and in "Love lightens Toil" and "Waifs and Workers" Mr. T. Austin Brown and Mr. J. Michael Brown, two of the most promising of our younger figure painters, maintain their successes of last year.

In the landscape department Messrs. Smart, Beattie Brown, Alex. Fraser, and Waller-Paton contribute their usual quota of work. Mr. Geo. Reid is represented by a rich and powerful autumn subject of embrowned beech foliage and woodmen busy among the fallen trees. Mr. D. Farquharson exhibits one of his most successful landscapes in "November Twilight," with the delicate light dying away beyond the tracery of bare tree stems, and a dark foreground filled with folded sheep. Mr. J. C. Noble is represented very richly in the seven landscapes that he sends, among which we may name a large subject, "The Vale of the Clyde," and a smaller picture, "By the Sea," which, in its mellow quietude, is immediately suggestive of the old Dutch landscapists. Mr. W. D. McKay shows several vivid spring effects, but his most important work is a carefully rendered view on the Teviot. Mr. J. L. Wingate is another prominent exhibitor of excellent landscape subjects, though his largest picture, "The Poachers," might have been carried further with profit.

In portraiture the exhibition contains rather less of interest than usual. Here, however, we have the finest production of Mr. R. Herdman's brush that we have yet seen—"Mrs. Horn," a three-quarter length portrait of a blue-eyed lady, standing with hands laid together in front and holding a fan of grey feathers, the warm creamy whites of her drapery culminating in the hues of a yellow rose that is set at the breast. Other powerful portraits come from Mr. Geo. Reid, Mr. W. McTaggart, and Mr. Jas. Irvine, and two charming pictures of children are exhibited by Mr. P. W. Adam and Mr. C. M. Hardie, while the latter artist shows also a singularly clever full-length cabinet portrait of "John Smart, Esq., R.S.A.," the well-known landscape painter.

In the water-colour room we have excellent work from Messrs. W. E. Lockhart, T. Austin Brown, Thomas Scott, James Little, James Douglas, P. W. Nicholson, and R. B. Nisbet; and the works of sculpture include Mr. Geo. A. Lawson's "Ave Caesar!" Mr. T. Stuart Burnett's fine statue of a youth and a hound, and several spirited and picturesque heads in bronze by Mr. G. W. Kinloch. J. M. GRAY.

"LE SALON PARISIEN."

AN exhibition, which has no particular right to assume the title of "Le Salon Parisien," has been for a week or two largely visited, and a good deal talked about. It contains a certain

number of commonplace, or, at the best, mediocre paintings by elder and younger men from Hébert downwards; but it is in truth notable not for these, but for its possession of almost innumerable panels by M. Van Beers, the artist of the Low Countries, whose picture of the embarkation on board the yacht *La Sirène* made so much stir two or three years ago. This famous picture is indeed now exhibited, and with it are many others, not one of which is as important, but of which many have the dubious interest of piquancy. There is, it is, true, a large and sufficiently vacant canvas, called "Flirtation," and a similarly extensive rendering of an everyday scene in the Park; but the more noticeable things are the smaller ones, and some of them are of extreme smallness, but always with high finish. For the most part they are thinly painted, and for the most part dexterously, and even correctly, drawn; but what is it that M. Van Beers draws? It is chiefly the vulgarest of models; it is indeed women whom to dignify with the name of professional models would be to cruelly wrong an honest and necessary class. And these people, who, in our opinion, so superfluously encumber M. Van Beers's studio, fling themselves about in it in every attitude that lacks grace, while it hardly betrays freedom. No; we are by no means enamoured of the persons of M. Van Beers's choice, nor of the fashion in which they present themselves to that artist; nor is English criticism generally so enamoured, despite the suggestion of the *Spectator* in one of those curious notices of art which it is wont to address to the theologian, apparently, rather than to the connoisseur. M. Van Beers's subjects are bad; his conceptions are bad. But when we come to his treatment, there is little with which qualified criticism can be inclined to reproach him. He is a good colourist and an admirable draughtsman. "La Paresse" is, in all probability, the ablest of his smaller works, as it is assuredly the most piquant. It represents, in a luxurious interior, a vivacious and slender blonde, dressed scantily in black. The beauty and suppleness of the figure are well accentuated, and the face, though at several removes from refinement, is much less absolutely coarse than is usual in M. Van Beers's art. "La Paresse" is indeed a brilliant and sufficiently agreeable instance of M. Van Beers's workmanship. Higher up in Bond Street there is a collection of pictures by Bougoureau, one of the modern masters of the nude. He is not precisely a painter, for the true gift of colour has been denied him; but he is an exquisite draughtsman and an artist of refined taste. Yet, by reason of his dealing with the nude figure, a patronage has in England been lacking to his art which is bestowed on the draped vulgarities of Van Beers. The fact is the average English picture-seer, without taste, without learning or instinct, is unable to distinguish between the refined and the gross. He does not know the difference in the very slightest degree. It is only between the dressed and the undressed that he knows the difference. And in his ignorance he tolerates the one, and turns aside from the other.

THE "VINGTISTES" AT BRUSSELS.

"YOUNG BELGIUM" in art, as in literature, is courageously fighting for a place among the modern schools of Europe. The "Vingt," the "Essor," and the "Refusés" seek their inspiration in the country and people around them. Peasant women and children, wood men and coalminers, fleeting impressions of sea and sky, autumn woodlands or spring meadows, filled with the sentiment of the season and the hour, are their favourite sub

jects. It is a work-a-day world they bring before our eyes: the beauty of sun and earth and the dignity of labour and humanity shining beneath rough and degraded exteriors.

The "Recargots," as the Academics are opprobriously called by their youthful rivals, may shrug their shoulders over the Vogels, Ensors, and Finches, whose boldness and broad touch often result in almost indistinguishable masses; but the most devoted adorers of school ideals are ready to acknowledge the originality and strength of much of the work displayed in this second Salon of the "Vingt." They have adopted as motto for their elegant little catalogue the saying of the committee of the Triennial Salon of last year, "S'ils ne sont pas content de leur place qu'ils exposent chez eux" and with the assistance of sympathetic friends at home and abroad have got together a very charming little show in the Palais des Beaux-Arts.

Pre-eminent among the members are Théo van Rysselberghe and Frantz Charlet, Verstraete and Verheyden, van Strydonck and Jan Toorop. Charlet sends but two contributions, of which—"Women Spinning, Morocco"—is, however, one of the most important compositions in the exhibition. Van Rysselberghe's "Arab Story-teller" surrounded by an attentive circle of listeners squatting on the sand, and "A Fantasia: Firing Powder, Morocco," are interesting results of the artist's sojourn in Tangiers, of remarkably fine colour and intelligent characterisation. Verstraete's six landscapes are all excellent. "The Beech Avenue" is charming; one seems to scent the subtle odour of the dead foliage that strews the ground, and of the smoke that rises amid trunks green with lichen from little heaps of burning leaves. "Cutting Brushwood in February" is a beautiful little piece of woodland ready to burst into a mass of primroses and anemones, now that the clearings let in the February sun. There is an interesting portrait of the painter, Meunier, at his easel, by Verheyden; and Meunier himself responds to the invitation of the "Vingt" with several striking studies of the coal district and its workers, on canvas and in clay: his puddlers and lightermen are modelled with great skill and natural action. Ter Linden's six marine symphonies are charming to lovers of the dunes with their wonderful variety in uniformity. Mellery's drawings of the island of Marken, the village folks and their feasts, are very remarkable; one, "The Funeral," is pathetically grotesque. From the Hague Mesdag sends several of his delightful marine pieces; and among other foreign competitors, are Uhde (Munich), John Swan (London), Michetti (Italy), and Kroyer (Copenhagen). Among the works in pastel, of which there are a good many, should be mentioned Rafaelli's forcible sketches of Parisian workmen, and a meeting of the Salvation Army, excellently individualised, though leaning to caricature.

CORRESPONDENCE.

"THE WOODCUTTERS OF THE NETHERLANDS."

Inner Temple: Feb. 18, 1885.

Mr. W. J. Linton is an undoubted authority on modern woodcutting, but it is evident that the "some extent" with which he is "conversant with old cuts" is breadth without depth. Had he really been acquainted with the history of his art he would have known that if there is one point on which it is needful at present to suspend judgment it is the question of the relation between the designer, the draughtsman and the engraver of the woodcuts of the incunables. Mr. Conway, he writes, makes "the usual and fatal mistake of inexpert writers on engraving—the mistake of

making the engraver responsible for the design." Now, although there is as yet not sufficient evidence (at least, with regard to the German cuts) to positively assert the identity of designer, engraver, and draughtsman (*Maler, Formschneider, and Reisser*) in the earliest woodcuts of the incunables, still there is a very great balance in favour of that opinion. The two chief sources from which we can gather evidence are the woodcuts themselves and the archives of the principal woodcutting towns. Mr. Conway has made a very careful study of the former, the latter is a field as yet, comparatively speaking, unworked.

Let me endeavour to state concisely what the evidence we are in possession of amounts to. My remarks will be chiefly based on a study of the German incunables, but there is little doubt as to a like, but somewhat later, development in the Netherlands, several of the Dutch series being, in fact, crude copies of similar German series, and there is much, if not conclusive, evidence of the dependence in this matter of the Lower upon the Upper Rhine and Swabia.

1. The earliest woodcuts of the incunables (I leave out of account block-books and xylographic broad-sheets) bear the impress of the most untrained hand. Their designer had certainly no knowledge of those laws of composition which were the undoubted property of the painters of the age. These cuts are not feeble reproductions of a good design owing to the infancy of woodcutting, but feeble reproductions of designs themselves prepared by men ignorant of the art of drawing. They were the product of untrained handworkers.

2. Several of the early German printers were originally *Karten- und Briefmaler*. It is from them that the conception of illustrating books with woodcuts appears to have arisen. These first woodcuts were mere outlines, which were always intended to be filled in with masses of colour. They were prepared in fact like the early playing-cards and saint-cuts, rather as symbols than as works of art. The first "illustrated" books in Germany with moveable type are due to the *Briefmaler* Pfister, who, there is little doubt, would himself assist in setting up the type, in designing and in actually cutting the blocks.

3. The great advance made in German woodcutting at the beginning of the last twenty years of the fifteenth century was owing to the German *Maler* beginning to take an interest in the art. They raised it from its *handwerkmdssig* position. This was not accomplished by their merely providing designs, but by their actually learning the art of woodcutting. They became not merely *Reisser*, but themselves *Formschneider*. This was not a very great stride for them to make, because carving in wood was, owing to the demand for painted images, almost a part of their profession. In several guild-regulations we find that the painters were allowed a certain number of apprentices and journeymen, of whom a certain proportion might be *Schnitzer* and another proportion *Maler*. Even so late as 1512, long after we are certain that a complete differentiation of *Maler, Reisser* and *Formschneider* had taken place, we find that a man like Burkmaier was capable of cutting his own blocks.

4. In the early Augsburg cuts it is certainly possible to distinguish various marks which enable us to divide into classes the cuts produced in that town. These classes are not distinguished by the goodness or badness of the design, but simply by the greater or less capacity of the engraver for cutting the bare outline, which is practically all they contain. To attempt to classify such cuts according to their designers would be absolutely absurd. The designer, supposing such to have existed, stands on as low (if not lower) level than the

woodcutter. It is to the cardmaker we must probably look for the production of the entire work, and to which particular cardmaker—there were upwards of fifteen in Augsburg about the middle of the second half of the fifteenth century—it is the archives of Augsburg alone which can tell us. It is difficult to think that they can contain no information with regard to the relation between printer and woodcutter.

5. With the publication of the Cöln Bible (1478), and soon after of the Nürnberg Chronicle (1483), a change came over the woodcuts. It then becomes all-important to know who was the designer; but even here is the very point where it is necessary to suspend our judgment. We have not sufficient evidence to determine what was the exact relation of the designer to the cutter when German woodcutting made its great bound. There is, however, much to be said for the view that at the very first the leap was owing to the *Maler* not only becoming *Reisser*, but to his taking upon himself the office of *Formschneider*. That this did not last any length of time is well-known. Towards the end of the century the *Formschneider* are admitted into the *Malerzünfte* as a distinct class, and we find a fair amount of information with regard to their relations to the designers.

6. Finally, without asserting definitely the identity of *Maler, Reisser* and *Formschneider* for the earliest cuts of the German incunables, I must state that it seems to me that the only way to classify these cuts is by the peculiarity of the woodcutter who prepared them. For bibliographical purposes of course the printer and the subject are the really valuable marks, and these have been stated by Mr. Conway with great exactness after patient investigation for the whole range of Dutch incunables. All students of woodcut illustration will agree with me in wishing that we had any work half as thorough as the *Woodcutters of the Netherlands* treating of the German incunables. K. P.

NOTES ON ART AND ARCHAEOLOGY.

MR. W. PATTERSON, of Edinburgh, sends us a prospectus of a new edition of the late Walter Geikie's *Etchings Illustrative of Scottish Character and Scenery*, which he is about to publish by subscription. The impression is limited to fifty copies, with proofs before letters on India paper, and 316 copies, proofs on Holland paper. This new edition will contain several hitherto unpublished plates. The original letterpress, which was contributed by Mr. James Ballantine, Mr. D. Vedder, and others, will be retained, and additional essays, referring to the new etchings, and to those which previously appeared unaccompanied with letterpress, have been furnished by Mr. Andrew Ross.

IN celebration of the reopening of the Hampstead Public Library in its new quarters—Stanfield House, High Street, formerly the residence of the late Clarkson Stanfield—a loan exhibition of pictures in black and white is to be held on February 26. Among the exhibits will be a number of drawings by the contributors to *Punch*, and works by Stanfield, Turner, Etty, David Cox, Constable, De Wint, Alma Tadema, Millais, Leech, Caldecott, and many other eminent artists. The library will be reopened on February 25 by Sir Spencer Wells. This institution has now had fifty years of life, and was supported at the outset by Samuel Rogers, Joanna Baillie, Lucy Aikin, Constable, and Linnell.

UNDER the patronage of the American Art Association, a large sale of pictures by modern masters will be held at New York on the 30th of March and the 1st and 2nd of April. There will be three hundred lots, including thirteen

pictures by Rousseau, fifteen by Diaz, eight by Dupré, five by Daubigny, four by Corot, and one or more by Meissonnier, Millet, Isabey, Troyon, Fromentin, Gérôme, Rosa Bonheur, de Neuville, Cabanel, Bonnat, Alma Tadema, Munkeasy, Millais, etc.

THE works of the late M. Bastien-Lepage will, it is now definitely settled, be exhibited during March and April at the Hôtel Chimay, which is now the property of the Minister of Fine Arts. The exhibition will be for the benefit of the Société des Artistes Français.

THE tomb of the Calpurnii Pisones Frugi has been discovered at Rome, in the course of excavations made at the Villa Bonaparte, between the Porta Pia and the Porta Salaria. Among the inscriptions is one referring to M. Licinius Crassus, consul in AUC 750, who was a kinsman of the family to whom the tomb belonged.

THE disputes which have delayed the opening of the Salle Davillier at the Louvre have been arranged. Another arrangement has also been made by which the Louvre will retain some of the glass and pottery, the rest of which go to Sévres. Three very fine plaques of majolica (Faenza, Sienna, and Cafagiolo) and a hispanomoresque dish are the pieces selected for the Louvre, and to these M^{me}. Davillier has added five pieces of Medici porcelain.

THE son of the celebrated sculptor, David d'Angers, has presented to the Louvre a complete set of the medallions modelled by his father.

AN important "Black and White" exhibition will be opened in Paris next month. The names of the "jury" comprise some of the most celebrated of French artists in chalk and charcoal, and engravers of all kinds. A gold medal and several of silver and bronze will be awarded.

A PETITION is being got up amongst American artists by the Union League Club of New York, in favour of the repeal of the customs duty on works of art. The petition has already received a very large number of signatures.

IN Paris the following exhibitions are open: Galerie des Artistes modernes, 5 Rue de la Paix (pastels, fusains, and drawings); Cercle de la Place Vendôme, Cercle de la Rue Volney, and the Société des Aquarellistes.

THE Mosaic Medallion Portraits of the Popes, which ornament the Church of St. Paul extra Muros, are about to be reproduced in chromolithography, with explanatory text by the Chanoine L. Pallard. The work will form thirty-three parts quarto, each part containing the portraits of eight Popes, costing seven shillings to subscribers, and appearing once a month.

M. AMBROISE TARDIEU has discovered, over the confessional in the church of Herment, a painting of Saint Radegonde, by Guido Reni.

THE intended new building of the Kestner Museum in Hanover, is to cost 236,000 marks. Prizes of 2,000 and 1,000 marks are offered for the best designs.

A SUBSCRIPTION is being opened for a monument to Alessandro Manzoni, to be erected at Lecco.

AN exhibition of the works of the celebrated Austrian painter Makart has recently been opened at Vienna.

THE STAGE.

MDLLE. JANE MAY, an engaging personality and an actress of talent, has returned to the Royalty Theatre, where "Le Monde où l'on s'ennuie" and "Niniche" have just been performed. "Niniche" is in many respects

objectionable, and "Le Monde où l'on s'ennuie" is in some parts worse than objectionable—it is dull. A literal translation of "Niniche" would be impossible on our stage; an adaptation would be bound to be somewhat pointless; and it is regrettable that so pleasant and ingenious a comedian as M^{lle}. May should appear in the heroine's part in all the crudity and offensiveness of the original. We trust we may shortly see her engage in the representation of a character the performance of which does less violence to her own gifts and graces. "Le Monde où l'on s'ennuie"—to say a word now of the more considerable comedy—must, on the most careful consideration, be pronounced unworthy of its great repute. Clever it undoubtedly is, but it tackles no serious problem, nor does it entertain wholly within the limits which high comedy must mark out for itself. Too much of it, in a word, belongs only to that comedy which is rightly described as farcical, and the satire directed against the affectations of learning, or often seemingly against learning itself, is not on the whole better deserved than that which was in England long ago directed against evangelical religion, and which has more lately been directed against the religion of Beauty. Of course, one sympathises very much with the *sous-préfet* and his young wife, who, in a great house wherein affection and jollity are tabooed, find themselves constrained, out of regard for their worldly interests, to display neither; but their enforced reticence is a little farcical. Distinctly farcical too—hardly belonging to comedy at all—is the method of love-making pursued by the English double-barrelled eye-glassed "Miss Lucy" and the young French *savant*. And perhaps the coldness of the marquise to her son is slightly exaggerated. Then, again, the duchess, the wise and tolerant old lady of the drama, is presented as in much too violent rebellion against the notions of "Le Monde où l'on s'ennuie." There seems to be nothing outrageous of which she would disapprove, and for the very greatest flippancy she reserves her heartiest patronage. Still the piece is very often funny, and we do not think that it is ever offensive. It is, however, to be remembered and esteemed chiefly as an acting piece. M. Pailleron, if he permits himself the extravagances of invention and execution which may be effective enough on the Stage, must not blame us for not according to him the honours reserved for pure Literature—reserved for Dumas and Emile Augier.

MUSIC.

THE POPULAR CONCERTS.

LAST Saturday afternoon Herr Joachim made his first appearance this season, and of course received a warm welcome. M^{me}. Norman-Néruda plays with wonderful finish, charm, and intelligence; Herr Sarasate astonishes us with his marvellous execution and *tours de force*; but Herr Joachim is still unrivalled as an exponent of the great masters and also as a quartet leader; and, while admiring his performances, we do not forget what he has done in the past for his art: how he has been a pleader, and a successful one too, in the cause of Schumann, Brahms, and Dvorák. We hope that this year he will introduce to our notice some interesting novelties; for the Popular programmes of late have been drawn almost exclusively from the treasures of the past. Herr Joachim's solo was the slow movement from Spohr's Sixth Concerto, and this he played in so simple and refined a manner that the public demanded an encore; a selection from one of Bach's Suites evoked fresh applause. Mr. Max Pauer, the pianist, chose for his solo Schumann's little-known Allegro (op. 8). This

piece, though it contains many passages of interest to the player, is perhaps one of the composer's least interesting contributions to pianoforte literature. It is unsatisfactory in matter, form, and tonality. In a letter to a friend, Schumann, speaking of it, aptly says "that the composer is worthier than his work." Mr. M. Pauer had, however, an opportunity of displaying his excellent *technique* and intelligent style of playing, and he well deserved all the applause he received. There was an encore, Schumann's Novelette in F, but this was not given with sufficient calm and dignity. Mr. Watkin Mills sang songs by Schubert and Handel. He has an agreeable voice; but his phrasing in "The Wanderer" was at times heavy. The concerted pieces were Mendelssohn's Quartet in E minor and Mozart's pianoforte Trio in C.

On Monday evening the programme commenced with Beethoven's Rasoumowski Quartet in C (op. 59, no. 3), and the performance by Messrs. Joachim, Ries, Hollander, and Piatti was a remarkably fine one. Herr Joachim played Bach's Chaconne, and for an encore a movement from the same composer's Suite in E: comment is quite unnecessary. Miss Agnes Zimmermann gave Schubert's Impromptu in C minor, and some of the Valses Nobles from op. 77. These valse are very pleasing; and were performed with taste and finish, but we should have preferred something more important. Miss Zimmermann is setting a good example: she again refused to accept the encore. Miss Thudichum was the vocalist, and sang Purcell's "Dido's Lament" in an expressive and intelligent manner; in the second part she sang two songs by F. Cowen. The concert concluded with Schumann's Fantasiestücke (op. 88) for pianoforte, violin, and violoncello.

How is it that Mr. Chappell is not going to notice the bi-centenary birthday of Handel next Monday? The next concert falls on the anniversary day itself. Mr. Maas is announced to sing one of Handel's songs; but the composer's name does not appear elsewhere in the programme. Surely all the vocal music might have been selected from the works of the great master. There was the sonata in A for Herr Joachim, and for Mr. Max Pauer one of the Suites or one of the six Fugues.

J. S. SHEDLOCK.

MUSIC NOTES.

THE *Musical Times* of March 1 will contain the first of a series of articles on music in America, by Mr. Joseph Bennett, who has just returned from a lengthened tour in that country.

A PERFORMANCE by the Sacred Harmonic Society of Handel's "Belshazzar" is announced to take place at St. James's Hall on Friday the 27th instant. As it is many years since there was a performance in London of this very fine but seldom heard Oratorio of the great composer, its revival by the Sacred Harmonic Society in commemoration of the bicentenary of Handel's birth will be looked forward to with considerable curiosity. The principal artistes engaged are Miss Annie Marriott, Miss Chester, M^{me}. Patey, Mr. Edward Lloyd, and Mr. Bridson. Mr. Charles Hallé will conduct.

WE regret to have to announce the death of M^{me}. Sainton-Dolby, the celebrated vocalist. She was born in 1821, entered the Royal Academy in 1832, and made her first appearance in public at a Philharmonic concert in 1841. Since her retirement from public life in 1870, she trained students at her Vocal Academy; and besides devoted herself to composition. Her cantatas "The Legend of St. Dorothea" and "The Story of the Faithful Soul" were produced in London—the one in 1876, the second in 1879.

SATURDAY, FEBRUARY 28, 1885.

No. 669, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Ralph Waldo Emerson. By Oliver Wendell Holmes. (Kegan Paul, Trench, & Co.)

THOUGH the books about Emerson are now numerous, a thorough, critical study is yet to be looked for. We do not need a better biography than that which Mr. Cooke has written, nor better analyses of Emerson's writings than those contained in the same work and in some of the papers read last summer at the Concord School of Philosophy, and now published. Nor, in the way of personal recollections, is there any dearth. Mr. Ireland's book is admirable; and Mr. Conway's, in spite of—or, perhaps, by the aid of—what Miss Peabody terms his "imaginative memory," is exceedingly interesting. Mr. Lowell has long since given us some notes, and may be prevailed on to give us more, and Mr. Frothingham promises a volume of the same kind. Other books—good, bad, and indifferent—and magazine articles innumerable have appeared from time to time. This ground having been so well occupied, what is now wanted is a well worked out critical study which shall display Emerson as he was and his work in its correct relation to his forerunners and his contemporaries. Mr. John Morley's essay and Mr. Matthew Arnold's lecture are excellent specimens of what is needed; but they were necessarily brief, and did not pretend to be exhaustive.

Dr. Holmes's book is in part biographical, in part descriptive, and in part critical. It contains much which had been told already by Mr. Cooke, Mr. Ireland, and Mr. Conway; but as Dr. Holmes adds something fresh by amplifying old incidents and producing new ones, and, best of all, giving reminiscences of his own, there is no need to complain. His method of giving an account of Emerson's writings is less satisfactory. To print one or two extracts from each essay, with occasional comment, gives about as good a presentment of the books as a brick from every building would give of the architecture of Boston. We are glad to re-read Emerson even in extracts, but for this purpose would take up the *Birthday Book* or the pocket volume of *Thoughts*. Persons already familiar with Emerson's writings do not stand in need of Dr. Holmes's description, and others will find no assistance here. The few doctrines which Emerson regarded as fundamental—self-trust, the guidance of the Oversoul, the supremacy of the moral sentiment—these might well have been indicated by Dr. Holmes and illustrated by quotations. There seems positively no explanation of his choice of method, excepting that he did not know how else to fill his allotment of pages.

The trouble with Emerson—which has stood in the way of criticism—is that he places his readers under a spell. They come

to think his thoughts, not their own; or, at least, he expresses their crude opinions on many points so well that they submit themselves to his guidance on all. Do they return to his books again and again in order that, having become familiar, they may discover their limitations? They find only new depths to be explored. He is so wise they cannot fathom him. I know a philosopher who, having imbibed much from Emerson, at length refused to open his books any more, because, he said, he could derive greater benefit from them by not reading them than by reading them. He meant that the ideas they presented had already taken root, and that so long as he did not return to the books his mental freedom was not infringed. It was timid as an expedient, and as a principle might easily be carried too far. As wine may be delicious and health-giving, though we cannot trace the vintage, so Emerson may quicken for the conduct of life even those who fail to fathom his depths.

There are two chapters in Dr. Holmes's book which, as far as they go, show what criticism of Emerson should be. We had all felt that however effective, for the most part, Mr. Matthew Arnold's lecture might be, there was an error somewhere in the suggestion that Emerson was not a "legitimate" poet. Dr. Holmes here supplies the best answer that has yet been given. Incidentally he points out that the phrase which Mr. Arnold quoted from Milton with so much effect (and who can handle such quoted phrases so well as Mr. Arnold?) assumes quite a new signification when read with its context. According to Mr. Arnold, Milton said poetry should be "simple, sensuous, impassioned"; but Milton was comparing poetry and rhetoric, and he described poetry as being "less subtle and fine, but more simple, sensuous, and passionate." This was a very different statement, and if quoted in full it would have lent no weight to Mr. Arnold's argument. Dr. Holmes, applying other tests, concludes that

"Emerson was not only a poet, but a very remarkable one. Whether a great poet or not will depend on the scale we use, and the meaning we affix to the term." "He looks always with the eye of a poet, never with that of the man of science."

Yet though

"full of poetical feeling, and with a strong desire for poetical expression, Emerson experienced a difficulty in the mechanical part of metrical composition. His muse picked her way as his speech did in conversation and in lecturing. He made desperate work now and then with rhyme and rhythm, showing that though a born poet he was not a born singer."

May not the confusion of singer with poet explain a good many false estimates?

In this portion of his book Dr. Holmes has certainly displayed the insight of the good critic. Here is a very just comparison of Emerson and Wordsworth in their attitude toward nature:

"Both are on the most intimate terms with Nature, but Emerson contemplates himself as belonging to her, and Wordsworth feels as if she belonged to him."

Comparing Emerson's prose and poetry, he says:

"When he gets into rhythm and rhyme he lets

us see more of his personality, he ventures on more audacious imagery, his flight is higher and swifter, his brief crystalline sentences dissolve and pour in continuous streams."

Perhaps it was inevitable that Dr. Holmes should be a little frivolous sometimes. There is a defect in his sense of literary proportion. That he can criticise well we have seen, but he does not maintain his level. For example, on the line from "The Adirondacs" in which Emerson, contemplating Nature, says:

"So like the soul of me, what if 'twere me,"

he comments thus:

"In our earlier days we used to read of the bewildered market woman whose *Ego* was so obscured when she awoke from her slumbers that she had to leave the question of her personal identity to the instinct of her four-footed companion:

'If it be I, he'll wag his little tail;

And if it be not I, he'll loudly bark and wall!'"

What shall we say of this save that, though doubtless funny, it is undignified and in bad taste?

There seems to be a prevalent notion that Emerson was a very meek sort of man, always deferring—outwardly, at least—to the opinions of others, listening patiently even to bores, and going through the world with a gentle smile upon his countenance. The singular robustness of his mind is quite lost sight of. It is satisfactory, therefore, to find some prominence given in the present volume to the practical side of Emerson's character. I like to think of him at the town's meeting as well as in the field and grove. I am pleased to note that he could be amused by comic songs, enjoy a cigar, tell a good story, and make and appreciate a joke. I did not doubt these things before, for his writings abound with practical wisdom and overflow with humour. Yet indiscriminating admirers of Emerson have forced upon us a fanciful notion of him which omits entirely the hearty good-humour of the man. These persons saw that he had understood something of poetry, of history, of science, of almost everything that came before his notice, and with superlatives they called him poet, historian, and man of science. They would not hear that there was anything of which he was incapable.

The truth is, that Emerson's distinguishing quality was the largeness of his sympathy, and this gave him entry into many fields in which he was not himself a labourer. He could put himself in the place of others and, so to speak, look through their eyes, and see the objects they beheld in the way they beheld them. In facts of science he was perhaps not well versed. Dr. Holmes tells us that it was Thoreau who taught him to observe. Truths of science, however, when they were presented, received his ready and understanding assent. To him they were not detached or classified facts—food for knowledge—but parts of a complete and perfect whole—food for thought. The newly-laid Atlantic cable was "the new-found path of thought." "What is classification," he asked,

"but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human mind. . . . Science is nothing but the finding of analogy, identity, in the most remote parts."

He was never anxious to gain converts to his opinions. He resigned his Boston pulpit because the ordinance of the Lord's Supper had ceased to be a reality to him; yet he said, "I am content that it stand to the end of the world, if it please men and please heaven, and I shall rejoice in all the good it produces." Doubtless, the baptism of children was a ceremony which had little significance for him; but the only restriction he placed on the baptism of his own was that it should be performed by one as pure as the children themselves. When William Henry Channing came, he said, "This is the man," and the children were baptised.

This breadth of sympathy won the goodwill of those who knew him, and finding its way into his works led Prof. Tyndall to write in his copy of *Nature*—"purchased by inspiration," and other readers to feel that he was not only their good teacher, but their personal friend. "He is the friend and aider of those who would live in the spirit," said Mr. Arnold; but in reality he was the friend and aider of many who would never have lived in the spirit, had not his understanding sympathy awakened the moral sentiment in them. "On all occasions," writes George Bancroft in the current *North American*, "the mind of Emerson turned to that which was general; to that which covered the whole." He himself, in his essay on "History," has affirmed that man's power consists in the multitude of his affinities. This breadth of sympathy explains much in his character, and must be the starting-point upon which to base a true estimate of the man and of his work in the world.

WALTER LEWIN.

SUDANESE LITERATURE.

The Wild Tribes of the Sudan. By F. L. James. (John Murray.)

My Wanderings in the Sudan. By Mrs. Speedy. In 2 vols. (Bentley.)

With Hicks Pasha in the Sudan. By Col. J. Colborne. (Smith Elder & Co.)

Three Months in the Sudan. By Emerline Sartorius. (Kegan Paul, Trench, & Co.)

THAT the eventful drama now in progress in East Africa should give a stimulus to what may be called Sudanese Literature is not surprising. "Anything on the Sudan, just now, will sell like wildfire," recently remarked a shrewd London publisher. The natural result is that the market is flooded with works professing to deal with the region in question, but whose professions are often supported by little beyond the word "Sudan," in its French form, "Soudan," conspicuously paraded on their title-pages. The term, in fact, has become so abused that its original significance is already forgotten, and the Beled-es-Sudan, the exact equivalent of our obsolete "Nigritia," properly comprising the vast region stretching from the Atlantic to the Nile, and from the Sahara towards the Equator, is now popularly restricted to the Khedival possessions South of Egypt. In this sense it is further made to include the steppe lands between the Nile and the Red Sea, to which the expression "Nigritia," or "Negro-land," never was, and never should be, applied. But

it is, presumably, already too late to enter a protest against this reckless misuse of geographical nomenclature, for which the publishers appear to be primarily responsible.

These remarks, however, have been naturally suggested by the titles of the above-quoted works, none of which, except the third on the list, are at all justified by their contents. Mr. James's comprehensive *Wild Tribes of the Sudan*, is explained in the sub-title to mean "An account of travel and sport chiefly in the Basé Country." The "Wild Tribes" thus reduce themselves mainly to the Basé (Kunama) people of the Upper Mareb (Gash) Valley, while the "Sudan" shrinks to the little debatable district between North Abyssinia and Egyptian territory, a district which, strictly speaking, is not in Sudan at all.

Nor is Mr. James quite correct in speaking of the Basé country as a *terra incognita* that had not been explored before his visit. Besides the unfortunate Powell family, who were all murdered by the Basé, this tribe was visited and studied by Munziger, who gives us a detailed account of them in his *Ost-afrikanische Studien*. It is remarkable, however, that this careful observer regards the Basé as probably a remnant of the aboriginal Hamitic inhabitants of Abyssinia without any trace of negro blood, whereas our author describes them as "of a totally different type, much blacker, and more closely allied to the pure negro than any of their neighbours." This is fully borne out by the etching from a photograph of a "Basé Professional Beauty" facing the Title, and by the engraving of a numerous group at p. 89; but not by another group at p. 139, nor by the Basé Chief Longay, in whom Hamitic features certainly predominate. Elsewhere is described the remarkable way of standing at ease, by placing the sole of the right foot against the left knee, an attitude almost impossible to an European, but which the Basé practise in common with some of the Nilotic Negro tribes.

It seems fair to conclude that the Basé are really a negro people, who have migrated eastwards to their present home, where they have become intermingled and to some extent assimilated to the surrounding Hamitic populations. But Mr. James is essentially a sportsman, and his descriptions of his personal experiences and adventures in the famous hunting-grounds of Taka and Kassala are so graphic that it is not surprising a second edition of his entertaining and richly-illustrated volume should have already been called for.

Kassala was also visited by the Speedy party, whose tour covered very nearly the same ground as that of Mr. James—that is, the tract of country between Suakin and North Abyssinia intermittently watered by the Khor-Baraka and here somewhat confusedly described as "that part of Nubia known as Eastern Sudan." The object also was much the same—a shooting excursion undertaken early in the year 1878 by Mr. Charles Speedy of Abyssinian associations, accompanied by his wife, by a Malay youth from Malacca, another from Abyssinia, native guides, "Spot and Flora the pointers," and so forth. The narrative takes the form of a series of letters, written at the time by Mrs. Speedy mainly to her mother, and all the better because not intended originally for

publication. Indeed they had been laid aside and almost forgotten in the family lumber room, until attention was fortunately again attracted to them by the present complications in East Africa. They are written with great vivacity, and betray considerable descriptive powers, rendering their perusal both pleasant and instructive. There is no space for quotations; but reference may be made to the reception by the Italian lady settled in Kassala, to the Arab entertainment there, including the native receipt for making coffee, to the interview with the German gentlemen engaged in the Settiti Valley in collecting animals for a European menagerie, to the detailed statements regarding the terrific heats prevalent on the Red Sea littoral even during the early spring months, and to the "race for life" from a sand-storm in the neighbourhood of Tokar. But the Hadendoa Hamites of that region should not be spoken of as "Arabs," nor their primitive Beja speech as a miserable patois resembling "the sounds that proceed from a sty full of hungry little pigs." Much attention has lately been bestowed on this branch of the Hamitic group of languages, and its remarkable structure elucidated especially by the researches of Munziger, Almqvist, and Leo Reinisch.

But it would be too much to expect a critical appreciation of these points from an English lady casually traversing the country, when we find an intelligent writer like Col. Colborne committing the same ethnological blunders. For him also the Hadendoa, Bisharins and other Beja peoples are all "Arabs." We are told, for instance, that "the line of demarcation between the territory of the Hadendoa and Bisharin Arabs" runs through the Ariab Valley on the Suakin-Berber route, where there are in point of fact no Arabs at all. As this route is about to be traversed by British troops ordered to the support or rescue of Gen. Wolseley's expedition on the Nile, would it not be well meantime to make a somewhat more careful study of the ethnological relations in the East Nubian steppe? A repetition might thus, perhaps, be spared of some of the ridiculous blunders preceding and accompanying Gen. Graham's bootless battles in that region.

In other respects Col. Colborne has given us a really valuable book, dealing directly with the unfortunate campaign of Hicks Pasha down to the battle of Marabia. Soon after that victory, the author, who was a member of Hicks's staff, was ordered home on sick leave, so that the subsequent events, ending with the crowning disaster in Kordofan, are related at second hand. Even much of the early portion consists of extracts from correspondence already published in the *London Daily News*. But it well deserved to be reprinted, and forms with the supplementary matter a permanently valuable record of one of the most thrilling episodes in this eventful drama.

Since the fall of Khartúm and the failure of the Nile expedition to rescue its noble defender, one reads with a sort of melancholy satisfaction from such a competent authority that the Suakin-Berber was "the only practicable route" by which success might be expected. Nor is the writer sparing in his censure of the Government and their officials on the spot, "who show as lamentable

ignorance as themselves of the knowledge of the Sudan." He complains that these men do not get advice from people really acquainted with the country,

"but trust to Egyptians who have never been in the Sudan, and wisecracks who think they can learn all about a country by poring over a map—generally, as a rule, wrong. I have been asked the most ludicrous questions about the Sudan by officials who have been studying the question for months, and who seem to know as little about it as when they commenced" (p. 262).

Among the many interesting topics incidentally referred to, is that of the coats of mail still in use among some of the Sudanese Arab tribes:

"Whether original or a copy, it was undoubtedly the dress of the Crusaders. The hauberk of mail was fastened round the body by the baltan, and formed a complete covering from head to foot. The long two-handed double-edged sword was borne between the leg and the saddle. The wearer of this mediæval garb was Sheikh Mohammed Sebekh, of the Halawin tribe of Bagarra [Baqqara] Arabs. I asked him where he had got his armour. He replied it had been in his family 310 years. I may add the horse's head was encased in steel, and its body covered with a quilt thick enough to turn a spear. It was shaped like the armour one reads of in Froissart" (p. 143).

It has been asserted in connection with this curious subject that the practice survives in the Sudan alone. It may, therefore, be well to state that it is also found among the Khevsur people of the Central Caucasus, who still habitually wear chain armour, shields and helmets, like mediæval knights. In fact, it was formerly general among all the Caucasian tribes, and the Chechenzes of Daghestan still wore coats of mail down to the beginning of the present century. The armour does not appear to have been forged by these peoples themselves, but was handed down, as among the Sudanese Arabs, as an heirloom from generation to generation in the families of the chiefs. Hence the inference that this armour dates everywhere from the times of the Crusades, of which it may be regarded as a remarkable reminiscence.

Mrs. Sartorius's *Three Months in the Sudan* means "Three Months in Suakin," where she resided from December, 1883, to February, 1884—that is, during the stirring period preceding the arrival of General Graham's expedition. She writes in a somewhat scattered way of men and things, but with a delightful and absolutely unconscious naïveté, which, like charity, covers a multitude of sins. Thus it may be wrong to speak of the Nile as rising in November, to call the janisaries "small landowners," to attribute *The Innocents Abroad* to Bret Harte, to make the Bahal Gazar (*sic* for Bahr-el-Ghazal) "the source of the Nile," or spell the name of the Hadendoa tribe, *à la* Cockney, with a superfluous *r* ("Haddendower"). But such peccadilloes will readily be pardoned in a writer who overflows with good humour often under really distressing circumstances, who describes the varied scenes of a fitful drama with the subtle charm of a perfectly natural style, and whose pages are replete with passages betraying considerable descriptive power and womanly common-sense. Take this account of Furrajulla, formerly "a slave from Bonga,

Central Africa," then a member of her Suakin household:

"He was very short, but very powerful, thick-lipped, black, with splendid white teeth, except his bottom front ones, which had been knocked out in accordance with the customs of his tribe. Now and then he got very much out of temper, and bullied the Portuguese cook frightfully. Once in Jeddah some Turkish soldiers insulted him, and he without hesitation went in for the whole guard (four men) and licked them all. Then when the officer came to complain in the morning to Mr. Wylde, Furrajulla, who had not recovered his temper, pushed past, knocked over the officer, gave him a smart rap or two, and then bolted for twenty-four hours into the desert for fear of his master" (p. 95).

Here is a charming touch, which may serve as a specimen of scores of similar passages:

"Near here there is a very ancient city, the traces of whose existence are lost in the dim mists of past ages; but it is so ruined, and tradition is so still about it, that *only the most learned antiquaries find interest in it*" (p. 13).

Here is a hint for Mr. Plimsoll:

"Fortunately for the Khedival Company, these steamers were all built long ago, and therefore of much better iron than now, and consequently they bear the strain which their captains and pilots are always putting them to" (p. 159).

Here is another for our Exeter Hall friends:

"It is on this slave-dealing account that the Egyptians have greatly to complain against the English people, for the latter have fixed on them a most exacting treaty, one which entails great expense and trouble in the carrying out, and which, in consequence, has raised the whole of Sudan against them. There has been, in modern times, no greater example of the Pharaïcal manner of laying heavy burdens on other men's shoulders and refusing to stir a finger to help them, than this treatment of the Egyptians by that vast body of English Methodists and fanatics, whose representatives make Exeter Hall their principal meeting place" (p. 84).

And lastly, here is one for the Egyptians themselves:

"Every village has its pigeon-houses, looking like great mud cones, and in the evening the owners go out and call them in. But when a man wants to get hold of extra pigeons, instead of calling them, he frightens the pigeons away. They do not understand this, keep circling above, and swoop down now and then towards their houses. Other pigeons, seeing this commotion, join them, and as soon as the man sees there are enough he hides. The whole of the birds, old and new, then go into the house, and the man returning shuts them in. This would be a fine business, if it were not that all of them do the same thing, and therefore each gets caught in his turn. They know this perfectly well, but no Egyptian fellah could resist the temptation of cheating his neighbour" (p. 32).

Altogether, if, notwithstanding their titles, none of these works except Col. Colborne's tell us much about Sudan proper, all of them are at least pleasant reading, while often embodying much useful information bearing more or less directly on the present troubles in that distracted region. A. H. KEANE.

The Aeneid of Virgil. Translated into English by J. W. Mackail. (Macmillan.)

THE problem of translation, according to a well-known saying of Cardinal Newman, is to make the minimum sacrifice. Something *must* be lost in transferring thoughts expressed in one language into another. How may this loss be least? If a Latin poet is translated into English prose, the extent of the loss lies upon the surface: the music of the verse is gone; and the subtle influence of form upon thought is at least entirely disguised. But does not the lessening of the sacrifice in other respects fully compensate for all that is thus given up? The translator is freed from all care as to metre and rhyme, and is able to devote himself entirely to devising the most exact equivalent for the words of his original. The numberless pit-falls that stud the way of one who attempts to render in verse no longer imperil his course; and if he is judged by a higher standard of fidelity, at least there are no artificial difficulties in the way of his reaching this standard. Mr. Mackail is right then in saying that a prose translation of a poet now needs no apology, though he is needlessly humble in comparing it to a copy of some great painting executed in mosaic, and even to a copy in Berlin wool. The only question possible, whether such a prose rendering can really give pleasure, has been answered sufficiently by experiment; and versions such as Hayward's *Faust*, Carlyle's *Dante*, the "Variorum" *Homer*, or Mr. Lang's *Theocritus* do not recall in the least, even to the most critical reader, the sensations produced by a Landseer, not to say a Raffaele, in wool-work. For our own generation it may safely be said that a good prose version is more sure of a welcome than a rendering in verse of any but the very highest quality.

When a new translation of the *Aeneid* was announced, the first point of interest was to know what sort of an ideal the translator had conceived of his duties. The version of Conington was in possession of the field. In what respects would this be held to be capable of improvement? Was the effort to be made to secure a closer faithfulness, a terser diction, a more idiomatic style, or a more accurate rendering of individual passages? Mr. Mackail, with commendable taste, offers no criticism on his predecessors. We are left to find out for ourselves what are to be the distinguishing notes of his own translation. Perhaps a comparison of various renderings of a passage selected almost at random may set us on the track. The first few lines of Book XII. are rendered thus by Conington:

"When Turnus sees that the war-god's enmity has broken the spirit of Latium, that men are beginning to claim his promise and make him the mark of their eyes, he bursts at once into fury unappeasable, and swells his pride to the height. As in Punic lands, when the hunters have wounded him deep in the breast, the lion at last rouses himself to fight, tosses with fierce joy his mane from his neck, snaps fearlessly the brigand's spear in the wound, and roars from his gory mouth: even so, Turnus once kindled, his vehemence grows each moment. Then he addresses the king, and dashes hotly into speech."

The widely-circulated "Globe" version has it thus:

"Turnus, when he sees that the Latins are

shattered and disheartened by unsuccessful war, that the fulfilment of his own promises is called for, that men's eyes make him their mark, burns all the more with rage implacable, and higher lifts his pride. As in Carthaginian plains, the mighty lion, his breast grievously wounded by the hunters then at last wakes his weapons, and exultingly makes his shaggy muscles start from his neck, and dauntlessly shivers the deep-fixed javelin of his assailant, and roars with bloody mouth; even so in Turnus, once inflamed, the fury swells up more and more. Then he thus addresses the king, and stormily begins his speech."

There is not much difficulty in the comparison here. The former is a first-class, the latter a rather poor second-class rendering. The personal element in *adverso Marte* ought certainly to have been retained; *ultra* is not "all the more," "wakes his weapons" is false English; to render *toros* "muscles" mars the picture; whatever the literal meaning, it is the mane which is seen to shake; "assailant" is a very weak rendering of *latro*; *arvis* is more or less than "plains"; the thrice-repeated "and" is very awkward; and, generally, there is a lack of ease in the rhythm, while the changes of subject are not managed happily.

Now let us turn to Mr. Mackail.

"When Turnus sees the Latins broken and fainting in the thwart issue of war, his promise claimed for fulfilment, and men's eyes pointed on him, his own spirit rises in unappeasable flame. As the lion in Phœnician fields, his breast heavily wounded by the huntsmen, at last starts into arms, and shakes out the shaggy masses from his exultant neck, and undismayed snaps the brigand's planted weapon, roaring with blood-stained mouth: even so Turnus kindles and swells in passion. Then he thus addresses the king, and so furiously begins."

This is evidently constructed on different lines from Conington's, but there is hardly less in it to praise. The close fidelity is admirable, and I venture to think it is a better model for imitation than Conington's spirited rendering; but there are flaws in detail. "The thwart issue of war" is naught; "eyes" are not properly "pointed," and "Phœnician" is a little misleading, in spite of Mommsen's precedent.

It would be, of course, unfair to sample the house by such an isolated brick; but the general impression left by a much more extended comparison does not differ widely from that which is so gained. The translator has the true ideal, and as a rule he comes very close to it; but occasionally there are jarring notes or lapses in language, none the less awkward because they are apparently deliberate. Is *præstans animi iuvenis* more happily rendered by "O, excellent young man!" or by Conington's "gallant youth"? Is "free to dally with death" legitimate for *mora libera mortis*? Is *maximus Actor* "princely" rather than "giant"? Does not the rendering "driven by what god" for *quo turbine adastra* need a word of defence? "Was it well?" rather misses the point for *placuit*. But these are very slight blemishes: it would be easier to find in abundance examples of rendering really perfect in their idiomatic faithfulness.

And we must not lose sight of the skill with which very frequently Mr. Mackail has preserved the order of the original. This is a point far too often lost sight of in translation: and yet

if the words are flung about at random, even if the bare meaning of the text is accurately given, the manner in which the component parts of the thought are presented to the mind is totally different; and, therefore, a very different impression is produced. The English reader, as he turns to this version, may be sure that he has the very form of Vergil's thought preserved with as much exactness as is possible. The only serious qualification that is needed is suggested by an occasional forcing of the note. "Ruining heaven" is not happy for *coeli ruina*; "dreadful steel-riveted gates" is neither exact nor elegant for *diras ferro et compagibus artis . . . portas*; nor "maiden unnamed" for *quam te memorem virgo*? It is easier to censure "weapons of corn-dressing" for *Cerealia arma* than to suggest an adequate equivalent. A happy daring is often needed to reproduce Vergil's bold experiments in style; but in cases such as these the daring is more evident than the happiness. "Deified glory" used of Hercules is probably not the meaning of *deus addite divis*, nor "gay Carinae" the right epithet for a quarter distinguished for the stateliness of its buildings.

One question remains to be discussed—the manner in which Mr. Mackail has dealt with passages of real obscurity. He tells us that he has often taken Servius as his guide in preference to the modern editors. The principle is a somewhat dangerous one. The best recent editors have not been lacking in respect for the authority of Servius; and if they have departed from his tradition, it has usually been only under strong compulsion. For instance, in two places in book i. Dr. Kennedy agrees with Servius as against many editors, first in interpreting *fatigat equos* (said of Harpalyce, v. 316) as "out-tires horses," and secondly in understanding *data fata* (v. 382) of the will of Jove, for "*fata* never means oracles or prophecies." In both these cases Mr. Mackail, wrongly, I think, disagrees, rendering "tires her coursers" and "oracular tokens." *Laquearia*, again, may, perhaps, be "chain-work," but that is not the view of Servius. In vi. 865 Servius supports Dr. Kennedy's interpretation *quantum instat in ipso*, "what a striking resemblance"; but Mr. Mackail more wisely follows Conington—"how goodly of presence he is"—though Prof. Nettleship is probably right in thinking that this does not exhaust the meaning of the phrase. Hence, Mr. Mackail has often been better than his principle, and, on the whole, there is little room to complain of his judgment. To test it in detail would be a task not for these limits. I may just notice that in iv. 663, and vi. 883, Dr. Kennedy's explanation is not admitted, and that in vi. 743 the rendering "we suffer, each a several ghost" for *quisque suos patimur Manes* shows that Mr. Mackail's conception of the duty of a translator does not include that of an interpreter. Prof. Nettleship's convincing disproof of Servius's interpretation of *concreta* in vi. 738 was probably not accessible when this part of the translation was finished. But I have noticed no instance where Mr. Mackail's interpretation of the sense of a passage—as distinguished from that of particular words—is not fairly defensible.

Perhaps it is right, before I close this

article, to give one specimen of the success with which the translator deals with passages of emotion or pathos. We may take the story of the death of Nisus:

"Then, indeed, frantic with terror, Nisus shrieks out. No longer could he shroud himself in darkness or endure such agony. 'On me, on me! I am here, I did it! On me turn your steel, O Rutulians! Mine is all the guilt; he dared not, no, nor could not. To this heaven I appeal, and the stars that know—he only loved his hapless friend too well.' Such words he was uttering; but the sword, driven hard home, is gone clean through his ribs, and pierces the white breast. Euryalus rolls over in death, and the blood runs over his lovely limbs, and his neck settles and sinks on his shoulder; even as when a lustrous flower cut away by the plough droops in death, or weary-necked poppies bow down their head if overweighed with a random shower. But Nisus rushes amidst them, and, alone among them all, rushes at Volscens, keeps to Volscens alone; round him the foe cluster, and on this side and on that, hurl him back; none the less he presses on, and whirls his sword like lightning, till he plunges it full in the face of the shrieking Rutulian, and slays his enemy as he dies. Then, stabbed through and through, he flung himself above his lifeless friend, and there at last found the quiet sleep of death."

This rendering is perhaps not flawless, but standing, as it does, as only an average specimen of the work, it warrants us in saying that Mr. Mackail's version justly claims a place of its own, and is a gift to be heartily accepted. To school-boys and to poll-men I fear it will be fatally useful.

A. S. WILKINS.

SPANISH POPULAR LEGENDS AND POETRY.

Biblioteca de las Tradiciones populares Españolas. Tomos I.—V. (Madrid.)

Concepto del Derecho en la Poesía popular Española. Por Joaquín Costa. (Madrid: Fortanet.)

SPANIARDS were not the first to enter on the study of folk-lore, but now that they have begun they yield to no other people either in zeal or in diligence. Even the reproach of tardiness may be in some sort repelled, for the great collections of the Romances are full of materials of folk-lore, and among the works of Fernán Caballero and others are excellent specimens of the pre-scientific period. But leaving questions of priority, the distinguishing quality of Spanish folk-lore, and much of its permanent value, consist in this—that its collectors and writers have infused a fresh life into the study by treating it not merely as a thing of the past, as an archaeological curiosity, but as an actual sociological fact. In these and similar volumes published in the Peninsula we hear very little of solar or other theories; little is done in the way of comparison of the legends, unless with those of other parts of the Peninsula and of Italy; there is no unwise attempt at literary adornment; but folk-lore is treated mainly from another, and perhaps not less valuable, point of view—as a demopsychology, to quote the term used by one of the most zealous toilers in the field, the editor of the present series, Don Antonio Machado y Alvarez.

Considered in this way, the collector of

folk-lore has no need to pitch his tent or to make his peregrinations in out-of-the-way places. He will find his material in crowded modern cities just as well as in the most thinly-populated districts, and in those farthest away from civilisation. Excellent examples of this kind of folk-lore are "El Folk-lore de Madrid," by Señor Olivarria, in vol. ii., and still more the study of Sevillian artisan town-life, by Luis Montoto, which opens the series. Only, as this writer warns us in another study in vol. iv., p. 313, we must not confound the "musa popular" with the "musa de la plebe." The former is free as the wind, but she is no courtesan. It is the latter only who is the muse of the *lupanar* and the servile parasite of Bacchus. Studies such as these of London courts and Whitechapel alleys would surely smooth the way for the labours of university men in the unknown world of eastern London.

Another phase of folk-lore in which these volumes are particularly rich is that of children's games. The "Juegos Infantiles" of Estremadura are treated at length by Hernandez de Soto, and those of Galicia by the distinguished novelist, Doña Emilia Pardo Bazan, and others. There are but few of our British infant games which are not represented here, and generally with more numerous variations than could be found in our own land (see the twenty-four ways of playing hop-scotch figured at the end of vol. iii.). The nursery rhymes which accompany such games are not generally, as in English, unmeaning jingles, but have often a touch of graceful poetical fancy which reminds one of the land of the romancero; indeed, some are charming little romances by themselves; and these are found not only in brighter Andalusia, but also in cloudy Galicia of the North.

Of superstitions—showing that popular religion, like embryology, contains within it types of all anterior forms—we have specimens from Andalusia by Señor Guichot; and also a more literary study by the same writer on the Myth of the Basilic. Vol. v. is occupied by collections of riddles, short studies, newspaper reviews, and articles by the editor, forming together a conspectus of nearly all that has been done in the Peninsula on the literature of folk-lore. Vols. ii., iii., and iv. contain also a translation of those chapters of Nyder's *Formicarium* (sæc. XV.) which treat of sorcery and of demoniacal possession. This is interspersed with dialogue, giving a view of the belief of educated Spaniards on these subjects at the present day. The treatise itself, though containing some interesting episodes, is as tedious and as untrustworthy in its facts as are most mediæval works on the like theme.

Our second work is a little study by Don Joaquin Costa, the author of *Poëma popular Española*, on the idea of right contained in the old proverbs and romances. He brings out therefrom the independence and nobility of sentiment of the Spanish people. How their ideas of right were widened by "el contacto, y mas que contacto, compenetracion de musulmanes y cristianos." The *refran*, he remarks, embraces all theologies, and contains the *detritus* of all former beliefs, even fallen ones; but there is not a single refrain which shows love to the clergy. The popular ideal of the

duties of a king is very different from that of later times. So far from Spaniards having always been submissive subjects, their popular poetry upholds the right and duty of insurrection. Hence, when absolutism was established, the popular muse became silent, even in the presence of most stirring deeds. There is not a single popular song to celebrate the conquest of America. An additional chapter, showing how freely the old singers borrowed from the "Fueros" and "Las Siete Partidas," the ancient laws of Leon and Castille, forms an excellent commentary on the Poëma and Romancero del Cid.

WENTWORTH WEBSTER.

NEW NOVELS.

Diana of the Crossways. By George Meredith. In 3 vols. (Chapman & Hall.)

Stormy Waters. By Robert Buchanan. In 3 vols. (Maxwell.)

A Dog with a Bad Name. By Florence Warden. In 3 vols. (Bentley.)

Current Repentance. By A. B. C. S. In 3 vols. (Maxwell.)

Not Every Day: a Love Octave. By Constance MacEwen. In 2 vols. (Ward & Downey.)

Found Out. By Helen Mathers. (Warne.)

In saying that the books of Mr. George Meredith appeal exclusively to a cultivated taste, we use the epithet "cultivated" as synonymous with the two epithets, "educated" and "acquired." In fiction, as in wine, the popular preference is for body rather than bouquet; and Mr. Meredith's work is almost perversely deficient in body, owing all its charm to a very delicate, but also very recognisable, literary flavour, which, if discerned at all by the untutored palate, is hardly likely to be enjoyed. Nor would we say that enjoyment must necessarily follow upon discernment. The peculiar quality of Mr. Meredith's writing is very charming; but its charm is not that which we expect, and rightfully expect, to find in fiction. The taste of the ordinary novel-reader may be somewhat coarse; but his demand for something a little more substantial than the items in Mr. Meredith's bill of fare is not unreasonable. The author of *Diana of the Crossways* has always seemed to us not so much a novelist as a singularly brilliant social essayist, who has wilfully chosen to cut up his essays into fragments of fictitious description and conversation. His books are always interesting, and yet, paradoxical as the saying may seem, we are interested neither in the personages themselves nor in what happens to them. We read simply that we may know what Mr. Meredith has to say, and that we may enjoy his manner of saying it; but the people and the events may be said to be in the way rather than otherwise, being at the best only concrete illustrations, like the men and women with the latinised names who figure in George Eliot's *Impressions of Theophrastus Such*. There is nothing better in *Diana of the Crossways* than the almost dazzlingly brilliant introductory chapter, "Of Diaries and Diarists touching the Heroine," which will be perused at least twice by

every reader—once when he begins the story and again when he has finished it; and here Mr. Meredith is what we contend he ought always to be, an essayist undisguised in the fancy dress of a novel writer. It is full of good things such as this, of romance—"The young who avoid that region escape the title of fool at the cost of a celestial crown"; or this of oratory—"It is always the more impressive for the spice of temper which renders it untrustworthy"; or a score of others that it would be pleasant to quote did space allow. These things in the essay are enjoyable; but a conversation conducted in epigrams is not enjoyable, because it brings with it a sense of strain and distortion. The situations in the book are not inevitable. They have no imaginative necessity, but only an intellectual necessity. They are simply pegs on which to hang clever comments. We do not, we cannot, really care for Diana Warwick and her various entanglements with her lovers and would-be lovers; but it is interesting to see what Mr. Meredith can make of them. Once, indeed, Diana does become vividly human—in the scene where Percy Dacier casts her off because she has betrayed his great political secret to the London editor; but the chapter comes as a surprise, and it is a surprise that does not recur, the only equally human and realisable passage being the description, which is almost painfully powerful, of Sir Lukin Dunstane's remorseful agony when his wife, to whom he has not been too faithful, is undergoing the operation which may deprive him of her for ever. We do not believe, however, that Mr. Meredith's admirers will feel that in *Diana of the Crossways* he falls below himself.

The quality to which, a good many years ago, the meaningless and absurd name of "sensationalism" was given, is again making itself very observable in contemporary fiction of the second rank. The extraordinary popularity of *Called Back* may have done something—and, in one instance, to which we shall refer, certainly has done something—to revive an old and rather discredited fashion; or novelists may have a suspicion that their readers are pining for nutriment a little more savoury than the long-drawn-out analyses of Messrs. Howells and James; but, whatever be the true explanation, the fact remains, and no fewer than three of the six novels in our list this week are distinctly "sensational"—that is to say, their interest centres in the unravelling of a tangled skein of circumstance rather than in the presentation and evolution of character. *Stormy Waters* is one of the three, and not the best of them; for the work of Mr. Buchanan, who is distinctly a man of genius rather than of mere talent, is only good work when it is congenial work—when it runs in the line of his special endowments—and it seems to us evident that his recent stories have been written not from an inward impulse, but in answer to a supposed demand from without. They are accordingly painfully unsatisfactory, especially to those who, like the present writer, have derived more pleasure than they can adequately acknowledge both from his memorable verse and from those prose writings in which his imaginative endowment has "ample room and verge enough" to display itself freely.

Stormy Waters deals with the doings and misdoings of a secret society established for the purpose of furthering the cause of socialism by the beneficent agency of dynamite; and Mr. Buchanan exhibits courage which surely crosses the borders of temerity by making one of his characters the perpetrator of the explosion at the Government offices in Charles Street. The criminal, Michael Morton, is a farmer who, in a fit of passion, has murdered his landlord, being urged to the deed partly by a notice to quit his farm, but mainly by a suspicion—which turns out to be altogether baseless—that the landlord is the unknown scoundrel who has seduced and deserted his daughter. The murder is witnessed by the real seducer, a certain Richard Kingston, who is the heir of the victim, and also the leading spirit in the secret society; and Morton, who is, of course, in Kingston's power, is compelled by him to give his assistance in carrying out the designs of the Brotherhood. Suspicion falls upon a young sailor named Hastings, who is finally captured, tried, and condemned to death; but on the eve of his execution the truth is discovered, Kingston is unmasked, Hastings is reprieved on his way to the scaffold, and poetical justice is done all round. Some of the chapters devoted to the plottings of the dynamitards are exciting enough, and will just now be specially attractive to some readers; but, from an artistic point of view, the subject is not well chosen, and the treatment has occasionally a clumsiness which seems the result of haste. There are good things in the story—Bob, the cabman, is admirable—but it gives no indication of the true nature of its author's power.

Whenever a reviewer wishes to point a more than ordinarily savage sneer, he has a habit of saying that such and such writing is "only worthy of the *Family Herald*." We are not familiar with this despised periodical, so cannot tell what amount of justice there may be in such allusions; but we learn from Miss Warden that her story, *A Dog with a Bad Name*, was first published in its pages, and we can only say that if all the novels which come into our hands were as readable as this one, our labours would be much more exhilarating than they are at present. Though it is entirely a story of plot interest, the writer has clearly taken pains to make her characters realisable and consistent; and while it is quite true that no one thinks of reading a book of this kind for the sake of its characters, still a fairly well-painted portrait is a pleasanter thing than a coarse daub. Certainly, the villains are decidedly non-natural beings; but as the villain of fiction is so uniformly non-natural it would perhaps be hypercritical to complain of such a trifle. In a story like this good construction is the one—we might say the only—thing needful; and in *A Dog with a Bad Name* the construction is very workmanlike and efficient. Miss Warden has evidently laid out her ground plan thoroughly before beginning to build up her narrative, so that symmetry and proportion are preserved throughout, and there are none of those after-thoughts, which, however carefully they may be worked in, are always detected and resented by the reader. The

secret upon which the plot turns is preserved with considerable ingenuity, and the reader's curiosity is so well sustained that, if the beginning of the third volume be reached before midnight, only a very strong-minded person will be able to get to bed before the last page is reached. We foresee that poor James Acton, who represents the proverbial dog with a bad name, will be cleared from the charges brought against him, and we know that another James Acton will somehow be discovered; but, though early in the story we make the acquaintance of the true criminal, we never suspect his identity. To readers craving for excitement, *A Dog with a Bad Name* may be confidently recommended.

The title *Current Repentance* will be somewhat enigmatical save to those who remember the speech of the Chief Justice to Falstaff in the second part of "Henry IV.": "Pay her the debt you owe her, and repay the villainy you have done her: the one you may do with sterling money, and the other with current repentance." In one respect this story is certainly inferior to the one just mentioned. So far is it from being well constructed that it can hardly be said to be constructed at all, but simply thrown together. The first half of the first volume, which deals with the unfortunate love-affairs of Mary Lee, is admirably written, and the narrative is full of movement and interest; but with the supposed betrayal and actual death of the ill-fated girl the interest collapses; and, when the story jumps over twenty years of time and half a hemisphere of space to introduce us to an entirely new circle of characters we feel first bewildered and then bored. In themselves the chapters dealing with official life in India are entertaining enough; but, coming where they do, we resent them as something like an impertinence, for they seem to have no vital connexion with what has preceded them. When we reach the concluding pages we discover that there is such a connexion; but, unfortunately, by that time we have ceased to care anything about it. This is a pity, for the author has some grasp of character, and can write decent English, though he seems to labour under the delusion that a "patronymic" is the same thing as a surname.

Were Mr. Martin Tupper and *Punch's* Postlethwaite to combine with a view to the production of a novel, the result of such combination would surely resemble the work which is entitled *Not Every Day*, though it might as well have been called "Every other Fortnight," or "Three Times a Year," or "Always," or anything else. We cannot imagine what manner of man or woman could possibly feel the faintest interest in the high fantastic phantoms which here do duty for human beings, or in a story which is, we should think, almost unique in its grotesque absurdity; but from the descriptive and conversational pages we have extracted an amount of amusement for which we can hardly be sufficiently grateful. The Tupperian hand is principally discernible in the original mottoes prefixed to the chapters and in the reflections which are sprinkled up and down them; it is in the descriptions and the talk that we find the touches which suggest the subtle and precious Postlethwaite. When we read that "advice

is, as a rule, very badly weighted; bias of some kind nearly always tips it over to the left," we cannot presume to understand; but we silently admire such an impressive echo of the oracular *Proverbial Philosophy*—an echo which we hear again in the following impressive affirmation and awakening question: "Most of us are fattened on the misfortunes of others. How much slaughter, thinkest thou, O man, it has taken to keep thee alive?" On the other hand, there can be no doubt concerning the source of the inspiration in this fragment of a "consummate" speech made by one woman to another whom she has never seen before. "We have but few great lights left. I'm sorry Rossetti, the poet-painter, has passed away." (Here she *did* pause, and for one half-moment a slight expression of pain swept across her worldly yet handsome face.) "It strikes me he would have admired your face and weaved you into those strange studies of his, all of which have a certain remote and deep expression which is unfathomable." We do not know whether we can say that Miss MacEwen's writing has, like her heroine's face, a remote and deep expression, but it certainly resembles that remarkable countenance in being unfathomable. She has a great fondness for particular words, "mystic" being such a special pet that she even talks about "mystic dynamite"; and she has also a fixed determination to be nothing if not transcendently metaphorical, which makes her book rather more puzzling than a double acrostic. Of course, there is just a possibility that *Not Every Day* may be an elaborate practical joke, and in this case we must declare it a tremendous triumph.

Found Out is the story we referred to as having been called into existence by the extraordinary success of *Called Back*; and from what we hear the venture has already had greater good luck than generally falls to the lot of imitative experiments. We do not mean it to be inferred that Miss Helen Mathers is guilty of imitating Mr. Fergus. Such imitation would have been one of those blunders which are worse than crimes. The author's aim has been simply to arouse that kind of interest which depends upon cleverly awakened and ingeniously sustained curiosity, and she achieves her aim without being in the least "psychological," an achievement for which our sincere thanks are due. The only technical criticism we feel impelled to make is that the machinery is in places rather too elaborate for a short story, the result being an occasional awkwardness which might easily have been avoided.

JAMES ASHCROFT NOBLE.

CURRENT LITERATURE.

The Princess Charlotte of Wales. An Illustrated Menograph. By Mrs. Herbert Jones. (Quaritch.) The occasion of this handsome quarto is to publish for the first time a series of some eleven miniatures of the Princess Charlotte, which were painted from life by Miss Charlotte Jones, and have ever since remained in the family of the artist. To accompany these illustrations, Mrs. Herbert Jones, the author of *Sandringham Past and Present*, has told afresh the story of a life which, from its ill-omened beginning to its sudden close, forms one of the most pathetic chapters in royal annals. As might be expected from her former work, Mrs.

Jones is careful to add whatever interesting touches can be obtained from the architectural and domestic history of the houses in which the Princess lived—Carlton (which ought apparently to be Carleton) House, Warwick House, which adjoined the former, and Claremont, familiar to us all by another recent death. She has also been enabled to make a real contribution to her biography by printing at length several letters written by the Princess to Emily Theophila, Viscountess Ashbrook, who, though some seven years older than her correspondent, still survives at the venerable age of ninety-five. Of these it is sufficient to say that they fully bear out the character for amiability that is commonly assigned to the Princess. But it is, of course, for its illustrations that this book will be chiefly valued. Their interest is twofold: partly because of their subject, whose brief career they trace in a succession of stages from her cradle to her wedding; partly as being excellent specimens of the English miniature art of Cosway's school. The graceful form of the young girl who never blossomed into full womanhood is here delineated by one who had both the skill and the opportunity to execute a faithful likeness. The originals were to be seen in London before Christmas; these reproductions have been done in monochrome, perhaps not all with equal success. But for the volume as a whole, praise is due unreservedly to both author and printer.

A Diary of Two Parliaments. By Henry W. Lucy. The Disraeli Parliament, 1874-1880. (Cassell.) In his recent book of travel, *East by West*, Mr. Lucy trespassed into a field of literature where he could not hope to win more than a *succès d'estime* from his brother journalists and his many personal friends. In the present volume, to be followed shortly by a second, he returns to the familiar scenes of parliamentary life in which he has established his reputation. In the House of Commons, though not of it, he has proved the proverb that "onlookers see most of the game." Many will have read before what is here reprinted from two or three newspapers, but all will be glad to refresh their remembrance of a period of history which is already beginning to seem remote. And we venture to say that the future historian of the reign of Victoria will not disdain to turn to these pages for a faithful record of one aspect of politics. They bear the same relation to *Harvard* that an instantaneous photograph does to full-length portraiture. Till within a few years the pulse of the House of Commons could be felt only by its own members. The outer public knew of it no more than was to be learnt from shorthand reporters; and the reporters themselves were directly concerned with nothing besides the speeches made. Now the House has been compelled to relax its rules so as to admit the intrusion of personal journalism. From picture, as well as from narrative, we are enabled not only to read what our representatives say, but also to learn in what way they comport themselves, and even how they dress. Of this new school of reporting Mr. Lucy is the recognised chief, sharing the honours with Mr. Harry Furniss in another line. He is in perfect touch with his subject, as well as with his readers; and, though sometimes hovering on the very verge, he always contrives just to escape the pitfall of vulgarity. It is not given to every one to compare the present Home Secretary in three lines to Casabianca, to the "minstrel boy," and to Mrs. Micawber.

A Bit of Human Nature and the "Lively Fairy." By David Christie Murray. (Chatto & Windus.) Though somewhat ostentatiously announced as Mr. Murray's "new novel," this volume really contains two separate stories, both of which have been printed before—the first in one of last year's Christmas numbers,

the second (we think) in a magazine. The first and longest is far the better of the two, for it presents what we make bold to call a new situation, skilfully and delicately worked out. A Chinaman in the Ardennes is an improvement upon De Quincey's historic Malay. The second is very slight, and may charitably be regarded as padding to fill out the volume. It might furnish material for a one-act farce. The truth is that Mr. Murray paints best on a large canvas, as may be seen by his real "new novel" in the *Cornhill*, which has begun excellently well.

The Student's Manual of Indian History. By Robert Hawthorne, Ph.D. Professor, Argyll College, Pauchgani. (Sonnenschein.) We have set out the title-page at length, in order that the author may have whatever credit attaches to his degree and his title of professor, and also to show the first of many misprints. "Pauchgani" should, of course, be Panchgani, a hill station in the Western Ghats, not to be found in Hunter's *Imperial Gazetteer*. It might, perhaps, be thought hypercritical to complain that a book from so remote a source should be imperfectly corrected for the press. But the misprints, we regret to say, are only symptomatic of an ignorance that shows itself on almost every page. Here are a few examples:

"During this time Bengal was under a double government (ruled by natives and Europeans). At length the E.I. Company sent out Warren Hastings as Diwan of the province, and put a stop to the double government by the Regulation [sic] Act, by which Bengal, Behar, and Orissa were brought under British jurisdiction" (p. 54).

Lord William Bentinck is called throughout "Lord Bentinck"; and he is dismissed with the remark that "he was not a great politician" (p. 65). "During the Afghan war the Ameers of Sindh had in many ways shown their hostility to the British" (p. 68). "The first Punjab war . . . lasted two years" (p. 69). As a matter of fact, it lasted only from November 1845 to February 1846. "Lord Lytton gained the affections of all classes, and his name will always be remembered with respect" (p. 72). In the case of school-books, more than with any other class, we hold ourselves bound to regard the motto—

"*Judex damnatur cum nocens absolvitur.*"

A Statutory List of the Inhabitants of Melbourne, Derbyshire, in 1695. With a Commentary and Explanatory Notes. By R. E. Chester Waters. (Bemrose.) It is but a few weeks since we received from Mr. Waters a little work in which he discussed with equal learning and acumen the parentage of Gundrada de Warenne, and proved once for all that she was neither daughter nor step-daughter of William the Conqueror. He has now issued another book, scarcely larger than the former in size, and not less decisive in its application to a disputed point in English history. Macaulay, as all will remember, deploras that no materials exist for determining with accuracy the population of England at the close of the seventeenth century. It has apparently been left for Mr. Waters to point out that, by an Act of Parliament passed in 1695 (6 & 7 William and Mary, c. 6.), a complete enumeration was made of the inhabitants of every parish in the kingdom, with a view to the imposition of duties upon marriages, births, and burials, and upon bachelors and widowers, "for the carrying on the war against France with vigour." Copies of all these lists were duly returned into the exchequer; but whether they still exist in the Record Office Mr. Waters has not ascertained. One such list, however, for the parish of Melbourne in South Derbyshire has been preserved among the family papers of Lord Hardinge, and is now printed for the first time by Mr. Waters. The total number of the inhabitants of Melbourne amounted in 1695 to 660; in 1881

the number was 3,123. This rate of increase, it is interesting to find, almost exactly corresponds with an estimate for the whole country that was adopted by Macaulay. Those who know Mr. Waters's mode of work will not need to be told that he has not contented himself with merely publishing the original document. With a few slight touches of description, he has made the village and its occupants to live before us. In addition, he has traced to the present day the descent of the two chief families who were then the largest landholders in Melbourne, nor has he despised the genealogy of some three other households of lowly estate. Such a piece of work is not only valuable in itself, but ought to serve as a model for local antiquaries to imitate.

Bulandshahr; or, Sketches of an Indian District, Social, Historical, and Architectural. By F. S. Growse. (Benares: Medical Hall Press.) There are probably many—at any rate among those who saw the Calcutta Exhibition of 1883-84, or are acquainted with the Indian collections at the South Kensington Museum—who have some idea of what Mr. F. S. Growse has done to make Indian art known to Europeans; but few can have learnt till now how much he has also done to encourage its growth in its native home. The account given in this book of the rebuilding of Bulandshahr, and the beautiful photographs of some of the buildings with which it is adorned, ought to be interesting to all district officers who have the opportunity of helping on a similar work, and also to those of the public who desire instruction in the methods of Indian administration and the nature of the duties which a Collector and Magistrate has to perform. Bulandshahr is a little town of some 18,000 inhabitants, situated ten miles north of the East Indian Railway in the centre of the district of the same name, which lies between the Jumna and Ganges, immediately to the East of Delhi. The district is exceptionally well cultivated, fully protected by irrigation against famine, very lightly assessed to land revenue, and owned to a large extent by wealthy and intelligent proprietors, chiefly Mohammedans. Most of these gentlemen have, besides their seats on their estates, town houses at Bulandshahr. Mr. Growse came to the district as Collector in 1878, and has succeeded in the six years that have elapsed, by private influence and public exertions, and for the most part with money raised by voluntary contributions from the landed gentry, in "converting a mean village into a handsome town." The houses of the wealthy have been rebuilt, several new streets of picturesque shops erected, and the town furnished with public buildings worthy of its private ones—all in a style of art which is not only in itself beautiful and satisfying, but has been found to be quite as cheap as the ugly and tasteless style in which most of our official buildings in India are constructed. The book (which is marked by a singular freedom of speech and absence of the official idiom) is an effective philippic against the Public Works Department. Perhaps that department may have something to say in reply which it would be desirable to hear before coming to a conclusion on the controversy; but there can be no question that the results of private effort and taste, as set forth in these photographs, are very attractive. We are sorry to hear that Mr. Growse has just been transferred from Bulandshahr to another district.

The Animal Food Resources of Different Nations. By P. L. Simmonds (Spon.) The various sources of food supply furnished by the animal kingdom—from "long pig" to earthworms—are here described in a way that happily combines statistics with travellers' stories. The book is not exhaustive, still less is it scientific;

but it will furnish a vast amount of out-of-the-way information to those who are curious in such matters.

Robert Boyle, Inventor and Philanthropist. A Biographical Sketch. By Lawrence Saunders. (Gilbert Wood & Co.) The subject of this little book is not the philosopher who was once described as "The father of Chemistry and the brother of the Earl of Cork," but a namesake who died in 1878. Robert Boyle was the author of many brilliant mechanical inventions, the best known of which is the method of ventilating public buildings, which by general consent is the most effective that has yet been introduced. His career was an interesting one, but the story is not improved by Mr. Saunders's inflated manner of telling it. The book includes not only the biography of the late Robert Boyle, but also that of his son of the same name, the present head of the firm of Robert Boyle & Sons, and portraits of both gentlemen are prefixed. Mr. Saunders has bestowed on the present Mr. Boyle an amount of eulogy which—supposing him to possess modesty commensurate with the other virtues ascribed to him—can scarcely be in itself very agreeable to the object of it, however serviceable it may prove as a business advertisement.

NOTES AND NEWS.

THE Hon. Roden Noel intends to publish very shortly a volume of Literary Essays.

We hear that Mr. Firth, of Balliol, one of the growing school of historical students at Oxford, is now passing through the press a volume on Col. Hutchinson.

A BIOGRAPHY of the late Richard Lepsius is in preparation by his pupil and friend Prof. G. Ebers. The author has had the diaries, letters, and other papers of Lepsius placed at his disposal for this purpose.

M. H. GAIDOUZ, who adds to his duties as director of the Ecole des Hautes Etudes that of lecturer on geography and ethnology at the Ecole Libre des Sciences Politiques, recently delivered a lecture at the latter institution upon "The British Empire of India," for which he used as his text-books the Indian chapter in *The Statesman's Year-Book*, Mr. R. N. Cust's *Modern Languages of the East Indies*, and the manual on India contributed by Mr. J. S. Cotton to the "English Citizen" series.

THE third volume is announced of Mr. Schouler's *History of the United States*, covering the period from 1817 to 1831.

A COLLECTION of unpublished letters of the Countess of Albany is being prepared for the press by Prof. Camillo Antona-Traversi. It is stated that these letters far exceed in interest all the specimens hitherto printed of the correspondence of the Countess.

MESSRS. TRÜBNER & Co. will shortly publish a translation of the *Pan Tadeusz* and *Grazyna* of Mickiewicz, together with some other poems, by Miss Maude A. Biggs, already favourably known by her version of the *Konrad Wallenrod* of the same author.

THE Boston *Literary World*, which contains a decidedly unfavourable review of Lord Tennyson's *Becket*, states that the sale of the work in America "has not been particularly large."

THE Rev. Alex. H. Craufurd is about to publish a selection of the occasional sermons preached by him during the last six years, from Mr. Frederick Denison Maurice's old pulpit in St. Peter's, Vere Street. *The Unknown God and other Sermons* is to be the title. Mr. Craufurd's previous volume of sermons, *Seeking for Light* (published five years ago), is now out of print. Mr. T. Fisher Unwin will have the new book ready on March 1.

The Pattern Life; or, Lessons from the Life of our Lord, by W. Chatterton Dix, will shortly be published by Messrs. Griffith, Farran, & Co. It is intended to instruct and interest the children of the Church of England in the truths of religion. Suitable questions are given at the end of each chapter, and a collection of original hymns is introduced.

MRS. J. K. SPENDER has begun the issue of her novels in a cheap one-volume form, the first of the series being *Mr. Nobody*. Messrs. J. & R. Maxwell are the publishers.

AN authorised German translation of M. Taine's *Les Origines de la France contemporaine* is to be published in thirteen fortnightly parts (Leipzig: Abel), the first of which will appear on March 1. The translator is Herr Leopold Katscher.

WE notice that George Eliot's *Life* is issued at New York, "by arrangement with the executors," for 15s. This American edition is in three volumes, and apparently contains all the illustrations published in England.

THE Abbé Liatz is engaged on the fourth volume of his *Memoirs*. The work is expected to fill six volumes. The first volume is to appear immediately.

MR. G. W. CABLE is preparing a book of what he calls "remarkable true stories of Louisiana life which have come to me in the last fifteen years."

WE understand that the publishers of Mr. Birkett Dover's little *Lent Manual* (Messrs. W. Swan Sonnenschein & Co.) are about to issue a sixth edition. The work has been furnished with an Introduction by the Bishop Designate of Lincoln.

MESSRS. GRIFFITH, FARRAN, & Co. will publish immediately a sensational romance, entitled, *A Modern Daedalus*, by Tom Greer.

Belvoir My Love and Me is the title of a new novel, by the author of *A Golden Bar*, shortly to be issued by Messrs. Hurst & Blackett in two volumes.

MESSRS. WARD & DOWNEY will publish early in March, in three volumes, a new work of fiction, by the author of *Phyllis*. It will be entitled *A Maiden all Forlorn*.

A History of Pianoforte Music, by Mr. J. C. Fillmore, with an introductory preface by Mr. Ridley Prentice, will be shortly published by Messrs. W. Swan Sonnenschein & Co.

Sea and Sky is the title of a new book for young people by Mr. J. R. Blakiston. The book is profusely illustrated, and contains a coloured supplement. It will be issued at once by Messrs. Griffith, Farran, & Co.

MESSRS. GINN, HEATH, & Co., of Boston, will publish on March 1 an abridged translation, by Eva Channing, of Pestalozzi's *Eva and Gertrude*, forming the second volume of their series of "Educational Classics."

Violette Fouquet is the title of a new novel in three volumes by Ursula Zoge von Manteuffel, which will be published early in March by Jancke, of Berlin.

A CORRESPONDENT informs us, referring to the Rev. T. Mozley's *Reminiscences chiefly of Towns, Villages and Schools*, that Henry Mozley, the printer and bookseller of Gainborough, was not the first of the name, or probably of the race, who was a bookseller. There exists a rare little volume entitled *Quaestio Quodlibetica*, or a discourse whether it may be Lawfull to take use for money. London: Printed for Humphrey Moseley, and are to be sold at his Shop at the Prince's Armes, in St. Paul's Church-yard, 1653.

MESSRS. W. SWAN SONNENSCHN & Co. will shortly publish in three-volume form an histori-

cal romance of the time of Henry II., by Mrs. Edmund Boger, entitled *Elfrida*.

IN an exhaustive paper recently read before the Académie des Inscriptions (*La Donation de Hugues, Marquis de Toscane, au Saint Sépulchre, et les établissements latins de Jérusalem au X^e siècle*), M. Riant reminds us how little is known of the history of Palestine previous to the time of the Crusades from the Latin side, although much has been done of late years to elucidate its history in connection with the Greek church. He makes the re-examination of an important grant of property by the Duke of Tuscany, in A.D. 993, to the Holy Sepulchre and St. Maria Latina the occasion for a sketch of the Latin occupation from the end of the sixth to the end of the eleventh centuries, showing especially the nature of Charlemagne's protectorate of the holy places. The document itself he subjects to a searching criticism, calling up, while so doing, a most striking figure in the Abbé Guarin, of Cuxa (one of the grantees), an eloquent ecclesiastic of great influence in both France and Italy, and a wide traveller.

JUST issued by the Société de l'Orient Latin, of which M. Riant is the head, we have also a *Fragment d'une Chanson d'Antioche* in Provençal, edited from a MS. at Madrid by M. Paul Meyer, who has provided a spirited translation of this narration of the battle between the Christians and Saracens before Antioch, fought June 28, 1098. This paper belongs to the *Archives*, Vol. ii., of the Society.

MESSRS. CASSELL & Co. have made arrangements with the London and North Western Railway Company to issue this season an *Official Illustrated Guide* to their railway system. This Guide will consist of a popularly written and portable handbook, and will be illustrated throughout with specially prepared route maps, and "bird's-eye" view maps, and a large number of authentic engravings.

Two Englishmen, by an American, is a character study in the form of a novel by Mr. G. M. Royce, which Messrs. Griffith, Farran, & Co. will publish immediately in one volume.

MESSRS. WILSON & McCORMICK, of Glasgow, will publish this month a new edition of *The Praise and Blame of Love*, and a new work, entitled *Annals of Blantyre*, by the Rev. Stewart Wright.

MESSRS. G. P. PUTNAM'S SONS have in preparation among their new books *The Life of Society*, a general view, by E. Woodward Brown; *Bible Characters*, a Series of Sermons by the late Alexander D. Mercer; *How Should I Pronounce*, by W. H. P. Phylfe; *Fragments from an Old Inn*, Sketches and Verses, by Lillian Rozell Messenger; *The Spanish Treaty Opposed to Reform*, a Report of the Free Trade Club; a one-volume popular edition of Williams's *History of the Negro Race*; *The Lenape Stone*; or, the Indian and the Mammoth, a monograph on a stone bearing Indian designs recently discovered in Pennsylvania, by H. C. Mercer; *Queen Bess*, a Story for Girls, by Marian Shaw; and a Romance of Hawaii, by C. M. Newell, which is entitled *Kamēhamēha the Great of Hawaii*.

PROF. N. CAMPANINI is about to publish a complete edition of the memoirs written by Lazzaro Spallanzani during his journey to Constantinople.

MR. O. B. BUNCE, the author of *Don't*, has written a new novel, *Adventures of Timias Terrystone*, which describes the career of a New York artist. It will be published by Messrs. Appletons.

We have already mentioned that the library of the late Dr. Ezra Abbot had been given to Harvard University. An appeal is being made

for 20,000 dollars in order to erect a fireproof building to receive it.

THE title of Mr. F. W. Robinson's new serial story, which will be commenced next week in Cassell's *Saturday Journal*, is "The Courting of Mary Smith."

THE March number of the *Antiquarian Magazine* and *Bibliographer* will contain, *inter alia*, an article by Mr. E. Solly on Dean Swift's pamphlet on "The Conduct of the Allies in 1611"; and also one by Mr. J. P. Edmond on "The Burial-place of Malcolm I."

M. E. FORESTIÉ, of Montauban, proposes to print, by subscription, *Les livres de comptes des Frères Bonis*, merchants and bankers of Montauban, from 1339 to 1369. The accounts give important and almost exhaustive details on all that relates to the domestic and housekeeping needs of that age. The edition will consist of two well-printed volumes, large 8vo., with an Introduction by M. Forestié, and with copious glossary, notes, and indices. Only the number of copies subscribed for will be printed. The price is 12.50 per volume.

TOMO VII. of the *Biblioteca de las Tradiciones Españolas* is already in the press. It will consist of a *Cancionero Gallego* by Señor Ballestro, with a Prologue by the distinguished Portuguese scholar, Theophilo Braga, who has made a special study of the dialect. The volume will thus have equal interest for the philologist as for the student of folk-lore.

At the last meeting of the Royal Historical Society M. Albert Sorel and M. H. Taine were elected corresponding members.

A NEAT and well-printed collected edition of Louise Chandler Moulton's stories for children has been issued by Messrs. Roberts Brothers, of Boston. It is in four volumes. If the stories are not to be published here by an English firm, we hope that this American edition will sell largely on this side of the water. That Mrs. Moulton's tales are not already better known in England would surprise us much were we not conscious of how much in England a fiction of strained ingenuity and of terribly self-conscious humour has been imposed upon the youthful reader only for the reason that it suits the *blasé* tastes of his elders. Mrs. Moulton's stories are simple and eminently serious. They are quite without unseemly jesting and impertinent chaff. If we find any fault with them it is that they are too continuously pathetic. Yet even their pathos is happily not quite unintermittent, and when it is too frequent it is yet obviously sincere. "Finding Jack," a Boston story, is a delightful tale of childish affection. "Solomon Girder's Customers," a tale of old London, has bits in it which are like bits of the true Dickens. "The Little Silver Locket" is an exquisite narrative of how a friendship came to be broken, and how its rupture was for ever regretted. In some respects we place highest of all "Roger Faithful's Invention." Roger Faithful was a person as much wedded to his "invention" as was Bernard Palissy to the art he strove to perfect. And people suffered by Roger Faithful's, as they did by Bernard Palissy's, fidelity. But Mrs. Moulton does not tell his story as one would who merely blamed him for obstinate constancy to a particular aim. How much of nobility there was in it, and how much of justice, as well as how much of sadness, Mrs. Moulton sets forth with an intelligence that is subtle, as well as with feeling that is deep. She is habitually interesting, and her English is nearly always as good as her thought, so that when child and moralist agree to approve her, the literary artist, whose delight is but in excellent workmanship, will never quarrel with the verdict. In America, indeed, this is already an admitted thing.

ORIGINAL VERSE.

CHARLTON THRUSHES.

HATH Winter fled with those dull rooks yestreen,
Which from our knolls on sooty burdened wings
Flapped to some inland wood in length'ning
strings?
This morn' young Zephyrs wake earth's sky pale
green,
And range each snowdrop-maiden round her queen,
Th' all-golden crocus. Darkling, sweetly sings
Th' thrush; 'neath cloudlets grey she blissful
flings
Her echoed notes, and rocking high is seen.
All hail, fair Spring! Day broadens and soft
light
Suffuses blackest elms with tender shades
Of purple; soon—too soon—in amber dight
Eve gleams afar; then, slow withdrawing, fades;
But thrushes still, their wide gaunt boughs among,
Round Charlton's oriel pour full floods of song.

M. G. WATKINS.

OBITUARY.

LOVERS of folk-lore, and students of geology, will unite with an unusually large circle of private friends in deploring the loss of so excellent a man as Mr. John Francis Campbell, of Islay. The Islay estates having been sold by his father, Mr. Campbell retained only the bare honour of the name, but his love for Scotland was not lessened by this loss. He was never more happy than when, freed from professional duties at Court, and from the engagements of the London season, he could revisit his beloved Highlands, and gossip in Gaelic with the peasant in his cottage or with the fisher-folk among the Western Isles. Laying aside all formalities, he would smoke a pipe with a gipsy on the road, or with a shepherd on the moor, and by his frank and familiar style soon gained the hearts of his strange friends. In this way he heard those traditional stories which the uneducated are generally so diffident in telling to people of culture, while he repaid his story-tellers by repeating to them in their own style some tradition which he had picked up elsewhere. Writing down his stories, he accumulated a large collection of manuscript volumes, dealing chiefly with Celtic folk-lore, and some of this matter he published in his *Popular Tales of the Western Islands*. Brilliant as a conversationalist, he was never seen to more advantage than when telling some Highland story to his friends within the hospitable walls of Niddry Lodge at Campden Hill, Kensington. But it was not only as a diligent student of folk-lore that Mr. Campbell was known. He had travelled much, was a keen observer of nature, and took much interest in geological studies, especially in relation to glacial phenomena. In 1865 he published two volumes, under the title of *Frost and Fire*, which at the time attracted considerable attention among geologists. He also took interest in meteorology, was the inventor of a sunshine recorder, and the author of a work on thermography. At one time he acted as secretary to the Lighthouse Commission, and in this capacity visited some of the wildest parts of our coast, always making excellent use of his opportunities by collecting local traditions. When the Duke of Argyll presided over the Royal Coal Commission, Mr. Campbell acted as his secretary, and thus came into frequent contact with geologists. His pen was rarely idle. He was a copious and original correspondent, and among his published writings mention may be made of his volumes entitled *Circular Notes* and *Time Scales*. Mr. Campbell's stalwart form and cheerful presence will long be missed in the scientific circles of London. He died at Cannes on February 17, at the age of sixty-four.

MAGAZINES AND REVIEWS.

IN *Mélusine* the searches and collections of traditions on several heads announced last autumn, besides others, have been carried through, and still continue. The recent numbers thus present a notable gathering of interesting legends, especially relating to the sea, among others on water-spouts, waves, phantom ships, marine monsters, why the sea is salt, superstitions connected with the tide (for which Shakspeare and Dickens give testimony), and the story of the diver into the gulf of Scylla and Charybdis, so beautifully treated by Schiller, but which M. Ullrich here carries back to Walter Mapes. The curious subject of fascination and the evil eye is dealt with by M. Tuchmann, who, besides giving its nomenclature in every tongue, culls examples recorded in ancient history and modern, classic and Christian. Local popular prayers in France, begun in the September number, are continued in January by M. G. de Lépinay. In the February number the editors and other contributors continue the singular collection of beliefs relating to the drowned. Nor do they neglect to notice the more important works of the day on folk-lore. Altogether the humble folk-lorist who is struggling towards the light, whether he be a disciple of Max Müller or of Mr. A. Lang, a philologist, a mythist, or a totemist, may be thankful for the substantial material for his study provided by the editors of *Mélusine*.

IN *Anglia* (Band vii., heft 3) Mr. Fleay attempts to identify a group of characters (Holofernes, Costard, Armado, &c.) in "Love's Labour Lost" with the Anti-Martinist group of six writers, indicating the attitude of Shakspeare towards Puritanism; Proescholdt and Leonardt have also each some Shakspeare notes, the second on "Cymbeline," the first by way of correction to the Cambridge edition. Still in the domain of drama, Miss Toulmin Smith gives a pretty East-Anglian play of "Abraham and Isaac," recently found in a Suffolk MS. of the fifteenth century; while A. Diebler examines into the contemporary pantomimes or farces on the stories of Faustus and Wagner referred to by Pope in the "Dunciad"—in reality not much more than puppet shows. Turning back to older English, Varnhagen begins to print the smaller poems in the famous Vernon MS. at Oxford, collated with Add. MS. 22, 283. There are thirty-one in all, some of which have been printed by Furnivall and others, though many remain unprinted hitherto. We await with interest the notes elucidating these. E. O. Stiehler describes the contents of a fourteenth-century volume of old English poems among the lately purchased Stowe MSS.; Hönner studies an interpolation in the Anglo-Saxon Genesis, while the grammatic use of the dative and instrumental in Caedmon are fully treated by O. Hofer. M. F. Mann devotes an elaborate essay to Philipp von Thaun and his "Physiologus," attempting some analysis and the sources of this collection. To the modern English reader the article on Negro-English, with its phonetics, grammar, and collection of specimens, by Jas. A. Harrison, of Lexington, U.S.A., will prove the most amusing, and not the least instructive, of any in the number.

THE *Boletín de la Real Academia de la Historia* for January prints the detailed prospectus of an Encyclopædic Dictionary projected by the Marquis de Santa Cruz de Marcenado at Turin in 1727. Señor Riano treats of the Churches of San Miguel de Lino, and of Santa Maria de Naranco in the Asturias, and declares them to be of Byzantine type, akin to the subsequent Roman style of the South of France. J. Loeb gives some Deeds of Sale of Houses in Gerona by Jews in the thirteenth and fourteenth centuries, with the Hebrew and a Spanish transla-

tion. From one we learn that the price of the five books of Moses, the first and second Prophets, and the Hagiographa, was 500 sous Barcelonais in 1296; the price of a house being 1240 sous. The formula used on handing over possession of a house in 1352 is also given.

CORRESPONDENCE.

A LETTER OF ADAM SMITH.

Oxford: Feb. 17, 1885.

Through the kindness of a friend, I have received the following, a printed copy of a letter addressed by Adam Smith to William Pulteney, M.P. for Cromarty:

"Kirkcaldy: Sept. 5, 1772.

"MY DEAR PULTENEY,

"I received your most friendly letter in due course; and I have delayed a great deal too long to answer it. Though I have had no concern myself in the Public calamities, some of the friends in whom I interest myself the most have been deeply

concerned in them; and my attention has been a good deal occupied about the most proper method of extricating them.

"In the Book which I am now preparing for the press, I have treated fully and distinctly of every part of the subject which you have recommended to me; and I intended to send you some extracts from it; but, upon looking them over, I find that they are too much interwoven with other parts of the work to be easily separated from it. I have the same opinion of Sir James Stewart's book that you have. Without once mentioning it, I flatter myself that any false principle in it will meet with a clear and distinct confutation in mine.

"I think myself very much honoured and obliged to you for having mentioned me to the East India Directors as a person who would be of use to them. You have acted in your old way of doing your friends a good office behind their backs, pretty much as other people do them a bad one. There is no labour of any kind which you can impose upon me which I will not readily undertake. By what Mr. Stewart and Mr. Ferguson hinted to me concerning your notice of the proper remedy for the disorders of the coin in Bengal, I believe our opinions upon that subject are perfectly the same.

"My book would have been ready for the press by the beginning of this winter; but interruptions occasioned, partly by bad health arising from want of amusement and from thinking too much upon one thing, and partly by the avocations above mentioned, will oblige me to retard its publication for a few months longer.

"I ever am,

"My dearest Pulteney,

"Most faithfully and affectionately,

"Your obliged Servant,

"ADAM SMITH.

"To William Pulteney, Esq.,

"Member of Parliament,

"Bath House,

"London."

The owner of this autograph letter has printed sixty copies of it.

Original letters of Adam Smith are, I believe, very scarce. The above, however, is very characteristic and significant. His great work was not published till 1776, and it is plain that the delay in the publication was due to the negotiations which Mr. Pulteney was evidently making for the purpose of getting Smith employed, either as a member of the London East India Board, or in the Calcutta Council. Had he succeeded, it is probable that the *Wealth of Nations* would never have seen the light; for every one knows that, in the first and second books of that work, the East India Company is criticised with the greatest severity. Two years after the publication of the book, he was made a Scotch Commissioner of Customs by Lord North.

I have often been struck, as an editor of Adam Smith, with his silence on many of those events which occasioned that part of the American War of Independence which preceded the irreconcilable phase of the dispute. I cannot but think that, had Mr. Adam Smith's work been printed in the early days of the struggle, his theory of a colonial policy would have very much aided in smoothing the differences between the Plantations and Great Britain. When the book was published, its influence was as immediate as its importance was obvious. I have no doubt that, owing to Pulteney's negotiations, it lay unrevised and unaltered during four years in the author's desk. The Declaration of Independence was issued in the very year that *The Wealth of Nations* was published.

On the other hand, what if he had been a London Director of the East India Company, in the crisis of 1773, or a member of the Bengal Council in the place of Clavering or Francis? Nothing to be sure is more barren than to speculate on what might have ensued, if something, which never occurred, had happened. But Adam Smith is, to my mind, the greatest

Englishman, or (to appease Scotch infirmity), the greatest Britisher of the eighteenth century, whose reputation is, or ought to be, as solid as it was a century ago.

JAMES E. THOROLD ROGERS.

"TO END" AS AN AGRICULTURAL VERB.

London: Feb. 20, 1885.

In *Coriolanus*, v. 6, 37, we read,

"I served his designments

In mine own person; help to reap the fame
Which he did ~~and~~ all his."

Mr. Aldis Wright, in his edition of *Coriolanus* (Clarendon Press Series, 1879), has declared positively that the word "end" in this passage is used as equivalent to the agricultural verb to "in," signifying to "gather in," to "garner" a harvest. The use of "in" in this sense must be familiar to all students of our seventeenth-century literature; but I am not aware of any classical authority for the variant "end" with its vowel change and euphonic *d*. Mr. Wright, however, states that this form is used in several English dialects, as, for example, in Sussex, Surrey, and Hallamshire.

But, be the derivation of the word in question what it may, the metaphor in the passage quoted above seems to be a purely agricultural one, and it would be interesting to find a similar use of the same expression in Milton. I would suggest that we have an instance of such a use in the following passage from "*L'Allegro*," where we are told of the "lubber-fiend," or "brownie," that

"Ere glimpse of morn

His shadowy flail has threshed the corn
That ten day-labourers could not ~~end~~."

In this passage, if we consider "end" as bearing its ordinary signification, the idea is perhaps a little weak; and certainly the word is used in a very forced sense. If, however, we interpret the "end" of this passage as an agricultural term, the word is used in quite a natural sense, and the primary idea is strengthened. The "lubber-fiend," in one short night, has not merely threshed as much corn as ten labourers could do in a whole day, but as much as ten labourers could "end," "gather in" or "garner," a much more difficult feat when we consider the respective bulks of the unthreshed wheat and the garnered grain.

T. A. ARCHER.

ARETHUSA AND ALPHEUS.

Coombe Vicarage, near Woodstock: Feb. 21, 1885.

In this day's *ACADEMY* Mr. F. H. Rawlins follows up Sir Edward Strachey's interesting letter by suggesting that, in Pindar (*Nem.* i. 1), *ἁπνεύμα* should be rendered "breathing-place" instead of "resting-place." Statius (*Silvae*, I. ii. 203-8) writes thus:

"Tumidae sic transfuga Pisae

Amnis, in externos longe flammatus amores,
Flumina demerso trahit intemerata canali,
Donec Sicani tandem prolatus anhelo
Ore bibat fontes; miratur dulcia Nais
Oscula, nec credit pelago venisse maritum."

I would draw attention to the words "anhelo ore bibat fontes."

We may, I think, well place the words "anhelo ore" side by side with Pindar's word *ἁπνεύμα*, if, as Mr. Rawlins suggests, rendered "breathing-place": this will perhaps be regarded as making for Mr. Rawlins's suggestion; at all events, we then have in a later poet a passage that seems to coincide with that in Pindar, if so interpreted.

J. HOSKYNs-ABRAHALL.

Frenchay, near Bristol: Feb. 19, 1885.

Referring to the interesting letter of Sir E. Strachey on this subject in the *ACADEMY* of

February 14, the following extracts from Dr. Gsell-Fels' *Unter-Italien und Sicilien*, [vol. ii., p. 741, 2nd edition, 1877, and Bädeler's *Italie Meridionale*, pp. 318, 322, 3rd edition, 1872, may serve not only to confirm his statement as to the existence of a "stream of fresh water welling up in the sea," but also to suggest that its origin may be, like the apparently similar phenomenon in the little harbour, purely artificial:

"Im grossen Hafen ist eine Süswasserquelle, Occhio della Zilica, welche Fazzello für eine der Quellen Arethusa's hält, die durch Erdbeben dahin verlegt worden, aber die Lage spricht gegen diese Ansicht, und die Arethusa bezieht ihr Wasser vom Festland."—Gsell-Fels.

"Le courant d'eau (de la Fontaine d'Aréthuse) qui se jette aujourd'hui comme autrefois dans le bassin entouré de papyrus, n'est certainement autre chose que l'écoulement d'un immense aqueduc descendant de l'Achratine et passant sous le petit port."

"L'autre aqueduc descend du Mont Crimili, le Thymbris de Théocrite, passe également par l'Epipole, et ensuite le long du mur septentrional jusqu'à l'Achratine. . . . Il tourne alors au S. le long de la côte, passe sous le petit port, pour aboutir dans l'île, où l'eau sort de terre sous le nom d'Aréthuse. Depuis le tremblement de terre de 1169, l'eau de cet aqueduc est devenue salée. Dans le petit port, on distingue en hiver, et par un temps calme, la place où elle monte du fond à la surface, à l'endroit où le canal s'est rompu et où la mer y pénétre."

In the map accompanying Bädeler the "F. (Fonte) Occhio della Zilica" is placed at a part of the great harbour south of the "F. Aréthuse," and, beneath it, stands the word (Alpheus). In Gsell-Fels' map the position assigned is much the same, though slightly farther north of the Faro, and nothing is said about the Alpheus.

Though I have visited Syracuse, I did not row out in a boat into the great harbour, and can only, therefore, answer by the above quotations Sir Edward Strachey's question as to the existence of "any recent notice of this curious phenomenon." F. F. TUCKETT.

London: Feb. 23, 1885.

The translation, suggested by Mr. Frank H. Rawlins in the last number of the ACADEMY, of the word *ἁγίασμα* in Pindar, *Nem.* i. 1, as "breathing-place" is confirmed, as many may remember, by the authority of Mr. Fennell, who, in his edition of the Nemean and Isthmian Odes (Cambridge, 1883) makes the following remark on the above mentioned line:

"1. ἁγίασμα 'Hallowed spot where Alpheus took breath'; i.e., after his pursuit of Arethusa under the sea."

RICHARD WARE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 2, 5 p.m. Royal Institution: General Monthly Meeting.
8 p.m. Victoria Institute: "Was Primitive Man a Savage?" by Mr. J. Hassell.
8 p.m. Society of Arts: Cantor Lecture, "The Chemistry of Pigments," by Mr. J. M. Thomson.
TUESDAY, March 3, 5 p.m. Royal Institution: "Digestion and Nutrition," by Prof. Gamgee.
7 p.m. Society of Architects.
8 p.m. Civil Engineers: "Construction of Locomotive Engines and Results of their Working in the L. & S. C. Railway," by Mr. W. Stroudley.
8 p.m. Biblical Archaeology: "The History of the Coptic Martyr Isaac," by Mr. E. A. Wallis Budge; "The Inscription of the Destruction of Mankind, in the Tomb of Rameses III.," by M. Edouard Naville; "The Weasel and Cat in Ancient Times," by the Rev. Dr. Piacsek (translated by the Rev. A. Löwy).
9 p.m. Zoological: "General Remarks on the Fauna of Kilimanjaro," by Mr. H. H. Johnston; "On the Insects collected on Kilimanjaro by Mr. H. H. Johnston," by Mr. C. O. Waterhouse.
WEDNESDAY, March 4, 11.30 a.m. British Museum: "Egyptian Antiquities," by Miss Beloe.
4 p.m. Society of Arts: "The Evolution of Machines," by Prof. H. S. Hele Shaw.

THURSDAY, March 5, 3 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.

4 p.m. Archaeological Institute: "Roman Inscriptions discovered in Britain in 1884," by Mr. W. T. Watkin; and "Church Bells," by Mr. J. L. Stahlischmidt.

4.30 p.m. Royal Society.

8 p.m. Civil Engineers: "Water Motors," by Prof. Unwin.

8 p.m. Linnean: "New Genera and Species of Hydroids from H. Gatty's Collection," by Prof. Allman; "Recently discovered Flowering Plants from the Interior of New Zealand," by the Rev. W. Colenso; and "Rearing, Growth, and Breeding of Salmon in Fresh Water in Great Britain," by Dr. F. Day.

8.30 p.m. Antiquaries.

FRIDAY, March 6, 11.30 a.m. British Museum: "Egyptian Art," by Miss Beloe.

8 p.m. Society of Arts: "The Trade between India and the East Coast of Africa," by Mr. F. Holmwood.

8 p.m. Philological: "Conditions of Onomatopoeia," by the late Mr. G. B. Cayley.

9 p.m. Royal Institution: "German Discoveries at Pergamum," by Mr. C. T. Newton.

SATURDAY, March 7, 3 p.m. Royal Institution: "Richard Wagner," by Mr. C. Armbruster.

SCIENCE.

A Dictionary of Urdu, Classical Hindi, and English. By John T. Platts. (W. H. Allen.)

A NEW dictionary of a living language needs no apology; still less is any needed for a new dictionary of a language so rapidly growing in copiousness of utterance, so constantly the field of exploration by students on the spot, as the vernacular of North-Western India and the *lingua franca* of the greater portion of the Indian Empire. Every new worker at the subject must necessarily appropriate and include the fruits of the labour of his predecessors. It lies upon him to make the best possible use of them, and to justify his originality by correcting their errors, improving their arrangement of the subject matter, and adding to their store the new material gathered by himself.

In regard to all these points Mr. Platts has, we think, amply made good a claim to be the author of the best Hindustani dictionary yet published. Those who have been in the habit of using the old dictionaries—that of Shakespear and its recast by Forbes—know well how many errors and shortcomings they exhibit, due, in a large degree, to the fact that the material from which they were compiled was the language of the Urdu and Hindi text-books of the beginning of this century, which has long since become to a great extent antiquated as a vernacular speech. Dr. Fallon's Dictionary was a great advance on these, and, so far as it went, a trustworthy and (in spite of its defects of arrangement) very useful help to the student of Hindustani. But, as Mr. Platts observes, it "aims at the collection of a peculiar class of words and phrases. Hundreds of words that occur in Hindi and Urdu literature Dr. Fallon thought proper to give no place to in his dictionary, because, from his point of view, they were pedantic." The very proportions of the new work, compared with those of its predecessors, show how immensely it has enlarged the field of record. We have not been at the pains to make an accurate estimate of its bulk for comparison with that of Forbes's Dictionary; but, to judge from the number and size of its pages, it must contain quite twice as much matter as the latter. Mr. Platts has been for many years resident in India, and his duties in the Education Department have

given him special facilities for the collection of lexicographical material. His additions are drawn from a long familiarity with the colloquial idiom, and from a study, undertaken with this special end in view, of the voluminous latter-day literature in Urdu and Hindi, as well as the vernacular press, which has yielded thousands of new words and phrases, and new meanings of words, which would be sought for in vain in the works of his predecessors.

Mr. Platts thus sums up the special characters of his Dictionary:

"The distinguishing features of the work are: (1) the space assigned to the etymology of words; (2) the arrangement of words which are similarly spelt, but differently derived, into separate paragraphs according to their etymology; (3) the indicating the postposition by means of which an indirectly transitive or an intransitive verb governs its object, and the change of meaning which frequently takes place by the employment of different postpositions after a verb; (4) the admission of numerous words which do not find a place in the literary language."

Of these the first, third, and fourth are the most important, and the chief merits of the book. The pains taken with the etymologies has evidently been very great, and their appearance, to the extent to which Mr. Platts has supplied them, is a novel feature in a dictionary of Hindustani. This is a branch of investigation in which fresh progress is constantly being achieved; and it is no blame to the author if his work, which has evidently been several years in passing through the press, bears in its earlier pages marks of theories as to the relations of Hindi, Prakrit, and Sanskrit, which have now been abandoned. The Zend and Pahlavi etymologies for Persian words will, we believe, be especially valued, though they also are, in some few cases, open to reconsideration in the light of recent research.*

The proof of a dictionary is in the using; and a final judgment on such a work as that before us is impossible without years of handling and study. After expressing our conviction that this is by far the most copious, most correct, and most convenient of all Hindustani dictionaries now extant, we proceed to claim the privilege of *nukta-chini* allowed to reviewers, and to point out a few blemishes and deficiencies which, in turning over its pages, have struck us as susceptible of amendment.

There is a singular want of agreement between the preface and the body of the work as to the method used for the transcription of the vowels in the Roman transliteration. In the former we are told that long *a*, *i*, and *u* are rendered by *ā*, *ī*, and *ū*. But on turning to the latter, we find instead that they appear as *a*, *i*, and *u*, leaving the accent to be employed, if Mr. Platts had chosen, for its proper purpose of marking the tone-syllable of the word. We regret very much that he did not, at least in the large number of

* E.g.:—*Pesh*: for Old-Persian *pes*, Pahlavi *pesh*, Zend *para*, read Old-Persian *patish*, Pahlavi *pish*, Zend *patishā*. *Juft*: for Zend *yaoiti*, Sanskrit *yūti*, read Zend *yukhta*, Pahlavi *yukht*. *Khvash*: for Zend *qae* + pron. suff. *sh*, read Zend *hvaēush*, Parsi *hēvash*, Pahlavi *khvash*. *Shah*: for Zend *khshaya*, read Old-Persian *khshayathiya*. *Shahr*: for Pahlavi *shatan*, read *shatrō*.

doubtful cases (e.g., *Gobardhān*, *Rāmānand*, *kāringō*), use it for this object. Mistakes are exceedingly common on this point, and he had a precedent for marking the syllable bearing the stress in the *Dictionary, Hindee and English*, published by J. T. Thompson at Calcutta in 1846. It is to be noticed that, besides the ordinary vowels given in his table on p. vi. of the Preface, Mr. Platts employs in his transliteration a short *e* and a short *o*. The former appears generally to stand for the Persian *isāfat*, and for short *i*, modified by the influence of *hamsa*, 'ain, or an aspirate; the latter for short *u*, similarly modified.* This is, we think, a decided improvement, though it would have been well to explain the nature of the sounds in the preface.

We strongly object to the use of the word "vulgar" which appears on every page of the *Dictionary*. Mr. Platts, it would seem, thinks that when Sanskrit words like *jala*, *dharma*, *Rāma*, *karma*, *Krishna* are adopted into Hindi, it is vulgar to pronounce them (as everyone does) as *jal*, *dharm*, *Rām*, *karm*, *Krishn*. Surely this is to confuse the vernacular with the vulgar. Anyone who should give these words the pronunciation recommended would certainly not be understood as speaking Hindi. Again, a number of usages are branded as vulgar which have the fullest sanction of classical Persian. The dropping of the *tashdid* in *radd*, *haqq*, *rabb*, &c., is called vulgar: the same word is applied to the *nūn-e-ghunna* in *jahān*, *khānsāmān*, &c. (though no Persian verse in which *-ān* occurs could be scanned without it): the *fakk-e-isāfat* in *mīr-ākhur* is called vulgar, though any other form would be a solecism;† so also are the pronunciations *saho*, 'azo, *hajo*, *naho* (though not the exactly similar *afū* and *rafū*—better 'afo, *rafo*—nor *sa'i*, *nahī*, *wahī*). Besides these, the same wanton misuse of the name appears in the case of the large number of words which are never uttered in India except with a wrong pronunciation—e.g., *qila*, *hijr*, *shujā*, 'at, *himāqat*, &c. Mr. Platts should have remembered the proverb—*ghalat-e'āmm saħīh o fashīh*. Does he consider it vulgar for an Englishman to say *anemōne*, *St. Helena*, the *Himalāyas*?

One of the special features of the work is the large number of recent loan-words from the English, and colloquial terms unknown to the literary speech, which it contains. Yet here it seems that Mr. Platts has been somewhat capricious in his selections and rejections. We find the curious *phalālain* (flannel), but have searched in vain for the equally common *mārkin*. *Gilās* (a glass or tumbler, but generally used for a brass mug) appears, but not *barūs* (brush), *pātākūn* (though we have *jāket* = jacket), *giles* (braces, derivation doubtful), and several other articles of European toilet which are well known by their English names in all towns. We miss the interesting *potarsili* (parsley, Dutch *potersilie*).

* The usage is not quite consistent: besides the cases mentioned, *ū* appears in contact with *q* in the word *qūr'ān*; but Mr. Platts writes *qur'a*, *qurāish*, *qurbān*.

† We are not quite sure that Mr. Platts is sound on the subject of the dropping of the *isāfat*. Most of his compounds with *sahib* (in the sense of "possessor of") which have *isāfat* appear to us to be wrong. With *mīr isāfat* is never used. See Blochmann, "Contributions to Persian Lexicography," *J. A. S. B.*, xxxvii. pp. 49-51.

Kamti is included, but not its correlative, the familiar *jāsti* (a corruption of *siyāda* with added *tī*). *Baksis*, a classical form found in Tulsī-Dās's *Rāmāyan*, is not separately given, though mentioned as a vulgarism under *bakhshish*.

This is not, however, the place to attempt any adequate list of corrections or omissions; and we therefore conclude with two only, which we do not find mentioned in the *corrigenda et addenda* at the end of the volume. *Mushir-e-Qaisar-e-Hind* does not mean "Knight Companion of the Bath," but "Councillor of the Empress" (a dignity invented on the proclamation of Her Majesty as Empress of India in January 1877, and conferred upon a few distinguished native princes and statesmen). *Bandagān-e-'ālī*, or *bandagān-e-huzūr*, much used forms of address in court and elsewhere, are not given. They are liable to puzzle the new-comer, who does not at first realise that by "the exalted servants" or "the servants of his Presence," is meant himself, regarded under the fiction that so lofty a creature can only be conceived to act through the ministry of humble slaves.

C. J. LYALL.

BOOKS ON ANCIENT PHILOSOPHY.

A History of Eclecticism in Greek Philosophy. Translated from the German of Dr. E. Zeller by S. F. Alleyne. (Longmans.) Dr. Zeller's *Philosophie der Griechen* has been before the world too long for a translation of it to be reviewed as a new work. The translator seems to have taken great pains to put the present instalment of it into shape for English readers, but she is unfortunate in having to deal with an essay a good deal deeper than M. Martha's brilliant contributions to the *Revue des Deux Mondes*, but certainly a good deal duller. The section on eclecticism is probably the duller part of a work which is altogether too thorough-going to be good reading. It would be invidious to say whether the subject or the treatment be most to blame for this. Eclectics are almost necessarily poor company. People who keep their sympathy with any one view under restraint may be judicious, but are generally uninteresting. But then the treatment, too, is dull and spun out. It gives us often a record of deviations from this school rather than of approximations to that. And it may even be thought to confuse development with eclecticism. Most men will feel that the notion of eclecticism has been somewhat stretched when they find Epiktetos and Marcus Aurelius brought under it, though Dr. Zeller asserts (p. 287) that Stoicism made no scientific progress through them. And one cannot help asking what Demetrius, the friend of Seneca, is doing here when we see (p. 293) that "the peculiarity of his Cynicism lies only in the severity with which he stamps his principles on his life." We have noticed one or two passages where the translation appears at fault. We read on p. 223 n. that Seneca's money-dealings were "one of the causes of the insurrection under Nero in favour of Britannicus." The German is "eine von den Veranlassungen des britannischen Aufstands unter Nero," and what is meant is of course the rising in Britain. The context, again, makes us believe that, when Dr. Zeller speaks of Posidonius as "den syrischen Hellenisten," his meaning would be more nearly expressed by "a Syrian hellenising" than by "a Syrian Hellenist" (p. 61). On p. 228 *Autarchy* is not a proper rendering of *Autarkie*. So much of the whole work has been translated that it seems a pity to make the references to

the *Philosophie der Griechen* rather than to the English volumes.

Etudes morales sur l'Antiquité. Par Constant Martha. (Paris: Hachette.) Clearness, simplicity of treatment, and interest, are the features which one expects to find in a French work of this sort, and the author of *Les moralistes sous l'Empire romain* is the last person to disappoint our expectations. The public may complain, as M. Martha says, that the study of classical antiquity is becoming more and more a domain reserved for the initiated, but his own limpid French style will do a great deal towards throwing some of the domain open, even to ladies and *jeunes gens*. M. Martha is of opinion that the discoveries of archaeology are turning men's attention too exclusively to the material aspect of Greek and Roman life, and leave us less curious to penetrate into the minds of the ancients. This may well be so; and it may be suspected that in England at least the tendency to study the grammar and constructions of authors, to the neglect of what used to be called their "beauties," has a similar effect. It is, he urges, not enough to collect from the dust of ages

"les témoignages épars, les fragments, les inscriptions, et de les ranger froidement en ordre, à leur date, en de méthodiques compartiments; ils ne prennent toute leur valeur que si à leur aide on recompose l'être moral dont ils sont comme les débris."

And even if the criticism of the present day, thanks to severe examination of texts and new methods of precision, has told us more about the philosophical doctrines of the old world, we yet pay less attention to the "détail moral" which alone gives the doctrines their real character and value. Hence must follow such mistakes as one which M. Martha sets himself to point out in the essay on *L'Examen de Conscience chez les Anciens*. The Pythagorean injunction to go over the actions of the day before sleeping has been, he says, misunderstood, not only by the ancients themselves, as by Cicero (*De Sen.* chap. 11), but by all the moderns, with perhaps the exception of M. Cobet. It was not issued *memoriae exercendae gratiā*, but for the sake of self-examination and self-improvement. But there is not only the pleasure of seeing "toute une suite de véritables savants" stand corrected; there is plenty of piquancy in the way in which M. Martha treats his subjects. The suggestion that the consolatory arguments, of which so many were once written, were only good to console other people, and the remark that, if old age is a good thing because it cures you of love, many a patient would be found to say, "I prefer the disease to the remedy," may owe their lightness of tone to the lightness with which even professional consolers treated their own work; *partem mali audire solatia*, Seneca wrote. But the interest of seeing Carneades treated as a great moral benefactor of Rome, and of learning how and why Lactantius, of all people, approved of Carneades, is all of M. Martha's own making. Reluctance to "verser toutes ses notes devant le lecteur" is no doubt one step towards writing a readable book, but has sometimes its disadvantages. One would like to know the authority for one or two statements which, if true, are important in the essays on "L'Eloge Funèbre chez les Romains" and "Un Chrétien devenu Païen" (Julian). How easy it is to overrate the value of a phrase, M. Martha himself shows when he speaks of Laelius Sapiens as following up the partisans of the Gracchi with a "sévérité atroce," therein surely going beyond his authorities. We can hardly believe that "lever le sourcil" is right for *attractis superciliis* in Seneca, *Ep.* 113, although it is just possible that M. Martha may defend himself by the *attractis pedibus* of Catullus 15-18, itself an obscure phrase,

Forschungen zur Geschichte des Erkenntnissproblems im Alterthum. Von Dr. Paul Natorp. (Berlin: Hertz.) Though Dr. Natorp insists upon the importance of a study of Kepler, Galilei, Gassendi, Boyle, and Leibniz, so earnestly as to make us hope that he has himself that study in hand, his present volume of essays is concerned exclusively with more ancient philosophers—Protagoras, Aenesidemus, Democritus, Epicurus, and the Sceptics. The essay on Aenesidemus is a new edition of a paper which, we believe, roused some attention when it first appeared in the *Rhein. Mus.* To state the problems of the origin and of the nature of knowledge (so far as these problems were yet distinguished) as they appeared to the successive philosophers, without losing sight of what view was inherited or traditional for the particular thinker or thinkers—this seems to be one great object of the author. But he is also eager to discuss the adequacy of the solutions, and to do something, too, towards the recovery of the real views of men from the error and confusion which have grown up about their records. As to Protagoras, for instance, he aims at following a course intermediate between that of Grote, who first questioned the accuracy of the information which we get through Plato, and ascribed to Plato an unconscious misrepresentation of the Sophist, and that of W. Halbfass (1882), who looks upon Plato as guilty of intentional perversion, and extends his scepticism to all our authorities about Protagoras. Dr. Natorp seems to hold the opinion, in which, as he says, he has been anticipated, that the Sokrates of Plato misrepresents the views (or perhaps only the connexion of the views) of Protagoras for fun, and possibly for the trial and improvement of the young Theaetetus. His fun, therefore, must be dissected, to the total destruction of the humour. As to the worth of Aristotle's information about Protagoras, Dr. Natorp seems, with Halbfass, not to rate it very high (p. 53); but he learns enough from later writings, and does not leave us without a view of the Sophist which is at any rate clear and possible. As to the cloud of questions about Aenesidemus (p. 64), he decides, after careful examination of the evidence and of conflicting theories, that Aenesidemus was teaching about 340 B.C., and that he held (not merely reported) Herakleitean views. These views did not imply an abandonment of his sceptical position; he found it logically possible to unite the two positions (p. 85). Here Dr. Natorp is in agreement with Mr. McColl, who, in his clever Hare Essay on *The Greek Sceptics*, says that Aenesidemus saw in Pyrrhonism "a fitting means of clearing the way for his Herakleitean theories." The remaining essays, also, are valuable, alike for Dr. Natorp's own discussion and for the useful references to recent German literature upon their subjects.

OBITUARY.

PROF. T. C. ARCHER, the Director of the Edinburgh Museum of Science and Art, died suddenly at the Midland Hotel on the 18th instant. Mr. Archer first attracted attention by his ability in forming and arranging for the Great Exhibition of 1851 a collection illustrating the imports into Liverpool. He afterwards contributed a work on *Economic Botany* to Lovell Reeves's excellent series of popular volumes on Natural History. On the death of Dr. George Wilson, Mr. Archer was appointed to the post of Director of the Edinburgh Museum, and in this capacity brought the institution to a high state of development. His was a position requiring a peculiar combination of knowledge in different departments—art, technology and natural science being represented in the collections under his care. Mr. Archer died at the age of sixty-nine.

CORRESPONDENCE.

AN ANCIENT LATIN CURSIVE SCRIPT.

Dublin: February 18, 1885.

IN vol. ii., p. 169, of Dr. Isaac Taylor's valuable work on the Alphabet there is a curious misapprehension of the meaning of a passage in Suetonius (i. 56).

After describing the documents found at Pompeii in 1875, written in a cursive script, and belonging to the years 55 and 56 A.D., Dr. Taylor goes on to say:

"Although no earlier examples of this script have been discovered, it must have been in use for nearly two centuries before the destruction of Pompeii, for thus only can we explain the statement of Suetonius that Julius Caesar wrote *d* instead of *a*. A confusion between the capital forms *D* and *A* would be impossible, but the cursive characters *d* and *a* might easily become undistinguishable."

In the passage of Suetonius there is no mention of any "confusion" of characters. Caesar deliberately substituted *D* for *A*, *E* for *B*, and so on for the other letters (*et perinde reliquias*), and thus formed a system of cipher writing (*per notas scriptis*) to be used in despatches requiring secrecy (*signa occultius perferenda erant*). To one unacquainted with the secret the letters would have no meaning (*sic structo litterarum ordine, ut nullum verbum effici posset*). No similarity of form in the letters is assumed, and, indeed, such similarity would have defeated the object of this cipher script.

The passage in Suet. ii. 87-88, also quoted by Dr. Taylor, is to be explained in the same manner, save that Augustus substituted *B* for *A*, *C* for *D* instead of the system mentioned above.

Augustus is said to have approved of phonetic spelling, and, when a verse was too long for one line, to have written the surplus words below, distinguishing them by a circular mark; but neither of the passages cited by Dr. Taylor imply that either Augustus or Julius Caesar introduced a change in the form of the letters or used what we should call a writing character.

CHARLES H. KEENE.

SCIENCE NOTES.

SO little is known about the geology of Western Australia, that we call attention to a recent Report on the Kimberley district by Mr. E. T. Hardman, who was sent out from the Irish Geological Survey some time ago for the purpose of exploring this region. His discovery of the gigantic extinct kangaroo (*Diprotodon Australis*) is an interesting addition to our knowledge of Australian geology. It is unsatisfactory, however, to learn that no useful minerals have been discovered, though it is probable that gold exists in the neighbourhood of the Napier range.

PROF. V. BALL, Director of the Science and Art Museum at Dublin, has reprinted from the *Proceedings of the Royal Irish Academy* a paper which he read last year on "The Identification of the Animals and Plants of India that were known to Early Greek Authors" (Dublin: Ponsonby & Weldrick). Some of his identifications are already known to readers of the *ACADEMY* (April 21, 1883, and April 19, 1884). The present paper deals with no less than thirty-two animals and twenty-two plants, concerning each of which Prof. Ball gives quotations from the Greek authors, together with illustrations drawn from his own wide experience in India. A good example is his explanation of the horn of the "Indian ant" mentioned by Pliny, as a sheep's horn still used for a pickaxe by the Thibetan miners, the "Indian ant" itself being, of course, the Thibetan mastiff. So again with his suggestion that the "horned wild ass" of Otesias, with its head red, its horn of many colours, and its

body white, was a tame rhinoceros which had been painted as this animal is painted at the present day in the menagerie at Baroda. We do not feel convinced by all Prof. Ball's identifications; but he has certainly done a good piece of work, not only by calling attention to an interesting subject, but also by helping to support the authority of our sole literary materials for the early history of India.

PHILOLOGY NOTES.

SINCE his return to Madras in the early part of last year, Prof. Gustav Oppert has been busily engaged on the task which he inherits from the late Dr. Burnell of exploring the Sanskrit libraries of Southern India. He has himself visited the British districts in the extreme south and on the western coast, as well as the adjoining native states; and he has succeeded in obtaining the support of the Rajas of Mysore, Travancore and Vizianagram, and the historic Zamorin of Calicut, toward the starting of a Madras Sanskrit Text Publication Society. He has paid a visit to Sringeri, in Mysore, the residence of the great Sivaita reformer Sankaracharya in the eighth century, whose spiritual authority has been handed down in unbroken succession to the present Swami, a young man of liberal mind; and also to the Jain shrines at Sravanabelgola. As regards publication, Prof. Oppert has nearly ready the second volume of his *Lists of Sanskrit MSS. in Private Libraries in Southern India*, with two alphabetical indices, one according to subject matter, the other according to names of authors. He has further in hand English translations of the *Sukranitasara* and the *Ntīprakāṇḍa*, as well as an edition of the *Vaijayanti Sanskrit dictionary*. One more matter with regard to Prof. Oppert we feel bound to mention, though without comment. Under the title of *Ne Sutor ultra Crepidam* (Madras: Addison), he has felt it his duty to publish a pamphlet defending himself with some details against two attacks upon himself that were published in India during his absence in England.

THE new number of the *Journal of the German Oriental Society* contains an important paper by Prof. Jacobi on the development of the Indian post-Vedic metres; E. Hultsch edits two Sanskrit inscriptions from Kofa and Baroda; Dr. A. von Kremer continues his translations of the philosophical poems of 'Abū-l-'alā' Ma'arri; Prof. Sachau publishes a Nabatean and three Syrian inscriptions; Dr. P. Schroeder re-edits the bilingual of Harran and seven other Semitic inscriptions from Syria; and Prof. A. Bastian prints (with a translation by a German missionary at Bangkok) an inscription found on a bronze figure in Kampeng-phet, the ancient capital of Siam, which throws some light on the Brahmanic (pre-Buddhist) history of that country.

MESSRS. VIEWEG have just issued in the "Bibliothèque française du Moyen Age" (in which recently appeared M. G. Raynaud and Lavoix's collection and study of early French *motets* and music) *Le Peautier de Metz*, of the fourteenth century, tome i., containing a critical edition of the text, founded on four MSS. (one of which is Harleian 4327), by M. François Bonnardot. The editor promises a second volume, with a critical study, grammar, and glossary, which it is to be hoped will not be delayed.

PROF. LESKIEŃ, of Leipzig, is now engaged on a work on the accent-laws of Servian; and Dr. Woolner's forthcoming book on Servian metre will, for the first time, treat that subject exhaustively.

In the last number of the *Literarisches Centralblatt*, Prof. Windisch reviews M. Bergaigne's *Manuel pour étudier la langue sanskrite*. The review, on the whole, is favourable; but Prof. Windisch justly objects to the theory that in *brav-i-mi, grh-i-ta, jan-i-tā*, we have bi-syllabic roots, *bravi, grhi, jani*.

Corrigenda.—In the ACADEMY for February 7, 1885, p. 103, col. 1, l. 70, for "*Eriu*," read "*Eriu*"; col. 2, l. 7, for "*Stammväter*," read "*Stammvater*."

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 19.)

MR. FRESHFIELD, V.-P., in the Chair.—Mr. John Evans exhibited a dozen flat wooden rounds, or fruit trenchers, enclosed in a box, which had been the wedding present from T. Martin, vicar of Stone in Orkney, to Roger and Mary Simpson. Fruits and flowers were painted on the trenchers, and appropriate verses round the margin and below the device.—Prof. Ferguson, of Glasgow, exhibited copies of the "*De Secretis Mulierum*" and the "*Liber Aggregationis*" of Albertus Magnus, one of which was bought from the Hamilton Library, and the other from Syson Park. Prof. Ferguson showed that both copies had once been in one cover, and in that state were the property of Herbert, the Editor of Ames. They were both printed by Machlinia.

PHILOLOGICAL SOCIETY.—(Friday, Feb. 20.)

THE REV. PROF. W. W. SKEAT, President, in the Chair.—Mr. Whitley Stokes read a paper on "*Old-Irish Declension*." After giving a sketch of the discoveries of Bopp, Zeuss, Ebel, Siegfried, Windisch, Rhye, and Thurneysen, in this department of philology, he gave a complete set of Irish declensional paradigms, and then, in order to restore the proto-Keltic declensions, set out, with tentative translations: first, twenty-five Gaulish inscriptions, twenty-five Gaulish coin-legends, the Gaulish glossary preserved in a ninth-century MS. at Vienna (first published by Endlicher), and twelve Ogham inscriptions. The Gaulish inscriptions were placed in three groups: five in the North-Etruscan character from Italy (Todi, Novara, Limone, Verona, and Este); seven in Greek characters from the south of France, not far from the Greek colony of Massilia (Vaison, Nîmes, St. Rémy, and Malancène); and thirteen in Roman characters, from Vieux-Poitiers, Volnay, Autun, Dijon, Allse, Vieil-Evreux, Nérès-les-Bains, Guéret, Nevers, Beaumont, Poitiers, Bourges, and Paris. The Ogham inscriptions were from Trallong, Cilgeran, and St. Dogmael's in Wales, Fardel in Devonshire, and the rest from Ireland. The grammatical results derivable from these linguistic monuments were then classified. The traces of declension discoverable in the British languages were set forth. The changes which the declensions have undergone in the passage from proto-Keltic to Old-Irish were then stated; and then an attempt was made to restore the chief Old-Celtic declensional paradigms. The general result is that the Celtic languages possessed, and to some extent still possess, a complete declensional system; stems corresponding with all those in Latin, Greek and Sanskrit, except feminine stems in *o*, stems in long *ū*, participial stems in *vāns*, and labial stems; three genders and numbers; and, besides the ordinary cases, a locative singular, an ablative singular, and two instrumentals—one found only in the singular, representing the Indo-European *-ā*, the other found in the singular, dual, and plural, representing the Indo-European *-bhi*. The paper concluded with three sections on the declension of the neo-Celtic adjectives, pronouns, and numerals, and a list of some of the native grammatical terms. Incidentally, the twelve verbal forms found in the Gaulish inscriptions were discussed, and some interesting equations (e.g., Irish *art*, "*stone*" = *népa*) were suggested.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Feb. 24.)

MR. FRANCIS GALTON, President, in the Chair.—A paper on "*The Race-Types of the Jews*," by Dr. A. Neubauer, was read. The opinion that the Jewish race have kept their blood unmixed is

based chiefly on the fact that a Jew is almost at once recognised among thousands of others. From the earliest times, however, we find evidence of intermixture. Abraham's son Ishmael was the offspring of an Arabian woman; Joseph married an Egyptian, and Moses a Midianite. David descends from Ruth the Moabitess; Solomon is the son of a Hittite woman, and he himself had foreign wives. We are often reminded in the Bible of the non-Jewish women who came in contact with the Israelites, and undoubtedly the "proselytes" increased the mixture of races by marrying Jewish women. At Rome the conversions were numerous, and, of course, the converts frequently married Jews. Evidence was also adduced of intermarriages in later times between Jews and Christians of various races. The differences between the Spanish-Portuguese Jews and the German-Polish Jews were so marked, that in the Middle Ages they were believed, by the Jews themselves, to have descended from different tribes—Judah and Benjamin respectively. But the Italian Jews, both in features and habits, stand between the rough German and the polished Spanish Jews, and there is no evidence of any systematic emigration of the various tribes. The pronunciation of Hebrew words also varies, and this variation is believed by Dr. Neubauer to be due to the influence of the language spoken by the surrounding peoples. The difficulties of obtaining accurate measurements of Jews are very great, and but few skulls have been examined; all evidence, however, goes to disprove the existence of any pure Jewish type, uninfluenced by contact with the nations among which they dwell.—Mr. Joseph Jacobs read a paper on "*The Racial Characteristics of Modern Jews*." After enumerating the various classes of Jews now existing, the enquiry was limited to the biostatics and anthropometry of the Ashkenazim Jews who form more than nine-tenths of the whole number. Their superior fecundity and vitality were found to be due to social causes, and were, therefore, only secondarily racial; an indication of racial influences was found, however, in the fact that mixed marriages between Jews and Christians are infertile. Jews enjoy no immunity from any special diseases; but they are more often colour-blind, blind, deaf, and insane than others, owing, perhaps, to their life in cities, and to their frequent intermarriages. Jews were then shown to be the shortest of all Europeans except the Magyars, and to have the narrowest chest. Their skulls are mostly brachycephalic. An examination of over 100,000 Jews showed that they have darker hair and eyes than those of any nation in Northern Europe, though nearly one-fifth of the Jews have blue eyes, and they have nearly twice as many red-haired individuals as the inhabitants of the Continent. A number of composite photographs of Jewish boys, prepared by Mr. Galton, were exhibited to show the Jewish type, and were compared with early representations of Jews in Assyrian art. The Jewish face was said to be a combination of Semitic features and Ghetto expression. Turning to the question of the purity of the race, it was pointed out that this depended on the number of proselytes made by Jews in ancient and mediæval times. The earlier proselytes, before the foundation of Christianity, were mostly fellow-Semites, and would not affect the type; while the numbers made afterwards were too small to modify the race, owing to their infertility and the tendency of the offspring to revert to the Jewish parent. A considerable number of Jews, the Cohens or descendants of Aaron, were not allowed to marry proselytes, and must, consequently, be tolerably pure. The general conclusion reached was, therefore, in favour of the purity of the Jewish race.

FINE ART.

The Store-City of Pithom and the Route of the Exodus. By Edouard Naville. Egypt Exploration Fund. (Trübner.)

M. NAVILLE'S Memoir on Pithom is a clear record of the most important discovery of modern times in the field of Old Testament research. The results of Assyrian archaeology

are deeply interesting as completing and illustrating the story of the Kings of Israel and Judah; but they do not touch the remote period of the Sojourn and the Exodus, nor contribute anything to the debated dates of the biblical documents. Only the bearing of the $\Delta\delta\alpha\chi\eta$ and the Inscription of Abercius on New Testament criticism, can be compared to that of M. Naville's discovery on the criticism of the Old Testament. It must now be admitted that a portion of the Pentateuch could only have been composed, however afterwards annotated, within the memory of the events which it relates, and, farther, that the doubts as to the historic character of the Sojourn and the Exodus lately common in the writings of the "advanced" school of critics are no longer tenable, and that their various theories of the dates of the Old Testament documents must be largely revised. But it is most gratifying to add that no attack on M. Naville's facts or conclusions has come from the quarter where they might have been thought most unwelcome. The "advanced" German, Dutch, and Scottish critics are far too truth-loving and too intelligent to controvert new facts or self-evident conclusions, even if they have to change once more their ever-changing position. The only serious argument on the other side has proceeded from the late eminent Egyptologist, Dr. Lepsius, who in maintaining that the site excavated by M. Naville was Rameses not Pithom, does not invalidate the importance of the discovery, though, as a consequence of his view, we should have to imagine the Israelites marching out of Egypt from East to West, which, of course, is a *reductio ad absurdum*. This lapse was no doubt due to the failing health of the illustrious pioneer of a sound treatment of the Sojourn and Exodus in their relation to Egyptian documents. Were Lepsius right in his last essay, the startling coincidence of the unearthing of a store-city of the Oppression on the line of the march out of Egypt, would prove little less under the name of Rameses than under that of Pithom; there would only be a want of the minute geographical agreements which enforce the value of this central fact. The general conclusion would be the same, but it would lack that astonishing completeness which it gains from M. Naville's geographical study on the spot of the surrounding regions. Dr. Brugsch, with his wonted frankness, has hastened to admit M. Naville's conclusions and to publish his assent in a learned paper, which is nothing less than a complete surrender of the theory of the route of the Exodus which he maintained in all his most important works for a course of years. No other criticism worthy the name has appeared. This is as well, for no one but the master of Egyptian geography, Dr. Brugsch, could speak with any weight until M. Naville had made his own statement. This is said with a full knowledge of the services of Miss Amelia Edwards in making known the results of M. Naville's work from time to time; for his articles were rather in the way of comment than of criticism; but it is interesting to notice that, after concluding a series of papers in *Knowledge*, written in support of Dr. Lepsius's identification of the site of Pithom with Rameses, she, like Dr. Brugsch, was immediately convinced of the truth by the cogent logic of M. Naville's inscriptions.

M. Naville's memoir leaves nothing to be desired: it is complete, clear, and illustrated by every monument discovered. There could be no better proof of the wisdom of Sir Erasmus Wilson in welcoming the proposal to try whether one of the most eminent Egyptologists would not also be one of the most successful explorers.

Having been appointed to conduct the first season's work in Egypt; M. Naville, on reaching Cairo, sought M. Maspero's advice, and resolved on beginning work at Tell-el-Maskhutah, the site identified by Lepsius with Rameses. Before doing so he went to Ismailiah in order to examine the monuments discovered at Tell-el-Maskhutah by M. Jaillon and removed to that town. Able to read the inscriptions with facility, M. Naville immediately discovered that the solar god, Tum, was the chief divinity worshipped at the buried town, and that consequently its sacred name was necessarily Pi-Tum, "the abode of Tum." Therefore, Tell-el-Maskhutah concealed not Rameses, but a Pithom, perhaps the sister treasure- or store-city built by the Israelites early in the time of the great oppression. Exploration revealed the true character of the place. Within a great crude brick wall, in the form of a square, stood the small ancient town and its little temple, and also a series of remarkable structures, unlike anything else discovered in Egypt—chambers very solidly built of crude brick and mortar, with walls two or three yards thick and entered from the top. These were unquestionably store-houses. If the appearance of these remarkable chambers were not enough to prove their use, the title of one of the priests of the place, in an inscription found by M. Naville, leaves no room for hesitation. He is called Mer-ar, "the keeper of the store-house." Thus this Pithom is the store-city of that name built by the Israelites in their bondage.

The monuments discovered revealed also the civil name of the place, *Thuku* or *Thuket*, "first a region," then "the name of the chief city or the capital of the district." It may be mentioned that each Egyptian town had its sacred or temple name, derived from the chief object of worship, and its civil name, just as we speak of St. Albans, while the place also retains the Roman name of Verulamium surviving as Verulam. Thuku had long ago been identified by Dr. Brugsch with Succoth. This identification has met with a degree of opposition, in which, some years ago, I concurred. It is well to note the result of the rapid movement of Egyptian and Assyrian research, by which every work in which a text is translated, or even a name quoted, must be more or less out of date in a few years. The makers of books who quote indiscriminately whatever a writer has published in the course of forty or fifty years are either purely ignorant or wilfully malicious, or both.

To return to Succoth. A careful study of Dr. Brugsch's argument (*Aeg. Zeitschrift*, 1875, p. 7) convincingly shows that the interchange of the Egyptian *th* and Hebrew *o* is quite regular, as indeed comparative philology would lead us to expect. M. Naville, referring to Dr. Brugsch, thus summarises the evidence—"th is often transcribed in Greek and Coptic by *o*, and in Hebrew by *o*. The name of *Σεβέννυτος* (Sebennytus, *Theb-neter*) is

a striking proof of this assertion, which is corroborated by the spelling of many common names. I need not dwell on this philological demonstration, which seems to me quite conclusive" (p. 6). Succoth, which means "tents," M. Naville takes to be the nearest Hebrew word, comparing the case of "Mesu" and "Moseh," the Egyptian and Hebrew names of Moses.

In later times the Egyptian cities often acquired a Greek name also, usually the translation of the sacred name. Thus Pithom became Heroöpolis, shortened by the Romans to Ero. This may be either a translation of Pithom, Hero or Heron being used as the equivalent of Tum in the obelisk inscription, translated in Ammianus Marcellinus, or it may be "store-city," from the Egyptian "Ar," a store-house, and this is the more likely origin, as M. Naville holds, no doubt because of the consequent reasonableness of the Roman Ero.

Geographically, the identity of Heroöpolis is a matter of great consequence, inasmuch as it shows that in the classical period the Heroöpolite Gulf, or Gulf of Suez, though perhaps partly dried up, and kept navigable by means of a canal, did undoubtedly include Lake Timsah; while at the time of the Exodus there must have been, on geological indications, a continuous basin.

The true interest of this reconstruction of the map of Eastern Lower Egypt lies in its bearing on the route of the Exodus. Before M. Naville attacked Tell-el-Maskhutah, it was uncertain whether the Israelites marched by the Wadi-t-Tumeylat, where the site lies, or by the Valley of the Wanderings, parallel to the other wadi but leading from above Cairo to Suez, while the researches of Dr. Brugsch had shown the possibility of another route far to the northward, not crossing the Red Sea, but passing along the narrow strip of sand between Lake Serbonis and the Mediterranean, a route subject to be submerged by the sea. The position of Succoth as a town and district once fixed the line of march is determined. M. Naville has found the first resting-place of the Hebrews, and has so positively ascertained the line of march and the place where the sea was crossed. This is a discovery of the highest consequence, quite worth the small cost of M. Naville's exploration. Not only can he lay down the direction of the route of the Exodus, but he is also able to show, on grounds of high probability, the position of other places eastward of Succoth mentioned in the Bible. As to Rameses, he hazards no conjecture, but it is not improbable that in the present season he will ascertain its site. This done, and the other places determined by excavation on the spot, we shall have a positive knowledge of the whole route of the Exodus as well defined as that of any great march of modern times—a marvellous linking together of the present with the remotely distant past.

M. Naville's method in this part of the inquiry is most instructive. Generations of critics have handled the geographical problem until it has seemed impossible to see anything in the clear light necessary to the discovery of truth. Thus it has always been supposed that the Hebrews went from town to town; Rameses the starting point, Succoth, Etham, have been regarded as so many towns. No one seems to have thought

of the "Land of Rameses," or the "Land of Thuku." M. Naville, perhaps with the insight one gains in working on the spot, insists on the unreasonableness of forcing a great body of people into a space far too small for them and into inevitable conflict with the Egyptian garrisons. To him each station means the region, and thus he identifies Etham, the third, not with the Egyptian Khetem the stronghold, a singularly inappropriate place, but with the border-land of Atima or Atuma, mentioned in the picturesque story of the "Wanderings of Saneha" and elsewhere, in a geographical connexion, which leaves no doubt of its lying in this neighbourhood. Pihahiroth, Migdol and Baal-Zephon, the landmarks of the Passage of the Red Sea, are placed with high probability respectively near Pithom, at the Serapeum, and at some place like Sheykh-en-Nedek, on what was the eastern shore of the sea. The identification of Pihahiroth with Pikeheret or Pikerehet, which appears from the evidence of the important inscription of Ptolemy Philadelphos to have been very near Pithom, is highly probable. If it be accepted, we must suppose the last march towards the sea to have covered little ground to the eastward, as indeed the circumstances of the narrative imply in relating the change of direction.

These results by no means exhaust the fruit of M. Naville's work for the Egypt Exploration Fund. The positive determination of the foundation of Pithom by Rameses II. settles all doubt as to his having been the great oppressor and his son Menptah the Pharaoh of the Exodus. This is a historical result of primary value, though it is less striking than the geographical identifications, as but little doubt on the subject remained in the minds of reasonable scholars.

Pithom has not yielded many monuments, but the few discovered are of the first order. The hawk with the name of Rameses the founder and the statue of the Recorder of Pithom, of the Bubastite period, have enriched the British Museum, and the Boolak Museum has, with other inscriptions, the Stone of Pithom, a decree of Ptolemy Philadelphos in hieroglyphics, which affords a large contribution to the history and geography of Egypt. Particularly it throws great light on that king's relations with Ethiopia and the foundation of Ptolemais Theron for the purpose of importing elephants, as well as affording a mass of most curious geographical and statistical information. Those who know the want of materials for the history of the Ptolemies, especially Philadelphos, will welcome this fresh document.

The inscriptions have been carefully engraved, and thus everything in the way of record has been permanently preserved, with a full commentary by the discoverer. An excellent map of the route of the Israelites, generously contributed by M. Paul Chaix, of Geneva, and a plan of Pithom, are included in the fifteen illustrations.

As one of the honorary secretaries of the Egypt Exploration Fund, I forbear to make any comment on the work of that society in producing this volume; but I would add that continued support will ensure the publication of a series of memoirs recording the work of each season. Mr. Petrie's first Memoir on Tanis is in the printer's hands, and the plates

are now completed, so that it may be issued in the present spring; and it is to be hoped that this year's work, both of M. Naville and Mr. Petrie, will afford fresh memoirs not less interesting than those on Pithom and Tanis.

REGINALD STUART POOLE.

CORRESPONDENCE.

THE HOLBEIN SOCIETY'S "TEWRDANNCKH."

Manchester: Feb. 24, 1885.

As the publisher of the works reproduced for the Holbein Society I must ask to be allowed a few words in reply to Mr. Conway's criticism of the *Tewrdannckh*.

It is unnecessary to explain here why the second edition was used instead of the first; but I may say that in some respects the second edition is better than the first, and for all practical purposes is equal to it.

If, as Mr. Conway says, the copy we used was *misbound*, then the first edition must have been wrong, for I collated every page of our reproduction with a very fine copy of the first edition, and found every page in its proper place; but there were two pages missing from the first edition.

As to the process employed I shall be glad to adopt any improvement in photo-lithography. I never heard of the Mr. Hirth named by Mr. Conway.

I find no omissions in the reproduction excepting the *blank pages*. They were in their places when the copies were sent to the binder, and I can only conclude that he thought they were superfluous and removed them.

A. BROTHERS.

THE ZOAN EXPLORATION FUND.

Boston, U.S.A.: Feb. 6, 1885.

Noting the comments of Mr. J. Edward Pfeiffer in the *ACADEMY* of January 24, allow me to say that the subscriptions in the United States for Zoan and the Biblical-historical work of the Egypt Exploration Fund come largely from scholars and men of eminence in the Church (i.e., religious denominations as well as the Episcopal Church), and that this is true particularly of late, as I may sometime show in your columns. The only "lukewarmness" here is on the part of rich business men, who could, if they would, give largely to the invaluable explorations. But many of them do not know these excavations to be more than ordinary archaeological work; some are pledged to practical home charities; and "the times" are hard. Since January 13, of thirty-two subscriptions received, more than half are from prelates, divines and educators, after whose names D.D., or both LL.D. and D.D., are written.

WM. C. WINSLOW,

Hon. Treasurer for America.

ROMAN MILESTONE DISCOVERED IN YORKSHIRE.

242 West Derby Road, Liverpool: Feb. 14, 1885.

About the commencement of the year 1880 there was found in the town of Castleford, near Pontefract, in Yorkshire, close to the Roman road which passes through the town, at a depth of three feet, a Roman milestone, four and a half feet high, and one foot in diameter. No account of it appears to have been published; but it was removed to the garden of Mr. Joseph Brewerton at Half Acres, a short distance from the place of its discovery, where it now remains.

I am indebted to the Rev. W. C. Lukis for the first information as to its existence; and, on asking Mr. Brewerton for information as to the inscription it bore, I received a copy of a most confused mass of letters, from which no sense

whatever could be gathered. I, however, considered that in one line I detected the word VOLVSIANO, and by suggesting that the inscription commenced with IMP., and by filling up the lines with some of the usual formulae for comparison with the stone, and afterwards by an interchange of letters on some of the doubtful points, I have succeeded in reducing it to intelligibility, though there is still much to be deciphered. I notice these facts more particularly, as I do not wish every letter to be guaranteed; and, as a photograph is about to be taken, the reading may possibly be emended in several points.

The stone has some peculiar characteristics. It has been set up, in the first place, in the reign of the Emperor Decius A.D. 249-51; and, on his death, it appears to have been turned upside down, and an inscription to his successors, the joint emperors Gallus and Volusianus, cut upon the other end. This last inscription, which is decidedly the most perfect, runs as follows:

IMP P
... C. VIBIO
GALLO ET C. V.
VOLVSIANO
NO. P. F.
AVGG. EB
...

XXI

In the second line CAESS or CAE might be expected at the commencement, but Mr. Brewerton informs me he makes out KE; in the seventh I should expect VR. M. P., but Mr. Brewerton, after several examinations, reports XXV. The whole inscription I would read: *Imperatoribus Cae(aribus) C. Vibio Gallo et C. V. Volusiano P(is) F(elicibus) Aug(ustis) Eburaco m(illia) p(assuum) XXI.* It would thus mark twenty-one Roman miles from *Eburacum* (York). Castleford is generally thought to have been the site of the Roman station called in Fifth Iter of Antoninus *Legedilium*, and in the Eighth Iter *Lagecium*, in each being named as twenty-one Roman miles from York, the distance thus agreeing with the numerals upon the stone.

The other, and earlier, inscription is more difficult to unravel, the stone being more worn. The three first lines seem however undoubtedly to be

IMP. C
C. M. Q
DECIO
...
...
...
...

The remaining four lines are obscure. The first of them (the fourth of the inscription) as sent, looks like PROQ.; it may be TRO., a frequent abbreviation of TRAIANO in this emperor's inscriptions followed by PIO, the o being in the next line, which seems to commence with OF. ligulate (the F for Felici), followed by C.M. The two remaining lines at present seem like OQ followed by INVICTO. But with the exception of the commencement *Imperatoris C(aesari) C(aio) M(essio) Q(uinto) Decio*, I can say nothing with certainty.

I hope, however, shortly to receive a photograph of the stone, when I will communicate the result of a critical examination. In the meantime, I must be absolved from any errors in the reading of the obscure portions.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

MR. P. G. HAMERTON'S work on Landscape will be published on March 12.

ENCOURAGED by the success of last year's

exhibition in Arlington Street, the Duchess of Leeds has decided to hold another this year in aid of the Girls' Friendly Society's Club and Recreation Rooms for Working and Factory Girls in East London. By permission of the Marchioness of Downshire it will be held at 24 Belgrave Square. Miniatures will again be the prominent feature.

WHETHER as portrait or as work of art, nothing finer has been published lately than M. Léopold Flameng's etching of Prof. Huxley, after Mr. John Collier's well-remembered picture. For the striking likeness of the face—and still more of the attitude—the painter is responsible; and it must be no little satisfaction to him to feel that he has achieved his masterpiece in this portrait of his father-in-law. As regards the reproduction, there is, we fear, no Englishman who could have executed the work with so much faithfulness, and with such a marvellous added effect of light and shade. It is the mark of the true artist thus to interpret rather than reproduce. The etching is issued by the Fine Art Society, whom we have to thank for a remark proof.

MESSRS. FIELD & TUCKER have sent us specimens of prints in red and brown which they are publishing from the original copperplates engraved by Bartolozzi and his pupils nearly a century ago. Some of the plates, it appears, were only used for a few impressions; and they are certainly still in very fine condition. The result is not a little helped by the careful manner in which the present prints have been made. The engraving of "Love Healed," by Robert Cooper after Sam Shelley, which bears date 1798, is a particularly pleasing example of the school.

FROM Malta we receive two more papers by the indefatigable antiquarian, Dr. A. A. Carnana—on the discovery of an isolated tomb-cave in Gozo in June 1884, and on an exploration made by him of a cluster of tomb-caves in the Casal Saffi, Malta, in October of the same year. The latter paper is the best, as Dr. Carnana was able to describe the place carefully before its destruction by the farmer, a fate which he was too late to avert from the Gozo specimen. Both are illustrated by photographs, those of Saffi being of special interest.

THE works of the late Mr. Harry Johnson, whose sudden death at the commencement of this year excited so much sympathy and regret, will be sold next week by Messrs. Christie. The pupil and friend of Müller, by whose side he worked in Lycia, and also of David Cox. Mr. Johnson established a style of his own in the pure water-colour which is the great charm of the English school; and, like Duncan and Leitch, he was one of the most distinguished ornaments of the spring exhibitions. His extensive knowledge of Greece (which he visited with the late Mr. Falconer Poole), Asia Minor, Spain, and Italy, besides his familiarity with the wilder regions of England and Scotland, render this collection singularly interesting.

THE well-known firm of Alinari at Florence have lately made some very important and successful additions to their huge gallery of photographs. These include the frescoes by Giotto and others in the Church of St. Francis at Assisi, and those by Signorelli at Orvieto.

THE Society of Lady Artists (*Femmes Peintres et Sculpteurs*) open their annual exhibition in Paris to-day.

THE French Government have purchased two examples of the art of the late Éva Gonzalès "Niché," a pastel, and a little picture called "Entrée du jardin."

MANY readers of the ACADEMY will be interested to know that Mr. Bassano, of Bond Street, has just taken a very successful portrait of Miss Amelia B. Edwards on the large scale known as a panel. The likeness is admirable, and the photographer's work has been skilfully done.

THE STAGE.

THE COMEDY AT THE COURT THEATRE.

"LES FOURCHAMBAULT" is one of the later, and it is not one of the better, comedies of Emile Augier; but it is free from certain of the blemishes which disfigure the adaptation of it at the Court Theatre. Yet, taken on the whole, we are not prepared to say that Mr. Albery could have done other than he has done, if his object was to satisfy an English audience. He has done one thing, at all events, towards satisfying them—he has avoided offending them. He has not courted the disapproval of that tribunal of the nursery-governess of which we wrote a fortnight since; judged by the standard of the school-room the work is excellent, since its propriety is unassailable. It is true, of course, that Mr. Albery, in tempering this wind of the French drama to the shorn lamb of the English schoolroom, has in one or two instances made the play ridiculous. Much of its motive is impossible. To begin with, Mr. Denham would never have taken advantage of an informality in the marriage ceremony to break off a connection of which if he was weary he was weary simply because he had no stability in him. The lady to whom he had allied himself was an unexceptionable woman, replete with tenderness and grace. They both had thought they were married to each other, and he is not likely to have left her even if there was a fault in the ceremony. But imagine them, on the other hand, never to have supposed themselves married, then they may easily have separated, and without great heartlessness on his part; since, with no infliction of the wound of surprise, he might have left the lady and married himself to "another." The character might not even then have been worthy of our deepest esteem, but it would at least have lain within the limits of our understanding. As it is, even to men of the world, this peculiar man of the world is a little incomprehensible.

Again, Haidée, the young American heroine, who stays in the house of Mr. Denham, and of his second and legitimate wife, is beset with difficulties that are absolutely artificial. In the French piece, where the reputation of an *ingénue* has necessarily the fragility of a Dresden china figure, it is of course quite natural that her good fame shall be damned for ever if she takes a walk with a man. But in England it is impossible to conceive that any gross scandal should have attached itself to a young woman who liked exercise because she liked it in company; and as the man was unmarried as well as the woman, the most that would have been said of the two if they walked out a great deal together, was that they were preparing for the adventure of matrimony. An engagement to marry might, after all, never follow; but the very worst that could be said, even if they were both unmarried, was that they were then on the eve of it. Yet in Mr. Albery's version of Emile Augier's bolder if less agreeable drama

a man, who is not really seriously in love with Haidée at all, is implored and conjured to take her to him as his wife because they have taken certain rides together, and village gossip has fastened on the circumstance. This is very feeble indeed. And that the two deep weaknesses of dramatic construction which we have mentioned should not have destroyed the interest of the piece altogether, says very much for the piece, and perhaps yet more for the actors. And the truth indeed is that Mr. Albery is far from having only made mistakes. If he has in crucial points enfeebled the plot, he has likewise in many places strengthened the interest. But he has shifted its ground. He has transferred the interest in a very great measure from the serious to the comic portions of the play, and has enriched these with brilliant, if sometimes inappropriate, wit. As it is at the Court we are not greatly moved by the scandal about Haidée. That can look after itself. We know that it will presently subside, and need never have arisen at all. But we are vastly entertained by Mrs. John Wood's exquisite unreasonableness—the unreasonableness of a spoiled woman, educated enough to talk but not enough to think. And we recognise real perception of character, and the power to portray it, in Mr. Arthur Cecil's sketch of a "society" clergyman, the Reverend Lord William Whitehead.

Mrs. John Wood plays with unremitting zest the part of the disagreeable woman who is the legitimate Mrs. Denham. In life, sheltered under the bulwark of a marriage certificate, such a person is unavoidably intolerable—on the stage her wrongheadedness and her cruel density are but continuously amusing. Mrs. Wood has probably in reality a part of fair length, but however short her part may be it will always seem fairly long, because she possesses, in a measure beyond that of her comrades, the faculty of making every sentence and every word "tell." Mr. Arthur Cecil is deliciously unctuous and persuasive, and even when it is clear that the Reverend Lord William Whitehead is an arch humbug, you scarcely wish him away—let him stay by all means: he is such excellent company. Mr. Conway looks and bears himself still almost as the perfection of youthful manliness as the man whose society Haidée distinctly relished. That little flirtation had at least, you feel, a *raison d'être*. Much more serious work than falls to the lot of the engaging Mr. Conway—who is, after all, an actor and an artist as well as a pleasant figure—is undertaken by Mr. John Clayton. He is the natural son of Mr. Denham, and, at the instigation of his mother, who always loves Mr. Denham unselfishly, he comes to Mr. Denham's rescue when business disasters surround him. And he is deeply in love with Haidée, and yet, till the very end, is prepared to resign her to another. Mr. Clayton is often at his best when making a sacrifice with masculine resignation: a little of the spirit of "All for Her"—the spirit of "The Tale of Two Cities"—clings to him still. He bears himself bravely. Mr. Edward Price as Mr. Denham is hardly successful. Of the ladies we have thus far only mentioned Mrs. Wood. Miss Lydia Foote appears with becoming grace and dignity as the woman who has been abandoned by her sometime husband, and who finds solace in the

devotion of a son. She is not truly emotional, but she has the tender stateliness of a French *marquise*. Miss Norreys plays Mr. Denham's daughter with the charm of a lively simplicity. And Miss Marion Terry, real enough as usual in the scenes of anxiety and trouble, comes, once or twice, in the lighter passages, where she is meant to be gay, within measurable distance of the expression of happiness.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

LAST Thursday week the Bach Choir gave the first London performance of Dr. C. H. H. Parry's music to "Prometheus Unbound." The composer has taken scenes from Shelley's lyrical drama. First we have the mighty Titan, in spite of his sufferings, defying Jupiter and prophesying his overthrow: fair spirits summoned by the Earth come to comfort and to cheer him. The short orchestral introduction is rather vague, but the opening Prometheus monologue shows dramatic power; and in the choruses which follow the composer tries hard first to depict the cruel furies, then the fair spirits; yet his success seems in inverse proportion to his effort; there are some fine thoughts, but these are hidden, or partially obscured, by a restless striving after originality. The second scene, in which the Demogorgon bids Jupiter descend with him to the abyss, commences with some wild strains; but in the choruses of unseen spirits and Hours there are some most effective passages, and Dr. Parry's mind, "late so dusk," seems inspired by the new "life of Hope and Power" of which the spirits sing. "Prometheus" is a clever and ambitious, but we cannot say successful, work. It was written for the Gloucester Festival of 1880, and since then Dr. Parry has produced music more masterly in construction, more effective in development, and therefore more satisfactory and more interesting to the hearer. The performance, so far as orchestra and chorus were concerned, was fairly good; the solo vocalists were Mrs. Hutchinson, Miss H. Wilson, and Messrs. Lloyd and Brereton, who all sang well. After this came the "Pastoral Symphony" from Bach's Christmas Oratorio. Special instruments had been constructed to enable Messrs. Horton and Lebon to play the original Oboi d'Amore parts. In Bach's score these instruments are used in combination with the obsolete Oboi di Caccia; by using the one set without the other the proper balance of tone was not obtained—the bassoons were overpowered. As heard at this concert, the Oboi d'Amore had but little of the "veiled and pathetic" tone about which we read in books. The programme concluded with F. Kiel's "Star of Bethlehem," an oratorio for solo voices, chorus, organ, and orchestra. This work, produced in Germany about two years ago, bears strong traces of the past, and but few, if any, of the present. The composer's recitatives are old-fashioned, his melodies simple, and his fugues clever, but the music lacks everything that is needed in these days to make an oratorio attractive. With all its faults, Dr. Parry's work was far more acceptable: a composer struggling with his thoughts and expressing them in imperfect language is better than one who speaks clearly, but has little to say. The whole of the concert was conducted by Mr. G. Goldschmidt, with his usual care.

At the Crystal Palace concert, Saturday, February 21, Raff's Symphony, No. 11 in A minor, "Winter," was performed for the first time. The hand of death was on the composer ere he had quite completed it, for it is published

as "revised and edited by Max Erdmannsdörfer." It forms the last of the four symphonies in illustration of the seasons; its three predecessors have been given at the Palace, and though in all of them we were able to trace the composer's experienced hand, there was a want of freshness, and at the same time an increased tendency to diffuseness. Even in his best days Raff was seldom free from this fault, and in this "Winter" Symphony we find all his old failings, and still greater prolixity. It is scarcely necessary to describe the work in detail; for although musicians were naturally curious to hear the "song of the swan," it is not likely often to be played. Let us admire the composer who worked so laboriously to the very end; but in future he will be best called to remembrance by his "Im Walde," "Lenore" symphonies, or by the above-mentioned. The performance under Mr. Manns was extremely good: the lively "Carneval" was given with immense spirit. Mr. Max Pauer played Mendelssohn's D minor concerto; but the performance was a tame one, and in the Finale the young pianist did not exhibit his usual neatness and precision: he afterwards gave with success solos by Bendel and Schumann. Mdlle. Lido was the vocalist.

Last Saturday the "Handel Society" gave its first public concert at St. James's Hall. The work chosen for performance was Handel's "Saul," which has not, we believe, been heard in London since 1852. Of course everyone knows the "Dead March" and the fine choruses, "Envy, eldest born of Hell," "Gird on thy sword"; but the rest of the work, as compared with some of his other oratorios, may be considered dry. On Saturday a great many numbers were wisely cut out. In the programme-book attention was called to an article of Mr. E. Prout's, on the orchestration of Saul, which appeared last year in the *Musical Times*. If the organist, Mr. E. G. Croager, had studied that article and also Dr. Chrysander's account of "Saul," he would probably have more closely followed the composer's intentions. We say Mr. Croager, though perhaps, he was only obeying the conductor's orders. In the absence of a harpsichord, we may, perhaps, forgive the use of the organ to accompany vocal airs where Handel has expressly written *senza organo*; but, in the second movement of the overture, and in many of the choruses, Handel's wishes were altogether unheeded. The choir is only a new one. The performance was not a brilliant one; but there are some good voices, and we shall expect improvement in the future. Mr. F. A. W. Docker, as conductor, took great pains. The orchestra, with Mr. Burnett as leader, included many amateurs, some of whom were ladies. The vocalists were Miss E. Green, Miss Ellicott, Mrs. Andrew Tuer, Messrs. Benson and Pownall, and the Hon. Spencer G. Lyttelton. Mrs. Tuer has a fine rich contralto voice.

Mr. Max Pauer was pianist last Monday evening at the Popular Concert, and played exceedingly well Schumann's difficult "Novelletten," Nos. 2 and 8; the latter was given for the first time. It is long and rather rambling, but by no means the least interesting of the set. The programme included what to many must have appeared a novelty, not having been performed since 1875. This was Grieg's Sonata for piano and violin in F (op. 8). The three movements with their quaint themes, developed now with scholarly devices, now with all the freedom and fancy of Scandinavian folk-music, never fail to please and fascinate the listener. Mr. M. Pauer played the pianoforte part with simplicity and good taste, and was, of course, fortunate in having Herr Joachim as partner. The latter chose for his solo his favourite Tartini Sonata. The quartet was Beethoven, op. 59, No. 1. Mr. Maas was the vocalist.

J. S. SHEDLOCK.

CHAPMAN & HALL'S NEW BOOKS.

THE FORTNIGHTLY REVIEW

For MARCH.

Edited by T. H. S. ESCOTT.

CONTENTS.

THE COMING LAND BILL. By C. A. FYFFE.

LITERATURE.

A History of the Custom-Revenue in England from the Earliest Times to the year 1827.

Compiled exclusively from original authorities. By Hubert Hall, of H.M. Public Record Office. In 2 vols. (Elliot Stock.)

It may be at once admitted that the history of the customs, as levied under the royal prerogative before the great Civil War, is at once of great importance from a constitutional point of view, and of a curious interest to the student from its obscurity and legal perplexity. Mr. Hall is perhaps needlessly severe on the great historians who have failed to treat his special subject with the technical accuracy which he himself possesses. Bishop Stubbs, it seems, depends too much for his definitions upon Hale and Madox, with a result which demonstrates afresh "the inutility of these authors for purposes of reference." We hear a little too much of "grievous mistakes" and "glaring errors" in this connexion; but the historian must console himself with the reflection that Prof. Rogers can as easily be convicted of "palpable errors," and that Mr. Hallam cited the authority of MSS. "which he was wholly skill-less to read, and which, when actually examined, by no means support his case." When it is once conceded that everybody makes some mistakes, especially when taking a general view of a number of special subjects, it is useless to pursue the victims into every corner with the object of showing that they are but shallow admirers of the "bigots" who held mistaken opinions in times past.

Mr. Hall confesses to having started an erroneous hypothesis in the course of castigating Bishop Stubbs; and it seems to be a further grievance that the historian, after "tacitly accepting" the lesson, never noticed the author's subsequent acceptance of a correction of his own correction. Perhaps some minuter historian will detect an error here and there in the handsome volumes now before us; but we shall hope that the critics in that case will be more merciful than our author has shown himself to be in his fustian of "honest Hallam" and the rest. One example may be selected as a specimen to show the difficulties of the subject. An extract is given from "the Roll" citing a royal grant of certain privileges described as "*custodiam passagii plumbi averii de pondere et tronagii [et] narum in villâ regiâ de Kingston.*" This is translated "the custody of the passage of lead of avoir du pois, and of the tronage of wools in the King's town of Kingston," and we are told that

"it is a curious fact that even the incomparable Madox has blundered in this very passage by translating 'et tronagii et lanarum,' and of the tronage and of wools," whereas it is evident that the second 'et' (which does, indeed, occur

in the Roll) is redundant: for the tronage of wools is a known term, and, written apart, the two are meaningless. Moreover, the point is established further down in the same passage of the record by the words '*Passagii et tronagii praedicti.*'"

We have no reference to the record or to the page of Madox, and the omission of exact references is a fault which is noticeable in several parts of the book; but it is clear that Madox was justified in not altering the words of the record, and there is at least some reasonable doubt as to the proper construction of the extract. Mr. Hall has himself shown us that tronage extended to merchandise other than wool. He tells us that

"the sacks or 'serplers' containing wool, and the bales of salted hides, were placed under the custody of the collectors when they reached the wool-quay, and were successively weighed at the 'beam' by a special officer, the 'tronager' or 'tronour,' care being taken that no sharp practice was resorted to on either side, such as was too often complained of."

It may be also that lead was not the only merchandise of *avoir du poids* which the privilege was intended to include. The grantee would probably have claimed the custody of the "passage" (if that be the right term) of lead and other goods of that class, and of tronage generally, as well as a privilege over wool in particular. But, according to the extracts from the Fine Rolls, which are printed in the ordinary Abridgments, the grant did not refer to "passage" at all. We know from the Rolls of Parliament that the Commons prayed that the "passage" of wools and other merchandises might be free, without any loans or subsidies over and above the due Customs, the King answering, "Be the passage open, and that every one pass freely, saving to the king that which is due to him," or to that effect. But according to the authorities already cited, the grant of privileges at Kingston was confined to the "*pesage*," or dues for weighing the lead of avoir du pois. Whichever may be the true reading, the result seems to be that the author's criticisms on his predecessors are concerned with matters which are somewhat too technical for his public, and that the apparatus for arriving at a proper conclusion is not at present sufficiently provided.

Mr. Hall is, of course, quite right in devoting a large space to the decision in Bates's case, by which James the First was enabled to impose the new duties on merchandise which were specified in the Book of Rates. We may regret with him the cruel theft by which we are deprived of the notes of Chief Justice Fleming which Mr. Hargrave intended to publish, and we cannot but wish that the author had given some useful reference to the unnamed MS. authorities which he has consulted for the purposes of his argument. We may pass by his violent attack on Mr. Hallam, who seems to be charged with a sacrifice to the Idol of Antithesis of "all hope of historical accuracy"; nor is it necessary to consider whether the "political Commons of England" were prompted in their opposition to the Stuarts' impositions by the influence of "a morbid and hysterical religion at the expense of decency, equity, and charity," or in order to cover the "hideous sin of usury"

under the semblance of fearless piety. To say the truth, these matters are not irrelevant, for at least they bear on the old problem whether Charles the First was or was not "the holocaust of direct taxation"; but they appear very unimportant as regards the history of the Custom-Revenue, when compared with the dry facts, on which alone we can form our judgment. An information was brought against Bates for refusing to pay a new duty on currants lately imposed by royal letters patent. Bates pleaded that he was an English merchant, and an adventurer, and a denizen, and that he made a voyage to Venice and there bought currants and imported them into England, and that he had paid the dues imposed by statute, and therefore refused to pay the fresh duty "because it was imposed unjustly and against the laws of the land." Mr. Hall has summed up the various arguments of the judges, and appears to be satisfied with the decision in favour of the Crown. We may prefer the common opinion of that day "that this judgment was against law and divers express Acts of Parliament"; but, in any case, we miss the well-known argument by which Lord Coke and Chief Justice Popham convinced themselves, after much hesitation, that the judgment might be supported. They were clear that the king could not levy such impositions "unless it be for the advancement of trade and traffic, which is the life of every island," and on examination of Magna Charta and later statutes they found a principle of reciprocity in dealings with foreign merchants, so that the foreigner might never gain an advantage over the Englishman; and then, considering the duties imposed by the Doge of Venice they found that the English king's action might be defended on the ground that the imposition was levied "to make equality, and for the advancement of trade and traffic." But the point was so fine that the Crown lawyers seem to have been afraid of pressing the new doctrine very far in practice.

The benefits provided for the foreign merchants by Magna Charta were continually infringed by restrictions intended to redress the balance of trade, until, under the Tudor sovereigns, "traffic was regulated wholly in a protective spirit. "Whenever a native industry is established, no foreign competition is to be allowed at the expense of the clumsy insular artisan." We are told in another passage that the reigns of the children of Henry VIII. furnish a few novel instances of covert or downright protection which illustrate "the degradation of English commercial morality." Few of Mr. Hall's readers will sympathise with the epithets which he applies to the traders and artisans; but, if allowances are made on this point, they will find in his work an interesting account of the commercial relations between England and the Continent. "The rascally English cloth-worker is forbidden to seek a sale for his cheap wares among his countrymen, but is allowed to export them to the continental marts. This permission indicates a return to the earlier system of commercial piracy, for it had long since been the custom of shrewd brokers to export English unfulled woollens, and import in their stead a similar quality of Flemish cloths of both a lower value and superior quality." French mer-

chants were not only burdened with heavy duties on their wines, but had to pay again on the wool or cloth which they desired to import in return. The Government was full of devices to prevent the Dutch making profit by engrossing our trade. The balance of trade was always found to be against us, and the only profitable policy seemed to be the doing of as much damage as possible to the foreigner. The Government did not want his goods, and was anxious above all things that he should never become prosperous by dealing with English merchandise.

Mr. Hall gives many excellent illustrations of this mischievous and antediluvian policy. The most valuable part of his work seems, however, to be that in which he traces the various sources from which the "Customs" originated. He considers that the prerogative right of pre-emption existed from the earliest period of our history, and that the payments exacted under this right may be regarded as a customary tax in kind. The principle was soon extended to exported and imported merchandise, on the ground that the exports would otherwise be unfairly freed from purveyance, and that as to imports it was desirable to check excessive introduction of foreign produce. Here we find the origin of the "ancient custom" on wools and leather, which, as time went on, required the addition of "new customs," as well as the arbitrary and irregular levy called the "Maltolte." There was still an undefined right of "prise," or pre-emption, existing alongside of the regular customs, and this developed into the later purveyance for the king's household, while the "Maltolte" was replaced by the Parliamentary subsidy. There still remained an undefined prerogative of laying imposts on alien merchants in order to preserve the balance of trade, or otherwise to further the public benefit; and this right survived until the whole system of the Customs' revenue was placed upon its modern footing. The history of the taxation upon wine, being somewhat anomalous in its character, affords the author a good opportunity of working out his theory and of testing its accuracy. The chapter "of Prisaige and Butlerage," in particular, is full of instruction and interest. Mr. Hall must certainly be congratulated on the success of his treatment of a peculiarly difficult subject, and we may hope that in his next edition he may find it possible to modify somewhat of the censure which he has too liberally applied to his predecessors.

CHARLES ELTON.

At the Gate of the Convent, and other Poems.
By Alfred Austin. (Macmillan.)

This book leaves upon the present writer an impression that Mr. Austin's powers are in some ways better suited to an ambitious task, such as *Savonarola*, than to smaller attempts at imaginative beauty. Undeniably too long, *Savonarola* was finely conceived; we could see the Florentine crowd, we could feel the doomed tenderness of Valori. But in these minor poems, though they contain exquisite passages, the inspiration seems to flag and halt; a vein of egotism and self-assertion appears—qualities, no doubt, very incident to the poetic temperament, but rather crudely exhibited, here and there, in this volume.

In the poem, for instance, that gives its name to the volume, the poet, standing face to face with the prior of an Italian convent, listens to the gentle old man's appeal to him to leave the joys and agitations of the world for the cloister's quiet and chastening solitude. It is a beautiful appeal—these verses hang in the memory, like some of Mr. Arnold's on kindred subjects (p. 9):

"Of life beyond I speak not yet.
'Tis solitude alone can e'er,
By hushing controversy, let
Man catch earth's undertone of prayer.
Your soul, which Heaven at last must reap,
From too much noise hath barren grown;
Long fallow silence must it keep,
Ere faith revive and grace be sown."

O si sic omnia! But the poetic malady of self-assertion must needs put into the speaker's mouth the following fulsome compliment to his hearer (pp. 4-5):

"Nor wealth did lure, nor penury cramp,
Your ripening soul; it lived and throve,
Nightly beside the lettered lamp,
Daily in field and glade and grove.
And when the dawn of manhood brought
The hour to choose to be of those
Who serve for gold, or sway by thought,
You doubted not, and rightly chose.
Loving your land, you face the strife;
Loved by the muse, you shun the throng;
And blend within your dual life
The patriot's pen, the poet's song."

Forcible as they are, it is difficult to read these verses without a sense of repulsion. Is it reasonable that any man should write up his poetical and journalistic work in this way? Did the "lettered lamp" never shine over the page where the greatest of Greek poets puts his indelible stigma on self-praise—

*ἐναισίμους
'Ανεῖν, παρ' ἄλλων χρητὸς ἐρχεσθαι γέρας?*

But if Mr. Austin has been in some measure affected by the moralising egotism of a mood to which Wordsworth was not seldom given, he has repeatedly caught an echo of Wordsworth's clearer note (Prelude, v. 15-17)—

"... Though my verse but roam the air,
And murmur 'mong the trees,
You may discern a purpose there,
As in music of the bees.
Hence too it is, from wintry tomb,
Where earth revives, and when
A quickening comes to Nature's womb,
That I am born again.
I feel no more the snow of years;
Sap mounts, and pulses bound;
My eyes are filled with happy tears,
My ears with happy sound."

This is Wordsworthian, both in manner and metre; but imitative work is rarely so fresh and vigorous, so little alloyed with the mediocre elements of the original.

It is very observable how Mr. Austin's imagination kindles at the presence of either of two themes—Spring and Italy; and the former particularly in its English—not, as might be expected, its Italian—aspect. The "Defence of English Spring" (pp. 47-61) is delightful, and the more so that its origin seems so very unpromising. It is an answer, in verse, to a piece of shuddering prose from the *Pall Mall Gazette*, complaining of the unreality of our language about spring. "No one," we are told, "who took his language and his ideas direct from Nature could ever dream of holding up, as the model of a delicious climate, that alternation of swirling,

dusty nor'-easters and boisterous, drenching sou'-westers which we in England recognise as spring." It is certainly difficult to argue with a man who can see no beauty if he runs the least chance of being cold or wet, and a less promising controversy can hardly be imagined. But Mr. Austin is an Arcadian, *cantare par et respondere paratus*, and his lyric refutation is more than his antagonist deserves. Showers—what do the spring showers matter?

"They are but April skirmishers,
Thrown out to cover the advance
Of gleaming spear and glittering lance,
With which the sunshine scours amain
Heaven, earth, and air, and routs the rain.
See how the sparkling branches sway
And, laughing, shake the drops away,
While glimmering through, the meads beyond
Are emerald and diamond.
And hark! behind baptismal shower,
Whose drops, new peared on leaf and flower,
Unto their infant faces cling,
The cuckoo, sponsor of the Spring,
Breaks in, and strives, with loud acclaim,
To christen it with his own name."

And oft you may, when all is still,
And night lies smooth on vale and hill,
Hear him call 'Cuckoo!' in his dream,
Still haunted by the egoist theme."

This is to bring to the contemplation of spring-time a heart that listens and receives, not a mere woeful longing for a great-coat, respirator, and hot-water bottle.

It may seem ungrateful to pick small holes in a gift so full of grace. But there is something in the "fatal facility of the octosyllabic verse" that betrays even practised hands into ugly lapses. Whatever authority there may be for its use, "apotheosized" (p. 54) is bastard Greek, not English; and even Conington's famous slip (Aen. ii. 230),

"To harm with impious steel
Those planks of consecrated deal,"

becomes poetry itself compared to Mr. Austin's description (p. 57) of one vernal sight—

"See! the lambs kneel, that they may tug
The better from their mother's dug."

This is surely the rattle of fire-irons coming athwart spirited music.

Some misunderstanding also has arisen on p. 25. The second line of stanza 5, standing, apparently, by itself—

"Has back just sank below the brow,"

seems to make neither grammar nor sense.

The poems inspired by Italy are all good, and one or two charming. "At San Giovanni del Lago" reminds one, especially in the last few stanzas, of Heine and his little maiden of the Harz: it is a simple but beautiful poem. So is the "Letter from Italy" (pp. 132-141). Will not Mr. Austin some day erase the "creaking couplet" that concludes p. 134? With one or two slight prunings, this would rank high among poetical letters (p. 136):

"How looked Florence? Fair as when
Beatrice was nearly ten;
Nowise altered, just the same,
Marble city, mountain frame,
Turbid river, cloudless sky,
As in days when you and I
Roamed its sunny streets, apart,
Ignorant of each other's heart,
Little knowing that our feet
Slow were moving on to meet,
And that we should find, at last,
Kinship in a common Past."

"At Delphi" is an ambitious poem, but

leaves a sense of inadequacy to its subject. This is partly owing to the terribly "Rule Britannia" nature of its conclusion. Whatever voice of Apollo or the muses still haunts the place where, long ago, *χαμὰ πῆρε δαίδαλος ἀλλὰ*, it is hard to fancy that it had nothing better to say to a wandering Englishman than to compliment him on our contemporary poetry. This blunt, heavy touch mars several of Mr. Austin's poems. But in the last sonnet no such fault can be found (p. 142):

"LOVE'S HARVESTING.

"Nay, do not quarrel with the seasons, dear,
Nor make an enemy of friendly Time.
The fruit and foliage of the falling year
Rival the buds and blossoms of its prime.
Is not the harvest-moon as round and bright
As that to which the nightingales did sing?
And thou, that call'st thyself my satellite,
Wilt seem in Autumn all thou art in Spring.
When steadfast sunshine follows fitful rain,
And gleam the sickle where once passed the
plough,
Since tender green hath grown to mellow grain,
Love then will gather what it scattereth now,
And, like contented reaper, rest its head
Upon the sheaves itself hath harvested."

E. D. A. MORSHEAD.

West African Islands. By A. B. Ellis.
(Chapman & Hall.)*

THE reader of travels now knows what to expect from Major A. B. Ellis, whose fifteen visits to Western Africa, extending through as many years, have already produced three volumes, the picturesque and outspoken *Land of Fetish* being the favourite. He can tell an over-dry tale in a pleasant way, with a sub-acid humour which disguises insipidity, his *mise-en-scène* and his "topothesia" are artistic, and he has scant respect for the commonplaces of travel. He cherishes a rooted aversion to everything which, as the late Lord Strangford used to say, "wears a black coat, natural or artificial": his civilised negro is an anthropoid ape, his missionary is a "bird of prey," and one of his bishops is a "flibuster"—a counterpoise to the Protestant "buccaneer-bishop" of whom we heard some years ago.

Yet Major Ellis has this time undertaken a thankless task. Firstly, since the export slave-trade has died the death and the Middle Passage is no more, the home public has lost all interest in its ugly black pets; it feels that its philanthropy has shown a very silly side—e.g., at Sierra Leone, an admirable specimen of what a negro colony ought not to be—and it wants to hear no more of the matter, unless highly-spiced with battle and murder and German annexation. Secondly, the *West African Islands* all want, Madeira excepted, scientific monographs; but as subjects for popular description they are without novelty or interest—dry as summer dust or foul as winter mud.

The author begins south with Saint Helena, and works northwards ending at Madeira; and the reviewer has only to follow him. Saint Helena, not called from the "wife of Constantine" (p. 8), the Crown colony of severe type, where cherries refuse to grow and the busy bee to breed, is "down in its

luck" at present, and will not recover till a sanitarium of hot dry air is required for "pest-house" colonies of Europeans on the opposite coast of Africa. Major Ellis is justly severe upon the ungenerous and ignoble conduct of a British Government which sent a Napoleon Buonaparte to eat his heart out in this hole. Very good fun is extracted from the cinder-heap Ascension Island, that most priggish of naval stations, officially known as "Tender to H.M.S. *Flora*"; but the author did not see its sole specialty, the "gull-fair"; and he neglects to caution visitors against its nervous, "jumpy" climate. Many an honest drinker from The Bights has died at Ascension of D. T. within the month. Of the natives and their language in Fernando Po, a writer should not treat without reading the *Introduction to the Fernandian Tongue*, by John Clark (Berwick-on-Tweed, 1848). The British trader called the people "boobies," from the word "bobe" (a man), by which they often designate themselves; and the dialect, instead of having "some slight affinities with one or two South African languages" (p. 59) is an excellent specimen of the great linguistic family, for which the trivial name "Bantu" has been thoughtlessly accepted, apparently because proposed by a German philologist. He is quite right about the inordinate consumption of consuls at Fernando Po, but the story he tells about their pensions (p. 81) is a "Joe Miller" originating with the first judge at Sierra Leone. He sharply characterises the style of conversion hitherto adopted: "What they want to do is to make them Methodists first and Christians afterwards." Major Ellis seems only to have landed at the Isles de Los ("of the idols"), where some curious fetish remains are found; but he has not forgotten to recount how, in the old Napoleonic Wars, the British frigate *Amelia* first attacked and then ran away from a Frenchman of her own size, the *Aréthuse*.

The next chapter touches at St. Vincent, Cape Verde, perhaps the least interesting island colonised by man. But why not call it by its right name, São Vicente, and, above all things, why "San Antonio" for Sant' Antão? Apparently the Englishman will never make the distinction between Saint Anthony the Hermit (*Antão*) and St. Anthony of Lisbon-Padua (*Antonio*). And, again, why "Senoras and Senoritas" (p. 133) for "Senhoras and Senhorazinhas"? Have our people made up their minds that Spanish is identical with Portuguese, German with Dutch? In days gone by a magazine editor who spoke, as the Spaniards say, five words of bad Castilian, proceeded to correct my good Portuguese. Nor can I agree with Major Ellis (p. 140), "Strip a Spaniard of all his good qualities, and you have a Portuguese." I should say, "Strip a Portuguese of his thrift and industry, supply him well with bigotry and a pride which has nothing to be proud of, and you have a Spaniard."

The break-neck ride over the mule-paths of Sant' Antão is good, and so is the execution of "Citizen Louis Bonaparte" at Goree (p. 180); but we must simply decline accompanying Major Ellis to Grand Canary, Tenerife, and Madeira. All he tells us about them is as well known as the mysterious regions of Belgrave Square and Waterloo Place. As regards Madeira, I am glad to

hear that the excellent "Handbook," first printed in 1851, is being re-issued by the surviving collaborateur, the venerable Mr. J. Y. Johnson.

Major Ellis has been extraordinarily incurious about his "proper names," and similar minor details. We have, for instance, Fernas do Poo (p. 53) instead of Fernam de Póo; Mongo-ma-Lābah (p. 80) for Lobah; "the Alimani or king" (p. 184) for the "Alimamy" (Al Imām = antiates or fugleman in public prayer); Anagra (for Anaga) Point (p. 234); and "Bangor's Pillar" for Banger's Folly (p. 313). One is curious to know when "kous-kous" (kuskusu) became a damper (p. 192), what language *no combran* belongs to (p. 161), and who may be "His Eminence the Pope" (p. 194).

In taking leave of Major Ellis, I allow myself the liberty of suggesting that a man who can write so well upon the lighter scenes of travel, should find some subject better adapted to his specialty than these most uninteresting West African Islands; and I think that every reader of this volume will agree with me in wishing that the writer would try his hand on a work of fiction pure and unadulterated.

RICHARD F. BURTON.

Prolegomena of the History of Religions. By Albert Réville. Translated by A. S. Squire. With an Introduction by F. Max Müller. (Williams & Norgate.)

PROF. MAX MÜLLER'S Introduction is, of course, charmingly written, and with many readers will serve as the best of testimonials. But the subject of the work is so new, and there are so many who look upon it with an evil eye, that the mediation of a friendly reviewer may not be inopportune. It is worth while, then, to remark that if religion is the "soul of history," it must be a meritorious work to show that the non-Christian religions are not an "inextricable jungle of falsehoods and absurdities." What Carlyle desired the Hibbert Lectures are beginning to accomplish for the increasing public of unprofessional students. The *Prolegomena of the History of Religions* worthily follow the Hibbert Lectures of last year, in which the same author describes the spirit in which he writes in the following terms:

"It is as a historian that I am here, and as a historian I shall speak. Only let me say at once that, while retaining my own very marked preferences, I place religion itself, as a faculty, an attribute, a tendency natural to the human mind, above all the forms, even the most exalted, which it has assumed in time and space" (pp. 5, 6).

This should be carefully remembered, as there is a very common prejudice against the historical study of religions, arising out of the assumption that the would-be historians have no religion or no theistic religion of their own. M. Réville is clearly not one of those referred to by Prof. Wordsworth in his learned and profoundly Christian Bampton Lectures on the same subject in the sentence, "Their mouths are full of the various ways in which other men have thought of God, but He Himself is far from their own thoughts" (*The One Religion*, p. 73). It is true that M. Réville gives us in neither book a confession of

* Happily without illustrations, but wanting a sketch-map to orientate the reader.

faith; but we may assume that, like Prof. Max Müller (H. L., 1878, pp. 377-8) and Prof. Rhys-Davids (H. L., 1881, pp. 6, 7), he is opposed to the plausible theory that the perfect religion would combine that which is common to the various higher religions, and that like the former, he admits that in the future each "crypt-worshipper" will retain "his own pearl of great price." It is also true that he regards religion as a natural development, and Prof. Wordsworth's widely-read book may lead some to suppose that this implies on M. Réville's part the exclusion of "the action of God." But it should be remembered again that the needs of the historian are different from those of the worshipper. We are bound to investigate as if man made his own religion, even though we believe in our heart of hearts that unaided man could not do this great thing. M. Réville, in fact, expressly says that "the love of religion within oneself is indispensable to the historian of religions" (Preface, p. vi.), and tells us that he "could accept the idea of a primitive revelation," in a sense which leaves perfect freedom to history, i.e., if it is understood to mean that "man was so constituted that, arrived at a certain stage in his psychic development, he must become sensible of the reality of the Divine influence" (*Prolegomena*, p. 36). These few lines may strike some as slightly unsympathetic; but M. Réville is writing in France, where an external conception of revelation may be still more prevalent than in England. Coleridge's words, "There is no religion except that which is revealed," would not to an English Hibbert Lecturer appear intrinsically hostile to criticism. It may be added that our author preserves the same attitude of complete neutrality towards both theology and philosophy. See the interesting chapters headed respectively "Theology" and "Philosophy."

Although M. Réville speaks with subdued irony of the Protestantism which "made the Bible a miraculous writing," he compensates these hard words by very suggestive remarks on the happy consequences of "this ardent study of the Bible" (p. 173), just as he makes up for his moral censure upon the intolerance of the Church by a thoughtful suggestion on the new regard for truth which was the legacy from this intolerance (pp. 168, 226). Altogether the work is very French; in saying which no disparagement is intended. It is the reproduction in a condensed form of lectures delivered by the author at the Collège de France in the year 1880. The subject was new, and the professor was starting full of energy on a new career. His audience was not composed, as might have been the case in England, of students bent on diving into the depths of knowledge, but partly of specialists and partly of the seekers of "some new thing." The book consists of two parts of unequal extent—the first in which religion is defined, the hypotheses of a primitive revelation, a primitive tradition, and other *a priori* theories of religious history discussed, the principle of development set forth as the key to religious history and a classification of historic religions attempted. M. Réville does not confine himself to the higher religions. He would probably agree with Mr. Tylor that "the divisions that have

separated the great religions of the world into intolerant and hostile sects are, for the most part, superficial, in comparison with the deepest of all religious schisms—that which divides animism from materialism" (*Primitive Culture*, i. 453). He remarks, however, that even animism implies too much reflection for it to be considered as the most primitive religion. "There must have been first," he says, "a worship of nature or of natural objects personified; thence came animism, which among certain races, and especially among negroes, was condensed into fetishism" (pp. 92-3). He notices the extreme difficulty of classifying religions, the highest polytheisms and monotheisms presenting evident traces of animism and fetishism. (It is noteworthy that M. Réville does not ascribe to Christianity the retention of polytheistic elements.) It may be questioned, however, whether the somewhat mechanical division into monotheistic and polytheistic religions will be acquiesced in by the historian as final. Indeed, M. Réville only accepts it for convenience sake, and proposes another classification of the higher religions as religions of law (six in number, viz., Confucianism and the religion of Lao-tse, Mazdeism and the religion of the Avesta, Judaism, and Islamism), and religions of redemption or deliverance (Buddhism and Christianity).

The second part is longer than the first, but enters less profoundly into the questions raised. There seems to me to be a disproportionate amount of Biblical criticism and ecclesiastical history, and, on the whole, M. Réville rather discourses on his subjects than discusses them. He is, however, honest in confining himself to what he knows—omniscience would be the ruin of a book like this—and his subjects are well chosen, especially those which open the list—the myth, the symbol and the rite, the sacrifice, the priesthood, prophetism. On one point M. Réville seems hardly satisfactory. Symbols are certainly very often merely weakened forms of myths; it is too much to say that they are merely produced by "analogical intuition." Sacrifice is well explained as the almost universal means of realising the union of man with the Divinity. Priesthood is, perhaps, more adequately treated than prophetism. What is gained from a historical point of view by telling us that "prophetism is not dead; it expands and is perpetuated under other names"? But our author retains the habits of the preacher, and we can but congratulate his audience. After Prophetism comes Religious Authority; M. Réville speaks of the irresistible tendency to centralise, issuing in the Roman Church in Papal Infallibility; he does not, as an English writer in 1885 would, refer to the same tendency in Islam. The concluding sections on Theology, Philosophy, Morality, Art, Civilisation, and Science, are admirable discourses, penetrated by the breath of boundless hope and courage. The translation is fairly executed, though such slips as "the majestic *Somme* of Thomas Aquinas" sometimes annoy the reader. T. K. CHEYNE.

Algernon Sidney: a Review. By Gertrude M. Ireland Blackburne. (Kegan Paul, Trench, & Co.)

IN the preface to this book Miss Blackburne expresses herself with so much modesty and diffidence that we are encouraged to hope that she will take in good part the criticisms which we feel it our duty to make. Every page of her writing bears evidence of enthusiasm and labour; and we, in our turn, do not desire to call attention too forcibly to the defects with which, from a literary point of view, her work is disfigured. We will only say that we consider that she has a just ground of grievance against her friends and her publisher, for permitting a work which on the face of it ought to be important and instructive to come into the world so marred by slipshod and ungrammatical writing, moral platitudes, irrelevant parentheses, and inaccurate quotations, that the reader is unable to fix his attention upon the information which it is sought to convey. Probably the conscientious study of some suitable English grammar, and a good many half-hours with the best authors, would secure the avoidance of these defects in the future. As it is, however, we claim our share in the grievance; for so distracted were we by the constant necessity of noticing these vagaries, that, in justice to Miss Blackburne, we were compelled to read through her book a second time before feeling ourselves in a condition to form a judgment upon the matter which it contains. The result of our studies has been to confirm our view that Miss Blackburne had determined, at whatever cost to herself and her reviewers, to write a book. We could wish that she had seen her way to choose another subject; for in spite of industry and earnestness of purpose, it is only in a certain sense that she can be said to have acquired any adequate knowledge of the complexities of what is, perhaps, the most difficult period of English history—complexities without a due understanding of which the aims and the actions of many of its prominent figures, and especially of Algernon Sidney, remain dubious and obscure. When we find her asserting that Charles "was the cleverest king that ever sat on the throne of England, and that the proof of this lies in the deepest disgraces of his reign—his intrigues with Louis, and his victory, single-handed, over his own people"; when we are told that Danby "gave the crown a mortal hurt which it never recovered from"; that "the Exclusion Bill was pressed forward by men of all parties, though none supported Shaftesbury"; when we suddenly, without a word of explanation, have the Irish question condensed into the following oracular phrase:—"Parliament did not trust Lord Inchiquin," and when we hear that "the Orange (or Lowestein) party eventually forced a war upon England (1652)," we are forced to the conviction that a sceptical, or indeed a suspicious, frame of mind best becomes one of Miss Blackburne's readers.

To the unfamiliarity which we have noticed with the intricacies of the English tongue, and to an imperfect grasp of historical facts, Miss Blackburne adds a warmth of heart and a capacity for hero-worship which help to place obstacles in her path. "Did Algernon Sidney take money from Barillon?" she asks; and straightway proceeds to demolish the direct evidence which exists to show that he

did, by an appeal to our feelings, or, as she would perhaps say, to our sense of probability. A reference to his portrait would be as conclusive. In the same way, deciding it to be impossible that Sidney could err, she passes lightly and without a word of adverse comment over the fact, which she does not dispute, that but a short while previously he had engaged to Louis to bring upon his country all the horrors of civil war if that monarch would furnish him with 100,000 crowns. Miss Blackburne in fact here, as in many other passages, shows a tendency not unusual in hero-worshippers to make her facts square with her wishes.

Putting details aside, however, there is a good deal in Miss Blackburne's work that is of interest. The sketch of Sidney's position with regard to the other members of the family is vivid and sympathetic; while the following passage, describing Sidney in 1676, is one of the best in the book:

"But when we think of Algernon Sidney returned from his 'half burial,' his temper a little spoiled by his misfortunes, his sensitiveness increased by ill-success, but withal his patriotism as pure as ever, his only hope that 'the cause should prosper, though not by him,' we say that here was one who deserved pitying respect. The men who were to make the cause prosper, the means they were to use, and the ends they wanted, were repugnant to him. He moved among a crowd of younger men, who looked on the last great survivor of the most purely political movement of the age with respect due to his age and temper, but not in the least comprehending his aims. His thoughts seemed to move in a wider circle than theirs. He was to them, though they knew it not, the man of understanding, who will only interfere in politics in his own city: that 'which is confined to the region of speculation; for I do not believe it is to be found anywhere on earth.'"

Throughout her book Miss Blackburne, as might be expected, does full justice to the fearlessness and independence of Sidney under the harassments of straitened means and political suspension. She realises fully that at a time of which Marvel declares, "We are all of us venal cowards except some few," Sidney was one of the few, and that through a sky heavy with private and public dishonour his star shone on the whole with a pure and steady light.

OSMUND ATRY.

A Fly on the Wheel. By Col. T. H. Lewin. (W. H. Allen.)

UNDER this modest title Col. Lewin has produced a book very superior to the ordinary Anglo-Indian "Reminiscences," &c., of which, to say truth, the reading public has had somewhat too much of late. Not that the material is altogether different from that of which these books usually consist: the Mutiny, tiger-shooting, snakes, and native servants, enter freely into the gallant Colonel's *farrago libelli*. But these subjects are treated with a vivacity which goes far towards redeeming them from the disrepute into which gratuitous repetition has naturally brought them. Moreover, there is in his book a commendable absence of ascendancy airs, and the still more unpleasant patronising of Asiatics which one is accustomed to find in

the recollections of retired officers and their wives; while the later chapters, treating of the almost unknown hill-tribes who hold the forest countries between Eastern Bengal and the Chinese empire is a new and valuable feature.

The writer is evidently a man of no ordinary character, uniting a genuine and enthusiastic love of daring adventure to an eye for natural beauty and a mind of considerable gifts and acquirements. The drawings, without any artistic pretension, are spirited and useful; the descriptions of scenery are original and observant; and the author is, further, a lover of music and an accomplished linguist. For eight or ten years he saw almost continuous service in Chittagong and the hilly tracts to the eastward. Beginning as a police-officer, he rose to the charge of a district, and, in 1871-72, accompanied the column under Sir Charles Brownlow which took part in the Lushai campaign. To a colloquial knowledge of the Hindustani and Bengali tongues he added an acquaintance with several dialects of Burmese. He was thus enabled to move among the people, adopting their costume, eating their food, and living in their houses. The culinary *répertoire* seems more novel than appetising, including shoots and roots of wild plants, frogs, gekko-lizards, young dogs, and a sort of grub extracted from decaying vegetation, which is considered a delicacy of exceptional merit. The method of fattening dogs for the table deserves a passing record. You take a young puppy and feed him for a couple of months on rice and curds. On the day when he is to appear at dinner you give him his last feed; as soon as it is eaten, you knock him on the head, and, when you cook him, the rice he has just swallowed forms his stuffing.

To appreciate the extraordinary labours that a civilised and cultured English gentleman can go through it is necessary to read the book. Walks barefoot through jungle in which the underwood has to be cut at every step, voyages in hill-streams where the boat has to be steered over rapids where one wrong stroke of the paddle at the stern will send all to perdition, serpents falling on your shoulders, tigers crossing your path, treachery from subordinates, and ambuscades of bold mountaineers provided with fire-arms: these were among our author's experiences. When he got back to his office, he was still not free from perils, for the chiefs whose irregularities he sought to correct consulted astute Bengali scribes, by whose advice and assistance they kept up a fire of petitions to the authorities at Calcutta, which often brought trouble of a most serious kind, in which position, credit, and honour were involved. One of the official inquiries to which Col. Lewin was subjected led to a tragedy of the saddest kind, which—the parties being now dead—is told with some detail in chap. x.

One of the most amusing stories in the book relates the circumstances in which the author first made the acquaintance of the formidable hill-potentate Ruttun Poia, who became such an active ally in the expedition of the right column in the Lushai campaign. It is so good a specimen of the Colonel's mingled audacity and resource that a short abstract may be here given without unduly discounting the value of the complete narrative.

Ruttun Poia, then, was sullen, while his friendship was deemed deserving of unusual effort. The colonel accordingly repaired to his hill fastness and insisted on an interview. This was granted, but proved unsatisfactory. The chief remained obdurate, and all was going as ill as possible. The Colonel now resolved to risk his last trump. Calling for a musket, he asked if they had ever seen a sahib who could be shot; adding that all deputy commissioners were clothed by the Government with invulnerability before being despatched to take charge of districts like theirs. He then produced a marked bullet, which, after showing it to all, he affected to put down the barrel, having first charged it with powder. He really substituted a bullet of blackened wax which he had provided for the purpose, concealing the leaden missile in the palm of his hand, after the manner of conjurors. He then returned the musket to its owner, and, taking his stand ten paces off, covered his face with his hand, and called on the Lushai to fire. As the flash appeared he removed his hand, when the ball was seen between the colonel's front teeth. From that moment the chief and his men were his inalienable admirers and friends; and, when the expedition took place, helped him to recover Mary Winchester, the English child whom the Lushais had stolen, and to bring the war to an early and most satisfactory conclusion.

The name Lushai is derived from two words, *Lu*, "the head," and *sha*, "to cut"; these interesting savages having a special knack of decapitating enemies with one blow of their inseparable *dao*, a weapon somewhat resembling the Nepaulese *kukri*. They are to a certain extent cannibals, as their braves are in the habit of eating morsels of their enemies' hearts and livers to promote courage. It does not, however, appear that these delicacies form part of the native diet of which Col. Lewin was called upon to partake.

Enough has been said to justify the opening sentences of this notice. Col. Lewin's life has been one of exceptional hazard and novelty even among the records of our adventurous race; and the manner in which it is narrated is as free from banality and conventionalism as are the incidents of which it is made up. It is unpleasant to have to add that, after all his various and useful services and sacrifices, he has received no honours, and his only reward is a "pension of £190 a year." Yet he is not embittered; writes in a spirit of manly cheerfulness; and concludes with a high eulogium on the Government whom he has so long served with so little profit to himself. Modestly calling himself "an unprofitable servant," he admits that "the Indian Government is perhaps wise in not encouraging individual effort." It does not, he says (quoting high authority), require "personal influence. What it wants is men who will obey orders." But with his last words he extols that "impartial justice, perfect tolerance, and respect for personal freedom which characterise it . . . making it, in spite of many blunders, misunderstandings, and mistakes, the strongest and wisest Government . . . that the world has known." Such a sentence does honour not only to the Government, but to the spirit of its soldier-civilians.

H. G. KEENE.

NEW NOVELS.

In and Out of Fashion. By Richard Davis Perry. In 3 vols. (Hurst & Blackett.)

Once for All. By Max Hillary. In 3 vols. (Sampson Low.)

A Man of his Word, and other Stories. By W. E. Norris. In 3 vols. (Smith, Elder, & Co.)

Kate Valliant. By Annie Thomas (Mrs. Pender Cudlip). In 3 vols. (F. V. White & Co.)

Boulderstone. By William Sime. (Maxwell.)

Ups and Downs in Bumpkin's Mayoralty of Broughtown. By David Sinclair. (Manchester: J. Heywood & A. Heywood & Sons.)

THE first part of *In and Out of Fashion* details the struggles of the Church, as represented by the Rev. Arthur Pitman, and the Army, as represented by Colonel Wemmiss, to secure the affections of the heroine, Maggie Delamere. In the outset it seems as though the Church militant would become the Church triumphant, but it is only for a time. Fate plays it rather low upon poor Pitman, who is beaten in the struggle, and finds that he has only been making the running for the Army. The parson is really a fine fellow, and behaves most magnanimously, championing the cause of his cousin Maggie when the clouds gather thickly round her head, and actually paving the way for the ultimate triumph of the Colonel. The second and third volumes are occupied with the machinations of two contemptible adventurers, who endeavour to ruin the character of Miss Delamere and to secure the Colonel for the female plotter. There is a pretty warm time all round for every one of the characters, and it seems at a given point as though villainy must succeed; but righteousness intervenes through its chief apostle, Mr. Pitman, and some others, and there is a general *bouleversement* of devilish tactics. Maggie, who is the best character in the piece, gets her Colonel at the last, and is correspondingly happy for the time of severe trial she has passed through. Political questions form the staple of a considerable portion of the novel. Sir George Wemmiss is a pronounced Tory, with a rollicking inconsequence in his speeches, and a mixture of metaphor that is appalling. In these days of democracy, it is his one great wish to have ramparts raised against the intrusion of the lower ranks into the upper. His life's object "is to throw down this feeble erection of anarchy, to turn aside this unblushing stream of Radicalism, and to build up again, in still more magnificent proportions, the wall of constitutionalism, to set flowing again, in still more overwhelming floods, the grand river of Conservatism." Sir George is rather bewildered in his rhetoric, what between his efforts as a State builder on the one hand and a State turncock on the other. He is terribly exercised over the deeds of Mr. Gladstone, Mr. Chamberlain, and Sir Charles Dilke. There is a considerable amount of fun in these volumes, some of it very passable satire, and some of it only farce. But Mr. Perry has a quick eye for the bearings of current events. His name is new to us; and although we cannot say that this is altogether a good novel, there

is evidence enough that the author could produce one with care. We have certainly come across many worse novels than the present, in which readers will find not a little entertainment.

If the second and third volumes of *Once for All* had been equal to the first it would have been a work to do credit to most of our living writers of fiction. The author's talent does not consist in weaving a deep plot, but in dealing with character, and also with certain phases of nature. In the earlier part of the story there are things which are distinctly good and suggestive, and also many happy individualising touches in connexion with the leading persons in the narrative; but afterwards there is a considerable falling off. It is as though the author had made an effort, and had not been able to keep up to his best. The story fails in construction too, for in the opening we have a vigorous description of several Scotch characters, and from the prominence given to them, we expect to hear a good deal more of them, but subsequently they fall almost entirely out of the story. Yet the author is never dull, and his average writing is better than that of many novelists. His heroine, Yetta Graham, evokes a deep sympathy, both on account of her love troubles, and also on the ground that she is struck blind during a thunderstorm. We feel somehow that her sight will be restored, but it is not until quite at the end of the novel, when she is made happy with Robert Ardwell, who is also a striking and sterling character. One or two morsels we must quote. An old Scotchman, describing a compatriot, discounts his chances of Heaven very severely. "I hae mair opinion o' the Almighty's discreemination, nor to think that siccan a ne could sit in the company o' decent saints." James Milligan, an old coachman, is quite an original. He has "nae kythin' to them strolling players and musicians. They are a' in league with Satan more or less." Of a certain youth he says: "It's a fair disgrace to hear a man take God's name in vain, as if he were as intimate wi' Him as he is wi' His enemy the deevil." Mrs. Flint, alluding to Ardwell's musical talent, remarks that "he plays most beautiful, and he can make tears come into your eyes, just as a thaw can make a' Natur' weep." Ardwell's description of Yetta is very beautiful; but we have only room for a brief extract: "Every motion seemed to him more exquisite than music. Her grace was a kind of music to the eye. He began to think the ear an inferior organ since he had seen her." A canny old Scot says to his wife: "I never kent a woman that could reason, and that was why they were tauld to hand their tongues in the congregation, Betsy. Ye ken nae mair about politics than I do about navigation, and I wouldna' care to be on board the ship I had to steer, that's a'." We had marked a vivid description of a thunderstorm for quotation, but must forbear. In his present story, the author labours, as already intimated, under faults of construction; but the work as a whole affords evidence of unusual promise.

There is a good deal of vivacity in the sketches which go to make up Mr. Norris's

three volumes. The title-story, *A Man of his Word*, is the most humorous. We will hope that the vulgarity of Mr. Hobday, the rich tradesman who aspires to represent his native town in Parliament, is a little exaggerated. Of course, like all such upstarts, he is represented as a Radical. But, empty as he is as regards intellect, he is not altogether a sham in the matter of feeling. He is extremely impudent to Lord Rye, and also to his son the Hon. Egbert Denne, who is a suitor for the hand of the parvenu's charming daughter, Josephine. "Call you the *Honourable* Denne, don't they? If they called you the Ornamental Denne, now, or the Unnecessary Denne, there'd be something in it; but why *Honourable*? that's what beats me." Hobday eventually gets some rough knocks, and an accession of wisdom thereby. But the mistake must not be made of supposing this man typical of a class. He simply belongs to the inferior order of self-made men, and these are in England decidedly in the minority. Much the best story of the whole series is a Norwegian one, "*Nils Jensen*." There is a touch of real pathos in the way in which this noble Norwegian sacrifices himself when he finds that the woman of his heart is in love with a German painter. The descriptions of scenery also in this sketch are exceedingly good, and far removed from mediocrity. There is a good deal of amusement to be got out of "*The Old Woman of the Sea*" and "*Mrs. Van Steen*"; and, indeed, all these short tales are very readable.

Mrs. Pender Cudlip's story, as a story, is interesting, and it reads smoothly; but how is it, when we want to find particularly selfish and soulless women, we have to go to members of their own sex for them? In this novel Blanche Carroll, who is almost as prominent as the heroine herself, is about the meanest and most contemptible schemer we ever met with. She could give long odds to Becky Sharp. She says to her old lover, just before her marriage with the new, "If it's any satisfaction to you that I should humble myself by confessing that I'm going to marry for money and place, that I don't care for the man I'm going to marry, and that I do love you whom I'm leaving, you shall have that satisfaction, for I confess it all." When her intended husband is brought home after an accident and dies, her exclamation is, "Why didn't he take care of himself till after we were married, and I was sure of all that wasn't entailed." She is a miserable creature to the last, and so are many of the other characters in these volumes. It is really surprising how an author can devote so much time to describing worthless people, with not an elevating thought among them. There is nothing helpful or suggestive in such books, and there is too much rubbish in the world already to incur the responsibility of adding to it. No candid reader could possibly say that he had got the least good out of the story before us, for example. We regret to have to say it, because Mrs. Pender Cudlip is certainly clever, and has no mean powers as a novelist; but do let her get hold of some real men and women, as Carlyle would say. Life would appear to be earnest and real to everybody but the novel-writers. By the way, our author should be a little stronger in

her history. She speaks of an Irish earl whose earldom dated from 1641. He had "got 'title and lands' from King James, and afterwards ratted and fought for the Commonwealth for money." He would be puzzled to get title and lands from King James in 1641, seeing that that worthy monarch died in 1625.

Mr. Sime is already favourably known for his *King Capital*, and his present story will also please for its vigorous and unconventional way of looking at things. The author is a man who can think for himself. He deals here in a trenchant way with ideas already in the air; and, whether readers agree or disagree with him, he is always worth attending to. This is worth something in a cheap and flaccid age.

There is a kind of rattling fun now and then in Mr. Sinclair's sketch of Broughton which many persons will no doubt find entertaining enough. The intrigues of provincial magnates, and their desire for notoriety, is not quite a new subject, having been handled by Dickens and other novelists; and, therefore, *per se*, there may not be much to be said for a new writer in the same field. But Mr. Sinclair will doubtless have his reading clients, who will discover renewed interest, under his guidance, in an old theme. What pathos there is in this book is unfortunately laid on with a trowel. The author is not a literary artist. G. BARNETT SMITH.

BOOKS ON ANCIENT HISTORY.

Lives of Greek Statesmen. By the Rev. Sir George Cox. (Longmans.) It is with some regret that we find Sir George Cox leaving unfinished his large and valuable *History of Greece* to write small school books. While, too, something may be said for teaching the essence of ancient history in a biographical form, there must be more life and interest infused into the biographies than this volume contains. We must gossip like Plutarch, if we can: there is no help for it. It is not with impunity that one tries to improve on Plutarch's literary methods. The late Mr. George Long, in a somewhat similar enterprise, trying to set forth the Civil Wars of Rome, was content to translate in sequence the proper Lives of Plutarch, with notes. In the present volume, which does not go below the Persian Wars, we have the points with which Sir George Cox has already made us familiar rearranged, but, unless we are mistaken, little that is new. Peisistratos is mentioned as having appeared before the archons (p. 62), and before the Areopagos (p. 44); of course, the latter is the right version. There seems to be some misprint in the following sentence (where the italics are ours): "The time had not yet come when only the Asiatic Ionians cared to bear the name, if indeed, they did more than answer to it themselves when so styled by their *Ionian* lords." On p. 210, "Chalkioichos" must be an error for Chalkioikos or Chalkioikos. The story of Peisistratos's restoration by help of the woman Phya, on which some doubt is cast at p. 42, seems to us more probable, or at least more plausible, from the somewhat similar story about the daughter of Epigethes told in Plutarch's "Aratos," c. 32.

The Agricola of Tacitus: a Translation. (Kegan Paul, Trench & Co.) We have great pleasure in welcoming a translation of no ordinary merit. It does not aim at exactitude: it gives a very free rendering. It is not altogether free from small oversights, as in naming Otho's brother

Salvius Titius instead of Titianus. But it is readable and spirited; and, which is more, it has a distinct character. It has neither the tameness nor the "hideous fidelity" of some versions of classical writings. Literalness being thrown overboard, the translator has been at liberty to recast and rearrange his sentences, and the result is a happy one. It reads like an original composition in English, and has at the same time a strong flavour of Tacitus. The phrases from c. 30, "The last stronghold of liberty in the last of lands," and "Rich nations fall before their greed, and poor before their love of power," illustrate the neatness of the rendering as well as it can be illustrated without quoting such longer passages as the end of c. 41. The text followed is in the main Mr. George Andresen's edition of Orelli.

A History of the Romans. By R. F. Horton. (Rivingtons.) Mr. Horton's *History of the Romans down to B.C. 31*, as it ought to be called, contains five neat little maps and some judiciously timed references to them; but beyond this it is difficult to praise the book. It contains (pp. 328) too short and sketchy an account for even school use. The myths, to which schoolboys have an indefeasible right, are passed over. The course of events is for the most part traced, or rather told, too summarily. The attempt to make the outline clear and firm, leads to the taking too many things for granted. It is not right to tell people as if it was a known fact that "the pontifical college invented the names of magistrates," or to put down as known that the plebeians shared the assembly of the *curiae*, or to adopt without a word of caution Mommsen's theory of a two-fold assembly of the tribes. Nor can we accept without protest Mr. Horton's rhetorical style. It is fatiguing to read, and will be a very bad model for the young. His phrases, happy here and there, as when he says of reading Roman History, that "we are in a picture gallery of the dead, it is true, but it is in many respects our ancestral picture-gallery"—are much too fine. "The iron arms looked round their country" on one page, "the iron feet planted in Campania" on the next page, "the deep-bayed battle-cry born of the trackless forest of the Elbe"—are bad enough. It is irritating to find three metaphors for one thing on one page ("floods of fond fictions," "a mist of imaginary details," "false tinsel"—what, by the way, is false tinsel?) when the same thing has been already decorated with four metaphors beforehand; but it is more irritating when we come to confusion of metaphors, as "an overflowing scourge," or a metaphor which is misleading, as "the Aventine sacred to the genius of the poor." There was no need to put details into the account of the death of Cato of Utica, but if it must be done they should be correct. He did not, as any reader of Plutarch may see, "quietly remove the bandage and bleed to death." But indeed Mr. Horton's book is literally full of small inaccuracies. The *comitia tributa* did not assemble to vote on the Capitol. The real name of "Vitruvius Vacca, the Priver-nate," was Vitruvius Vaccus, and he was a native of Fundi. Kineas said the senate was like an assembly of kings, not of gods. Septimuleius, not Satuleius, mutilated the body of the younger Gracchus.

Sénèque et la Mort d'Agrippine. Par H. Dagbert. (Paris: Lechevalier.) M. Dagbert is not anxious to whitewash the character of Nero, whom he regards as quite capable of murdering his mother, but to prove that as a matter of fact he did not murder his mother. She killed herself after an unsuccessful attempt to kill her son; so that Nero's message to the Senate told the truth, though the suggestion of its purport to be found in Quintilian, viii. 3, is preferable to the fuller

version of it given by Tacitus. The rehabilitation of Seneca is the point to be secured by this correction of history. He was not the lover of Julia or Agrippina, and he never took any mean or undignified steps to procure his recall from exile; for in either case he would have lost, not perhaps the favour of the multitude, but certainly the approval of his own sect; and this approval he enjoyed to the end. The servile letter to Polybius is a forgery. He neither connived at the murder of Agrippina nor tried afterwards to cover the deed, since there was no murder perpetrated. In his line of argument upon this last point M. Dagbert follows Voltaire, many of whose, sceptical suggestions he adopts. His position must be divided for examination into its two sides: (a) Agrippina killed herself; (b) her son did not kill her, or at least all the circumstances recorded are for one reason or another incredible. For (a) he gives no evidence whatever; in support of (b) he makes some good points against the version or rather the discrepant versions of Tacitus, Suetonius, and Dion. These three authors give inconsistent accounts of how Agrippina came to be at Baiae; and they by no means agree on other details. Tacitus says Agrippina's own trireme was wilfully wrecked at Baiae to prevent her returning in it. Suetonius does not bear this out. Why too should she either go or return by sea for so short a trip, giving herself the trouble of embarking and disembarking, when a twenty-minutes ride in a litter would suffice and be far more comfortable? Anicetus, though he was a sailor, went from Baiae to Bauli by road. Moreover, the trireme constructed on purpose to fall to pieces is incomprehensible; and of what use was it, if the cabin roof, loaded with lead, was also arranged to fall in and crush the passengers? Why did the ship fail to come to pieces? What was to become of Anicetus and the crew if it had come to pieces? Why did the crew obey an order to drown themselves by throwing their weight on one side and upsetting the ship? How could their weight suffice to do this at any time? How could any weight suffice to do it when the oars were out and would stay the ship up? How could any secrecy be observed if Anicetus was sent with a large body of men to finish his crime on shore? Tacitus says the act raised general indignation against Nero and Seneca. Where is the proof of it? His own facts yield nothing but congratulatory addresses; and, which is stronger evidence against it, Thrasea Paetus spoke not very long after in the Senate *multo cum honore Caesaris*, and called him *egregius princeps*. The epigrams on matricide, which Suetonius gives must be put later, at a time when it suited the Flavian dynasty or earlier agitators that Nero should be incriminated. The words of Seneca in Tac. A. xv. 72 are only put into his mouth by Tacitus, and do not prove that he believes Nero to have killed his mother. But in this M. Dagbert is going too far. He is successful in showing that the circumstances of the death are very mysterious, and that the crime may not have been immediately known. He raises some doubt in us whether Seneca really knew at first that there had been a murder. But that it was never committed; that Seneca did not say something equivalent to the phrase in A. xv. 72; that the general consensus on the subject of the murder is worthless: this we can hardly believe. M. Dagbert admits too much when he admits that Nero might have killed his mother. If he might have done it; if before long he was universally supposed to have done it; if there is no other account of her death, except the improbable and unattested story about Agerinus: then we may accept the account, without committing our-

selves to its particulars, but without more suspicion than any remote story which gives circumstantial details and deals with unusual crimes must needs incur.

Perikles als Feldherr. Von Dr. Julius von Pflugh-Harttung. (Stuttgart: Kohlhammer.) Prof. Pflugh-Harttung's preface dwells with some complacency on his having worked in other fields of history and on his having acquired practical and theoretical knowledge of war by having served against France and by having read military books. Less real experience of war proved useful to Gibbon, and Prof. Pflugh-Harttung writes in a practical and unpedantic way. Nevertheless we think him unfair to Perikles. Admitting somewhat grudgingly the greatness of Perikles in other matters (he says he was a great "Bürgermeister," p. 112), he sets himself to work to destroy Perikles' military reputation. If Perikles was responsible for the battle of Tanagra, he is (the author says) to blame, since Athens had little to gain by a victory, and after a defeat might have been taken by a rapid march with the aid of the disaffected Oligarchs. That the Spartans did not thus follow up their success was fortunate for Athens, but does not justify her minister. But there is no proof that Perikles was responsible for a battle being fought. As to his campaign against Samos, it is said that he was wrong to divide his fleet and take part of it to meet the expected Phoenicians, since if the Phoenicians had slipped past him, they would, when united with the Samians, have destroyed the blockading fleet and then have come out again to destroy Perikles' detachment. And after all the terms of surrender were favourable to Samos. Not very favourable, we think; and such as they are they have been looked on as proofs of Athenian moderation rather than of Athenian weakness; while we might fairly credit Perikles with having taken means to ensure that the enemy should not slip past him unobserved. The affair of Korkyra, again, was, he thinks, mismanaged; for by sending so small a contingent Perikles really caused the enormous loss which befell the Korkyreans in the battle of Sybota, whereas a slightly larger force would have prevented there being any battle at all. This must have alienated the Korkyreans. Yet somehow the Korkyrean *demos* was not alienated, and the aristocrats do not count. Again, when the Peloponnesian War drew on, Athens being ready first should have struck first. She should at least have occupied in self-defence the passes of the Megaris. But this would have been an act of war. It would have broken the Thirty Years' Truce; and in the state of men's minds then prevailing it was well worth while to begin the struggle with clear consciences. The Spartans had to admit their offence in beginning, and, as they thought, to suffer for it. The same reason may have had something to do with the Korkyrean affair. There is more justice in Prof. Pflugh-Harttung's contention that the Peloponnesians ought to have been far more energetically harried from the sea than was the case. But then Perikles did not live far into the war, and part of the time he was ill or out of office. The definite facts against him, therefore, seem to reduce themselves to two: that in command of a large fleet and forces he did on two occasions, 456 and 430, effect nothing to speak of against the Peloponnesians. We should not, however, think too meanly of the destruction of Prasias. Probably, Drake was accused of effecting nothing when he singed the King of Spain's beard; and Aristophanes shows that people thought something about Prasias. The attempt on Epidaurus too, though it failed, cannot be called aimless, when we remember Thucydides' account of the importance of the town to Athens. At all events, Perikles did well not to send the plague among the enemy,

as our author seems to think he should have done. On the whole, we admit that if Perikles erred, it was on the side of caution, though it is an exaggeration to say that he was less anxious to win a battle than not to lose one. But considering that he did avoid defeat through a long military career, that Athens went from bad to worse when she passed out of his hands and ceased to follow his advice, and that his generalship was admired in his own time (Plut. Per. 18), we must decline to go with this new attack upon an established reputation. The helmet still remains no inappropriate ornament for his bust.

WE have received from Messrs. Kegan Paul, Trench, & Co. the third volume of the English translation of M. Duruy's *History of Rome* (edited by Prof. Mahaffy), which is issued, like the previous volumes, in two separately bound parts. It covers the period from the rise of Julius Caesar to the organisation of the empire under Augustus, where the historian has ample opportunity for indulging his political sympathies. We would specially notice the digression on the early condition of Gaul, which, as the editor remarks, must be scarcely less interesting to inhabitants of the British Isles than to Frenchmen. The illustrations, though uneven in execution, and not always satisfactory in selection, will always cause this work to be highly valued by those who attach importance to teaching history through the eye.

NOTES AND NEWS.

THE Delegates of the Clarendon Press announce as nearly ready, *The Plays performed by the Crafts or Mysteries of York on Corpus Christi Day in the fourteenth, fifteenth, and sixteenth Centuries*, edited from Lord Ashburnham's unique MS. by Miss Toulmin Smith. The text consists of forty-eight plays in poetry, and while adhering faithfully to the MS. has been made as comprehensible as possible for modern readers, a full glossary being appended. Facsimiles are given of the music accompanying one of the plays, which has been edited by Mr. W. H. Cummings. The Introduction contains extracts from the municipal records of York relating to the plays, including Burton's list of A.D. 1415; notices of other early religious plays performed at York; a comparative table of the cycles of English plays; and a list of all known plays or cycles, and places where they have been performed, in Great Britain.

MESSRS. SCRIBNER will shortly publish the official narrative of the Greely Relief Expedition, written by Capt. Schley and Prof. J. R. Soley. It will be illustrated by a series of photographs made by members of the relieving party.

MESSRS. BLACKWOOD's announcements include *The Founders of the American Republic: a History and Biography of Washington, Adams, Jefferson, Franklin, and Madison*, by Dr. Charles Mackay; *Poems*, by Francis Heywood Warden, with a notice by Dr. Vanroth; *Hugh Moore*; or, *What is Honour?* in 2 vols.; *The Transvaal War, 1880-1881*, edited by Lady Bellairs; *The Royal Mail: its Curiosities and Romance*, by James Wilson Hyde; and *Sport, Travel, and Adventures in Newfoundland and the West Indies*, by Capt. W. R. Kennedy, R.N.

THE Rev. Edmund S. Ffoulkes (Vicar of St. Mary's, Oxford) is about to publish a work on *Primitive Consecration of the Eucharistic Oblation*, which will deal as much with history as with theology, bringing to light several little-known facts relating to the ninth century.

MR. RICHARD JEFFERIES has been engaged in writing a new work, entitled *After London*; or, *Wild England*. The first portion of the book is named by its author "The Relapse into

Barbarism," the second part, "Wild England." Messrs. Cassell & Co. will be the publishers.

THE Rev. W. Cushing's *Initials and Pseudonyms: a Dictionary of Literary Disguises*, is announced for early publication by Messrs. T. Y. Crowell & Co., of New York. The work will consist of two parts: first, an Index of about 10,000 initials and pseudonyms, alphabetically arranged; second, about 6,500 real names of authors, answering to the pseudonyms, with brief notices—date of the writers' birth and death, &c. Arrangements have been made to incorporate in the work the material gathered by Mr. A. R. Frey, of the Astor Library.

WE learn from the *Independance Belge* that the French translation of Mr. H. M. Stanley's work on the Congo is to be published, not in Paris, but by Mucquardt, of Brussels, and the Belgian *Institut national de Géographie*. The German edition is to be issued by Brockhaus, of Leipzig.

MR. ROWLAND STRONG is issuing a series of reprints of English dramatic literature. The first of the series, *Otway's Venice Preserved*, has already appeared. The following are in preparation: Drummond's *Cypress Grove*, Congreve's *Double-Dealer*, Ben Jonson's *Bartholomew Fair*, Dryden's *Don Sebastian*, Webster's *Duchess of Malfi*. No alterations of any kind will be made in these reprints, the editor's object being to reproduce accurately the text of first or best editions. The original spelling and capitals, but not the long s's, will be retained. An analysis of the plot will be prefixed to each play. Applications for copies must be addressed to Mr. S. A. Strong, St. John's College, Cambridge, and must be accompanied by a postal order for 1s. 6d.

MR. T. FISHER UNWIN announces for publication early next month a new work, consisting of thirty original discourses, by Dr. Samuel Cox, the late editor of the *Expositor*. It will be entitled *Expositions*.

May's British and Irish Press Guide for 1885, which will be published immediately, contains much that will be of special interest for novelists and journalists. It will give a list of the newspapers in the United Kingdom which run serial stories, and the editor has spent much pains on verifying the dates of births and deaths, and amalgamations of newspapers, together with their various titular changes. The *Guide* will also contain a newspaper obituary.

MESSRS. JAMES NISBET & Co. are preparing for publication at an early date *A Commentary on Zechariah*, by the late Rev. Dr. W. Lindsay Alexander; *Communion Memories*, by the Rev. Dr. J. R. Macduff; *Metaphors in the Gospels*, by the Rev. Dr. Donald Fraser.

MR. ELLIOT STOCK is about to publish a cheap re-issue, at one shilling each, of his facsimiles of Walton's *Angler*, Bunyan's *Pilgrim's Progress*, and Herbert's *Temple*.

A SECOND edition is now ready of the new novel, *Some One Else*, by the authoress of *Proper Pride* and *Pretty Miss Neville* (Mrs. Croker).

A NEW novel, by Theo. Gift, will be published shortly by Messrs. Ward & Downey, under the title of *Lil Lorimer*.

MESSRS. WILSON & McCORMICK, of Glasgow, have in the press a new work of fiction from the pen of Mr. John Davidson entitled *The North Wall*.

MESSRS. CASSELL & Co. will publish in a few days a new American novel, entitled *Trajan*, by Mr. Henry F. Keenan. The author is well known in journalism, but has not hitherto attempted fiction. The work has been highly praised by Mr. W. D. Howells.

THE Bibliographisches Institut (Leipzig) announces a new work on Schiller's Life and Poetry, by Karl Hepp, with fifty illustrations. The author has consulted the books on Schiller which have been published to the end of 1884.

DR. D. G. BRINTON has in the press a work on *The Lenape and their Legends*, forming the fifth volume of his "Library of Aboriginal Literature." The volume will give the complete text and symbols of the "Walam Olum," with a new translation and an inquiry into its authenticity, by Dr. Brinton.

DR. JOHN BRADSHAW, Inspector of Schools, Madras, editor of Milton's poetical works, has in the press *An English Anthology from Chaucer to Tennyson*. The first edition will appear shortly in Madras, and a second will be published in the course of the year by Messrs. W. H. Allen & Co.

MESSRS. FIELD & TIER will shortly issue a new work on *British Railways and Canals, in Relation to British Trade and Government Control*, by a writer who assumes the signature of "Hercules."

Poor Papa! is the title of a lively American story which Messrs. Hodder & Stoughton are about to republish in a cheap form.

THE Incorporated Society of Authors have appointed as their secretary Mr. Alexander Galt Ross, of Caius College, Cambridge. They have exchanged their company offices in Queen Anne's Gate for rooms at 24 Salisbury Street, Strand, where the secretary may be visited and addressed on business connected with the society.

FOREIGN journals continue to be led into error by the practice of simultaneous issue of books in England and America. As we have before remarked, such errors are often almost unavoidable; but it is rather startling to find the *Magazin für die Literatur des In- und Auslandes* announcing the *Dictionary of National Biography* as published by Messrs. Macmillan & Co., of New York.

THE Society for the Promotion of the Study of General History has appointed Dr. Zerffi to deliver a course of thirty lectures on "The Historical Genesis and Evolution of Humanity," on Saturday afternoons, at the Royal School of Mines, Jermyn Street. In order to spread the study of general history, the society admits free all masters and mistresses of Board and other schools, and all students of the Science and Art Department.

WE have received the first number of a journal (we suppose intended to be published monthly) entitled *Parallax*. It is edited by Mr. John Hampden, the valiant champion of the theory that the earth is a circular plane. We are disposed to welcome the new periodical, as the professedly comic papers have been painfully dull of late. Mr. Hampden retains all his well-known ingenuity of vituperative expression: to call Sir Isaac Newton "a fanatical pantheist" is a happy thought which would certainly not have occurred to everybody.

A POPULAR edition of Signor Cesare Cantu's work on Alessandro Manzoni will be published to-day in celebration of the centenary of Manzoni's birth. It will have a new Preface, and will be illustrated by portraits of Manzoni and of his first and second wife.

THE Council of the Harleian Society have just issued to the members the first volume of the *Christenings at St. James's, Clerkenwell, from 1551 to 1700*, and the continuation up to 1754 will form vol. ii., and is nearly all in the press. The *Visitations of Bedfordshire* in 1566, 1582, and 1634, are now being issued to members, and that of Dorsetshire in 1623, is also nearly completed. It is proposed to

print the *Wardings* which have taken place at St. George's, Hanover Square, from the commencement of the registers, and Mr. G. Leveson Gower will edit the volume. The Registers of Christ Church, Newgate Street, are transcribed, and will shortly be put in the press.

M. EDMOND DE GONCOURT is a candidate for the chair of M. About at the Académie française.

THE MS. of Gen. Dembinski's memoirs has been offered by Herr Völker, of Frankfurt, to the national museum at Pesth for 4,000 marks. The work is said to contain materials of great value for Hungarian history.

A NUMEROUSLY attended meeting of the Penzance Natural History and Antiquarian Society was held on Friday, February 20th, the president, Rev. W. S. Lach-Szyrma, in the chair. The papers in the Natural History section read were "Two Cornish Phenomena," by Rev. S. Rundle; "The Wings of Insects," by Mr. Marquand; "Cornish Marine Shells," by Messrs. Tregellas and T. Cornish. The president read a paper on explaining mermaid legends, entitled "Nicholas Cola, the Man Fish," and a proposal was brought forward by Rev. S. Rundle for tabulating Cornish antiquities.

At the meeting of the Clifton Shakspeare Society held on February 28th, Dr. J. N. Langley read some "Notes on some Baconianisms in 'The Two Gentlemen of Verona.'" Papers on "Proteus," by Miss Emily T. Smith and Miss Florence Herapath, were read. The Society resolved to introduce into their work the plays in *British Dramatists* (edited by John S. Keltie, and published by Nimmo), and the doubtful plays in the Tauchnitz Series.

MAGAZINES AND REVIEWS.

THE most striking article in the March *Nineteenth Century*—we might say in any of the magazines of the month—is that by Lord Acton on "George Eliot's Life." Although the subject is one on which many able writers have been busy, nothing which has yet been written upon it can be compared, for insight and felicity of expression, to this remarkable paper. We quote the concluding sentences:

"There will be more perfect novels and truer systems. But she has little rivalry to apprehend until philosophy inspires finer novels, or novelists teach nobler lessons of duty to masses of men. If ever science or religion reigns alone over an undivided empire the books of George Eliot might lose their central and unique importance; but, as the emblem of a generation distracted between the intense need of believing and the difficulty of belief, they will live to the last syllable of recorded time. . . . Her teaching was the highest within the resources to which Atheism is restricted, as the teaching of the *Forresti* is the highest within the Christian limits. In spite of all that is omitted, and of specific differences regarding the solemn questions of Conscience, Humility, and Death, there are few works in literature whose influence is so ennobling; and there were people, divided from her in politics and religion by the widest chasm that exists on earth, who felt at her death what was said of the Greek whom she had most deeply studied—*αὐτὸν οὐκ ἔβλεπον πένοντες*." It is possible that many readers may doubt whether this is quite the right thing to say, but we think there can be no question that it is finely said.

THE *English Illustrated Magazine* contains a portion of the journal of Prince Edward and Prince George of Wales in South and West Australia, being an extract from the forthcoming volume describing their voyage in H.M.S. *Bacchante*. The interest of the journal, judging from this specimen, is chiefly that which is due to its authorship. Mr. Grant Allen contributes a paper on "The Primrose

and the Cowslip," which is charmingly illustrated by Mr. H. Ryland. Perhaps the most valuable article in the number is that by Mr. G. Simonds on "The Art of Casting in Bronze," which conveys a large amount of information in a peculiarly attractive manner. Mr. W. Minto's article on "Pilgrimages" is also very good.

LADY MARTIN ON SHAKSPEARE'S WOMEN.

MESSRS. BLACKWOOD announce a re-issue of Lady Martin's now celebrated critical and autobiographical essays on certain of Shakspeare's Female Characters, the collection to form one volume quarto, illustrated with portraits of the author (when Miss Helen Faucit), after the well-known originals by Sir Frederick Burton, R. Lehmann, and Richard J. Lane. To this we are enabled to add that hand-made paper is being specially prepared for the purpose, that the engravings are ready, and that the book may be looked for in about a month or five weeks. We have already, it will be remembered, taken note of these charming papers, which have from time to time appeared in the uncomfortable double columns of *Blackwood's Magazine*, and which it will be a luxury to re-read in fine type and upon large paper. Written in the form of letters, addressed to the late Mrs. S. C. Hall, Mr. Browning, Mr. Ruskin, and others of the author's friends, they treat of Ophelia, Portia, Desdemona, Imogen, Juliet, Rosalind, and Beatrice. The two earliest, "Ophelia and Portia," were at first printed for private circulation only; and it was from the columns of the ACADEMY that the outer world received a first intimation of that carefully-guarded secret. We cannot affect remorse for an indiscretion which ultimately forced the hand of the fair writer, and put the public in possession of so fresh, so graceful, and so interesting a contribution to Shaksperian literature. The title under which the collection is announced errs by the modesty of its claim. While professing to write only of seven of Shakspeare's women, Lady Martin does, in fact, discuss each play in turn, analysing the motives and idiosyncrasies of all the principal characters, entering into the development of every plot, and identifying herself not only with the heroines whom she erewhile impersonated, but also with Hamlet, Othello, Romeo, Mercutio, Shylock, Jessica, Hero, Benedick, and the rest of that immortal company. Nor is this all. She has more than once overpassed the poet's own limit of time and action, and, entering into her subject with such a simple intensity of belief as can only be possible in a great actor, she has imagined for herself the after years which Shakspeare leaves untold. She knows all about the kind of married happiness with which Beatrice and Benedick were rewarded; she realises the life-long friendship of Rosalind and Celio; she feels, as Portia, a wondrous tender pity for Shylock in his bitter solitude, and she depicts the gracious lady visiting the Jew in his den, and winning him to penitence. It is in passages such as these, where the author reveals the actress's undoubting faith, that the singular novelty and charm of Lady Martin's essays are chiefly conspicuous. More than once she asks "forbearance for what is purely personal"; but it is precisely this pure personality which is delightful and unique. Not willingly would we have been excluded from her confidence where she tells of the pain with which a refined and delicate nature spoke (though with considerable modification) the epilogue to "Much Ado About Nothing"; and it is nothing less than a revelation of dramatic sincerity when we read how, as Juliet, in the intensity of her passion and horror when about to drink the potion, the actress literally broke the phial in

her desperate clutch, and so lacerated her hand that the blood streamed down upon her white satin robe, she all the time unconscious of even a scratch! If Lady Martin had given yet more of these personal reminiscences her readers would have been all the better pleased.

The volume is to be dedicated, by permission, to the Queen.

CORRESPONDENCE.

THE EIKON BASILIKE AND A BOOK OF BALLADS.

British Museum: Feb. 23, 1885.

At the sale of the library of the late Mr. John Payne Collier, which took place last August, lot 214 was purchased for the British Museum. It was described as a "MS. Common-place Book filled with a Collection of Old Ballads, a Diary, Extracts, &c. vellum. Sac. xvii." As this volume is interesting for more reasons than one, I will attempt to describe it for the information of your readers. It is a small quarto of 153

paper leaves, and contains practically two MSS. The first, so far from being a "common-place book, diary," &c., turns out to be an early copy of the "Eikon Basilike," and, as no other contemporary MS. of this work is known to be in existence, it is at least a literary curiosity. An examination of the water-mark in the paper proves that it belongs, as nearly as can be ascertained, to the year 1649; and a collation of the text with the first edition of the Eikon, which appeared in 1648-9, leads me to believe that it is a copy from that edition, probably made by some Royalist admirer who did not anticipate the rapid succession of editions of the king's book, and who therefore went to the trouble of transcribing it in default of securing the printed text. The Eikon in this volume is written on the recto sides of the leaves.

Reversing the book, and beginning from the end, we have the second MS. written on the verso sides of the Eikon and on a few blank leaves. This is the Collection of Ballads. But so far from the writing being of the seventeenth century, not a line of it, I will venture to say, was penned before the nineteenth century. The ballads are thirty in number, some genuine and some spurious. Their titles are given by Mr. Collier in his *New Particulars regarding the Works of Shakespeare*, 1836. Two of them, viz., "The Tragedie of Othello the Moore" and "The Inhabited Island," descriptive of the same tales as Shakspeare's "Othello" and "Tempest," were printed, the first in the *New Particulars*, p. 209, and the second in *Further Particulars regarding Shakespeare and his Works*, 1839, p. 56. Both of them, together with a third entitled "The Atheist's Tragedie" (four stanzas of which were also printed in *New Particulars*, p. 47), have been denounced as forgeries by Dr. Ingleby (*ACADEMY*, vol. ix., 1876, p. 313).

It is not my intention to follow Dr. Ingleby in examining the internal evidence of spuriousness in these ballads. I leave that to him and to others far better qualified than I am for such criticism; but, convinced, as I am, that the writing is by a modern hand imitating an older style, I cannot but wonder that Mr. Collier, who had so wide an experience both of the literature and of the handwriting of the sixteenth and seventeenth centuries, could even pretend to have been deceived. Who, being pretty sure that Mr. Collier's sagacity was not at fault, can refrain from laughing when he reads his serio-comic remarks on the ballad of "Othello"? "The word *finis*," writes Mr. Collier,

"was originally followed by the name of the author, which has been erased so as to leave no trace, and you will admit at once that such a ballad was worth owning by any of our poets who followed Shakespeare. In my letter to my friend Amyot, I hastily ventured an opinion that it might be the production of Thomas Jordan; but, on reconsideration, and comparing it with what I have already quoted from his pen, I cannot help thinking that it is much too good, and somewhat too old, for him."

Mr. Collier was, perhaps, sarcastic.

To return to the writing of these ballads, it is, I repeat, by a modern nineteenth-century hand, imitating one of the seventeenth century; and it is of the same cast, and undoubtedly by the same hand, as certain fabricated documents and entries, professing to be of the end of the sixteenth and beginning of the seventeenth centuries, and connected with the history of Shakspeare and the English stage, which have been interpolated among the MSS. at Bridge-water House and Dulwich College. If it could be shown that these ballads were really copied out in the seventeenth century (that is, after the year 1649, for even the most credulous would hardly assert that they were written down on the paper before it was made), we

should have a unique instance of a man writing a fixed hand for a clear half-century. Some may believe this possible: I do not.

Before closing, I venture to revert for one moment to the Eikon Basilike. In the last leaf, just after the word *finis*, the paper is torn or gnawed away in a suspicious manner. What may we not have lost? May not the signature of the Royal Martyr himself have once stood there, attesting this the original copy of his work, but now, alas! destroyed by impious hands or eaten by illiterate rats? There were several curious autograph signatures in Mr. Collier's books; but I cannot trespass further on your space to speak of them. I will only remark that another MS. book of ballads, which sold at a high price, and which has gone, I believe, to America, was, indeed, as the sale-catalogue puts it, "an interesting and remarkable MS.," quite as interesting and remarkable as the one I have just described.

E. MAUNDE THOMPSON.

THE BROUGH STONE.

St. Catharine's College, Cambridge: March 2, 1885.

We have had a large photograph of the Brough stone reproduced by the autotype process. In looking through the autotype from behind I find that there is an N after BIO, and with this hint it can be seen on the stone. This removes the one case of the omission of a final N which could not be explained away, leaving only the two cases of $\epsilon\mu\eta$ and $\gamma\eta$. May I add the suggestion—the autotype throws no light on this—that the letters next before $\gamma\alpha\phi$ & $\tau\alpha\iota\varsigma$ are $\alpha\gamma\alpha\delta\omicron\varsigma$. The only difficulty is the $\gamma\alpha$, and it will be seen that these letters very closely resemble the $\gamma\epsilon$ in $\gamma\alpha\phi$ & $\tau\alpha\iota\varsigma$, the γ in these two cases being like a modern small γ made long and reversed, and unlike the ordinary γ in $\kappa\omicron\mu\mu\epsilon\gamma\eta\tau\omicron\varsigma$ and $\gamma\eta$. G. F. BROWNE.

THE HUNTING OF THE WREN.

Kinnaird Castle: Feb. 2, 1885.

Prof. Ridgway's renewal of last year's correspondence in the *ACADEMY* regarding the "Hunting of the Wren," induces me to offer to your readers a few remarks on that curious subject, not, indeed, as claiming the merit of original research, but as tendering a clue which may be useful to better scholars than myself. In its various relations the subject is difficult, vast, and complex; no more can now be attempted than to indicate a line of thought and very lightly touch on certain matters belonging to the mysteries of the ancient world.

Briefly, then, the key of the lock consists in this. The Wren is the bird which was substituted for the Lynx or Wryneck, as the representative of Adonis or some kindred Dionysiac sungod, and of the might of love as drawn from the sun and endued with his heat and potency. The wryneck was chosen as the type in this symbolism, because of its sunlike manner of revolving its head ("sometimes describing parts of circles, at others, from side to side, with an undulating motion not unlike the actions of a snake,"—Yarrell, *Brit. Birds*, ii. 164), and likewise, because its movements were thought to be significantly suggestive in certain erotic relations. For the latter reason, the wagtail (*Motacilla*) served as the love-symbol among various peoples. The wryneck being rare or unknown in Ireland and the northern and western parts of Britain, its substitute in this symbolism was naturally found in the wren (sometimes termed *Motacilla Troglodytes*), which is a true wagtail in its movements, and has the advantage over the proper *Motacillidae* in its greater resemblance to the wryneck, and in its constant presence in the countries referred to, while the latter birds are more or less migratory. The wren, therefore, as doing duty for the wry-

neck, may be looked upon as a type of the sun under certain aspects, and the "Hunting of the Wren" is nothing more than one of many modes familiar to the ancients of setting forth the idea, that the death of the sun's representative must precede his birth to life and vigour and triumph in the heavens.

Adonis (the Sun, or Love) being slain by the Boar (Winter), the wren, in a like parable, is slain by its pursuers—who proceed to wrap it in a "mass of ivy," or to "exhibit it on an ivy-bush," the very plant of the Dionysiac deities. The crossed hoops within which the wren's body is exhibited may possibly relate to the equinoxes or to other periods of the year, but they undoubtedly relate in their circularity to the course of the sun, and in their intersection to the power and act of love. This may be partly gathered from an Irish custom described by General Vallancey as prevalent about a century ago:—

"A custom still prevails in the south of Ireland, of obliging the bridegroom to produce his Golden Ball. On the first day of May, annually, a number of youths of both sexes go round the parish, to every couple married within the year, and oblige them to give a ball [sphere]. This is ornamented with gold or silver lace; I have been assured they sometimes expended three guineas on this ornament. The balls are suspended by a thread, in two hoops placed at right angles, decorated with festoons of flowers; the hoops are fastened to the end of a long pole, and carried about in great solemnity, attended with singing, music and dancing. This custom is practised particularly in the counties of Cork and Waterford" (Vallancey, *Collectanea de Rebus Hibernicis*, Dublin, 1786; vol. iv., part 2, p. 351).

It seems worth noting that the counties here specified are those in which the Ogham-inscribed monuments are chiefly to be found.

Adonis and Dionysos (it need hardly be said) were in truth the same deity, and the bull was the latter's special type and associate:

"Dionysos is a god essentially tauric. . . . The bull in its widest symbolical significance represents the active energising principle of the universe, especially in a humid aspect, and in its narrowest was merely a name for the phallos. . . . The bull apparently was a type of the god himself" (Brown, *Great Dionysiac Myth*; ii. 112, i. 262).

Like Dionysos it was a representative of the "nocturnal suns," and, like that deity, was specially connected with the under-world (Brown, i. 387, i. 391). In certain aspects it also represented the earth—"the riches and fatness of the earth beneath"; though the cow, as symbolising the passive principle in nature, was the earth's more special type (Brown, ii. 43, 44). Hence in the frequent representations of Mithras (a similar sun-god) in the act of stabbing a bull, whose tall buds into ears of corn, and whose blood is lapped by a dog, we may see (among other things) the victory of the diurnal or summer sun over the nocturnal or winter sun (viewing the two characters apart), also the power of the sun's rays in entering and subduing the earth, and fructifying it through a death which is to be succeeded by a resurrection.

This mithraic scene may partly perhaps explain the Magyar custom referred to by the Rev. W. H. Jones in the opening letter of the present correspondence (ACADEMY, May 3, 1884). The red ox was the slain sun-god (red is the nocturnal sun's mythological hue), and the carrying it about and distributing objects attached to it formed a commemoration of the benefits of his death, as leading to present nourishment or growth of force, and future glory or fruition of power—all this, no doubt, with a more direct reference to procreative matters. The distribution of the objects

* The objects attached to the ox are thus detailed in the letter referred to:—"On the horns was

may have been meant to represent the rending and scattering of the slain god's body, a process which filled an important part in all such sun-myths—as may well be noted in the story of Osiris (a deity of the same class)—and it was symbolically presented in the correspondent ceremonials; hence, for example, the tearing in pieces of a spotted fawn in the Dionysiac orgies. "Being torn or cut to pieces is a fate commonly ascribed to Dionysos and the personages connected with him, such as Zagreus, Pentheus, Orpheus, Usar, and others" (Brown, i. 153). Hence, also, the numberless examples on gems and elsewhere of fierce animals clutched or mouthing the heads or off-torn limbs of creatures of the milder sort. "The white lion clawing the bull's head is the phallos of Osiris, or the phallos of the sun" ("Ritual of the Dead"—see Bonwick, *Egyptian Belief*, p. 192).

"This slaughter or cutting up of Zagreus is the stripping off of leaves and fruits in the gloomy autumn. . . . The sufferings and death of Usar (Osiris) were the great mystery of the Egyptian religion. . . . Adonis, the heat and vigour of the summer sun and the fruitfulness of the earth, . . . is doomed to die nightly, and more particularly to perish by the wound inflicted by the stern wintry power" (Brown, i. 150, 151—quoting from Rev. G. Cox and Sir G. Wilkinson).

It should be noted that Adonis, under the appellations of Aedd or Aeddon or Hu, was one of the most important deities in the Bardic (and probably in the more ancient) mythology of Britain. "He had died and lived alternately; and it was his privilege to carry the ivy branch, with which, Dionysius says, the Britons covered themselves in celebrating the rites of Bacchus" (Davies, *Mythology of the British Druids*, p. 122). Direct evidence as to Dionysiac worship in Ireland seems to be wanting, though unquestionably the sun, in one or other of his aspects, formed a chief object of adoration in that country. The legend of O'Duine resembles that of Adonis, and Phearagh, an Irish god, seems to be Baal-Peor, who more or less answers to Dionysos, and the names in both cases seem to correspond.

There can be no doubt that the Iynx or Wryneck served as a type of the Dionysiac god, and also of sensual love. In a scene on a Greek vase,

"Nikē crowns him (Dionysos) with a wreath, and behind her stands Pan . . . caressing the Iynx or Wryneck. This mysterious bird of love was peculiarly connected with the Semitic Aphrodite and with Adonis. So Pindaros:—"The Cyprian queen . . . from above her mystic Iynx brought, the maddening Bird of Love." . . . Another vase represents Adonis holding out the Iynx in his right hand to Aphrodite, who is seated. The bird, which was so named from its cry, is described by the Scholiast as hairy, with a long neck and tongue, and possessing the power of rotating its head and neck. It is also said to have been tied to a wheel and whirled round to assist amorous incantations. . . . The wild bird of love, in Hellas identified with the wryneck, is also Semitically connected with the myth of Astarte-Semiramis . . . and hence belongs to the cycle of the Syrian Adonis, who is identical with Dionysos" (Brown, i. 339, 340).

Ere leaving this subject, a quotation from a different author may not be out of place:—

"Pindar says that Venus brought down her bird fastened to a wheel of four spokes from Olympus, and such a wheel was one of the symbols requisite at the Phœvætauria. . . . Montfaucon shows us the Phallus fastened to the Cross Wheel, so that I fancy Venus's so-called bird, also to be seen on the

hung a kind of cake; the ears were filled with coins; a pot of home-brewed ale swung on his tail; cavities in the buttocks were charged with hazel nuts; and a long sprig of hops stuck out of his navel." Substituting wine and the vine for ale and hops, these things seem all more or less connected with the Dionysiac rites. The reference to the omphalos is peculiarly Bacchic.

wheel as well as phallus, is a mere euphemism. . . . The Romans called the Wagtail [anciently used in 'love-potions and incantations'] *Frutilla*, from *Frutis*, one of the names of Venus, and *Fruti*, the Fruitful One. It was also called *Motacilla*." (Forlong, *Rivers of Life*, i. 225, 226).

Whatever may have been the cause, the wren was almost certainly viewed as a sacred object by the Irish priests or Druids; and, to judge by its various titles of honour, it must have been held in like respect by most of the nations of Western Europe. Regarding this, Vallancey speaks at some length (in the first instance referring to metallic objects of antiquity found in the peat-bogs of Ireland):

"[These Aisin are] thin plates of gold joined together by a semicircular piece, . . . on the external plate is a small loop into which was fixed a slender golden wire, on which perched the Augur's favourite bird. The Hibernian Druids fixed on the *Wren*, an English word derived from *dreon*, i.e., *Draoi-én*, the Druid's bird; it was also named *Draolén*, i.e., *Draoi-ol-én*, the speaking bird of the Druid. *Toithén* is another name, signifying the bird of *Toth* or *Thoth*. The Druids represented this as the king of all birds, hence he was called by the vulgar *Breas-en*, king bird; *Righ-beag*, little king; *Ri-eitile*, flying king; and lastly *Briocht-én*, the bird of witchcraft."

After describing the "hunting of the wren"—which is there stated to take place on Christmas day, the procession being on the following day—our author refers to the "Irish catch importing the wren to be the king of all birds," and gives a long list of similar regal names in "all the European languages." The French, he says, call the wren "*Roytelet*, *Berichot*, but why this nation call him *Boenf de Dieu* I cannot conjecture." On this we may remark that the bull was *Thoth's* special animal, and that one of the above-mentioned wren names is *Toith-én*, *Thoth's* bird—a fact (if it be so) which helps to associate the Wren and the Bull in kindred symbolism. The Welsh, according to Vallancey, call the wren "*Bren*, king," but his ordinary name seems to be *Dryw*, the same word that signifies a Druid (Richards, *Pughe*). *Wraenna* or *Wrenna*, the Anglo-Saxon designation for the wren, is thought by some writers to be derived from *Wraene*, *salaz*, correspondingly perhaps with the *Motacilla* idea.

Vallancey, it will be observed (supported in this by others), assigns the "hunting of the wren" to Christmas Day, though the employment of St. Stephen's Day for such pursuits seems to have been more usual. In heathen times, perhaps, the wren was slain on the shortest day of the year, and exhibited in glory at the ensuing solar festival; a custom which would be gradually subverted through the appropriation of that ancient festival day by the Christian Church. "Christmas Day appears to have been fixed on the 25th of December (the birthday of Mithra), in the latter half of the 4th century, when Chrysostom wrote his homilies—see *Hom. 31*" (*Bible Folk-Lore*, 1884, p. 330).

It is not apparent why three days should elapse between the sun-god's birthday and his natural death-day, the shortest day of the year, unless Gen. Forlong's explanation be held sufficient: "All these Solar gods . . . are said to have been born at midnight on the 25th of December, when Virgo is out in two by the Eastern horizon, and where the days visibly increase in length" (*Rivers of Life*, i. 415). Whether on account of a supposed need for renewal of strength by rest, or for other reasons, the three days' concealment of the god seems to have formed an essential part in various solar myths. "Adonis, mourned for three days by the Syrian women, is born again, and Tammuz reappears after the *Kisti Sami* or commemoration of the 'hiding of the sun-god'" (*Bible Folk-Lore*, p. 244).

It would be interesting to learn something more on the following points: (1) What were

the reasons for the god's concealment? (2) Why was its duration fixed at three days? (3) What were the god's occupations during its continuance? SOUTHEK.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 9, 8 p.m. Inventors' Institute.
8 p.m. Society of Arts: Cantor Lecture, "Carving and Furniture," by Mr. J. Hungerford Pollen.
8 p.m. Aristotelian: "Free will and Compulsory Determinism," by the President.
8.30 p.m. Geographical: "The Irawadi River," by Mr. Robert Gordon.
TUESDAY, March 10, 8 p.m. Royal Institution: "Digestion and Nutrition," by Prof. Gamgee.
8 p.m. Anthropological Institute: "Certain Burial-Customs as Illustrative of the Primitive Theory of the Soul," by Mr. J. G. Frazer; "The Sculptured Dolmens of the Morbihan," by Rear-Admiral Tremlett.
8 p.m. Civil Engineers: "The Construction of Locomotive Engines," by Mr. W. Stroudley.
WEDNESDAY, March 11, 11.30 a.m. British Museum: "Egyptian Antiquities," by Miss Beloe.
8 p.m. Society of Arts: "Exploration and the best Outfit for such Work," by Major-Gen. Feilding.
8 p.m. Geological: "The Granitic and Schistose Rocks of Donegal, and other parts of Ireland," by Dr. C. Callaway; "Hollow Spherulites and their Occurrence in Ancient British Lavas," by Mr. G. A. J. Cole.
8 p.m. Microscopical: "A New Catadioptric Illuminator," by Mr. J. W. Stephenson; "Structure of the Diatom Shell," by Dr. Cox; "Pathogenic History of a New Bacillus," by Mr. F. R. Cheshire and Mr. W. W. Cheyne.
THURSDAY, March 12, 8 p.m. Royal Institution: "The New Chemistry," by Prof. Dewar.
4.30 p.m. Royal Society.
5 p.m. Hellenic: "Painted Vases from Asia Minor," by Prof. Ramsay; "A Statuette in the British Museum," by Mr. E. A. Gardner.
8 p.m. Society of Arts: "Recent Improvements in Photographic Development," by Mr. W. K. Burton.
8 p.m. Telegraph Engineers: "Constant Electro-Motive Force in an Electric Light Circuit," by Sir D. Salomons; "Electrical Definitions, Nomenclature, and Notation," by Mr. Andrew Jamieson.
8 p.m. Parkes Museum: "Household Poisons," by Mr. A. Wynter Blyth.
8 p.m. Athenæum Society: President's Address; "Chromatics of the Sky," by Mr. J. S. Dyason.
8 p.m. Mathematical: "The Flexure of Beams," by Prof. Kari Pearson; "A Method in the Analysis of Plane Curves," Part II., by Mr. J. J. Walker; "Two Elementary Proofs of the Contact of the NP Circle of a Plane Triangle with the Inscribed and Escribed Circles, together with a Property of the Common Tangents," by the Rev. T. C. Simmonds; "Another Proof of the same," by Mr. R. Tucker.
8.30 p.m. Antiquaries: "The Gate-House Chapel, Oxroden," by Mr. G. O. Wardle.
FRIDAY, March 13, 11.30 a.m. British Museum: "Egyptian Art," by Miss Beloe.
7.30 p.m. Civil Engineers: Students' Meeting: "The Blasting and Removal of Rock under Water, and the Construction of a Deep-Water Quay at Blyth Harbour," by Mr. W. Kidd.
8 p.m. Quakett Microscopical Club.
8 p.m. New Shakers: "An Elizabethan Learned Society," by Mr. S. L. Lee.
8 p.m. Society of Arts: "Condition and Prospects of Female Education in India," by Mr. Mancherjee M. Bhownagroe.
9 p.m. Royal Institution: "Accidental Explosions caused by Non-Explosive Liquids," by Sir F. A. Abel.
SATURDAY, March 14, 8 p.m. Physical: "The most Economic Potential Difference to employ for Incandescent Lamps," by Prof. Ayrton and Perry (discussion); "Further Lecture Experiments on Spectrum Analysis," by Mr. O. Cleminshaw.
8 p.m. Royal Institution: "Richard Wagner," by Mr. C. Armbruster.

SCIENCE.

A System of Psychology. Dy Daniel Greenleaf Thompson. In 2 vols. (Longmans.)

THE appearance of two portly volumes on psychology from the pen of an American is another proof of the sincerity and earnestness of philosophical study just now in the new world. America may not yet have produced a great original thinker in the strict sense, but she is rearing a number of able philosophic inquirers whose steady labours will result in valuable contributions to thought; and these productions, while connected with English thought by their language, are still more closely grafted on to it by internal affinities. To a large extent, at least, the really original

philosophic work of America is a development of distinctly English aims and tendencies.

Mr. Thompson's treatise, though named *A System of Psychology*, is in reality, in outline, at least, a system of philosophy. Thus it contains the author's conception of the aims of philosophy and its relation to the sciences, the laws of thought, the ultimate elements of material existence and its underlying first principles or axioms. It contains, too, a sketch of logical and of ethical principles. Respecting the desirability of touching on all these outlying regions in a work which, after all, is primarily and mainly psychological, much might be said. The author might contend, with force, that psychology stands in a unique position, through its peculiar and far-reaching relations to philosophy on the one side, and the physical sciences on the other; and that, consequently, its scope and limits can only be grasped when these relations are fully set forth and defined. Still, the reader will be disposed to resent so full an intrusion of extraneous matter as is found, for example, in Part 3, which seems to try to compress the substance of Mr. Spencer's *First Principles* and *Principles of Biology* into little more than one hundred pages. Such a plan seems fore-doomed. It will introduce much that is of no direct bearing on psychology, and, at the same time, will fail to do justice to extra-psychological problems of exceeding intricacy and difficulty. Thus the whole doctrine of objective force, space, and time, and their mutual relations, seems to be here inadequately developed. Kant's contention that space is subjective cannot be dismissed by merely asking, "If space which seems to contain body is subjective, why is not that which is contained subjective also?" It may be added that, while distinctively philosophical problems are thus handled at some length, interesting and pressing psychological questions are sometimes passed over much too hurriedly. For example, the discussion of the method of psychology (p. 81 *seq.*) is altogether below the level of the present developments of the science.

This leads one to touch on what is the peculiar excellence, while at the same time it is the special weakness, of Mr. Thompson's treatise. It is, to a very large extent, a following up of the work of the two English psychologists, Mr. Herbert Spencer and Dr. Bain. The author is very frank on this point, modestly emphasising his indebtedness to these thinkers. Indeed, he is, I think, unjust to himself in his generous habit of making long quotations from the works of these and other English writers whose views he adopts, and not pointing with equal distinctness to his divergences from their views when he is improving on them. At the same time, Mr. Thompson has plainly been a student of the English empirical philosophy by preference. His knowledge of German work in philosophy in general, and in psychology in particular, seems to be very limited. This gives to the exposition its seeming consistency and clearness, and, one may perhaps add, its air of happy confidence. The reader is led on smoothly and pleasantly from stage to stage, and never disagreeably pulled up by some awkward puzzle, as, for example, the mystery of self-consciousness, the mind's knowledge of itself as a permanent unity, in spite of the

ever varying flux of "states of consciousness," or the impossibility of thinking out the correlations between mental and physical processes definitely in all their detailed forms.

Yet, while following the most plainly-marked track in the fields of English thought, Mr. Thompson is independent, and now and again impressively original. We see this at once if we try to seize and define his standpoint in psychology. On the one hand, he seems in his conception of consciousness as supported by slowly evolved organic conditions, to tend to a distinctly materialistic view of mind. The leading term "states of consciousness" suggests, too, that mental phenomena are to be viewed as passive affections, involving no distinctly mental activity. Yet, on the other hand, we find in the ultimate analysis of these "states" the presence of no less active an element than "consciousness of power." In other words, "the Ego is conscious of an ability *actively to influence* its own states" (i. p. 110). So, again, in the analysis of the processes of development of states of consciousness we have as one of the prime factors "conscious automatic activity," that is the spontaneous or self-activity of the mind. Here we learn that association or (as the author, after Mr. Spencer, conceives of the process) the "segregation and unification of similarities in the experiences" is a result of the very same self-activity of the mind which more obviously manifests itself in attention. Such language shows that the author is far enough away from the point of view of Mr. Spencer and Dr. Bain, to whom association seems to present itself simply as the subjective accompaniment of a nervous and quasi-mechanical "co-ordination." Nothing is more characteristic of the later developments of psychology than the manner of viewing mental products as determined by the mind's conscious activity, and one is particularly glad to find a writer like Mr. Thompson, who has evidently worked out his results to so large an extent by independent and even solitary study, moving towards the same point of view.

A good deal might be said respecting the author's management and arrangement of his materials. The main division of the subject into general analysis of states of consciousness, their material conditions, their genesis and development, and, finally, the products of this development, has much to recommend it. More particularly, it strikes one as being in many respects a gain to consider the products of development, or what the author calls cognitive emotional and volitional integrations, apart from the processes. Every psychological student must be aware of the confusions which creep into most expositions by using terms like perception and imagination now for a process, now for the completed result of that process. Moreover, as the process of development is essentially one and the same in the case of each of the three main aspects of the mental life, there is an obvious convenience in dealing with this once for all at the outset. It is in the filling up of this plan that Mr. Thompson's method is open to criticism. The reader has not infrequently a sense of shock in being abruptly pushed, so to speak, into a new region. Sometimes the flow of the exposition is broken by side discussions, as, for example, the long and somewhat tedious exami-

nation of some theories of intuitional knowledge, to which the preceding psychological treatment of cognition does not directly lead up. One might object, too, that in dealing with results, Mr. Thompson has not been careful to distinguish between the actual results which psychology investigates, and the ideal results which logic and ethics prescribe, and that if the regulation of thinking and acting is to be considered, that of feeling deserves consideration too.

The general impression left by these volumes is that they are the work of a man of decided independence and originality of mind, but whose independent reflection has hardly kept pace with his assimilation of other men's ideas. Every now and then we have striking and fruitful suggestions; for example, on the nature of Dr. Bain's "indifferent" feeling (i. 366, and ii. 294), on the question whether feeling precedes cognition (i. 369), and on the nature of constructive imagination, which is happily likened to a process of crystallisation (i. 553). On the other hand, there is a good deal which appears a little crude and hasty, as, for instance, the arrangement of the sciences (i. 77). Many of the divisions of the subject-matter seem to be faulty; witness the following odd classification of instinctive actions: (a) the locomotive rhythm, (b) simultaneous movements, (c) harmonious movement, (d) self-defence movement, (e) expression of feeling, and (f) vocal exercises. The same oddity presents itself in the arrangement of the feelings, which, by a modification of Mr. Spencer's principle, are classified under three main groups—primary, secondary and tertiary pleasures and pains. It is positively bewildering to meet with juxtapositions like the following: "Pleasures and pains of defence, self-mortification, sunrise . . . balloon excursion, inflation of the lungs," and so forth (ii. 405). It appears to me, too, that the author's whole conception of matter and mind in their relation one to another needs further working out and fuller illustration. It is staggering, for instance, to find relativity and presentativity, i.e., ability of things to manifest themselves to our consciousness, attributed to external things, but duration denied them, time being reduced to a form or category of the "Ego-world."

A word may be said as to the author's style. Nobody will question that it possesses the first quality of a good scientific style—clearness. It is, moreover, free from everything like affectation. There is no effort at fine writing. Even in the second volume, where Mr. Thompson, dealing with the more concrete details of the emotional life, draws largely from the poets, he does not abandon his characteristic plainness. These qualities help much to impress the reader with the author's earnestness and single-mindedness, and this is a matter of some moment when the reader is invited to accompany that author through six hundred pages of grave discussion.

JAMES SULLY.

SCIENCE NOTES.

DR. R. B. TYLOR, Curator of the Museum at Oxford, is delivering a course of three lectures upon "Passages in Herodotus which bear on Anthropology." The first lecture treated of lake dwellings.

WE have received from Mr. Edward Stanford copies of two maps that he has just published of "The Seat of Military Operations in the Sudan," including Khartum, Berber, and Suakin. They differ only in that one is on a somewhat smaller scale than the other, and gives by way of compensation an inset map of Lower Egypt. Both have an inset of Khartum and its environs. The maps are very clearly printed; and many people will be glad to hang one of them on the wall just now. It is not the publisher's fault that information fails precisely where it is most wanted at the present moment. For example, the Shakuk pass is altogether omitted.

PROF. PRESTWICH has recently communicated to the Royal Society an important paper "On Underground Temperatures." After a sketch of the history of the subject, he points out the numerous sources of error which affect thermometric observations in collieries and metal mines. An elaborate discussion of a large number of observations, made not only in mines, but in deep borings for Artesian wells, and in the Alpine railway-tunnels, leads him to suggest that the mean thermic gradient is about 45 feet for every degree Fahrenheit.

PHILOLOGY NOTES.

THE veteran Prof. Georg Curtius, in his recent brochure, *Zur Kritik der neuesten Sprachforschung*, deals with the latest theories regarding phonetic laws, analogy, the Indo-Germanic vowel-system, and the origin of the Indo-Germanic linguistic forms. He delivers a parting home-thrust at Osthoff for his new theory (*Zur Geschichte des Perfects im Indogermanischen*, s. 324-90) that the Greek κ -perfects, e.g. $\delta\delta\omega\kappa\alpha$, are to be explained as agglutinations of the particle $\kappa\alpha = \kappa\epsilon\varsigma$. He concludes with a tribute to the learning, loyalty, and genius of his friend and colleague, Prof. Windisch.

THE first volume of Collitz's collection of Greek dialectal inscriptions has just been completed. In the following sections the arrangement will be essentially geographical: first, inscriptions in the dialects of Northern and Middle-Greece; then those of the Peloponnesos and the Islands; lastly, the Ionic.

M. VOSKRESENSKY is publishing at Moscow a general chrestomathy of the Slavonic languages, and Miklosich's famous comparative grammar of those languages is being translated into Russian. Vsevolod Müller's *Osetic Studies*, containing the epic narratives of the Osetes about the *nartes* or popular heroes, and their fables, tales, and songs, seem to be of high interest both to folk-lorists and Iranian philologists. Unfortunately the texts are accompanied only by Russian translations. Here is a field in which Mr. Ralston may work with pleasure to himself and profit to others.

PROF. BÜHLER'S *Leitfaden für den Elementar-cursus des Sanskrit*, somewhat recast grammatically, is about to be reproduced in English by Prof. Perry, of Columbia College, New York. This seems to show that all American scholars do not follow the redoubtable Prof. Whitney, who, in the last number of the *American Journal of Philology*, says that, in Prof. Max Müller's grammar, "the native science is made the supreme rule after a fashion that is sometimes amusing in its naïveté," and that in Bühler's book "the same spirit of subservience to Hindu methods is shown in an extreme degree, and both forms and material are not infrequently met with which are not Sanskrit, but belong only to the non-existent grammarians' dialect."

AT a St. David's day dinner, held under the auspices of the newly-formed Liverpool Welsh Society at Liverpool, the toast of Welsh language and literature was proposed by Dr. Kuno

Meyer, of University College, Liverpool, who dwelt particularly on their philological importance, and expressed a hope that the scientific study and teaching of Welsh, as an ingredient of comparative philology, might now, after the establishment of the Welsh colleges, be put on a broader and wider principle than had hitherto been possible. Dr. Meyer has now a class of fifteen Welsh students at the college, with whom he is reading selected portions from the *Mabinogion*.

THE new number of the *Journal of Philology* contains a continuation of Bentley's marginalia on Homer; "Notes on Latin Lexicography," by H. Nettleship; "The Interpretation of Tragedy" and "Aeschylea," by L. Campbell; "Platonica" and "Plato's Later Theory of Ideas," by H. Jackson; notes on Pliny, Juvenal, and Seneca, by J. E. B. Mayor; on Hor. Sat. i. 9.39, 75, by H. J. Roby; on the forms of divination and magic in Deut. xviii. 10, 11, by W. Robertson Smith; and a very important article on a newly-identified fragment of Epicurus, *περί φθόνου*, by W. Scott.

MR. ROBINSON ELLIS will shortly publish a contribution to the *Anecdota Oxoniensia*. It will contain (1) a collation of a tenth-century fragment of Ovid's *Metamorphoses* (Books i.-iii. 622), hitherto not rated at its proper value as one of the most authoritative founts for this part of the poem; (2) twenty-four Latin epigrams of uncertain date; (3) Latin glosses on Apollinaris Sidonius, copied in the twelfth century, and containing many early French and some early English words explanatory of the glosses.

THE February number of the *Archiv for Nordisk Filologi* contains a short article by Mr. Whitley Stokes, pointing out several striking coincidences between incidents of Irish and Old-Norse legend.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, Feb. 23.)

MR. J. W. CLARK, President, in the Chair.—Prof. E. O. Clark read a paper upon the inscribed stone from Brough-under-Stanmore, now in the Fitzwilliam Museum. Prof. Clark stated that this was an epitaph, in Greek hexameters, on a youth bearing the name of the god Hermes, and coming from the northern part of Syria, Commagene. The connexion of Syria with Westmorland was not very obvious, and Prof. Clark endeavoured to account for it by traces of Syrian worship and a Syrian corps of the Roman army in the neighbourhood from which this stone came. At Corbridge were found one altar dedicated to Hercules of Tyre, and another to Astarte the goddess of the Sidonians. The latter may probably be identified with "the Syrian goddess," of whom Lucian gives an account. Of the worship of this goddess, under her style "Dea Syria," *Magna* (Carvoran), was evidently a stronghold. Two altars have been discovered there, erected to her, the one by a cohort of *Hamii*, the other by an *ala*, bearing the name *Sabinian*, of the same people. These *Hamii* have been attributed, on reasonable grounds, to the town of *Hamath* or *Hamah*, on the Orontes. If so, they were the only Asiatic corps on the wall; they help to account for other indications of Syrian worship in the neighbourhood; and they show how a Syrian family could find its way at least to *Magna*. A last connecting link with Brough may be furnished by the leaden seals found at that place some years ago, and bearing the names of Roman military corps. One of these is inscribed with the words *Ala Sab.*, which obviously refer to the *Hamii* above mentioned. The Brough inscription has nothing to do with Syrian worship, being purely classical in feeling. It was obviously written by a person acquainted with the Greek of the Homeric poems and the tragedies. As to the date, the evidence of the characters merely amounts to placing the inscription as late as possible. Prof. Clark did not consider that it could date before the comparatively settled time follow-

ing the reign of Sept. Severus, when there might be residents with leisure to put up monuments and travellers with leisure to read them. For similar reasons he would place this document before the rough times which followed the Roman departure from Britain at the beginning of the fifth century. In the first line of the epitaph, *Εκκαδεχρη τις* *δων τυμβω σκεφθετ υπο μοιρης*, there is a syllable too much. Prof. Clark suggested that the first word was meant to be scanned *Εκδεχρη*. The word *σκεφθετα* he preferred to interpret as a participle which does not elsewhere occur, but would be regularly formed from *σκεπω*, and translate "hidden in the tomb." This translation was inconsistent with the notion of a *cenotaph*. The words *χαίρε συ παι παρ εμου* Prof. Clark translated, "A blessing, or greeting, to thee, O boy, from me." The literal translation of the following words, *κρητερ θνητον βιον ερπης*, was: "Even if thou creepest on a mortal life." This he could not take to mean simply "Even though thou art dead," and he therefore suggested two other interpretations:—(1) "And if thou indeed draggest on some human life (i.e., a dim semi-human existence beneath the tomb)"; (2) "Even though thou travellest (=didst travel) on the course of only a mortal life (as distinguished from the immortal career of thy divine namesake)." The play on the name may be paralleled by an epitaph in the Corpus, where a mortal *Helios* is obviously contrasted with the divine sungod (Kaibel No. 708, C. I. 6236). In the clause which follows, *ακνυται εστις γαρ μεροπων επι Κιμμεριων γη*, Prof. Clark considered that a final *ν* of *γη* had been omitted, although *ετι* with the dative was (rarely) found in the pregnant construction of motion to a place and rest there (*Iliad* 2. 89: 4. 251, &c.). The word *μεροπων* could not possibly, he thought, be used as an epithet of *Κιμμεριων*. He took these *Κιμμεριοι* to be the poetic folk of gloom and mist among whom Homer places his entrance to the shades (*Od.* A. 14): the *μεροτες* on the other hand were the *μεροτες* (a noun substantive) of the Anthology, meaning simply *men*. The genitive *μεροπων* expressed the not uncommon meaning, in poetry, of removal from a place. This line he would therefore translate "Since very soon thou didst flit from men to the land of the Cimmerians." Prof. Clark considered the meaning of this last line to be that the boy will not be entirely a misnomer (*ου ψευσαι* "thou shalt not be false to thy name") for, though not the god *Hermes* himself, he is gone with him. The ingenious suggestion [*ερμης*] *γαρ ο παις ερμης* [*ακολουθει*] was made by a candidate for the University Scholarship. The *α*, however, which follows *ψευσαι* on the stone being irreconcilable with [*ερμης*], Prof. Clark would read [*αυτου*], which fairly accounted for the two or three illegible strokes before *γαρ ο παις*. Possibly the stonecutter may have substituted the nominative *ερμης* for a dative *ερμει*, misled by the next words *δ παις*. The epigram is added below in what is submitted as its original form, with a metrical paraphrase:

Εκδεχρη τις δων τυμβω σκεφθετ υπο μοιρης
Ερμην κοιμαγηνον επος φρασται τις οδειτης
χαίρε συ παι παρ εμου κρητερ θνητον βιον ερπης
ακνυται εστις γαρ μεροπων επι Κιμμεριων γη
ου ψευσαι αυτου γαρ ο παις Ερμης ακολουθει.

Hermes of Commagene here—
Young *Hermes*, in his sixteenth year—
Entombed by fate before his day
Beholding, let the traveller say:—
Fair youth, my greeting to thy shrine
Though but a mortal course be thine,
Since all too soon thou wing'st thy flight
From realms of speech to realm of night;
Yet no misnomer art thou shewn,
Who with thy namesake god art flown.

—Mr. Browne pointed out the letters which occurred on the Brough Stone and no other Greek inscription in the North of England. These were one *α*, two *γ*, *μ*, *ρ*, the straight *σ*, *ν*, *ω*, and *δ* if it was not on the "Heracles" stone. It was curious that some of these particular letters had a strong Phoenician tinge. They were the first *α*, *δ*, *ρ*, *ν*. He thought the cutter might have been accustomed to an Oriental alphabet. He read the six letters before *γαρ ο παις* as *αγαθος*.—Canon Taylor said that Mr. Browne had suggested that the unique character of three or four of the Greek

letters in the inscription might be due to an assimilation of the forms of Phoenician letters used at a much earlier date. He thought the phenomena might be explained by a simpler hypothesis. The inscription was written in *uncial* characters. Uncial Greek writing had hitherto been found exclusively in codices, other Greek inscriptions being written in capitals, the forms of which differed considerably from those of the uncial letters. He thought the writer of the inscription could not have been familiar with the letters ordinarily used in Greek inscriptions, but was probably in possession of some uncial codex, from which he had taken the forms of the letters he employed. Thus this inscription was of peculiar interest, being the only lapidary record in uncial characters hitherto discovered, and supplying several transitional forms which had hitherto been sought for in vain. Canon Taylor also thought that due credit had not been given to Mr. Henry Bradley for the ingenious conjecture which had established the true reading of the inscription. He referred to the word *φρασται* beginning the fifth line. This had been read as *φαιβιστος* or *φιλανθρωπος*, the second letter appearing clearly in the published facsimile as an *iota*. Mr. Bradley conjectured that this must really be a *rho*, the loop of the letter having disappeared. Canon Taylor said that he had at once undertaken a journey to Brough for the purpose of ascertaining whether this conjecture could be supported, and that he discovered positive traces of the almost effaced loop of the *rho*. This point having been settled the earlier readings had been abandoned, and an interpretation based on Mr. Bradley's conjecture had been now universally adopted.—Mr. Sandys quoted from Kaibel's *Epigrammata Graeca* several parallels to expressions found in the Brough Inscription. In the last line, he was inclined to believe that the two lost words were *αμυθ* and *απόλωλεν*, the sense thus gained being: "for the boy *Hermes* has perished in his prime." He could not agree with Dr. Clark's interpretation of the tenth line. The most natural course was to take *μεροτων* and *Κιμμεριων* together; and it was perhaps not necessary to alter *γη* into *γην*. The "Cimmerian men" were in this case the Britons, who would be regarded as dwelling in a land of Cimmerian darkness by those who, like the friends of the short-lived *Hermes*, could remember the sunny land of Syria. The following would therefore be the sense of the line: "Short was thy flight in this land of gloom."

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 26.)

MR. EDWIN FRANKFIELD, V.P., in the Chair.—The master and brethren of St. John's House, Sherborne, exhibited a triptych, which has been for a long time in the possession of the house, and which was sent up to London to be cleaned. It is painted on panel by a Flemish artist of the end of the fifteenth century. The centre panel represents the raising of Lazarus, while the two others each contain pictures of two miracles, one being painted above the other and on a smaller scale. The subjects are the healing of the blind and of the demoniac, and the raising of Jairus's daughter and the widow's son. On the outside of the doors are four apostles in grisaille—Paul, Peter, James, and Thomas. A paper, by Mr. Everard Green, was read describing the picture, of the history of which nothing is known.—Mr. St. John Hope exhibited and described a collection of impressions of seals of the University and Colleges of Cambridge. Sixty-six seals have been used by these bodies, of which fifty-one are now in existence. Mr. Hope's collection is nearly complete. The earliest university seal dates from 1261, but that now used was made in 1580.—*Erratum*. In our report of the last meeting of the Society of Antiquaries (Academy, February 28), for "Orkney" read "Oxney."

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromes, and Olegraphs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. BARR, 118, Strand, near Waterloo-bridge.

ART-BOOKS.

WE have received from the Autotype Company the third, which is the concluding volume, of their reproductions of the *Liber Studiorum* of

Turner, with the sympathetic and always informing commentary of Mr. Stopford Brooke, who is known to be one of the deepest students of Turner's most important work. Before saying a word as to the success of the reproduction, let us express the regret that it has stopped where it has—that is, with the last of the seventy-one actually published plates. For the Autotype Company to have concerned themselves with the unpublished plates would have been, we are aware, to have entered upon debateable ground; yet we think this should have been done. The unpublished plates are naturally much less known than the published ones, yet among them is a full proportion of subjects of curious excellence, and it is extremely desirable that with these the public should be better acquainted. And how, except by means of some process of reproduction, are any of us, lovers of Turner—not to speak of simple outsiders—how are any of us to know familiarly the exquisite theme of "Crowhurst," a print of which only three impressions exist? The unpublished plates are all of them inevitably rare, though the "Crowhurst" is doubtless the rarest of them. There was thus a substantial reason for reproducing at all events the best of them—they would have been useful memoranda for the real amateur who does not ardently desire reproductions of prints the originals of which are still obtainable by him who cares to make a serious effort to obtain them. Now, however, as to the reproductions that have been made and as to the measure of success that has attended them. "Hedging and Ditching," "Solway Moss," "Mont St. Gothard," and "Severn and Wye" are among the plates provided in the present issue. "Mont St. Gothard" reproduces well: we cannot quite say why, unless it be that the rotten sky of the original plate, depriving the original plate of a charm it presumably might have had, permits between plate and reproduction a greater similarity of dullness than is generally attainable. Why the distinctly vigorous "Hedging and Ditching" reproduces well we can more distinctly aver. "Hedging and Ditching" is a plate dependent for its interest not upon the finer and more delicate effects, but upon the subject, the composition, and the masculine character of certain work in the foreground. Now though the reproduction never gives the full force of the etched line, it does give a good deal of its force, and accordingly the autotype from this characteristic vision of the cold clay country and the rural poor is one of the best in the book. "Solway Moss" is far less satisfactory. Anything like a decent impression of the original is, above all things, luminous in the most distant background. Here, on the contrary, the background is covered with an impenetrable veil. Shadow and darkness brood over the picture; yet, where the darkness should really be effective and impressive, as in the heavy cloud that passes over the upland, it is wanting in force. And "Severn and Wye" is not satisfactory either. It is somehow wanting in its appropriate Wordsworthian atmosphere of rest and peace. It is quiet not because it is happy, but because it is dull.

The *Birthday Book of Art and Artists*, compiled by Mrs. Davenport Adams (John Hogg), is perhaps the prettiest of recent birthday books, and it is certainly for several reasons the most instructive. The birthdate of most of the eminent artists, ancient and modern, is given wherever it has been found attainable. Many brief criticisms from the best writers on Art form texts for each day of the year, and in the main the passages quoted have been selected with judgment. Some of them will suggest thought even to those most versed in the subject, while others will afford to those who are ignorant in matters of art a means by which a

little knowledge may be readily attained. In dates and spelling and such like things we notice some errors, but considering the number of facts embodied in the book they are certainly very few. Girtin, the exquisite water-colour painter, has his name spelt as if he were a college for advanced young women; Mr. McWhirter is said to be at the present moment but sixteen years old—his birthdate being given as 1869; and George Cooke, the admirable line-engraver, is styled "Sir" George Cooke. He was never knighted, though we are sure that he deserved to be. Still, it has required some diligence on our part to discover these errors; and, on the whole, the little volume is as useful as it is dainty.

We include among "Art-Books" the so-called *Dickens Memento* (Field & Tuer), because it is chiefly noticeable for its pretty exterior. It is bound in quite the prettiest of bluey-grey cloth; the rose-grey marbled paper, without any lustre, is of exquisite colour and quality, and the printing is good, though perhaps a little fantastic. There is assuredly no appropriateness in the first initial letter, which is practically an illustration of the industry of the Middle Ages. But of what does the "Memento" consist? It is chiefly a reprint of the sale catalogue issued by Messrs. Christie & Manson when they sold Mr. Dickens's not very well chosen art treasures. And it has added to it what is at all events of more real value, and that is a little account of the first and other desirable editions of Mr. Dickens's works, compiled by Mr. Dexter, who, we understand, is a specialist in that matter.

Dictionnaire des Emailleurs. Par Emile Molinier. (Paris: Rouam.) The opening paragraph of the *Avant-propos* of this neat and handy little volume (one of a series of "Guides") modestly states what the author's intention has been in gathering material for its compilation—to produce "un volume de petit format facile à consulter"; but to this we would add a *multum in parvo* of valuable matter got together with judgment and carefully reduced to an essence. The author acknowledges the difficulty, which at once suggests itself, of distinguishing enamellers from goldsmiths and sculptors, for the well-known reason that so many of the artists of the fourteenth, fifteenth, and sixteenth centuries were adepts in each and all those branches of art, and were architects and painters more or less. This fact leads the author to make the meshes of his net perhaps a shade too small and too strong at the same time, as by it he hauls in many fish which we should hardly have expected to find in such water—Giovanni Pisano, for instance; for although he may have made the *retable* of marble for Guglielmo Ubertini, in the decoration of which enamelled silver plates were introduced, it is less likely that Giovanni executed them with his own hand than that he employed one of the skilful goldsmiths of Arezzo to furnish them. This remark, however, holds good with other names included in his extremely comprehensive but carefully made list, the compilation of which must have been a work of much patient toil, which love of the subject only could have prompted and sustained. Better that he should have included such names than that by a too conscientious filtration he should have omitted others with more legitimate certificate. Some may have escaped, but wherever we open the little volume concise notice of the artist we seek is there to hand. As M. Molinier justly states, anterior to the fifteenth century enamelling, except perhaps in some few localities, as Limoges, &c., was hardly a special, but rather a branch occupation of the goldsmith's multifarious art, and any definite classification of its workers is impracticable, and their native origin difficult or impossible to trace. It might have been as well, however,

under the name Arphé, a family of enamellers, &c., working in Spain, to have been told that they were of Flemish origin, as established by Davillier and others. But the little volume has yet more matter. A concise *résumé* of the methods and manner of enamelling in various ways is the principal subject of the *Avant-propos*. The alphabetical list of names, &c., is followed by an "Essai d'une Bibliographie" on the art, very useful to the student, but naturally less complete; and then again by a list of the principal collections of enamels public and private, the latter of which must necessarily be fluctuating, the more so as it includes the names of many dealers who generally have but temporary possession of such treasures; to this, however, there are some exceptions where collections have been formed by dealers for private enjoyment. For the rest we cannot do better than recommend this handy, neatly printed and excellent book, which ought to be on the table of every amateur and art student. If the other promised volumes of the series of "Guides du Collectionneur" are as complete as this they will be extremely valuable.

OLD BOND STREET GALLERIES.

MESSRS. AGNEW'S spring collection of water-colours in Old Bond Street is as usual most carefully selected. These exhibitions have a character of their own, and although of course there is no sameness in them, there is a certain habit of arrangement and a certain preference for particular artists. On the left side of the screens nearest the door we may reckon upon finding one or two small Turners for instance, and probably one of Millais's rare water-colours, and on the right side of the farther screen a collection of Birket Fosters. Mr. Wyld is also a constant appearer on the screens, and David Cox and Copley Fielding one may meet here and there and everywhere. The assemblage of Turners is unusually numerous and interesting. There are the early drawings, somewhat faded, but still wonderful, of the Interiors of the Transept and Chapter House of Salisbury Cathedral which were exhibited in 1797—masterly works of the "draughtsman" when twenty-two. There are no less than three of the exquisite blue and amber drawings of Yorkshire scenery done for Whitaker's *History of Richmondshire* (published 1823), the "Crook of Lune," the "Kirby Lonsdale Churchyard," and the "Simmer Lake," lovely in their liquid sunlight, and their delicate drawing of bough and leaf; and besides there are two later scenes in Switzerland. Among the works of the older men may be mentioned several pure and luminous Barretts, and two or three fine examples of Prout, W. Hunt, De Wint, and James Holland. There are two Rossettis—one a very careful and early study in pencil for his never finished "Found," and a very unpleasant and gaudily-coloured drawing of a lady bending to sip a brimming glass of champagne. It is scarcely necessary to mention the works of living artists included in an exhibition of this kind, but it is some cause for congratulation when a name appears in Messrs. Agnew's list, and we therefore welcome those of Max Ludby, C. Robertson, and G. F. Wetherbee.

NINETEENTH CENTURY ART SOCIETY.

MR. GOTCH again contributes the most thrilling picture to the galleries in Conduit Street. It is called "Consent," and shows us a kind old father giving his consent to his daughter's marriage. The lady is charming and refined, and the expression of the old gentleman is good. The work is painted in a looser manner than is usual with the artist, and there is a flatness and paintiness about parts of it which we regret to

see; but other portions, like the furniture and the various articles on the table and the books behind, are treated with great breadth and skill. Mr. Trood's clever and humorous studies of dogs and kittens, Mr. Aubrey Hunt's bright views of Venice, a clever study by Miss Alice Miller, the richly and truly coloured pansies of Miss Ada Bell, a fresh view of spring meadow and brook by Edwin Izard (thoroughly English), and a fine-toned and Millet-like "Pastureland" by Edwin Calvert (thoroughly French), are some of the best of the other pictures in oil; "Tempting Wares: Cairo," by Miss Margaret Murray-Cookesley, though scarcely satisfactory in its fruit, deserves to be noticed for its graceful figure, its pleasant colour, and a certain glory of light. There are also a number of agreeable water-colours.

CORRESPONDENCE.

THE HOLBEIN'S SOCIETY'S "TEWRDANNOKH."

London: March 3, 1885.

I stated a series of defects in the second edition of this book which do not exist in the first. Mr. Brothers denies the existence of none of them, because they are undeniable. He contents himself with reiterating the assertion that one edition is as good as the other. Such an assertion needs no further reply.

It was unnecessary for him to prove himself a careless collator. If two pages of a book are misplaced, anyone who can read the language in which the book is written can discover the fault for himself. Two pages of the reproduction are so misplaced. There is nothing more to be said.

Mr. Brothers declares that he never heard of Mr. Hirth. Perhaps not; but it is not my business to introduce him to one of the leading German publishers. W. M. CONWAY.

NOTES ON ART AND ARCHAEOLOGY.

WE are glad to see that Mr. Arthur J. Evans, the new keeper of the Ashmolean Museum at Oxford, has obtained from Convocation a grant of £1050, to be devoted to the formation of a strong-room in the museum, the heating of the building by hot-water pipes, and the provision of cases for the upper room, now vacated by candidates for examination. Mr. Evans is now delivering in the museum a course of five lectures on "Megathic Monuments."

THE *Courrier de l'Art* expresses great dissatisfaction with the proposals contained in the bill for the establishment of the Museum of Decorative Art in the building formerly occupied by the Cour des Comptes. The Union Centrale undertakes to spend three and a half millions of francs on the building itself—a sum which, the writer observes, will probably have to be increased to four or five millions, thus absorbing nearly the whole capital of the society, and leaving only a very trifling balance for the purchase of objects for exhibition. Another ground of complaint is that the museum is to be open free on only two days in the week, a provision which will seriously impair the usefulness of the institution to the workmen for whose benefit it is, or rather ought to be, principally designed.

THE Princess of Wales has consented to sit for a portrait to be painted by Mr. J. E. Millais as a commission from the City Art Gallery of Manchester.

MR. F. E. HULME, headmaster of the Putney School of Art, informs us that Messrs. Cassell & Co. have placed at his disposal each year a selection of art books to the value of three guineas as prizes for success in art study. These will be known as the "Cassell Prizes."

THE museum of the Luxembourg has just bought for 4,000 frs. a portrait of M^{me}. de Calonne, painted by Ricard.

NEXT week (March 9, 10, 11, 12) Messrs. Sotheby, Wilkinson, & Hodge will sell a number of valuable ancient and modern coins and medals, among which are four rare and early Chinese gold coins, about thirty five-guinea pieces, tetradrachms of Perseus, Philip V., Seleucus II., and Demetrius II. The sale will also include some Babylonian cylinders, and a collection of valuable books on numismatics and similar subjects.

Two of the pictures shown at the recent exhibition of the works of M^{me}. Eva Gonzalès have been purchased by the State. One is a crayon drawing, "*La Nichée*," and the other a painting, "*L'Entrée du Jardin*." It is expected that the former will be placed in the Luxembourg.

THE municipality of Aix-les-Bains is in treaty for the purchase of the splendid art collection of M. Vuilliermet, of St. Jean de Maurienne. The collection will be placed in the ancient château, which has long been the property of the town, and has been fitted up as a museum, though hitherto it has been unprovided with objects for exhibition.

THE STAGE.

LYTTON'S "JUNIUS" AT THE PRINCESS'S.

If there are any left who consider that in the poetry of the late Lord Lytton there resides that quality by which the mind is quickened and fired, they will have great joy even in the pure literature of the new production at the Princess's. But for our own part, the "*Lady of Lyons*" and its fellows move us to but moderate ecstasy. They are the praiseworthy result of learning, and of continuous industry, and of occasional good taste. They contain little to teach, little to elevate, little potently to charm. Only on the stage—the stage for which, we admit it, they were meant—do they dazzle with success. In the closet, the brilliance is perceived to be a little tawdry; the tone sometimes pretentious when it aims to be high; the moral unexceptionable, no doubt, but somewhat obvious and dull. But, however that may be, the late Lord Lytton took himself and his work seriously. He studied carefully the stage for which his writing was destined; he knew the effects he wanted, and generally obtained them. And "*Junius*" is not a work of youthful immaturity or of intellectual decrepitude. It dates from about the period of the "*Lady of Lyons*"—a play whose popular sentiment and dexterous stage-contrasts still make it prized by the actor. Inferior to that play in richness of opportunity, it is free from its exaggerated ornament of language. It is surprising to us, we frankly admit, that it should not, till now through the well-advised enterprise of Mr. Wilson Barrett, have seen the light of the boards. It has, we think, but one conspicuous weakness, and that is the insufficiency of its short third act—an act devoted first to the brief display of Lucretia among her maidens, and then to the treacherous coming of Sextus Tarquin, who begins his dishonourable wooing. But that the middle act of a play should be insufficient does, of course, point to some thinness of material throughout the whole. Nothing but the tyrannical requirements of classical drama can have caused the play to

appear in five acts. The whole subject might have been conceived in four acts, or in three. But as with Lord Tennyson's "*Cup*" at the Lyceum, so here at the Princess's with Lord Lytton's "*Junius*," a stage management at once lavish and discreet has come to make amends for that which the play lacks, and where there is no interest of engrossing action there is that of an engaging spectacle. The "setting" of "the gem" was, it may be, needed as well as justified. Anyhow the result is satisfactory. One sees good acting, gorgeous accessories; one listens to sound morals and to sonorous words. If here and there the effort after literary style is somewhat painful, and the art displayed instead of concealed, one feels that before he wrote this play Lord Lytton had saturated himself with the writing of great masters. He often rises above the commonplace. He is often vigorous and terse.

The acting leaves little to be desired. It is not ideal, but it is at least adequate. As for Mr. Wilson Barrett himself, his performance is complete. We could wish nothing better than his appearance and his acting in that character of the severe yet tender Roman who loved Lucretia when she was a child, and who avenges her death. Junius Brutus appears a little silly at the first; the assumption is made very skilfully indeed, and would impose upon the acutest observer. Subsequently his force is declared; an occasion presents itself, and he rises to it. Mr. Barrett is both stately and persuasive, dignified and touching. Another part is played, we think, with as small a trace of error, and that is the part of Vindex, a slave who pants for freedom; one who has elements of nobility mixed with his elements of baseness. It is played by Mr. Hudson, who has not hitherto, that we can recollect, done anything that is specially noticeable. Mr. Willard looks very well, in the first act, the character of the fairly conventional heartless voluptuary. Then the lines in which he tells how Lucretia impresses him are delivered with the gravity of a feeling deeper than that for which the voluptuary might claim to be credited. Later on the ignoble basis of his character is fittingly revealed. Yet Mr. Willard sometimes snarls and draws more than one likes him to do. His elocution is accurate, but it is not free from monotony. Miss Eastlake, who looks the part of the young Roman matron excellently, has certainly no further fault than the fault of want of intensity. But her intensity a year or two ago, in the performances before Ophelia, was wont to be hysterical. Now her more measured emotion is never wanting in dignity. Her performance is not great, but it is worthy. Her Lucretia is without blame. We have implied already, if we have not expressly said, that the scenery and stage trappings are appropriate and splendid. A word must be said for the movement of the groups, especially of the groups in the last scene. Almost each person here plays his part as if he were indeed an actor. The old supernumerary, who brought body and no mind at all, has vanished from the Princess's.

FREDERICK WEDMORE.

"A BLOT IN THE 'SCUTCHEON'" IN NEW YORK.

MR. LAWRENCE BARRETT is known to the American public as the actor who is most willing to run risks of personal discomfort and pecuniary loss for the sake of his art, and to introduce worthy new pieces to the stage. His successful revival of "*A Blot in the 'Scutcheon*" is the latest instance of this, and though opinions differ as to the practical value of the play, Mr. Barrett's enterprise has received warm appreciation from all quarters. Some account of the performance may be welcome to English readers, since besides the interest that would in any case attach to the presentation of this play, the present revival is specially noteworthy because the changes in construction by which Mr. Barrett has sought to secure a successful acting version, have been made by him in collaboration with Mr. Browning himself, or at least discussed with the latter and submitted to his judgment.

In the first place, all the introductory conversation between the servants is omitted, on the ground that it is trivial in comparison with the rest of the dialogue, and unnecessary to a comprehension of the plot. At the Star Theatre the curtain rises upon the gallery leading from Lord Tresham's dining-hall. Earl Mertoun, a pale, fair-haired boy, dressed in crimson velvet, is supposed to have dined with the family, and to be taking his leave. Tresham's first words, "I welcome you, Lord Mertoun, yet once more," are thus a recurrence to a subject previously discussed. No change in the text is necessary to this view. Then the scene changes to Mildred's chamber, where she is discovered dressed in white, regarding herself pensively in a mirror, close by the painted window and the signal lamp in readiness upon the table. The next change is the omission of Mertoun's song, the Earl simply entering at the window and taking Mildred's hand as she sits in front. The song is omitted because it would seem unnatural for Mertoun to waste a moment before seeking Mildred after his interview with Tresham, and also because it would interrupt the action of the play at the moment when the audience are first becoming conscious of the terrible character of the situation. This is fully revealed by the scene between the lovers, and the tragical intensity which is reached when Mildred sinks upon her knees at the words, "God forgot me—and I fell," is never relaxed again during the play. The opening of the second act shows instantly that the horror is increasing as it spreads, by the striking contrast between the calm and gracious nobleman who received his sister's wooer, and the haggard and excited man who now drags his woodman after him into the library, and hastily bolts the door. From this point the play progresses rapidly to its climax, which is found in the middle of this act. The entrance of Guendolen, unconscious of anything wrong, is hardly noticed between the pathetic scene with Gerard and the equally pathetic entrance of Mildred. For a moment the latter looks over her brother's shoulder at the book, then at his "Don't lean on me," she goes around and seats herself at his feet. The lines descriptive of a brother's love (with a noticeable change of reading—"Your love . . . her love, that is—the sister's love!") were delivered by Mr. Barrett with great tenderness and made a visible impression upon the audience. "Must I, Mildred? Silent still?" comes in the same tender tones, and then, as Tresham nerves himself to put the dreadful question, the shame of it all overcomes his love, and springing to his feet he demands, in a voice hoarse with passion, "Is there a gallant—" and so on. As no answer comes, his passion changes to determination, and drawing his sword, he asks in a low voice for the name. "Till now, I only had a thought for you—But now,"—

flinging his sword upon the table—"his name!" The next long speech of Tresham's—for a reason seen later—is omitted down to the words, "But with to-morrow hastens here the Earl!" The dramatic climax of the play occurs at this point. Mildred's half-eager, half-fearful query, "But Thorold—if I will receive him as I said?" seems to Tresham to reveal a depth of moral infamy in her, casting her actual sin so far into the shade that he staggers back and chokes in the attempt to speak. When the words *The Earl?* do come, it is with a shriek, and when Mildred repeats entreatingly, "I will receive him!" Tresham's passion bursts all bounds, and the rest of the scene to his exit passes like a whirlwind. The impression produced by the foregoing passage is indescribable: the performance has shown the most dramatic passage in Mr. Browning's works in actual representation to be where probably few of his readers have suspected it. Mr. Barrett's acting grew steadily in power as the scene progressed, till at the culmination of it he reached the highest point at which he has yet been seen in tragedy. At the close of this act an important change in construction was introduced. After Guendolen's words to Mildred,

"Remember, sweet,
He said there was a clew! I hold it, come!"

instead of the curtain falling upon the end of the act, Tresham re-enters, subdued and master of himself again, and putting the others aside, addresses to Mildred the following lines, put together from an earlier speech in this act, to which allusion has been made:

"We two will somehow wear
This one day out: the dead must heave their
hearts
Under the marble of our chapel-floor;
They cannot rise and blast you! You may wed
Your paramour above our mother's tomb;
Our mother cannot move from 'neath your foot,
I'll hide your shame and mine from every eye."

The yew tree avenue of the third act gives an opportunity for a very impressive scene, with the moonlight casting great twisted shadows across the stage, and the purple-lighted pane in Mildred's window shining through the branches. After this, to bring the play to a close in the comparatively uninteresting scene of Mildred's chamber, would clearly be to lose an important effect. It is much better, moreover, that the suicide should take place in the avenue, rather than in the sister's bedchamber. Therefore, after Tresham bids farewell to his home and leaves the stage, Mildred's window opens and she looks out. Seeing nothing, she comes down and crosses the stage to the very spot where her lover fell. Tresham re-enters, seeking her, and the last scene also is played appropriately under the yew trees. In spite of the overwrought tragedy of the three deaths, Mr. Barrett succeeded in making Tresham's last speech the most touching of the whole act, with its solemn charge to hold the 'scutcheon up—"Austin, no blot on it!"—and its extreme pathos in the pride of the dying man that "all's gules again."

The performances of the "Blot in the Scutcheon" in Washington and Philadelphia were more or less experimental, but now that the play has received the favourable verdict of a metropolitan audience, it will doubtless be seen regularly upon the stage, in spite of the great demands it makes upon the sympathy of the spectators. For this result Mr. Barrett is entitled to the gratitude of all serious players and lovers of Browning.

HENRY NORMAN.

STAGE NOTES.

THE last few days have been marked by extraordinary activity in the world of the theatre.

"Junius," the new production at the Princess's, is written of above; of the Haymarket revival of "Masks and Faces" we shall say something next week; a paragraph to-day may fitly dispose of Miss Mary Anderson's latest venture—an appearance in "The Hunchback"—and of Miss Jennie Lee's reappearance in town in the part with which her name will long remain associated. The plays of Sheridan Knowles were but few; they were never very enlivening; nor can we, for our own part, understand that they should be found to touch. Still, like the best plays of Lord Lytton, they have great stage qualities, and the actor, and especially the actor who looks at art and life conventionally, may yet for a time be faithful to them. But Miss Anderson, we deem it, has been very ill-advised in her selection of the character of Julia. It is a character of feeling, but of somewhat stereotyped feeling: the breath of genius is required to refresh and renew it. Miss Anderson does not bring genius at all, nor a finished art, but a measure of taste and a statuesque beauty. Accordingly it is the opinion of many qualified judges that she succeeds no more with Julia than with Juliet—no more with the creation of the laborious playwright than with that of the profound poet—and the assumption of a character so conventional is not likely to assist her in the first business of an actress who is once *en scène*—the business of concealing such art as she may possess. The performance is by many accounted quite uninteresting, and certainly the Lyceum company, as a whole, make a strong cast out of the question. We cannot even expect it. The *débuts* of Miss Anderson were distinctly promising. It is a pity that these her later appearances should have ceased to command the interest of so many of the best students of the theatre. The Strand has been the house selected for the performances of Miss Jennie Lee, who comes before the public once again as the Jo of "Bleak House," and acts the part with a complete renewal of her old success: it is an interpretation of well-mingled humour and pathos such as the master of the modern novel would himself have loved to behold. And Miss Lee is excellently supported in her weird and impressive performance. Mr. Burnett, Miss Dolores Drummond, and other approved actors, hold with credit the places which they have been wont to occupy of old. If there is in London any lover of pathetic character-acting who has not seen "Joe," he should betake himself to the Strand on the first opportunity.

MUSIC.

RECENT CONCERTS.

THE first concert of the seventy-third season of the Philharmonic Society was given at St. James's Hall, on Thursday, February 26. The programme contained no novelty, but Herr Joachim was the violinist; and the Beethoven Concerto, of course, attracted the public. They expected a treat and certainly were not disappointed, for the great player was in his best form. The second part of the concert commenced with Brahms' Symphony in F. This fine work may almost be regarded as a novelty, for since its production last season by Herr Richter, it has only been heard once at the Crystal Palace. The performance under the direction of Sir Arthur Sullivan, who is conductor for the season, was an exceedingly good one; there had evidently been some careful rehearsals; it was a very promising commencement of the series. All the four movements of the Symphony were much applauded, and Brahms' "Eroica" as it has been called by Herr Richter, will, we are sure, have a long and prosperous career. Mdlle. Elly Warnots sang with great success "Sweet Bird"

from "Il Penseroso"; for her second song she might have chosen something more interesting than "Come per me" from "Sonnambula." The overtures were Mendelssohn's "Athalie" and Weber's "Ruler of the Spirits." The reasonable length of the programme deserves notice. At the second concert on the 12th of March Herr Gustav Ernest will conduct his Prize Overture.

The Sacred Harmonic Society gave their Handel Bicentenary Concert on the 27th of February, and it was an excellent idea to perform "Belshazzar," one of the seldom-heard oratorios. "Belshazzar," composed in 1744, was produced at the King's Theatre on March 27, 1745; it was revived by the Sacred Harmonic Society in 1847, and was given by Mr. Barnby at the Albert Hall in 1873; since the latter date it has not been heard in London. Of "Belshazzar" Handel is said to have been very fond, and it certainly contains some very fine music. He shows in many of the numbers intense dramatic power, and indeed while writing he never seems to have lost sight of the stage. It is divided not into parts but into acts, and a description of each scene given. Thus when Daniel sings "O sacred oracles of truth" there is the indication "Daniel with the prophecies of Isaiah and Jeremiah open before him." There are some splendid choruses, "Behold, by Persia's hero made," in which the Babylonians deride Cyrus, the one closing the first act, "By slow degrees the wrath of God," and the famous "Ye tutelary gods," are as fine as any choral writing in his other oratorios. It was, we think, a mistake only to give Handel's sketch chorus "O glorious prince" at the end of the second act instead of the long one printed in the German Handel Society edition. Of course, in performance, many of the numbers had to be omitted, for the oratorio is very long. When Handel received the libretto from Charles Jennens, the composer complained of its length, and in setting it to music left out many lines. Cuts should, however, be made judiciously. In the airs the "Da capos" may be shortened or in some cases omitted, as, for example, Handel himself has suggested in "Capricious man" in "Saul"; but Mr. Halle occasionally omitted the whole of the middle and contrasting section, and, of course, the whole of the repeat; this is, indeed, curtailment with a vengeance. Then it was surely a pity to leave out the very fine air "Thou God most high" and also "Destructive war," in the accompaniment of which latter song Handel has used trumpets and drums besides the usual wood-wind, strings, and cembalo. And speaking of instruments, we should mention that additional accompaniments were used. The re-scoring had been accomplished by a skilful hand. In "Let festal joy" and in the "Orgie" chorus some clever effects were obtained, though scarcely by legitimate means; for some of the instruments used were decidedly un-Handelian. The solos were accompanied by organ and the bass instruments. From the centre of the hall one can scarcely hear the organ; at times the effect was that of a duet between voice and bass instruments in unison. And then Handel most probably used not the organ, but the harpsichord. If the accompaniments to the choruses are arranged more in conformity with our modern orchestra, why should not those of the arias be treated in a similar manner? Friday night's performance presented a curious mixture of the antique and the modern. In the rendering of some of the numbers the chorus greatly distinguished itself; Mr. Cummings evidently rehearses in a thorough manner. Mr. Halle conducted with great care and energy, but lights and shades were not sufficiently observed, and there was not always a clear understanding between the conductor and his forces. The solo vocalists were Miss A. Marriot, Mdme. Patey, Miss Chester, and Messrs. Lloyd and Bridson. Miss Chester, whom we have not

heard before, gives good promise as a vocalist. The others sang well: M^{de} Patey and Mr. Lloyd were in excellent form. There was a very good attendance.

The programme of last Saturday's concert at the Crystal Palace was principally devoted to Bach's music; yet it was neither the date of his birth nor that of his death. The composer whose name deserved special notice in that week was Handel. However, there was an interesting selection, and the works were rendered in a satisfactory manner. Bach's D minor concerto for two violins was interpreted by Herr Joachim and Herr Robert Heckmann, a sound and intelligent player. Herr Joachim gave the Chaconne in masterly style, and Mr. A. J. Eyre performed the Toccata and Fugue in D minor, and for his fine performance won loud applause. In the selection from the cantata "Ein feste Burg," we noticed with pleasure a marked improvement in the Crystal Palace choir. Herr Joachim played the Mendelssohn concerto to the perfect satisfaction of the audience. The programme concluded with Brahms' festival overture (op. 80). Mr. Harper Kearton sang the two somewhat ungrateful solos in the Bach cantata. Mr. Manns conducted the whole of the concert with great care and energy. There was a very large audience.

Last Thursday week M^{lle}. Douste (de Fortis) gave a pianoforte recital at Princes' Hall; the room was packed, and the audience seemed most favourably disposed towards the young pianiste. In her performance of Schumann's "Etudes Symphoniques" she showed signs of cleverness and promise; her vigour, however, requires to be tamed, and her talent judiciously trained. There was some concerted music, in which Messrs. Kornfeld and Whitehouse took part, and some songs ably sung by Miss Griswold.

At the last Monday's Popular Concert the celebrated double-bass player, Sig. Bottesini, made his appearance. He played an Andante and Rondo of his own composition. The performance of these light but showy movements, and of a "Saltarelle" by way of encore, showed that his hand has lost nothing of its former dexterity and cunning. After displaying his talent as a virtuoso, Sig. Bottesini took the double-bass part in Schubert's long but interesting "Trout" Quintet in A for piano and strings (op. 114). Niels Gade's Sonata for pianoforte and violin in A (op. 6) was given for the first time, and admirably performed by Miss Agnes Zimmermann and Herr Joachim. The music is light, cheerful, but the influence of Mendelssohn is unduly prominent. The second Sonata in D minor is a more interesting work, and that we hope will soon be announced. Herr von zur Mühlen was the vocalist. We are glad to see the names of Gade and Grieg coming to the fore. We live to a certain extent in the past, but ought not to shut our eyes to what is taking place around us. Is Mr. Chappell going to do nothing for English art this season?

We are sorry to have to notice very briefly the Chamber Concerts of the clever and, in some respects, remarkable Heckmann quartet party from Cologne. Their first concert was given at the Princes' Hall on the first night of the Philharmonic Society. At the second concert, last Thursday evening, they—Herrn Heckmann, Forberg, Allekotte, Bellmann—performed quartets by Dittersdorf, Brahms, and the long one in E flat (op. 127) by Beethoven. They play with great intelligence, fire, and military precision, and elicited loud applause from the public. Their third concert, next Thursday, will be devoted entirely to Beethoven—the names of Mozart and Mendelssohn have not been included in their programmes. And it would have surely been better policy had they given some English work instead of the graceful, but old-fashioned, music of Dittersdorf.

LITERATURE.

A History of Taxation and Taxes in England. By Stephen Dowell, Assistant Solicitor of Inland Revenue. In 4 vols. (Longmans.)

A REALLY exhaustive account of the taxes and the processes of taxation in the history of England and its Exchequer would be of great service to the student of English history and the English people. But to get the facts necessary for such a work would entail great labour—labour beyond what might be expected from any one student, however diligent he were, and however informed of the materials for his purpose. Mr. Dowell has made use of the obvious sources of information. The chroniclers, Madox, the Rolls of Parliament, and the Acts of Parliament, printed regularly during and since the reign of Henry VIII., are the means which he has been able to use, and, to be just, he has used them very fully and very creditably.

But the chroniclers mention such matters accidentally. It by no means follows that they quote all the cases in which the king demanded, and the Council or Parliament conceded, assistance from his people. Madox dealt with the information contained in the earliest Pipe Rolls, and he is more interested in extracting such particulars as would throw light on some of the special topics which he wished to illustrate, than in getting at and giving a schedule of ways and means. The Rolls of Parliament are very imperfect, valuable as they are, and they certainly are by no means an exhaustive account of parliamentary grants, for they are not even an exhaustive account of the Parliaments which met. There is a complete series of Acts of Parliament from the beginning of Henry VIII.'s reign to the present day; but it may be doubted whether there are two or even one perfect collection of these Acts in existence. There is none in the House of Commons. That which I have always used is in the Bodleian Library, and it is not perfect. There does, indeed, exist a reprint of these Acts, and a reprint in *extenso*; but I cannot aver that the compilers of these reprints had a complete original.

If one person, or rather fifty persons, would undertake to analyse and summarise the Pipe Rolls, with their appendages, from the accession of Henry II. to the demise of Henry VII., he or they might be able to get at the particulars of the royal revenue. It would be absurd to expect that Mr. Dowell or a septuagint of students would do this. My memory of the Pipe Rolls and of their appendages is that each year demanded about fifty pounds weight of parchment, written closely on front and back, and with each account carefully reckoned and audited. I should think that the mass of evidence in one of

these sets, which indeed are perfect and continuous, is about three or four times that of Domesday—a document which has not yet been analysed.

There do exist sources, however, more manageable than the Pipe Rolls, from which, if he could not have examined them thoroughly, Mr. Dowell might have procured very useful information. There are the Subsidy Rolls. Many of them exist for the time of Edward I. in the Record Office; and, though I cannot say that they are perfect for all the counties in which Parliament made grants, yet they are very numerous, and could be made to supply what would practically be a census for England at this early period.

When I collected the facts for my first volumes of the history of agriculture and prices, I noted all the taxes which one of the series of estates contributed. They are far more numerous than those recorded in the existing rolls of Parliament, and Mr. Dowell is in error when he thinks that no grants of fifteenths and tenths were made between 1360 and 1369. I have noted them for four of these years, and I daresay that they were far more numerous than those which I have discovered in the audits of the bailiffs' accounts.

Mr. Dowell says that fullages fell into disuse after 1332. But I have noted them in 1339 and in 1374 (vol. ii., 562–69) stated as charges under this name. It may be that these names are a survival of an experience which had passed away; but it is not a little remarkable that in such a case a name should have survived forty years after its abandonment as a financial expedient.

The amount which an estate paid to a subsidy before the great Plague, and therefore before the income of the landowner suffered so serious a shrinkage, was about five per cent. on the net profits. After that event, it fell to half this amount. Mr. Dowell is quite accurate in stating that the amount of a subsidy was fixed at an early date, and, therefore, the diminution of the landowner's payments must have been made up by the increased contribution of the tenant. But he should, I think, have pointed out how large was the tax granted in 1341 on wool and the grant of the 20,000 archers in 1452. Both are recorded in the Rolls of Parliament. In 1347 a tax of a twentieth sack of wool is granted, as I find from the payment made from divers estates, though there is no record of it in the Rolls.

I do not refer to these particulars in order to carp at a very useful book, but to show that the information which it contains for the earlier part of the enquiry might be greatly extended, and the results greatly amplified. English finance and taxation during the period which Hallam called the Middle Ages is a very curious and instructive study. The power of the purse counted for a great deal in the fifteenth century; and, though the Commons did not understand how to use it as an instrument of administrative reform, they well knew that it could be so used, and were anxious to discover the process.

Mr. Dowell has omitted any notice of the remarkable aid which Henry VII. levied in 1503, on the plea that his son's knighthood had not been paid for, nor his eldest daughter's marriage. The tax was leviable on lands

held from the Crown in knight service only; but Henry demanded it from all persons, freeholders and copyholders alike, though he excused one-fourth of those whom he alleged to be liable from the contribution. This tax, which is given in detail in the Rolls of Parliament, had not been leviable for a century and a half, the only person who might have been made the occasion of the claim, Henry of Monmouth, having been knighted by Richard II. just before the close of his reign.

The history of taxation given in the later volumes of Mr. Dowell's work (for what has been referred to is treated principally in the first volume) is far more exact and exhaustive, especially in what relates to the narrative of particular taxes; some long abandoned as sources of revenue, and some still surviving. The work also contains some curious and interesting information on the progressive use of certain duty-paying articles, and on the ingenuity with which frauds are practised on the revenue.

Altogether, Mr. Dowell has supplied the public with a very useful book, and has dealt with the history of the revenue in a far more readable manner than any of his predecessors have in the same field. It is worth observing, too, that his treatment of the subject is not controversial but historical. He has not, however, told us that the principal source from which British financiers have borrowed their later schemes of taxation, at least from the days of Speaker Grimstone's book of Rates (which is preserved in MS. in the House of Commons Library), was the expedients which the Dutch adopted in order to meet the charges of the War of Independence.

JAMES E. THOROLD ROGERS.

Songs of the Heights and Deep. By the Hon. Roden Noel. (Elliot Stock.)

IN a very interesting article on Lord Tennyson, recently contributed by Mr. Roden Noel to the *Contemporary Review*, he gives us some little insight into his education and aims as a poet. He tells us that while Tennyson spoke to him in youth, Byron spoke to him in his boyhood. No doubt other poets besides these have "spoken to" Mr. Noel, Walt Whitman, if I mistake not, and Browning; but it is not in his versification for the most part that the influence of these or any other poets can be traced. He is clearly as natural in his utterance as a modern poet can be. He has something of Byron's impatience of technical restraint, something of his fervid flow of words; while his pictures of nature would probably have not been so careful in detail if he had never read Tennyson; but the effect of the minds of other poets on himself has been spiritual and intellectual rather than artistic, and it is in his wide and fearless "criticism of life" and in his "higher pantheism" that we see it most plainly.

In the article already quoted it is said that Tennyson, "like every greater poet, wears the prophet's mantle as well as the poet's bay," a sentence which, without any personality, may be taken to indicate Mr. Noel's ideal of the poet's function. Indeed, it has always been evident that Mr. Noel is a poet not satisfied with mere literary excellence; and he has already won a deserved

place, if not among the prophets, at least among the few who write verse, not to please with graceful themes and dainty workmanship, but to express emotion stirred by the sufferings of man and the terrible riddle of his destiny. It may be added that he is one of a still smaller band of poets whose views of the present and the hereafter are not tinged with either fatalism or indecision. He has words to say, and they are words of cheer.

The mist of hopelessness which clings to so many latter-day prophets, and deprives their utterances of all solace and encouragement, does not cloud the poems of Mr. Noel. The faith which dissipates it is indeed vague as a wind, but it is steady and invigorating. Although he by no means dwells upon the sunny side of things, but takes a wide sweep of them, comprehending all the joy and grandeur of the natural universe, all the sin and squalor of civilisation, he never desponds. Though the battle of life may be dire, he feels that it is worth waging; though the result may be uncertain, he is not discouraged. In the first poem, "A Lay of Civilisation or London," pictures of misery and wrong, of social and spiritual disease, succeed each other like terrible phantoms. "The City of Dreadful Night" is scarcely more terrible than this awful picture of the modern Babylon, with its

"Illimitable leagues of piles confused,
Dome, tower and steeple, stately palaces,
Islanded in a welter of dim street;"

and its river

"A guilt-laden ghost,
How he hurries all unlingering below,
Away, away, through horror of deep night,
Pale with the guilty secret of a city."

Yet, notwithstanding the contrast of all this crime and ugliness with the beauty of nature and the purity of innocent children, the poet is able to conclude his dreadful survey with the following lines of noble comfort:

"Therefore, dear birds, in leafy woods ye warble,
And you, my children, by the rivulet
Play, laughing merrily, because the world
Is sound at heart, howe'er it seems to all.
God-fronted, dragon-trained, 'tis but the marred
Image in souls, who travail yet ungrown,
Who, ruffled, slowly waver into rest.
And why ye arise and fall, no mortal knows,
Save that by change alone the unchanged abides;
Love breathes amid the ruin of dead wrong.
For a moment only of our infinite life
With one wild wing-pulse cleaving earth's rent
air.

Oh! lift we one another from this hell
Of blindly-battling ignorance to God!"

So the evil in this world does not appear to Mr. Noel triumphant, as it appeared to the late James Thomson; nor is he satisfied with both good and evil, as Walt Whitman is; but, not so much a Pantheist as a Pan-Christian, his survey of existence breeds in him a strong faith in the ultimate conquest of the good, or the blinding of good and evil into something more divine than can be grasped by the finite intellect.

Mr. Noel's last volume contains some passages more encouraging even, perhaps, than that just quoted. Here is one, for instance, in which he seems to recognise that the heights to which the human soul can attain even in this world may make "life worth living," besides suggesting a grander here-

after. In his poem called "Tintagel," which recalls visions of Arthur and the Knights of the Round Table, he exclaims:

"And if those heroes were not, then the mind
That holds high visions of our human kind
Is mightier than mighty winds and waves,
And lovelier than emerald floors of caves.
Nature herself is the high utterance
Of holy gods; we, half awake in trance,
Hear it confused; through some half-open door
We hear an awful murmur and no more!
We are under some enchantment; lift the spell.
What mortal, then, the wondrous tale may
tell."

The "Lay of Civilization" is by far the best of the longer poems in this book, and "Melcha" is by far the worst. In the latter strange mixture of old legend and modern allegory it is difficult to sustain sufficient interest to wade through its pages of loose verse and confused thought. It must also be confessed that in many of his shorter poems the writer fails to carry the reader away upon his wild steed of rhapsody. "Thalatta" is, for instance, a poem remarkable for its power of fancy and force of language; but it needs more than ordinary patience to listen to the long account of the different forms which sea and cliff assume to the writer's excited imagination—buffaloes and tongues of fire, wan warriors' arms and fairy-fretted spires, Niagaras and avalanches, and

"Beetling, flickering huge crags of seething snowy
spume,
Wherein are caverns of green tint among pale
coral branches,
And white comets thwart more shadowy froth-
precipices gloom!"

Readers of Mr. Roden Noel need not to be told of his inequalities. Perhaps no one capable of writing such good verse was ever so little a critic of himself. There are many noble bursts of eloquence in this volume marred by some utterly commonplace line; many a passage of inferior verse ending with a fine thought finely expressed. Of his peculiar failing—mixture of metaphor—we have perhaps less than usual, but it is still too frequent. The Thames in London is an "artery spanned by tumultuous bridges," and "rolls headlong" like a scapegoat, and faith is "the fair fruit come to birth in us, the earliest green-point of the flower to be." It is in his smaller and more personal poems that his verse is most free of defect. The lyrics and sonnets called "Autumn" are charming no less for their vivid pictures of nature than for the deep sentiment which inspires them, and the following song is sweet:

"LOVE HIDING.

"Love was playing hide and seek,
And we deemed that he was gone,
Tears were on my withered cheek
For the setting of the sun;
Dark it was, around, above,
But he came again, my love!"

"Chill and drear in wan November,
We recall the happy spring,
While bewildered we remember
When the woods began to sing
All alive with leaf and wing,
Leafless lay the silent grove;
But he came again, my love!"

"And our melancholy frost
Woke to radiance in his rays
Who wore the look of one we lost
In the far-away dim days;
No prayer, we sighed, the dead may move,
Yet he came again, my love!"

"Love went to sleep, but not for ever,
And we deemed that he was dead;
Nay, shall aught avail to sever
Hearts who once indeed were wed?
Garlands for his grave we wove,
Yet he came again, my love!"

COSMO MONKHOUSE.

Madagascar and France. With some Account of the Island, its People, its Resources and Development. By George A. Shaw, London Mission, Tamatave. With Illustrations and Map. (Religious Tract Society.)

THE main subject of this book, as will be understood by the opening words of its title, is the long-continued series of attacks, still in progress, by the French in prosecution of their claims over Madagascar. The part unwillingly played in the drama by Mr. Shaw cannot have passed from the reader's recollection; but it is difficult to realise—thanks to various subsequent international episodes not more flattering to our pride—that the events only occurred a year and a half ago. Mr. Shaw's plain and unvarnished narrative will call forth a sympathy not unmixed with some natural indignation. In truth, one can hardly imagine a more unpleasant position—at the absolute mercy of a certain class of French official, for whom the victim not merely embodied the national enemy: *ce méthodiste* was besides, in the present instance, for these devout sons of the Church, the successful rival of the creed which, as M. Huc said of it in Tibet, represents at once the greatness of Jehovah and the majesty of France; and certainly the close imprisonment for weeks, as the writer describes it, in a dark lower deck cabin, the not unmeaning threats of violence, the chivalrous refusal to allow his wife, who had just arrived from England, to see him even from a distance, besides the destruction of his property—to say nothing of the indirect outrage to English feeling—seem but slenderly compensated by the payment of a thousand pounds and a very lame apology. To do the author justice, however, he gives no undue prominence in the narrative to his own sufferings, and, though not concealing his sympathies, it is always in measured, if very plain, language that he exposes the shallowness, historically, of the French claims, and describes the harsh and arbitrary conduct which he asserts to have been the cause of their repeated failures to colonise or to gain political ascendancy in Madagascar. He naturally records with complacency that

"the fifty-three 'children of France' who signed the petition to the President, telling him that if the Republic could not help them against the savage hordes of Madagascar, there was nothing for them to do but to wrap themselves in the colours of *La Belle France*, and die in defence of the just rights of her outraged citizens, are now thoroughly disgusted with themselves for ever having been such fools as to have helped to drive the Hovas, and with them the trade, away from the coast."

We must not, of course, forget the long and bitter rivalry in the island of the Protestant and Jesuit missions, and that the policy and conduct of the former—though in the main they may fairly claim, as the result, a great moral and material advance—has not met with invariable approval even from inde-

pendent observers. And even the fact that King Radama II., "the French protégé," got drunk at his coronation with all his guests, while the virtuous Protestant Queen Ranavalona toasted her subjects in lemonade, may possibly be explicable otherwise than by the political or religious connection.

The recent rapid increase of civilisation which the author describes is very remarkable, and the striking instances he records of courteous, humane, and disinterested conduct on the part of the native authorities towards the French, in the midst of extreme provocation, seems, as he says, to prove its reality, and to show that the Malagasy are justified in demanding, what the French have always refused, that they should be treated as a civilised people. Assuming, with the author, the probability that the Hovas, the leading tribe in Madagascar, have a common origin with the Polynesian race, it is interesting to note the many resemblances between the two peoples as to their virtues and their vices, their customs and habits; neither people capable, apparently, of much development till the impulse was given from without, since when the Malagasy, with their greater material resources, aided, perhaps, by the early infusion of some Semitic blood, have made the greater progress of the two.

It must be admitted that there is some confusion in Mr. Shaw's observations on the origin of the people. First he speaks of the "Malay origin of the Malagasy." True, he explains later that by "Malay" he means rather the common ancestors of both the present Malays and the Malayo-Polynesians. But, he says, there are in Madagascar two races—the Hovas, the latest arrivals, who are fair and straight-haired; and the remaining tribes, who are dark; and he traces the latter to the Melanesians (whom he misleadingly calls "Western Polynesians"). He is hardly justified, however, in assuming a "Malay" origin and starting-point for immigrants of the latter race, and still less in supposing that the fairer people, on arriving in Madagascar, would find the Melanesian language of their precursors intelligible to them.

Mr. Shaw explains shortly, but clearly, the circumstances which, over and above the sentimental consideration, give to England a strong commercial and political interest in the independence of Madagascar. He also gives some details about the administration, and there are two pleasant chapters on the flora and fauna of the island, which, though by no means exhaustive, show a keen observation and cultivated taste for the study of nature. It will thus be seen that the book, though on various points entering into less detail than such a work as, e.g., Mr. Sibree's, has nevertheless something more than an ephemeral interest. COURTESY THOMAS.

Coligny: the Earlier Life of the Great Huguenot. By Eugene Bersier. Translated by Annie Harwood - Holmden. (Hodder & Stoughton.)

THIS is the first part of a work of which the design is better than the execution. The grandest figure of French Protestantism, the greatest Protestant layman of the sixteenth century, with the exception, perhaps, of

William the Silent, was the renowned Admiral who, after a life devoted to high and noble ends, and always true to its accepted faith, became the victim of the worst deed of blood ever perpetrated in the name of religion. Coligny's pure and heroic nature made him the master-spirit of the Huguenot cause; and he was almost the only chief of his party whose conduct can be wholly ascribed to single-minded and unselfish motives. In addition, besides, to these claims to honour, the Admiral was one of the foremost soldiers and statesmen of a memorable age; he was, in arms, the rival of Francis of Guise; he laid the foundations of the colonial empire possessed by France until 1763; and he anticipated the policy of Henry IV., only carried out to its end by Richelieu, in his persistent efforts to check and reduce the perilous supremacy of the House of Austria. It is no wonder, then, that his splendid qualities should at all times have commanded the homage of really great historical thinkers, though they have been questioned by partisan writers; and English students of his age, we believe, concur generally in the verdict on him pronounced by St. Simon, Voltaire, and Montesquieu. The volume before us is, for the most part, an epitome of the elaborate work of M. Delaborde on Coligny's life; and, when complete, it will give the reader a biography of its illustrious subject full of information within a narrow compass. M. Bersier has given proof in his book of honest industry and thorough research; and he has brought together abundant details that throw full and instructive light on the first part of the Admiral's career. A deficiency, however, of art and insight is visible throughout the entire performance: the author has failed to place before us the living image, so to speak, of Coligny, and, though not wanting in real knowledge, he has not reproduced the character of the time, or shown us the France of 1540-70. The book, in a word, is somewhat lifeless, although valuable in many respects. We should add the translation from the accomplished pen of Mrs. Holmden is fluent and good.

M. Bersier has given us useful details as to Coligny's youth and early manhood. The circumstances of his life were not adapted to form a Huguenot of the sternest type, or a great leader of French Protestantism. His childhood was passed in a feudal castle, rich with the pomp of Italian art; and he received in his teens the martial training, and was brought up in the splendid luxury that characterised the French noblesse of his time. The associations, too, of his youthful time were, for the most part, such as would make him dislike a creed generally despised by his order, and identified, even in the national mind, with jealousy of the great, and contempt of dignities. His father was a marshal of France, his uncle the Constable Anne Montmorency, was a mainstay of the throne of the Valois; and his family held a conspicuous place among the chiefs of the "parti politique," which, in its zeal for France and the monarchy, upheld the Church as a power in the State and persecuted the Reformers as dangerous sectaries. No wonder then, that Coligny's mind was only turned by slow degrees to the faith in which it rested at last; and that for many years he was famous only

as one of the most distinguished soldiers of his day. His military career from the first was brilliant; and he exhibited in it the great qualities which have distinctively marked his character. Less dashing, perhaps, than Francis of Guise, he was a more solid and abler leader. A diversion admirably planned by him made Charles V. recoil from Metz; he contributed much to the fall of Calais; and he saved France after the rout of St. Quentin, displaying that patience and undaunted courage which marked him out among the men of his time. Coligny, too, possessed great gifts in organising and preparing war. At an early age he was made, so to speak, Inspector-General of the Infantry of France; and his orders enforcing strict discipline, yet careful of the soldier's sense of honour, remain models of administrative skill. Having attained eminent military rank, he became Admiral of France in his thirty-fourth year; and in this great office he gave ample proof of capacity and far-reaching intelligence. The navy of France indeed, was in embryo only; and a century was to pass before it began to be formidable under the hand of Colbert. But French enterprise beyond the sea was largely due to Coligny's efforts. It was he who was the chief founder of the flourishing empire of French colonies which endured until the Seven Years' War; and it was he, too, who first called attention to the immense value, in the interests of France, of the possession of the seaboard of Flanders, at all times an object of French ambition.

Coligny was in his fortieth year when the great change came over his life which made him the champion of French Protestantism. Certain tendencies in him made him inclined, by nature, to the Huguenot faith. His disposition was grave, austere, and with a strong sense of personal duty; and he had no sympathy with priestly influence, or with the external pomp of a dominant Church. Besides, one of his instructors in youth had been brought up at the feet of Erasmus; his mother had been charged with Huguenot leanings, although she remained through life a Catholic; and his wife, the heroic Charlotte de Laval, was a zealous and loyal disciple of Calvin. The study of the Bible, it is said, during his captivity after the defeat of St. Quentin, and a correspondence with the Genevan Reformer, determined his slowly-formed purpose; but not improbably the condition of France, threatened by the tyranny of the brothers Guise, and rent asunder by religious discord, concurred to turn him towards the Huguenot cause. From the moment when he became a Protestant, he was the acknowledged chief of the party; and the years of life that remained to him were dedicated to the noble ends of mitigating the sectarian feuds of France, and endeavouring to obtain some kind of repose and security for the oppressed Huguenots. The task appeared, in the first instance, hopeless, for the Guises enjoyed a complete ascendancy during the brief reign of Francis II.; but the efforts of Coligny, though at last baffled, were not fruitless in the first part of the Regency of the queen mother Catherine. M. Bersier has described very well the attitude of the religious factions which at this period divided France, and the controversy between the rival Churches; and he has accurately

pointed out what Coligny accomplished, in the direction, at least, of religious freedom. We cannot, however, commend his sketch of the policy of the French Court in those years, or of the motives which swayed the conduct of the ill-understood widow of Henry II. Catherine de Medicis, we are convinced, desired, and this from purely political reasons, to support the Huguenots, as long as she dared, as a counterpoise to the Guises and Philip. We cannot, in any other way, account for the authority Coligny had in her councils, or for the willing ear she gave to his advice to assist the Reformers in the Low Countries, and to arrest the progress of Spanish ambition. But when, after a long experience, it had become apparent that the Catholic cause had the sympathy of three-fourths of France, and that the Huguenots were much the weaker party, and when, above all, the enormous power of the Guises evidently menaced the throne, the queen mother threw in her lot, reluctantly, with the winning side; and then, with the falsehood of a weak nature, she did not hesitate to yield to counsels which deluged France with torrents of blood, and have left an indelible stain on her name. This volume closes at the point of time at which she began to lean towards this fatal policy, and at which the massacre of Vassy showed how completely ascendant the Guises were, how savage was the mood of Catholic France, and how arms had become the only chance of safety for the imperilled Huguenots. It is unnecessary to notice the idle charge of Catholic historians of the seventeenth century, that, in drawing the sword at this terrible crisis, Coligny was a rebellious subject. He fought to save his country from the House of Lorraine, and to rescue Protestant France from destruction. The martyr of St. Bartholomew was slain as a heretic; but, in his own day, he was never denounced, even by calumny, as a disloyal traitor.

W. O'CONNOR MORRIS.

Proceedings of the International Conference on Education, London, 1884. Edited by Richard Cowper, Secretary to the Committee of Organisation. In 4 vols. (Clowes.)

THESE four goodly volumes form the permanent literary record of an event which was for several reasons remarkable in the history of education in this country. The International Health Exhibition of last year was in many ways eminently successful, and in none more so than in the discussions and conferences for which it supplied the pretext. It seems to have been felt by the Commissioners that so great an opportunity as was furnished by the assembling of many thousands of people under one roof ought not to be lost, and that the usefulness of the Exhibition should not be limited to mere sight-seeing. They accordingly made provision for the discussion of subjects more or less cognate to the purpose and contents of the exhibition itself, and for the publication of the results of the discussions in hand-books or reports. In no one department was this design so successfully carried out as in that of Education. The congress of August last was attended by an unprecedented number of persons, chiefly teachers of various ranks, from England, Scotland, from the principal Continental nations,

and the United States. The vigour and attractiveness of the discussions were so well sustained during one of the hottest weeks of the year that the numbers present were larger on the later days than on the first. Much of this success is to be attributed to Lord Reay, the President both of the Organising Committee and of the Conference itself, whose wide knowledge of foreign lands and systems, whose tact and courtesy, and evidently keen interest in the whole subject, rendered him specially fitted to preside over an International Conference. The small committee which assisted him in making arrangements, and in the selection of the right persons to read memoirs, and to initiate the several discussions, was composed of persons representing varied forms of educational experience and knowledge, and was enabled to secure the aid of some of the most distinguished scholastic authorities in Europe. The present volumes, which have been carefully edited by Mr. R. Cowper, the secretary, contain a complete report of the speeches, as well as a carefully revised reprint of each of the lectures or memoirs with which the several meetings commenced.

The Conference divided itself into four sections: (1) Elementary Education, (2) Technical Instruction, (3) University Education, and (4) Intermediate and Higher Instruction. To the record of proceedings in each of these several departments one of the present volumes is assigned; and it is satisfactory to learn that for the convenience of those who do not desire to possess the whole, each volume may be obtained separately.

The first volume is very varied in its contents. The freshest and most useful of its suggestions will be found under the heads of Physical Training, the Kindergarten, and the conditions of Health in schools. The general discussion on the organisation of Elementary instruction was below the level of merit and usefulness attained in other sections, and, except for the interesting contributions of MM. Buisson, the Director of Primary Instruction in France, added little or nothing to the store of public information on the subject. It is somewhat to be regretted that the larger aims and the more prominent interests which should be kept in view in considering a great system of public instruction were in part obscured by the introduction of matters of merely ephemeral controversy. This remark, however, does not apply to the other topics treated in the first volume. Some of the ablest exponents of the principles of Fröbel and Pestalozzi, including, besides English teachers, those from Germany and Switzerland, contributed useful expositions both of the principles of infant training, and of their practical applications. Mr. MacCarthy, fresh from an educational tour in the United States, brought some ingenious and useful suggestions about school fittings, and Mr. T. B. Horfall initiated a valuable discussion on the introduction of art into schools. The whole subject of the best tests of school-work, and the relative advantages and disadvantages of inspection and examination by the State, by the Universities, and by other public authorities, excited considerable interest, and the contributions of Mr. G. F. Browne, the secretary to the Cambridge Syndicate, Dr. Wormell,

and the Rev. H. L. Thompson, are full of valuable suggestions. A special department of the volume contains the papers read on the subject of music, and a record of the success which has attended the efforts of the Education Department, of Dr. Stainer, and of Mr. Curwen to encourage the study of musical notation in primary schools.

The second volume is concerned mainly with technical and industrial education and subsidiary questions. Those who desire to learn what is being done to provide either the training of the artisan to skilled handicrafts, or the improved teaching of physical science as a part of general education, will find the latest information, together with much useful suggestion on methods and principles, in this volume. The fact that the Conference itself was held in the new buildings of the City and Guilds of London Technical Institute served to accentuate the importance of practical instruction in the workshop and the physical laboratory as distinguished from lectures and book-work; and the descriptions given by competent persons of the provision for teaching natural science and the arts of construction and design in various institutions in Spain and in Belgium were full of useful hints. Not the least interesting part of this volume is devoted to the discussions initiated by Lord Fortescue and Sir T. Acland, and other landowners, on the subject of agricultural education and the right training of the skilled farm-labourer. Some miscellaneous papers on such external aids to instruction as museums, field excursions, and school savings' banks will be read with special interest by those who believe that the sphere of a school's influence is not limited to the lessons and discipline provided within its walls, but may also include training in the wise use of leisure and in the formation of right tastes and habits in the home life.

The volume devoted to the elucidation of University and higher teaching will seem to many to be more significant of the intellectual changes of recent years than any other volume in the series. The several faculties of theology, history, law, and science were well represented by Cardinal Manning and Dr. Wace, by Prof. Seeley, by Dr. Holland, and Prof. Fleeming Jenkin respectively, and the claims of different subjects of instruction were energetically advocated by many specialists. But the chief interest of the debates in this section centred round such subjects as the true office and functions of a university, the relation which ought to subsist between the authorities charged with the respective duties of teaching and examining, and more especially the proposal to co-ordinate the agencies existing in London for academic teaching into a metropolitan university, which should aim at directing and ennobling the higher instruction, and should not be limited to the function of conferring degrees. Some of the leading advocates of this proposal, including Lord Reay, Sir George Young, and Prof. Morley, evoked a good deal of sympathy with their general aims. But it must be owned that the plans for realising those aims were somewhat dimly foreshadowed, and that some of the practical difficulties which lie in the way appear to have been very imperfectly apprehended. What is the nature and meaning of the unity

which it is sought to establish between the Inns of Court, the great colleges, and the medical schools; to what extent their respective authorities are to be invited to part with any of their present independence, and what advantages are to be expected by those authorities to compensate for any sacrifice of their autonomy; whence the funds for new teaching institutions are to be derived, and what is the precise nature of the work they will have to do, are questions to which the discussions in this volume furnish no definite answer. As the record of a tentative and early effort after an ideal which will ere long doubtless find itself embodied in some practicable form, the volume will always have an interesting historical significance. The contributions to this volume of M. Dumont, whose lamented death so immediately followed his return to his native country, of Lord Lynton, on the necessity for a minister of public instruction in England, of Prof. Monier Williams, on the duties of the universities to our Indian empire, and of Mrs. Henry Sidgwick, on university education for women, are among the most important of the remaining contents of a singularly interesting and well-arranged volume.

The fourth section of the Conference concerned itself mainly with intermediate and secondary instruction; and the last volume, though somewhat miscellaneous in its character, records the proceedings of some of the most animated and generally popular discussions of the whole series. Chief among the topics here discussed will be found that of the Training of Teachers, and the share which the universities, special colleges and the State may severally take in the professional preparation of schoolmasters and mistresses. Profs. Meiklejohn and Laurie, Mr. Quick and some of the best known advocates of regular pedagogic instruction for teachers in secondary and higher schools were not only successful in enforcing their views, but have also brought down to the latest date the history of the efforts which have been made by the universities in this direction. On detached portions of the whole field of secondary instruction, the papers of Dr. Rigg, of Miss Beale, of Archdeacon Emery, Mr. Eve and Mrs. Bryant will be found to contain some fruitful hints; but for a sustained and coherent discussion on the larger subject of the relations of the State and of voluntary bodies to the organisation of English secondary education we must look to the important papers of Mr. Lyulph Stanley and Canon Daniel, who defended with conspicuous ability two opposite views, and who succeeded in evoking one of the liveliest and best-sustained debates of the week. In this section, as well as in all the rest, the contributions of foreign delegates, especially those from Holland, Belgium, the United States, France, and Switzerland added greatly to the variety and value of the proceedings.

As a landmark in the history of education in this country and in Europe generally, this publication will possess special interest for the future student of the progress of civilisation. He will see that many of the most important problems relating to public instruction in England yet remain unsolved; that there is great waste of resources, owing to the lack of harmony and

mutual understanding among various classes of authorities, and that much needs to be done to reduce chaos into order, and to place within the reach of all English citizens the help and guidance most needed in their practical duty and in their intellectual life. But he will also see signs of awakened thought and of rapid improvement. He will recognise on the part of English teachers and school authorities readiness to learn what is to be learned from others, and an earnest desire to do their work better. And if at the same time it should be perceived that we are at present moving somewhat uneasily about in worlds not realised, that some of our plans are crude and confused and our aspirations a little indefinite, it must, at least, be owned that discontent with all which we have yet achieved is in itself a hopeful sign of grace; and that in 1884 a substantial step was made towards the improvement of our educational machinery, and, what is of more importance, towards the perception with greater clearness of the ends which all educational machinery ought to subserve.

J. G. FITCH.

The Thoughts of Blaise Pascal. Translated by C. K. Paul. (Kegan Paul, Trench & Co.)

It, as may be hoped, M. Molinier's edition of the *Pensées* is definitive it is certainly reasonable that we should have a translation based upon it. Not that Molinier's edition ought to supersede the edition of Port Royal and those which are based upon it. The fault of that edition was not that in a mass of rough notes what was fragmentary was omitted, what was redundant was condensed, or even that what seemed relevant was added from minor and less fragmentary works, but that what was characteristic and shocking was softened down into what was safe and edifying. But after all the book which Pascal's friends made out of his remains is to all appearance better than the book he meant to have written would have been. Pascal's contribution to theology was very important, but it was very limited in extent. What was most characteristic was the contrast between the greatness and the littleness of man, and the inference that it had no explanation but the Fall, no remedy but the Cross. What was, perhaps, most effective at the time was the affectionate scorn of the frivolous way in which the "freethinkers" dismissed the whole subject as a hopeless puzzle, on the strength of a few cheap objections, without really considering it at all. They deserved to be told that as they had no choice but to bet, it was more reasonable to bet on the truth of Christianity than against it, especially as if they could but act steadily upon the opinion they had decided to back, they would before long be satisfactorily convinced that they were right. Pascal has practically no argument against a serious agnostic who is living a good life, and supposes that to be the only rational preparation for any other; but if he has no argument he has a theory. Such an one he thought was the worse, not the better, for his natural knowledge—what was gained by curiosity was lost by pride; that he found the evidence unconvincing was his fault, not his misfortune; for by the Divine appointment the evidence is so adjusted as to convince those

who approach it in the proper spirit, and to leave others in judicial blindness. Even to serious agnostics,* who hardly existed in the days of the Fronde, he has left one penetrating message: "The heart has its reasons, which reason does not understand." It is also instructive to all future apologists that Pascal should have deliberately refused to construct an apology for theism. He did not believe that such an apology could have any solid intellectual value, while he evidently believed that the argument for Christianity was convincing to an unbiassed mind, if such could be found in a world where all hearts were inclined one way or another—by grace or sin. It is noteworthy that he reject the argument from conscience quite as emphatically as the argument from nature—believe might be edified by both, unbelievers would be convinced by neither.

All this was sufficiently clear in the uncritical editions. What the critical editions help us to understand is the background which lay behind it, and the superstructure which was to have been built upon it. In secular matters, Pascal's determination to fall back upon unreasoned common-sense, and his cynical contempt for "les habiles," with their misplaced disturbing cleverness, were always plain enough; so was his view of miracles and of prophecy; but one sees better how much space in his mind was occupied by them, and by the sophistry about "diversion," to which it is answer enough that Lord Beaconsfield of all men could back himself against any man in the world to do nothing.

As to miracles and prophecy, Pascal never forgot that upon his principles the evidence ought not to be too clear. He dwelt with complacency upon the perplexing thesis that doctrine is the test of miracles, as well as miracles of doctrine; and he involved the argument further by his laborious and ingenious distinctions between the true miracle of the Holy Thorn and the future false miracles of Antichrist; while he liked to think that the prophecies of the glories and sufferings of the Messiah were as well fitted (before the event) to mislead the carnal as to enlighten the spiritual. For the rest, he built a great deal too much upon the traditional dates of Hebrew literature, always supposed that a prophet meant his words to be understood in the sense in which they were applied after the event, and never considered the scripture, which teaches that faith, like love, outlasts prophecy, as well as knowledge. Upon the whole, it was no loss to the world that the Port Royal editors left Pascal's borrowings from Raymond Martin where they found them: they have no value now. The discussion of miracles is more ingenious and more instructive. The definition of miracle is "an effect which exceeds the natural force of the means employed" is immeasurably preferable to those current now, which all turn upon "suspension" or "interruption" of the "laws of nature."

Mr. Paul's notes might sometimes have been a little fuller with advantage. There are allusions, for instance, to the calculating

* Montaigne was never quite serious, and decidedly objected to strip himself of his hereditary and rudimentary Christianity.

"machine" which are rather enigmatical; and, as Pascal clearly meant to build upon it almost as much as Babbage, it might be thought part of a translator's business to help the reader to guess at the underlying connection of fragmentary jottings. The translation is clear and readable, and perhaps a thought too careful. One misses the racy ease of the original, and half suspects Mr. Paul of falling into the error of the Port Royalists. If the famous *vous abêtira* only meant "you will lose your acuteness," not "make you a dull dog," Pascal's friends were not much to blame for leaving it out. Sainte-Beuve may have been right in thinking that Pascal in his rough notes put down emphatic expressions which he would not have passed for press. For instance, he might not have called the principles of geometry *gros* or *grossiers*; but, if his rough notes are to be printed and translated, perhaps they had better be translated in the rough, and one fancies that it is not exactly the same to be "practical" as to be *fin*. But enough of fault-finding. The frontispiece is admirable, with the look of beatified peace diffused over features which by nature were rather strong than sweet.

G. A. SIMCOX.

NEW NOVELS.

Lester's Secret. By Mary Cecil Hay. (Hurst & Blackett.)

Straight as a Die. By Mrs. Edward Kennard. (Chapman & Hall.)

Some Stained Pages. By the Author of "The New Mistress." (Ward & Downey.)

Nature's Nursling. By Lady Gertrude Stock. (Kegan Paul, Trench & Co.)

Skipper Worsé. Translated from the Norwegian of A. L. Kielland by the Earl of Ducie. (Sampson Low.)

The Dawn of Day. By the Author of "Thy Name is Truth." (Maxwell.)

MISS HAY is one of those novelists whom, if the critic does not love them (it would be improper, or at least indiscreet, for a critic to make a declaration of this kind in the case of a lady novelist), he certainly likes. A book of hers may not be a masterpiece, but it is pretty certain to be a readable piece of work. This is the case with *Lester's Secret*. The opening scene, which deals with a coach-top on a Dartmoor road, has a truth of description which appeals to the inmost bones of anybody who knows Devonshire, and who, while loving Devonshire as all men who know it must, is unfortunately not to the manner born of impregnability to rheumatism. Nor does the rest of the story shame the opening. There are, we think, rather too many characters—a not uncommon fault in writers who have more exuberance of invention than acquired discipline of workmanship. But this is almost the only fault. An interesting disputed inheritance, some nice young women, a virtuous hero, a villain with smooth manners and an affection for his mother, and several other agreeable personages and things diversify the pages. Where the author attempts social and political satire she is generally not very happy; but as nineteen novelists out of twenty are not very happy when they attempt social and

political satire, this should hardly be counted against her.

Mrs. Edward Kennard, also, is well known of her works, though we are not quite so sure that the "well" has an altogether complimentary meaning. The profane have charged Mrs. Kennard with being slangy, which is true; they have even gone so far as to speak of vulgarity, which is not true. To speak the cruel critical truth, Mrs. Kennard writes the ordinary kind of sporting novel rather better in some ways, rather worse in others, than the average male novelist writes it. She is precluded by knowledge from being so delightful as Ouida; by ignorance (and some other things) from being so delightful as George Lawrence or Whyte Melville. These limitations she must accept; but surely she might leave off attempting satire by means of the bracketed [?]. The novelist who wishes to be fashionable is not more surely convicted by calling his heroine Lady Constance Vavasour on this page and Lady Vavasour on that (which we are sure Mrs. Kennard would blush to do), or the novelist who wishes to be knowing in affairs of the kitchen and cellar by spelling Lafite with two t's (which we hope Mrs. Kennard would blush to do), than the novelist who wishes to be satirical is convicted of incapacity by this luckless typographic device. For the rest, *Straight as a Die* is a harmless and amiable book, though we decline to endorse Mrs. Kennard's opinion of the die-like straightness of a heroine who marries against her will a disagreeable man double her age. The fishing and riding scenes between Dulcie Shepperton and Bob Mornington (Bob is not the disagreeable man, far from it) are rather Arcadian; that is to say with that latterday type of Arcadia which the profane call slangy, and when they are very profane something else above noticed. The morals are quite unimpeachable, and we should feel no kind of dislike for anybody of either sex below the age of twenty who thought the book admirable.

Some Stained Pages deals with an art and mystery which has rarely been much dealt with in novels, perhaps for the very reason that it has so much to do with novels themselves. The hero is for many days of his life a practical printer, whereas almost all novelists that we can remember have stopped short at an occasional "reader" of an interesting kind, who is usually a broken-down poet or scholar of the rarest genius. The hero of *Some Stained Pages* has none of these adventitious claims to interest, but is simply a little boy, whose father and mother die leaving him a well-begun education but no fortune, and who, after a short experience of tyranny in a lawyer's office, drifts into paper staining—first of one kind then of another—as his livelihood. There is, of course, a good deal in the book besides the humours of "the case." Love-making and other condiments are dealt out in decent profusion; and, altogether, it belongs to an old, and not a bad, style of book: the style in which incident takes the place of analysis and humours the place of elaborate character drawing. The workmanship is not unlike Mr. Frank Barrett's, though it shows less satirical power and a still more conventional kind of

morality. As a fresh evidence of a falling back on the part of many novel writers on the good old lines whereon novel writing proceeded from Defoe to Marryat it is not unwelcome; and readers who care very little about the lines on which novels proceed so long as they like the proceeding, will probably find no fault with its three volumes.

Lady Gertrude Stock's is a thoughtful and well-intentioned book. Having occasion (quite legitimate occasion, as much of the scene lies in France) to introduce French words, Lady Gertrude, for the most part, has the consideration to translate them. Thus, when we come to "*L'amitié c'est l'amour sans ailes*," a note informs us that this means "friendship is love without wings." The translation is quite impeccable; and though some persons with a high stomach may resent it as an imputation on their ability to translate for themselves, there is much to be said for the practice from the critic's point of view. For instance, the general enforcement of it would probably keep a great deal of the French now inserted in novels out altogether, and the necessary turning to the dictionary might perhaps induce the novelists who at present talk about *bête noir* and *à l'outrance* to correct their French itself. Lady Gertrude Stock, however, does not appear to be in any danger of writing *bête noir*, and her book, though rather "young," is a book not to be evil spoken of. The heroine is the daughter of Lord Cyril Camion, a younger son of a Scotch marquis, who marries beneath him, goes to live in Florence, and brings up his one motherless child in a state of religious ignorance, from the perhaps rather illogical point of view that he himself is not good enough to teach her any religion. The scene shifts to Scotland and Brittany (by the way, "*Noirmoutier*," not "*Noirmoutiers*," is the proper form both in usage and reason) and Muriel Camion falls in love with a young Breton, who afterwards becomes a papal Zouave. There are passages in the book which have rather a tendency to raise a smile; but it is very unpretentious and singularly pure in tone, while its actual interest is at least equal to that of the average novel.

That two translations of Kielland's novel of Norse Dissenter life should appear almost simultaneously in English is only a fresh instance of a frequently recurring mystery. Lord Ducie has done his translation very well and readably, though to a foreign reader translated novels which, like this, turn rather on minute painting of manners and modes of thought than on incident, must always lie under a certain disadvantage. The powerful termination of the book, however, which is not unworthy of Dickens at his best, comes out very well here, and so do the characters of Sarah Worsé and the missionary Fennelos.

We are informed on the fly-leaf of *The Dawn of Day* that *Thy Name is Truth*, the author's former work, is a "great social novel." It is not before us, and we cannot say whether it is or not. But what we can say is that *The Dawn of Day* is neither a great social novel nor a great anything else, unless, indeed, some rude and unkind person should call it a great mass of rubbish. Whether the author is a sincere socialist or only a writer with a notion that socialism is in the

air, and will make a good subject for a novel, we cannot, of course, say; but whichever he is, socialism has very little to thank him for. His hero, Dr. Harman, who on succeeding to a baronetcy informs his friends that "the title is extinct," appears to have about as clear notions of matters political and social as he has of the meaning of extinction as applied to titles, or of the use of English generally. If this seems harsh it may be sufficient to quote Dr. Harman's opinion that "the inequalities visible in human nature all around were living fallacies which should have no existence were their foundations well examined," a sentence which well examined will perhaps be found to be as good an attempt at utter nonsense as need be expected. The holding and putting of political views, and of most views, is free in this country; but they can only be attended to when they are put in intelligible English.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

Memoirs of Napoleon Bonaparte. By L. A. Fauvel de Bourrienne. Edited by R. W. Phipps. In 3 vols. (Bentley.) These three handsome volumes are substantially a reprint of the English edition of Bourrienne's *Memoirs* which was published in 1886, the translation, however, having been carefully revised, and much new illustrative matter having been added. The additions made by the former English editors have for the most part been retained. It is, perhaps, to be regretted that Col. Phipps has thought fit to omit from the text the passages which Bourrienne merely quoted from documents otherwise generally accessible. The present editor's point of view may be gathered from his statement that Napoleon, "if not the greatest, was at least the man most fully endowed with every great quality of mind and body the world has ever seen," and from the hope which he expresses that "another and happier Bonaparte may restore to France her lost children, may obtain for a grateful and satisfied land her natural and rightful boundaries; and then, while 'freedom crowns the edifice,' may unite the glories of the First Empire with the eventual and permanent peace which the first Napoleon could not give his country." We do not share either in Col. Phipps's estimate of Napoleon's greatness nor in his aspirations for the future of France; but these opinions are certainly no disqualification for the task of editing Bourrienne. The only respect in which the editor's partisanship seems to have operated unfavourably is that in the supplementary matter he has made less use than might have been wished of the important work of M. Lanfrey. Col. Phipps has no sympathy with the efforts made by extreme Napoleon-worshippers to discredit the authenticity of the memoirs. It may be safely affirmed that no work ever bore stronger internal evidence of its own genuineness than does this book. In his Preface, Bourrienne himself says, "I shall not insert a single reflection which did not occur to me at the very moment of the event which gave it birth." This statement is no doubt to be taken with some qualification; but that the profession is not wholly unfounded is strikingly, almost amusingly, shown by the marked change of feeling towards Napoleon which the *Memoirs* begin to exhibit from the page which relates the story of Bourrienne's own disgrace. Of the merits of Bourrienne's work it is not necessary to speak at length, as they are already familiar to all students of modern history. The writer was a man of uncommon penetration, and he enjoyed opportunities for intimate

knowledge of Napoleon's life and character such as no other person possessed; and the liveliness of his style renders the *Memoirs* interesting reading from the first page to the last. His judgments of persons and events are by no means free from strong bias; but the charge of deliberate misrepresentation has never been proved against him. The volumes are enriched with a large number of excellent portraits. Unfortunately the publishers have not thought it necessary to provide an Index, the place of which is not adequately supplied by the full analytical table of contents prefixed to each volume. It would have been well to furnish a genealogical table of the Bonaparte family. On the whole, however, this edition deserves very high praise.

The Little Schoolmaster Mark. Second Part. By J. H. Shorthouse. (Macmillan.) After having said that we should like to see more work of the sort of the first part of *Little Schoolmaster Mark*, we are grieved to have to say that the second part, published a year after the first, seems to us rather a mistake. Apart from the precept, "Leave well alone," there were several reasons which should have advised Mr. Shorthouse against giving us a second instalment of his little "Spiritual Romance." One of these is that the subject was far too slight to furnish out another volume, however small; another reason is that in the interval between the writing of the two parts, a certain alteration was likely to occur, and has occurred, in the author's manner of conceiving his situation and characters. The delightful legendary perfume of the first instalment—the something reminding one of such books as the *Fioretti di San Francesco*—has been replaced by a sort of metaphysical and pietistic unctuousness. There is an attempt to develop the personages of what we may call the legend of "Little Schoolmaster Mark," so quaint and charming in their decorative primness and unreality, into real living people; and what is much worse, living people embodying psychological problems. The whole legend, indeed, has been allegorised into a psychological problem. The cravings of an æsthetic nature, the cravings of a spiritual one, the influence of religion on art, of the love of solitude on religion: all these problems are given us instead of the princes and ladies and saints of the previous book—delightful creatures like the inhabitants of one of Fra Angelico's panels. Nay, the whole of the second part is a problem: the problem of the influence which a beautiful soul may exert after death. This is one of the most subtle, curious, and beautiful problems which psychology can offer the novelist; but for its solution we require a real novelist, not a writer, however charming, of spiritual romances. It puts one rather out of patience to see Mr. Shorthouse despatching such questions as the claims of the æsthetic and ethical parts of our nature with a few phrases of mysticism; but it is worse when the question of the influence of the noble dead upon the living—a phenomenon which all of us must know in some of its strange solemnity—is settled in a series of quasi-miraculous conversions of the kind in vogue in mediæval lives of saints and Spanish miracle plays.

Poland: an Historical Sketch. By Field-Marshal Count Von Moltke. Authorised Translation, with a Biographical Notice. By Emma G. Buehheim. (Chapman & Hall.) This essay was originally published in 1832, when Moltke was a lieutenant in the topographical department of the Prussian Generalstab. It seems to have attracted but little notice, and the translator states that it is not mentioned in any of the biographies of the author. It has recently been republished by Dr. G. Karpelen of Berlin, with Count Moltke's permission, in

the monthly review *Vom Fels zum Meer*. We cannot quite see that the book justifies the opinion expressed by the translator that, had the circumstances which directed Moltke's life been different, "the laurels which he won as a soldier might have been won as a writer." It is, however, an excellently condensed account of the constitutional history of Poland, and shows in a clear light the sources of the weakness which led to the downfall of the State. The actual history of the Partition, curiously enough, is passed over almost without a word of explanation. The translation reads very well; as to its faithfulness we are unable to express an opinion, not having seen the original. There seems, however, to be a slip in the first sentence: the word "result" should apparently be "cause."

Mythology, Greek and Roman. Translated from the German of Friedrich W. Nösselt by Mrs. Angus W. Hall. (Kerby & Eudean.) This translation is "dedicated, by the kind permission of the Prince and Princess Christian, to their daughters, the Princesses Victoria and Louise of Schleswig-Holstein," photographic portraits of whom are prefixed to the volume. Doubtless there are many readers for whom this singular proceeding will give attractiveness to the book; for our own part we confess that the effect is rather to excite an unfavourable prejudice. Mrs. Hall is quite right in saying that there exists in this country a need for a manual of mythology suitable for children; but surely the want might have been better supplied than by a translation of the work of Dr. Nösselt, who mixes up Greek and Latin mythology in a thoroughly unscientific fashion, and whose views respecting the origin of myths are decidedly old-fashioned. The translator does not appear to have any knowledge of Greek or Latin, and frequently retains such purely German forms as "Eumeniden" and "Kykloppen." The transliteration of Greek names is altogether capricious: we find Aeolos and Aeolus side by side with Daidalos and Daimon; sometimes we read of Hephaistos, and sometimes of Hephaestus and Hephaestus. It is difficult to say whether the many blunders are to be ascribed to Dr. Nösselt or to the translator, but we should guess that it is Mrs. Hall who is responsible for the constant spelling "Chronos" instead of Kronos. The book has, however, one excellent feature, which may be recommended for imitation to all writers of manuals of mythology for young people: the frequent introduction of quotations from the best modern English translations of the Greek and Latin poets. The volume is also handsomely printed, and there are several well executed illustrations in outline.

The History and Origin of the Law Reports. By W. T. S. Daniel. (Clowes.) Probably most intelligent laymen know something of the importance in English law that attaches to the reporting of judicial decisions, to which there is nothing analogous in any continental system of jurisprudence. It is, however, only members of the profession who will at once recognise from the title-page that the subject of Mr. Daniel's book does not cover the entire field of law reporting, but is limited to that recent development of it known as "The Law Reports" *par excellence*. So late as twenty years ago, the condition of law reporting—upon which, as we have already implied, a large part of the substantive law is based—was disgraceful. There were, indeed, at that time, two sets of reports in existence: the one called "regular," or "authorised," as possessing a certain measure of privilege and monopoly; the other set established by private enterprise in competition with the first. To describe the evils of this system, or rather lack of system, would be tedious. Suffice it to say

that they had long been universally recognised and deplored when Mr. Daniel, the author of the present volume, started in 1863 an agitation in favour of a scheme of co-operative reporting, under the control of an influential council of the profession, vested with a quasi-public character. In the face of much opposition, Mr. Daniel's continuous exertions were rewarded by the establishment of the now familiar "Law Reports" in November 1865. Their success was immediate, and has gone on increasing to the present day, though not to the exclusion of competitive enterprises. By success we would be understood to mean pecuniary profit and established reputation. Whether the "Law Reports" have satisfied the hopes of their original promoters in respect of improvement in the methods of reporting is a question we do not feel called upon to discuss. Mr. Daniel, at any rate, is entitled to regard with satisfaction the large proportions which his own child has obtained before the age of legal majority. In this volume he has collected all the materials that could be desired by the future historian of the subject.

WE have received from Messrs. Macmillan the *Statesman's Year-book for 1885*, edited by Mr. J. Scott Keltie, being the twenty-second year of publication, and the third year (we believe) under the present editor, who is to be congratulated upon the result of the thorough revision to which he has subjected the work. We would specially notice the tables and diagrams illustrating the colonial possessions of all European countries, originally compiled by Sir R. W. Rawson for his presidential address to the Statistical Society. Mr. Keltie has always shown himself so ready to correct mistakes that we venture again to call his attention to one or two minor matters. On p. 236, the new sinking fund instituted by Sir Stafford Northcote in 1875 is described not quite accurately. It is there stated that "the charge of the sinking fund . . . was fixed at . . . £28,000,000." The true state of the case is that the new sinking fund consists of the difference between the amount, whatever it may be, annually required for the interest on the debt and the fixed sum of £28,000,000 set apart each year on that account. Again, on p. 789 we read "The Lieutenant-Governor of Oudh is at the same time Chief Commissioner of the N. W. Provinces"—a statement which ought to be thus inverted, "The Lieutenant-Governor of the N. W. Provinces is at the same time Chief Commissioner of Oudh." These things, no doubt, are trifles; but the *Statesman's Year-book* needs to be above reproach.

NOTES AND NEWS.

MESSRS. BELL will shortly publish the first four books of the *Iliad* in English hexameters, by Mr. H. Smith Wright. The translator, formerly a scholar of Trinity College, Cambridge, is the son of the late Mr. I. C. Wright, who is also known as a translator both of Homer and Dante. By a special attention to accent, Mr. Wright hopes to have avoided the defects which are generally too apparent in English hexameters.

MESSRS. JAMES MACLEHOSE & SONS, of Glasgow, have in the press, and will issue in a few days, *The Social Philosophy and Religion of Comte*, by Prof. Edward Caird.

MESSRS. TEUBNER & Co. will shortly publish a volume of Greek lays, idylls, legends, &c., from recent contemporary poets, selected and translated by Mrs. E. M. Edmonds.

DR. ROBERT DICKSON, of Carnoustie, who has been for many years a collector of everything that relates to the early history of printing in Scotland, has prepared a little

volume on the subject, in collaboration with Mr. J. P. Edmond, to whom we owe *The Aberdeen Printers: Edward Raban to James Nicol, 1620-1736*. One of Dr. Dickson's objects is to make known the researches of M. A. Claudin, of Paris, who has succeeded in tracing the first Scotch printer, Andrew Myllar, to Rouen in Normandy, where his name appears in the colophon of a book dated 1505, three years before he and Walter Chepman set up the first press in Edinburgh. The book will be entitled *Introduction of the Art of Printing into Scotland*, and will be illustrated with some twenty-seven facsimiles of devices, titles, colophons, &c., and a complete page of Bishop Elphinstone's *Aberdeen Breviary* (1508), printed in colours. It will be published by subscription through Messrs. J. & J. P. Edmond & Spark, of Aberdeen.

For Good Consideration is the title of a new volume of essays, founded on legal maxims, which will be issued very shortly by Mr. Elliot Stock. The same house announces for immediate publication a new novel, drawn from Algerine life, entitled *Madame Naudet*.

MRS. SAMUEL A. BARNETT is engaged in the preparation of a reading-book on domestic economy, which will be shortly published by Messrs. Cassell & Co. under the title of *The Making of the Home*.

THE French edition of Mr. H. M. Stanley's book on the Congo, which, as we announced last week, is to be published in Brussels, will, we are informed, be translated by Mr. Gerard Harry, one of the editors of the *Independance belge* and of the *Mouvement géographique*.

ACCORDING to the Boston *Literary World*, Mr. Julian Hawthorne has written a new story entitled *The Trial of Gideon*, the scene of which is laid in the time of the Flood. In those early days it seems there was a tribunal before which would-be authors were obliged to submit their works. If the literary production was approved the rewards were great, but if disapproved the writer was put to death. "Gideon" writes a book, decides to take his chance, and passes the ordeal successfully. Messrs. Funk & Wagnalls will publish the book in the spring.

THE third and fourth volumes of the Duc d'Aumale's *Histoire des Princes de Condé* are announced for early publication.

MESSRS. W. SWAN SONNENSCHNEIN & Co. announce for early publication a volume of *International Sermons* by some of the most eminent preachers of the Episcopal churches of England and America.

"COUNT PAUL VASALI," whose lively sketches of Viennese society in the *Nouvelle Revue* have just been completed, announces that he intends shortly to commence a similar series on society in London.

AT a recent meeting of the Library Association the following resolution was unanimously carried:

"The Library Association beg to represent to the Controller of Her Majesty's Stationery Office the undesirability of issuing the volumes of *Calendars of State Papers* in the unsuitable binding which has been adopted in the case of the last volume just issued; and to point out that the new binding is not only not uniform with the old, but is inferior to it in character and appearance, and that the half-binding in cloth and paper is a very undesirable economy from the purchaser's point of view."

MESSRS. GRIFFITH, FARRAN, & Co., are issuing a shorter edition of the "Standard Authors' Readers." No alterations have been made in lessons, the changes being confined to the omission of the later pages. The appendices are continued in each book. The unabridged edition for those who prefer the longer books may still be had.

MESSRS. BEMBROSE & SONS have arranged with the Rev. William Arthur to issue a new and uniform edition of his works. The first volume will be a new work, entitled *Religion without God and God without Religion*, in three parts: (1) Positivism and Mr. Frederic Harrison, (2) Agnosticism and Mr. Herbert Spencer, (3) Deism and Sir James Fitzjames Stephen. This work will be followed by a new edition of the *Tongue of Fire*.

THE study of palaeography is receiving increased attention just now in Italy. A short time since a palaeographical school was founded at Naples, under the direction of the learned archivist, Dr. A. Miola. More recently the Pope has established at the Vatican a similar institution, which he has placed under the management of Father Carini.

A NEW one-volume novel, *Die Tolle Braut*, by Eugen Salinger, is announced for immediate publication by W. Sauerlander, of Frankfurt.

THE *Revue Politique et Littéraire* states that the MS. of two unpublished tales by Perrault has just been discovered. The titles are "Le Fée des Perles" and "Le Petit Homme de Bois." It is added that the MS. will be offered to the Bibliothèque nationale.

THE *Nuova Antologia* refers to a recent English pamphlet, *The Siege of London*, with the remark that it seems to have been suggested by "Disraeli's Battle of Porking"!

A DEFENCE of Prof. Drummond's *Natural Law in the Spiritual World* will be commenced in the *Expositor* for April, in reply to the attacks which have been made upon the author's views.

HERR ALBERT DUNCKER is preparing for publication the letters of Emmanuel Geibel to the Von der Malsburg family, together with several poems which have not hitherto been printed.

SEÑOR YRIARTE is at present in Italy, engaged in researches preparatory to his forthcoming work on the subject of Caesar Borgia.

WE have received No. XVI. of Mr. Wm. Griswold's well-known "Q.P. Indexes"—an index to fourteen leading British monthlies and quarterlies for the years 1882-4. The plan on which it is constructed is novel, and, for its special purpose, really admirable. In the first place there is a reference table, consisting of a list of the periodicals indexed, with numbers corresponding to the several monthly or quarterly issues; for example, the monthly parts of *Blackwood* published during the three years are numbered 1-36, those of the *Contemporary* 37-72, and so on. Then follows an alphabetical index of authors, each author's name being consecutively numbered, and followed by the numbers indicating the periodicals in which his articles appeared and the dates of publication. Lastly, there is an index of subjects, in which figures are used to indicate the names of authors and the magazines in which they have written. Thus, in the first index we find: "19. Arnold, Matthew, 126, 249, 252, 255, 260-1, 272," which informs us that articles by Mr. Arnold may be found in the *Fortnightly* for June 1882, the *Nineteenth Century* for May 1882, &c. Turning to the entry "Culture" in the index of subjects, we have "255 by 19," which, on reference to the key, we find to mean that an article on this subject by Mr. Arnold appeared in the *Nineteenth Century* for November 1882. A good deal of additional information is given by means of typographical devices which take up no room and suggest their meaning at a glance. The entire index occupies only thirty-six octavo pages.

Thiers, Guizot, Rémusat is the title of a new work which M. Jules Simon is on the point of completing.

THE work of the late Jules Vallès, *L'Insuburgé*, which appeared three years ago in the *Nouvelle Revue*, is to be brought out in volume form by Charpentier, of Paris. It seems it was the author's intention to subject the book to a thorough revision before republication.

THE *Magazin für die Literatur des In- und Auslandes* has the following odd remark on Mr. Edmund Yates's *Recollections*: "The whole book furnishes a new proof of the old truth how wretched a life it is to have to earn one's bread by writing." Mr. Yates will scarcely assent to this peculiar reading of the moral to be drawn from his volumes.

THE *New York Publisher's Weekly* contains the enigmatical announcement that Messrs. Winchell & Co., of Chicago, are bringing out "some games in the U.L.S.C. course of study—chemistry and Shakspeare—which are designed to meet an immediate want in that course."

A SECOND and revised edition of Dr. W. Baur's *Life of Baron von Stein* is to appear this month.

M. LUCIEN PERREY and M. Gaston Maugras have in preparation a work on the private life of Voltaire at Les Délices and Ferney (1754-78), drawn from unpublished documents.

A NEW novel, by Friedrich Spielhagen, *Die Heilquelle*, is announced to appear in the *Neue Preis Presse*.

THE publisher of the *Revue Critique* is about to issue a complete Index to that journal, from its commencement to the end of 1884. The price will be 10 frs., and the Index will be sent to press as soon as 200 subscribers have been obtained.

THE Senate of Hamburg has made a gift of 1,000 marks to Herr Karl Theodor Gaedertz, the author of *Geschichte des Niederdeutschen Schauspiels*, in acknowledgment of the value of his work in the illustration of the literary history of Hamburg. The present was made through the Hanseatic Minister in Berlin, where Herr Gaedertz resides.

M. BLAZE DE BURY has in the press a volume entitled *Alexandre Dumas, sa vie, son temps, son œuvre*.

THE Jewish Ministers' Association of New York and adjacent States, animated with the desire to advance the deeper study of Judaism, offers a prize of 200 dols. (£45), to be called the "Zunz Prize," for the best essay upon "Zunz, Progress, and Decline of Sadduceism." The treatment must be strictly historico-philosophical, and based on original research. The successful essay is to remain the property of the author, and the association pledges itself to purchase fifty copies at the published price when printed.

M. ANDRIEUX is writing a large book under the title *Les Religions laïques du XIX^e siècle*.

WE have to apologise for an unaccountable slip of the pen in our last week's paragraph, headed "Lady Martin on Shakespeare's Women," the epilogue therein ascribed to "Much Ado about Nothing" being, of course, the epilogue spoken by Rosalind in "As You Like It." Also, in regard of the three portraits engraved for Lady Martin's book, which we stated to be from portraits taken while the author was yet Miss Helen Faucit, we have just learned that the well-known half-length by R. Lehmann was painted since her marriage, and is, in fact, a comparatively recent work.

MAGAZINES AND REVIEWS.

Macmillan's Magazine is chiefly remarkable for heralding the return of Mrs. Thackeray Ritchie to the region of fiction. The beginning

of her new story, "Mrs. Dymond," shows that during the period of her silence she has learned to appreciate a wider range of character and greater skill in portraiture. An article on "Irresponsible Opinion" says many good things which tend to show that a man should understand the subject-matter concerning which he expresses opinions; but the writer preaches vainly to an untoward generation, whose ideal is that everybody should have an opinion about everything, whether he has knowledge or not. Mr. G. P. Macdonell deserves credit for an article on "Blackstone," in which he treats the great lawyer purely as an English classic, and deals with our law as a branch of literature. Mr. J. Theodore Bent, in a paper on "Old Mythology in New Apparel," collects some curious instances of Greek myths in Christian rites among the inhabitants of the Cyclades.

Blackwood's Magazine is noticeable only for a clever story, "Plain Frances Mowbray," which gives a lively picture of English life in Venice and of the good fortune of a matrimonial adventure.

In the *Deutsche Rundschau* Herr Herzog gives a vivid sketch of modern progress in an article on "Die Einwirkungen der modernen Verkehrsmittel auf die Culturentwicklung." His general conclusion is that the discovery of railways and the electric telegraph has tended to democratise society and substitute practical materialism for any moral ideal of life. Only when commerce has become truly world-wide, and national interests have ceased to jar and conflict, must we look for a world-state in which ideal ends again will meet with due recognition. Freiherr von Liliencron, in a paper on "Die Kunst der Conversation," undertakes the defence of German "Ernst" against French "esprit" as a basis for social life. An English bystander is probably inclined to suggest a happy blending of the two. Dr. H. Hüffer publishes some hitherto unprinted letters of Heine to his friend Johann Hermann Detmold. They are the scanty records of a friendship of thirty years, and are of great importance for Heine's biography, especially as regards his life in Paris and his relations to his wife.

DR. LUDWIG GEIGER has begun a new journal which promises to be of great literary importance, *Vierteljahrschrift für Kultur und Literatur der Renaissance*. (Leipzig: Seeman.) In the first number the editor contributes a very thorough study of the life and writings of Publio Fausto Andrelini, of Forlì, who taught in Paris from 1489 to 1518, and did much to quicken the impulse of humanism in France. Herr Grimm examines Vasari's authority for the statement that Michelangelo finished four statues of captives for the tomb of Julius II. He comes to the conclusion that Vasari was mistaken, and that only two, now in the Louvre, were really his work. Herr Zupitza criticises "Three Middle-English versions of Boccaccio's story of Ghismonda and Guiscardo"—one by Banister, a second by Walter, and a third anonymous. Besides these articles are published unprinted letters of Guarino and Renzolin. This new quarterly journal has every prospect of filling a decided need in literature, and bringing to light much new material for literary history.

VOL. VI. of the *Biblioteca de las Tradiciones Populares Españolas* is devoted to a traditional-topographical description and map of the town of Burguillos in Estremadura. In this way folk-lore joins hands with local archaeology. The idea is good, and well carried out; and yet we almost shudder at the amount of reading required, if every town and village of Europe is to be treated on this scale.

M. DE LAVELEYE ON J. S. MILL.

M. EMILE DE LAVELEYE has reprinted from the *Revue de Belgique* a paper entitled "Lettres inédites de Stuart Mill," which cannot fail to have much interest for Englishmen. It is published at Paris by Germer-Baillière. The letters themselves are not perhaps very important, except as throwing light upon the relations between the two men, for it appears that more than one of M. de Laveleye's best-known works was directly inspired by the suggestions of Mill. Concerning the burning question of the "unearned increment," it is curious to learn that Mill's doctrine, almost in the precise form recently promulgated by the President of the Board of Trade, has been incorporated in Belgian legislation since the beginning of the present century. The Law of September 16th, 1807, article 30, runs thus:

"Lorsque, par l'ouverture de nouvelles rues, par la formation de places nouvelles, par la construction de quais ou par tous autres travaux publics généraux, départementaux ou communaux, des propriétés privées auront acquis une notable augmentation de valeur, ces propriétés pourront être chargées de payer une indemnité qui pourra s'élever jusqu'à la valeur de la moitié des avantages qu'elles auront acquis."

We are sure that our readers will be glad to have before them in M. de Laveleye's own words his estimate of Mill as a man and as a social reformer.

"Mill parlait avec une admirable clarté, mais sans nulle chaleur. Sa voix, quoique grêle, portait loin, parce que le timbre en était élevé et mordant. Son argumentation était de la logique pure. Quelques faits indiqués mais peu développés. Quelqu'il parlât devant un auditoire démocratique, nul appel adressé au sentiment. Il voulait convaincre, éclairer, non émouvoir, entraîner. Son discours eût été mieux à sa place dans une académie de savants que dans ce meeting populaire. Mais il le voulait ainsi. Il eût rougi d'un succès dû à ce que nous appelons l'éloquence."

"Il m'engagea à aller le voir à Blackheath, près de Greenwich. Il y occupait une petite villa pendant les quelques mois qu'il passait en Angleterre. Il résidait la plus grande partie de l'année aux environs d'Avignon, où il avait acheté une propriété pour ne pas s'éloigner du tombeau de sa compagne adorée, qu'il allait visiter chaque jour. Ce n'est pas sans une vive émotion que je pénétrai dans la demeure du maître vénéré, dont les écrits étaient depuis longtemps ma lecture habituelle. Son accueil, extrêmement cordial, eût dû me mettre à l'aise; mais il y avait en lui une certaine dignité mélancolique qui imposait. Je le vois encore devant moi, comme si j'y étais. Le salon était sombre et sévère: à terre, un tapis turc aux nuances foncées; le long des murs, des bibliothèques basses, dont les tablettes étaient garnies de souvenirs et d'objets d'art; sur le fond obscur se détachait son grand front, chauve et pâle, et son profil aigu d'une extrême finesse. Les yeux étaient gris, pas grands, mais lumineux, d'une lumière grise et froide. Contrairement à l'habitude des Anglais, dans la journée, il était vêtu tout de noir, comme un pasteur. Portait-il ainsi, en ses vêtements, un deuil qui répondait à celui qu'il conservait si profond, si fidèle au fond de l'âme?"

"Je n'essayerai pas ici d'émettre un jugement sur les travaux du grand économiste et je ne pourrais, d'ailleurs, parler de la partie philosophique de son œuvre. Mais j'estime que, dans le domaine des sciences sociales, les deux auteurs à qui notre génération doit le plus de vérités utiles, sont Tocqueville et Stuart Mill. Tous deux ont examiné à fond le grand problème de notre époque, l'organisation de la démocratie. Seulement Tocqueville n'a pas bien vu les conséquences économiques des progrès de l'égalité, et ce qu'il en a aperçu le remplissait d'inquiétudes. Mill, au contraire, a nettement discerné l'approche d'une ère de réformes sociales, et il l'a saluée avec confiance, avec sympathie, parfois même avec enthousiasme."

CORRESPONDENCE.

A TRACT OF BISHOP KEN'S.

Oxford: March 7, 1885.

In the Bodleian Catalogue, among other entries under THOMAS KEN, are the following:

- (1) *A Letter to the Author of a Sermon entitled "A Sermon preached at the funeral of her late Majesty Queen Mary," 1695.*
- (2) *A dutifull Letter from a Prelate to a Prelate, relating to matters of grand concern, 1703. [To it is appended A Letter from Mr. D——d to Dr. Tillotson to prove Non-Jurors no Schismatics.]*

The second tract is a simple reprint of the first,

with the addition of this letter. Now this tract is summarily rejected by Round in his Preface to the *Prose Works of Ken*. Anderson condemns it even more decisively in his *Life of Ken*, by a Layman (ed. 1851), p. 418. He remarks:

"It is a tissue of bitter obloquy against the Queen and the Archbishop, wholly inconsistent with the meek spirit of the author of the 'Practice of Divine Love.' It was not likely that he should now, for the first time, and on such an occasion, enter the lists of a political controversy. If anything could draw him out of his retirement into the din of a contentious world, this at least was a topic uncongenial to him. . . . In all his acknowledged writings, or in his correspondence, no expression can be found that is akin to the whole tenor of this Letter of vehement animadversion. Ken, therefore, we may be sure, was not the author."

In his second edition he treats of this tract at much greater length (vol. ii., pp. 656 seq.), having evidently re-read it in the interval, but rejects the suggestion of Ken's authorship as decisively as before, attributing it to Hickes.

The pamphlet, it might be urged, is curiously characteristic of Ken's attitude towards the Queen and Archbishop Tenison. The writer has but one fault to find with the former—her breach of the fifth commandment; but, as concerns the Archbishop, he is as severe as Ken was in the case of Bishop Kidder. A passage in Hearne's Diary, however, not quoted by Anderson, seems to me to put Ken's authorship almost beyond question. Hearne writes on February 7, 1709: "Mr. Dodwell tells me his Letter to Dr. Tillotson to prevent the schism is printed with Bp. Kenn's Letter to Dr. Tennison conc. the Death of the Princess of Orange." And, February 15: "The Letter above mention'd of Bp. Kenn, conc. the Death of the Princess of Orange, is thus intitled, *A Dutifull Letter from a Prelate to a Prelate, relating to matters of grand concern, &c.*" This letter to Tillotson was evidently published with Dodwell's full sanction and approval, and it is exceedingly probable that the "Prelate" was likewise consulted before his own letter was reprinted. Dodwell, an intimate friend of both, and the "great Lay Dictator" among the non-jurors, must surely have known whether the Prelate was Hickes or Ken. We have, therefore, Dodwell's authority (and higher we could scarcely have) for attributing this tract to Ken; and Hearne was, I cannot but think, fully justified, in his Catalogue of Dodwell's works prefixed to the Dissertation on Woodward's shield (see No. xxxvi.), in describing it without hesitation as a work of the deprived Bishop of Bath and Wells. C. E. DOBLE.

DEATH OF CROMWELL'S SON.

London: March 8, 1885.

It has hitherto been supposed that Cromwell's son Oliver was killed in the Civil War, though it has never been known where or when. The following extract from *The Parliament Scout* of March 15-22, 1644, settles the question: "Cromwell hath lost his eldest son, who is dead of the smallpox in Newport [Pagnet], a civil young gentleman, and the joy of his father."

After this we can understand better Cromwell's words in his letter to Walton (*Carlyle*, Letter xxi.), "Sir, you know my own trials this way." Incidentally, the quotation puts an end for ever to the pretensions of the *Squire Papers* to be genuine.

In a note to the letter quoted above Carlyle gives a statement of the imaginary Squire as given after Marston Moor, "I thought he," i.e., Cromwell, "looked sad and wearied, for he had had a sad loss; young Oliver got killed not long before, I heard. It was near Knaresborough, and 80 more got killed."

SAMUEL R. GARDINER.

TWO QUERIES.

Baroda, India: Jan. 3, 1885.

Will some reader of the ACADEMY kindly inform me who are alluded to in the two following passages?

- (1) "him of Cordova dead,"
(Ben Jonson, *Lines prefixed to First Folio Shakespeare*.)

- (2) "that Content surpassing wealth
The Sage in meditation found,
And walked with inward glory crowned."
(Shelley, *Stanzas written in Dejection near Naples*.)

My failure to find the needed information in the scanty library of an Indian bungalow is my apology for troubling the readers of the ACADEMY with such trivial queries. H. L.

ARETHUSA AND ALPHEUS.

London: March 3, 1885.

These further notes on the emergence of Alpheus after his long dive in pursuit of Arethusa may, perhaps, be admitted.

The Pindaric phrase, *Ἀλφειὸς Ἀρεθούῃ*, is rendered by Boeckh "requies Alphei," by Donaldson "the resting-place of Alpheus," so by Paley (1868), so by Myers (1874). Leopold Schmidt gives us the somewhat closer "Erholungsplatz," and Hartung the far remoter "Aufblick." Cary (1839), with nearly accurate sense for the entire passage, writes:

"Ortygia, thou all-hallowed breathing-place
Where Alpheus lifts his weary head;
Syracusa's bloomy grace,
Delos' sister, Dian's bed."

Watkins Lloyd, in *History of Sicily* (1872), p. 326, translates:

"Ortygia! sacred breathing-place of Alpheus!
Sprout of glorious Sicily! couch of Artemis!
Delos' sister!"

Cary's translation would have been better without the epithet "weary," and "Syracusa's bloomy grace" misses the local propriety of Pindar, who calls the islet Ortygia a sprout or offshoot of the glorious city of Syracuse, not, as Donaldson says, for reasons which equally applied to the four divisions of the city itself, but with reference to its peculiar position. Pindar, by calling Ortygia "sister of Delos," refers to it as still an island—an island of Artemis most peculiarly, her couch. This is reason good enough for believing that the female head on early Syracusan coins, which on the celebrated Demareteion is within a ring, which again is encircled by dolphins swimming freely round it, is the Artemis of the islet Ortygia. The nymph Arethusa might prefer a plausible claim, but that the symbol of Gelon's victory over the Carthaginians can scarcely be assigned to less than a superior goddess (see Mr. Percy Gardner's *Types of Greek Coins*). W. WATKISS LLOYD.

IL GIORNO DELLE VECCHIE.

Said: March 7th, 1885.

The Thursday of Mid-Lent (this year March 12th) is called in Lombardy *Il Giorno delle Vecchie*. The children run about crying out for the oldest woman, whom they want to burn; and failing to possess themselves of the original, they make a puppet representing her, which, in the evening, is consumed on a bonfire.

Here, on the Lake of Garda, the blaze of light flaring at different points in the hills produces a picturesque effect.

Jacob Grimm states that a similar usage exists at Barcelona, and among the Northern Slavs, who call the practice "*Babu rexati*"—"sawing the grandmother." They saw their doll in two and then drown it. It cannot be doubted that the old woman on all occasions represents winter, who has to be destroyed to allow the coming of the spring.

E. MARTINENGO-CRARESCO.

FINN AND GWYNN.

University College, Cardiff: March 7, 1886.

My letter on this subject, which appeared in the ACADEMY for January 24, was written in the hope that Prof. Rhys might favour us with his opinion on the question more at length. I may here be allowed to express regret that in the reference to the Bodleian MS. my words might be thought to suggest that Mr. Rhys was unacquainted with that MS.—a suggestion which was very far from my thoughts.

Prof. Meyer's learned contribution (ACADEMY, February 21), which he modestly describes as "remarks" on my letter, calls for a few words of comment. With what Dr. Meyer says about taking information at second-hand all will agree. But I cannot see the applicability of his remark that I rely on a statement of O'Curry's, "without asking where he got it, and what it is worth." I expressly stated, in O'Curry's own words, that he got his information from the Book of Leinster. The "worth" of the statement consisted simply in its accuracy, except in one particular, to which I also specially called attention; and, as regards that particular point, I preferred the form *smelt* to *smelt*, because I thought that (whether it was a misprint or a misreading on O'Curry's part) comparison with the Welsh *smyllt* showed it to be the correct form. It is quite possible that the scribe of the Book of Leinster made a mistake. But that readers might take the identification based on such an assumption for what it might be worth, I particularly called attention to the correction, already made in the Index to O'Curry's own work.

In my reference to the interchange of *b* and *m* assumed in connecting Baisene with Maceen the addition of the words "in the two languages" was perhaps unnecessary. I was thinking chiefly of the confusion of the two letters in Welsh, as illustrated by such forms as *smelt* for *both*. It may be difficult to determine exactly how early this confusion began; but it may well have begun early enough to account for the appearance of an original Baisene under the form Maceen in our existing MSS. And, as already suggested, the change in this case may have been facilitated by the existence already of a similar form for the Roman Maximiana. The identity of the names Nuada and Nudd is admitted, but an obstacle to the identification of the persons is found in the fact that Gwynn is the son of Nudd, whereas Finn is the "great-grandchild of Nuada's grandson." I must confess I cannot see in this any great objection to the identification. I cannot accord any of these legendary pedigrees with the authoritativeness of a modern register of births, and do not feel that a discrepancy with regard to the position of a particular name in the two lists is so material. And, according to Dr. Meyer himself, though the Irish hero has three distinct pedigrees assigned to him, he still remains one and the same Finn. Why, then, should the variation just mentioned in the Welsh and Irish pedigrees be so fatal an obstacle to the identification of Finn and Gwynn?

THOMAS POWELL.

THE HUNTING OF THE WREN.

Llanwrin, Machynlleth: March 10, 1886.
